MEXICO.—The latest accounts report the successes of the revolutionary party in the south, under General Alvarez. One account, dated Acapulco, Jan. 23, states that Alvarez had obtained a complete victory in Guenere, over Santa Anna's army, and the latter, 1000 strong, had surrendered to him. It was also reported that a large part of Santa Anna's army had deserted and gone over to Alvarez.

SOUTH AMERICA.—PERU.—Dates from Callao to 7th ult. General Castilla has overthrown Echenique, and taken the government into his own hands. The squadron had voluntarily surrendered to him. Echenique had sought the protection of the British Minister.

BOLIVIA.—Dates to the 27th Dec. The rebel Acha had been put down, and those engaged with him in the insurrection, pardoned by the government. An extra session of Congress had been called to receive the resignation of the President. Things were quiet in Chili, and the Argentine Republic, and the news without interest.

AUSTRALIA.—Dates to Twelfth mo. 1. Trade was very much depressed, and fears were entertained of injury to the crops by the severe drought. Flour and grain from California were being imported in large quantities.

UNITED STATES.—The falling off in the United States revenue received First mo., 1855, as compared with the same month of 1854, is two millions three hundred thousand dollars. The aggregate falling off since the end of Tenth mo., when the reaction in the import trade began, is $6,000,000. The President has sent to the Senate for ratification, a new treaty with Mexico, in substance the same as that recently made with Russia, recognizing the principle that free ships make free goods. *Congress.*—The House has passed the bill authorizing an underground telegraph to be laid to the Pacific, having first stricken out the provision, which gave the contractors two millions of acres of land to build it. The bill only gives the right of way, and extends the laws of the United States over the line for its protection. A bill has also passed appropriating $6,550,000 for the payment of such creditors of the late Republic of Texas, as are comprehended in the act of Congress of Sept. 9, 1850. The money to be apportioned among the holders of claims, pro rata. The bill for the settlement of claims for French spoliations, prior to 1800, has passed the Senate; it had previously passed the House. J. C. Breckenridge, of Kentucky, has resigned the commission, which he had accepted, as Minister to Spain, and Senator Dodge, of Iowa, has been nominated and confirmed in his stead.

California.—The North Star at New York, brings 200 passengers and $1,269,000 in gold. The Panama railroad has been completed, and the first train passed over it on the 28th ult. The transit was made in four hours.

The miners were rejoicing over the recent rains, and the washing was going on briskly. In some parts of the State, the weather had been very cold, and snow had fallen to the depth of from two to five feet. A *negro slave* is advertised in Sacramento for sale at auction, by the sheriff. He is warranted sound and able-bodied. Is California a *free State?* The duties collected at San Francisco, in the year 1854, amounted to $1,461,160; in 1853, the amount was $2,052,808, showing a falling off of nearly one half.

Boston.—In this city, during the last year, there were 3128 marriages, 5688 births, and 4441 deaths.

New York.—The present efficient Mayor is operating against the fortune-tellers, astrologers, and other imposters of the same character, in that city. Mortality last week, 485.

Philadelphia.—Mortality last week, 175.

Kansas.—The Kanas Herald says that there are but very few slaves in the territory, south of Kansas river; probably none except those in possession of the Indians, or of the Methodist Mission. North of the river, there are a few in the region of Fort Leavenworth, who are mostly owned by Government officials.

An immense deposit of magnesia has been discovered. The stratum is found at the depth of twenty to fifty feet, and is supposed to underlie a large part of the country.

Illinois.—A prohibitory liquor law has passed both branches of the Legislature. Joint resolutions have also been passed, instructing the Senators, and requesting the Representatives to oppose slave States being formed in the territories of Nebraska and Kansas. An Anti-Nebraska Democrat has been elected to the U. S. Senate.

Miscellaneous.—The Panama Railroad.—This great work, which is now finished, was six years in progress and cost seven millions of dollars. The swamps, mountains, and unhealthy climate of the isthmus, were serious obstacles to its construction.

German Immigrants.—The New York Board of Emigration estimate that $20,000,000 in money has been brought into the country, in the last year, by German emigrants.

New York Senator.—W. H. Seward, the able representative of New York in the Senate of the United States, has been re-elected.

Fugitive Slave Law.—Booth and Rycroft, who were convicted at Milwaukie, for aiding in the escape of a fugitive slave, have been discharged from arrest by the Supreme Court of Wisconsin, on the ground that the law is unconstitutional, and the indictments under it illegal.

Immigration to Canada.—During the year 1854, the number of foreign immigrants arriving in Canada, was 53,183.

Cold Days.—On the 6th inst., the thermometer stood at Pottsville, Pa., 9° below zero. Pittsburg, 6° below. Philadelphia, 2° above. New York City, at zero; in various parts of the State, it varied from 20° to nearly 40° below. On the 7th, the temperature in Philadelphia fell to zero; New York, 10° below; in the Eastern States, from 10° to 30° below. On the 5th inst., the temperature at Quebec was 32° below, and at Montreal 22° below. At Philadelphia, there was a considerable fall of snow, with a temperature, but little above zero.

Pacific Railroad Expedition.—An expedition is being organized by the Government, to secure information relative to the proposed route for the Pacific railroad. It is to be under the command of Capt. Pope, and will be composed of 150 men. The object is, to ascertain whether water can be obtained at certain spots, by means of Artesian wells.

Losses at Sea.—During the last month, 43 American vessels have been reported as totally wrecked, and one a new ship, burnt. The value of vessels and cargoes was $1.244,000.

RECEIPTS.

Received from Jacob Haines, agt., Muncy, Pa., for E. Willits, $4, vols. 27 and 28, for Jesse Haines, $4 vols. 27 and 28, for C. Ellwood, $2, vol. 27; from A. Garretson, agt., O., for Wm. Boswell, $6, to 52, vol. 25; from J. Hueates, agt., O., for Robert Todd, $2, vol. 28; from R. Magill, Pa., $4, vols. 27 and 28; from Benj. Sharpless, jr., Pa., $4, vols. 26 and 27.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah, &c. Friends, who may feel concerned to engage in that station, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 140 Arch street, Philadelphia, or Ebenezer Worth, Marshalton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

FRIENDS' ASYLUM.

Committee on Admissions.—Samuel Bettle, Jr., No. 10 North Tenth street; Charles Ellis, No. 95 South Eighth street, and No. 56 Chestnut street; William Bettle, No. 14 South Third street; John C. Allen, No. 179 South Fifth street, and No. 227 North Front street; Horatio C. Wood, No. 210 Race street, and No. 37 Chestnut street; William Thomas, No. 242 North Fifth street, and No. 4 South Wharves; Townsend Sharpless, No. 187 Arch street, and No. 32 South Second street; John M. Whitall, No. 161 Filbert street, and No. 138 Race street.

Visiting Managers for the Month.—William Thomas, No. 242 N. Fifth street; George R. Smith, No. 487 Arch street; George G. Williams, No. 244 N. Fifth street.

Superintendent.—Dr. Joshua H. Worthington.

Matron.—Margaret Worthington.

DIED, Twelfth month 9th, 1854, REBECCA SAUNDERS, aged nearly 77 years; an esteemed member of Woodbury Monthly Meeting, N. J.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, SECOND MONTH 24, 1855. NO. 24.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the London Quarterly Review.

How London is Supplied with Food.

(Concluded from page 178.)

If the underground stock of water is shrinking, it has increased vastly on the surface. The seven companies which supply the metropolis bring in between them forty-four million gallons daily—a quantity which, large as it is, could be delivered in twenty-four hours by a brook nine feet wide and three feet deep, running at the rate of three feet per second, or a little more than two miles per hour.

The inability of figures to convey an adequate impression to the mind of the series of units of which the sums are composed renders it impossible to give more than a faint idea of the enormous supplies of food required to victual the capital for a single year. But the conception may be somewhat assisted by varying the process. Country papers now and then astonish their readers by calculations to show how many times the steel pens manufactured in England would form a necklace round their own little town, or how many thousand miles th. matches of their local factory would extend if laid in a straight line from the centre of their market-place. Let us try our hand on the same sort of picture, and endeavour to fill the eye with a prospect that would satisfy the appetite of the far-famed Dragon of Wantley himself.

If we fix upon Hyde Park, as our exhibition ground, and pile together all the barrels of beer consumed in London, they would form a thousand columns not far short of a mile in perpendicular height. Let us imagine ourselves on the top of this tower, and we shall have a look-out worthy of the feast we are about to summon to our feet. Herefrom we might discover the Great Northern road stretching far away into the length and breadth of the land. Lo! as we look, a mighty herd of oxen, with loud bellowing, are beheld approaching from the north. For miles and miles the mass of horns is conspicuous winding along the road, ten abreast, and even thus the last animal of the herd would be 72 miles away, and the drover goading his shrinking flank considerably beyond Peterborough. On the other side of the park, as the clouds of dust clear away, we see the great Western road, as far as the eye can reach, thronged with a bleating mass of wool, and the shepherd at the end of the flock (ten abreast) and the dog that is worrying the last sheep are just leaving the environs of Bristol, 121 miles from our beer-built pillar. Along Piccadilly, Regent-street, the Strand, Fleet-street, Cheapside, and the eastward Mile-end-road line, for 7½ miles, street and causeway are thronged with calves, still ten abreast; and in the great parallel thoroughfares of Bayswater-road, Oxford-street, and Holborn, we see nothing for nine long miles but a slowly-pacing, deeply-grunting herd of swine. As we watch this moving mass approaching from all points of the horizon, the air suddenly becomes dark—a black pall seems drawn over the sky—it is the great flock of birds—game, poultry, and wild-fowl, that, like —— Bond's ducks, are come up to be killed: as they fly wing to wing and tail to beak they form a square whose superficies is not much less than the whole enclosed portion of St. James's Park, or 51 acres. No sooner does this huge flight clear away than we behold the park at our feet inundated with hares and rabbits. Feeding 2000 abreast, they extend from the marble arch to the round pond in Kensington Gardens—at least a mile. Let us now pile up all the half-quartern loaves consumed in the metropolis in the year, and we shall find they form a pyramid which measures 200 square feet at its base, and extends into the air a height of 1293 feet, or nearly three times that of St. Paul's. Turning now towards the sound of rushing waters, we find that the seven companies are filling the mains for the day. If they were allowed to flow into the area of the adjacent St. James's Park, they would in the course of the 24 hours flood its entire space with a depth of 30 inches of water, and the whole annual supply would be quite sufficient to submerge the city (one mile square) 90 feet. Of the fish we confess we are able to say nothing: when numbers amount to billions, the calculations become too trying to our patience. We have little doubt, however, that they would be quite sufficient to make the Serpentine one solid mass. Of ham and bacon again, preserved meats, and all the countless comestibles we have taken no account, and in truth they are little more to the great mass than the ducks and geese were to Sancho Panza's celebrated mess—'the skimmings of the pot.'

Such, then, is a slight sketch of the great London larder. It may be imagined that many of these stores come to the metropolis only as to a centre for redistribution, and are again scattered over the length and breadth of the land. This, however, is not the case. The only line that takes food in any quantities out of London is the North-Western. This railway speeds into the midland counties, but especially to Birmingham, 350 tons of fish consigned to the country dealers, and to the nobility and gentry. As we have before seen, van-loads of fruit are often despatched in the same direction. The South-Eastern conveys large quantities of grain down the line, and the London and Brighton and South Coast takes annually to Brighton 26 tons of meat and 1100 cattle; and here all the food carried *out* of London in bulk ends. A constant dribble of edibles, it is true, is continually escaping by the passenger trains, of which the railways take no notice in their goods-department traffic; but it must be remembered that a much larger quantity is perpetually flowing unheeded into the London commissariat through the same channels. Of the stout and porter brewed in the metropolis by the great houses, again, one-seventh perhaps finds its way abroad—a drop in comparison to that which must be contributed by the 2482 smaller brewers of the town, and the great contingent supplied by Guinness, Allsopp, and other pale-ale brewers. This simple statement will suffice to make it evident that in the foregoing picture we have giv:n anything but 'heaped measure.'

The railways having poured this enormous amount of food into the metropolis, as the main arteries feed the human body, it is distributed by the various dealers into every quarter of the town, first into the wholesale markets, or great centres, then into the sub-centres, or retail tradesmen's shops, and lastly into the moving centres, or barrows of the hawkers, by which means nourishment is poured into every corner of the town, and the community at large is supplied as effectually as are the countless tissues of the human body by the infinitely divided network of capillary vessels. According to the census of 1851 these food distributors are classified in the following manner:—

Males.	
Grocers	6,475
Cowkeepers and milksellers	3,372
Cheesemongers	2,156
Butchers	7,428
Poulterers	551
Fishmongers	2,238
Other dealers in animal food	1,376
Greengrocers	3,325
Bakers	9,841
Confectioners	1,806
Other dealers in vegetable food	1,303
Brewers	2,499
Licensed victuallers and beer-shop-keepers, &c.	6,843
Wine and spirit merchants	1,915
Other dealers in drinks	3,805
Saltmakers	37
Water providers	428
Innkeepers	433
	56,601
Females.	
Grocers	676
Innkeepers	93
Innkeepers' wives	217
Cowkeepers	1,158
Butchers	205
Butchers' wives	3,086
Fishmongers	151
Other dealers in animal food	283
Greengrocers	941
Bakers	480
Confectioners	542
Other dealers in vegetable food	939
Licensed victuallers and beer-shop-keepers	970
Wives of ditto	4,440
Wine and spirit merchants	15
Other dealers in drinks	457
	14,653

If to this total of 71,254 we add the wandering tribe of costermongers, hawkers, and stall-keepers, estimated at 30,000 persons, we shall have an army exceeding 100,000 persons; and, as in-

directly there must be quadruple this number of persons employed, the merest pauper among the population has hundreds of invisible hands held out to provide him the necessaries and comforts of life. The smooth working of this great distributive machine is due to the principle of competition—that spring which so nicely adjusts all the varying conditions of life, and which, in serving itself, does the best possible service to the community at large, and accomplishes more than the cleverest system of centralization which any individual mind could devise.

Selected.

A WATCH-WORD.

"I beseech you, friends and brethren, to suffer the word of exhortation to prevail with you, unto a thorough examination of your own hearts, with the light of the gospel of Jesus, whether you have kept to the truth, as declared and practised in the beginning; or have you suffered loss in your inward man, and find decays of love to God, and of zeal for his truth upon earth? I know right well, that *a good condition may be easily lost, but hardly recovered*. Examine thyself, whether thou delightest thyself now, as much as at first thou didst, in communion with God and his people? Are the assemblies of his people as dear to thee as ever they were? If not, seek out the cause, and let no pretence blind thy mind from a diligent attending thereupon; but keep to the Seed in thyself, which thinketh no ill, much less doth any, and in that *thou wilt feel the benefit of communion with God's people*, and wilt be bound up together with them, as in the bundle of life: and *a bundle is not easily broken and shattered, as particulars apart are*. Search whether thou hast kept thy garments clean, from being defiled with the spirit of this world, building again in thyself, that which once thou destroyest in others. If riches increase, set not thy heart on them; which they will easily get, if thou be not watchful and diligent in keeping thy heart close unto the Lord, and his truth in the inward parts: for the love of money is the root of all evil, as it is written.

"Take often a view of the truth as it was in the beginning, and what effect and operation it had upon thee, when thou wast first convinced; how *low*, how *meek*, how *poor in spirit*, and *humble in heart* and mind; making thee to esteem every one better than thyself; seeing and knowing more evil in thyself, and in that nature by which thou wast a child of wrath, than in all the world beside, as in thy eyes at that day. And surely experience showeth unto the watchful, that that nature is the same, and will be bringing forth the same fruits again, if it be not mastered, and ruled over by the pure and divine Spirit: which made the apostle say after his conversion, 'That in him,' that is to say, in his flesh, 'was no good thing.' Again, art thou as careful to keep the truth without blame, as at the beginning? and as ready to *restore the fallen*, and *to cover the nakedness of thy brother*, as at first? Is there no whispering, evil speaking, and backbiting, and watching with an evil eye, and searching after weaknesses and haltings in some, accounting them great and heinous miscarriages, being glad of them, to defame those whom thou hast a mind to defame; and taking no notice of miscarriages in others, whom thou respectest, and wouldst have thought well of? Durst thou do thus in the beginning, when thou wast first convinced, and the lively quickening spirit ruled in thee, keeping thy spiritual senses always exercised, to discern between good and evil? Thus let every one try themselves by the measure of Truth, that they may see whether they have kept to it, as it was in the beginning." 1665.

Singular Couple—Compensation.

Along with my brother, who was collecting matter for a work he was about to publish, I visited the interesting town of Hexham—interesting at least to him, for it was a fine field for historical research; although, for my own part, I found little besides its ancient church. The circumstance which, more than anything else, obtained the dingy town a lasting place in my memory, was our taking a lodging with an extraordinary pair, an old man and woman—husband and wife—who lived by themselves, without child or servant, subsisting on the letting of their parlour and two bedrooms. They were tall, thin, and erect, though each seventy years of age. When we knocked at the door for admittance, they answered it together. If we rang the bell, the husband and wife invariably appeared side by side; all our requests and demands were received by both, and executed with the utmost nicety and exactness.

The first night, arriving late by the coach from Newcastle, and merely requiring a good fire and our tea, we were puzzled to understand the reason of this double attendance; and I remember my brother, rather irreverently, wondering whether we "were always to be waited upon by these Siamese twins." On ringing the bell, to retire for the night, both appeared as usual; the wife carrying the bed-room candlestick, the husband standing at the door. I gave her some directions about breakfast for the following morning, when the husband from the door quickly answered for her.

"Depend upon it, she is dumb," whispered my brother. But this was not the case, though she rarely made use of the faculty of speech.

They both attended me into my bed-room; when the old lady, seeing me look with some surprise toward her husband, said—

"There's no offence meant, ma'am, by my husband coming with me into the chamber—he's stone blind."

"Poor man!" I exclaimed. "But why, then, does he not sit still? Why does he accompany you everywhere?"

"It's no use, ma'am, your speaking to my old woman," said the husband; "she can't hear you—she's quite deaf."

I was astonished. Here was compensation! Could a pair be better matched? Man and wife were, indeed, one flesh; for he saw with her eyes, and she heard with his ears! It was beautiful to me ever after to watch the old man and woman in their inseparableness. Their sympathy with each other was as swift as electricity, and made their deprivation as naught.

I have often thought of that old man and woman, and cannot but hope, that, as in life they were inseparable, and indispensable to each other, so in death they might not be divided, but either be spared the terrible calamity of being alone in the world.—*Chamber's Journal.*

Selected.

In describing the trials of his day, Stephen Crisp says, "Yet did not the serpent leave off attempting to betray the innocent, but found out instruments fit for his purpose, whom he raised up under pretence of some new discoveries, accompanied with a voluntary humility, and a seeming self-denial, when indeed the design was to exalt self and man's work, wit and reason, above the eternal power of God, and through feigned pretences, to obtain a dominion over the heritage of God, and to impose and obtrude upon them things which were not taught by the living Spirit of Christ Jesus in themselves, nor had been received by doctrine or message from the true spiritual labourers in the gospel. By which means the minds of many were betrayed, and they were exercised in contending about some outward signs or tokens of their separation, till the weighty matter they should have minded, viz., how to be kept in the love of God, and in the heavenly unity, was in many lost and forgotten; and instead thereof, a secret root of bitterness grew up, and a hatred against the prosperity of the church of God, and the faithful servants and ministers of it; insomuch that they lost the very sense of God's blessed presence amongst us, and reckoned he had forsaken us; and thereupon many also forsook us, and were as another people, and were puffed up with great expectations of our downfall, and their own exaltation; and began to spread their design of separation into other nations, to the hurt of many who were deceived by them; so that the tender love of God, that had wrought in the hearts of the faithful labourers and ministers of the Gospel, to the gathering of them out of the world, now wrought again effectually, to gather many of them out of this self-separation, and with great patience and long-suffering, did we travail and labour with many. And the Lord beheld our sincerity and care, and blessed his work in our hands, so that the eyes of many were opened to see the crafty snares by which they were entangled, and power was given them of God, to break through and testify against the crafty wiles of them that had deceived them. And the Lord arose in his great and mighty power, in and among his people, and set an eternal judgment on the head of that spirit, and its work of dissension and separation that it had wrought; and it could then proceed no further, but withered and came to nought; and those who wilfully resisted the offers of the love of God, and of his people, they grew more and more corrupt, and perished wholly from the way of the Lord, and the society of his people, and turned back, some into the world's worship and religions, and others into the gross pollutions that are therein; and the churches of Christ, who stood firm and true to the leading of his Spirit, came to have rest from that extreme labour and travail which they had lain under several years, by reason of these things; and God fulfilled the prophecies of divers of his faithful servants, who by their faith had seen, and by the Spirit had testified at the beginning of that spirit's work, what the end of it should be. For many there were who saw, that it was from the earth, and thither it would return, and there it was swallowed up and all its substance; and as many as refused to be warned, perished with it. Then did the souls of the faithful give glory and honour to God, in whose hand is power and dominion, and he reigns on high in his strength, and is king of saints, and the defence of his Sion, now, henceforth and forever more."

The Fall of the Leaf.

The fall of the leaf is a most curious circumstance, and has puzzled many a wise philosopher. It cannot be merely because of the cold to which the leaf is exposed, for when a frost in June blackens our hedge-rows, and desolates our gardens, the leaves do not fall off: they only wither and die. It may be because of the arrival of old age, but this is a phrase which explains nothing. One would naturally ask, moreover, why some leaves remain on the tree the whole winter, though others fall so early. To understand these things, we must first learn what the leaf is, and how it is joined to the branch. A leaf is the thin part of the outer layer of bark, pushed outwards and stiffened by tough fibres, which pass into it from the wood, and form its veins. By these means, a simple and very curious apparatus is constructed,

the green or bark part of which, consisting of small bladders, acts as a stomach to digest with, and lungs to breath with, while the fibres convey food and air from the branch into the stomach and lungs. Now, when the leaf is first formed, its bladders and fibres have very thin sides, and whatever is introduced into them is readily returned again; and if what they receive was quite pure, it is not improbable that they would go on receiving and returning for a long time. But the fluids of plants are not water; on the contrary, they contain a great deal of earth, and other matters, which they deposit every time they pass over the surface. We know that when a kettle first comes home from the ironmonger, its inside is bright and clean, but as soon as we have boiled any water in it, the inside becomes a little furred, and when it has been thus used a great many times it becomes very much encrusted, till at last it is quite lined with a substance like hard earthenware. Something of this sort takes place in the inside of the bladders and fibres of a leaf; they are at first quite clean, but by degrees they are furred till their sides are rendered so thick that the fluid on which the leaf feeds can no longer pass through them readily. As soon as this happens the leaf begins to be starved and to leave off growing; want of food renders it weak, a sort of indigestion takes place, and at last it altogether dies. In the summer time leaves are always falling off as they die, those on the lowest part of the branches falling first; but we do not remark it, because the falling leaves are hidden by the living ones.

Now, the reason why a leaf falls off when it is dead, seems to be this: the bark to which it is attached goes on growing and expands; the leaf-stalk, as it dies, shrivels and contracts; the consequence of which is, that the one separates from the other. It is, in fact, just what happens when a piece of iron is heated, and then cooled; the outer part, which is an oxide, cools much quicker than the inner part. The metal contracts, but as the metal and the surface cool at a different rate, they also contract at a different rate, and so separate. Such is the case in the summer time; and, when the frost comes in the autumn, something of the sort takes place. At that time the leaves are generally in a dying state, for the reasons already explained; a partial separation has, in fact, taken place between them and their branches.—*Literary Jour.*

From the Annual Monitor for 1855.

Samuel Routh, of Exthorpe, Doncaster, an Elder, deceased, Tenth mo., 6th, 1853, aged 64 years.

He was the son of Robert and Mary Routh, of Lancaster, and was born there, in 1789.

The Christian course of this beloved Friend, affords an instructive illustration of the efficacy of Divine grace, and of the truth of the Scripture declaration—"The righteous shall hold on his way, and he that hath clean hands shall be stronger and stronger."

Of the earlier portions of his life, we possess but little information. There is, however, reason to believe, that from a comparatively early period the seed of the kingdom took root in his heart; and although its growth might not be very rapid or apparent, its developement was like the gradual operation of the leaven "hid in three measures of meal, until the whole was leavened;" and that the solemn and important truth "Ye must be born again," was at length applied with practical efficacy to his heart and conscience, was satisfactorily evidenced by the matured fruit, by which every branch of the True Vine is known.

He had very humble views of himself; his character was retiring, and he was not much accustomed to speak or write of his personal feelings; so that his spiritual progress has to be traced rather by the observations of those around him, than from any records of his own. As he was favoured to grow in the truth, his love for the principles and practices of Friends increased, and his interest in the religious welfare of the society deepened. He felt it to be of vital importance, that we, as a people, should seek to live up to what we profess,—even to be led and guided by the spirit of truth,—by a constant reference, both in little things and in greater ones, to that inward monitor, which cannot be removed into a corner. His attachment to our simple mode of worship was sincere and strong, and his attendance of all our meetings for the performance of this solemn duty, was very exemplary. In a letter written to his wife from Buxton, in 1851, he says, "Yesterday I sat alone for an hour and a half, instead of going to Monyash; and felt it a privilege to feel that we are not dependent on man's teachings, in endeavouring to draw near to Him who seeketh such to worship him as endeavour to do so in spirit and in truth, even through feelings of weakness, discouragement, and a deep sense of unworthiness."

In his own Monthly and Quarterly Meetings, his services in the discipline were truly acceptable, and the religious exercise of mind in which he engaged in them was very instructive. As an elder in the church it was evidently his earnest concern to be found faithful; and we doubt not, a blessing rested on his watchful oversight, and judicious counsel in this department of Christian labour.

In 1846, he addressed a few lines to a friend, expressive of the "strong sympathy" he had for many years felt for the members of our very small meetings. A brief extract from this letter will not not only exhibit an interesting trait of character, but may afford instruction to some of those on whose behalf it was penned. "Would it be possible," he asks, "to lay simply, yet forcibly and intelligibly before the class in question, without discouraging them by taking too high grounds, the very great importance of their position in a Christian community, as bearing an open testimony to the world of their faith in the reality of the presence of the great Minister of the Sanctuary; and also of the reality of the fulfilment of the promise of our Saviour, to be with the two or three gathered together in his name; not merely two or three individuals *sitting down together in meeting*, but two or three lovingly gathered together in and unto his name and power. But, then, in order to this, there must be a daily living and walking in the same; a real abiding in the True Vine. There is to me a peculiarly deep virtue in thus preaching by life and conversation. I would we had many such preachers scattered in the little hamlets, among our rural population. I want Friends to see and feel more of the necessity of thus walking before their neighbours in their lonely allotments; and not to think that, because they are thus placed in so discouraging a situation as to the society of their friends, they have nothing to do."

He was largely imbued with that charity which "thinketh no evil." This led him to put the most favourable construction on the conduct of others, and to avoid everything bordering on detraction. He used to say, he felt "far too full of faults himself, to be inclined to dwell on the failings of his friends, or to sit in judgment upon them; but he desired rather to seek to mind his own steppings." He was very solicitous to encourage every appearance of good in others, and his kind and judicious counsel was often strikingly applicable, and gratefully received by those to whom it was given.

His power of sympathy was great, and his mode of manifesting it peculiarly his own. It was not by the expression of many words, but by a tenderness of manner which those only can appreciate who have been privileged to partake of it, and by a self-sacrificing endeavour to alleviate the sufferings, and soothe the sorrows which had excited his Christian feeling.

This sketch of the character of our dear Friend, would be very incomplete, were it to leave unnoticed his long continued and unwearied labours on behalf of Ackworth School. Grateful for the benefit he had himself enjoyed as a scholar in that institution, he felt it a privilege to devote his time and abilities in promoting its welfare. Till within a short time of his death, and when in a very feeble state of bodily health, his cheerful visits to the school were continued; and long will those who were for many years associated with him on the committee, as well as the officers of the institution, gratefully recur to the value of his counsel and services. For several years before his death, he was subject to frequent attacks of severe and suffering illness. They were regarded by him as fatherly chastenings designed for his further purification; and, as he would pleasantly observe, as renewed notices to prepare to quit the tenement. His Christian patience, meekness and uncomplaining submission, were deeply instructive; and his brief but full expressions afforded to those who surrounded his sick bed, satisfactory evidence that his hopes were placed on the true foundation, and that his peace was made with God, through Christ his Saviour.

When somewhat recovering from one of these attacks, about two years before his last illness, he thus expresses his feelings in a letter to his wife: "There are times (would we could more continue under their influence,) when I feel very much more solicitous to witness a thorough preparation of heart and soul to enter upon an enduring inheritance, than I do for a restoration to bodily strength; for of my infirm health, I do not think I ought to complain. I have long been of the mind, that these attacks are, one and all, warnings of the breaking up of the earthly tabernacle, and mercifully sent to tell us plainly, that this is not our rest."

His last illness was short; though it had been evident to himself and his friends, for a long time previously, that his constitution was giving way under the ravages of his disorder. He had gone, for a little change, on a visit to his daughter, at Kendal; and whilst there, he was observed to be in a remarkably heavenly frame of mind, full of love and gratitude. The continual clothing of his spirit seemed to be not of earth, but as if a foretaste of the glories on which he was so soon to enter was vouchsafed him, even here; and as if he were waiting at the very gates of heaven, for the summons to enter within their portals.

Some of the occasions of sweet religious communion with his wife during this visit, are recurred to by her with tender emotion and mournful pleasure. On one of these, being together alone on the evening of the Select Quarterly Meeting, at Leeds, he referred to the circumstance with much feeling; his mind appeared bound to his friends in close religious fellowship, and he remarked with emotion—"There are many dear friends assembled there whom I tenderly love."

It was with difficulty he reached home; and after a few days of increased illness, his spirit was gently released from its enfeebled tabernacle, and permitted to enter, we undoubtingly believe, through redeeming mercy, into his Saviour's rest. The remembrance of the bright example of our departed friend is precious to many; and to them, "he being dead, yet speaketh."

The Cliff Swallow.—A beautiful story is going the rounds, taken from an old number of the Greenfield (Massachusetts) Advertiser, of the Cliff Swallow, which species has recently made its appearance, and begun to make settlements under the eaves, in Delaware county, Pennsylvania, its nest being in the shape of a retort with a long neck. The story referred to is of one of these swallows, which was seen to linger after the tribe had taken its usual flight to the tropics, apparently alone, through the autumn and winter. The following is the explanation:

Spring came, and he was there. An occurrence so singular, and contrary to the habits of the migrating tribes, caused his motions to be watched with more attention. At length another head was observed protruding from one of the nests, which seemed to be the abode of the bird which had been remarked with so much interest. On examining the nest the mystery was beautifully solved. Another swallow was found there a prisoner.

One of its legs had become entangled by a thread of hair, which had been used in the lining of the nest, and held it there a captive. Yet it was not deserted by its faithful mate. Through all the long and dreary winter, this patient self-devoting love supplied her wants. He saw without regret, but for his hapless consort, the deepening gloom of the fading year; he felt without feeling, but for her, the advancing rigour of winter; and if he, at times, remembered the sunny skies of the South, and the pleasures his tribe were then enjoying, it was only to sigh that she could not partake of them. By night and by day, in sunshine and in cloud, in the calm and the tempest, he was with her, ministering to her wants, and cheering the hours of her hopeless captivity by his caresses and untiring devotion.—*Late Paper.*

For "The Friend."

"Charity makes the *best* construction of things and persons; and is so far from being an evil spy, a backbiter, or a detractor, that it excuses weaknesses, extenuates miscarriages, makes the best of everything, forgives everybody, serves all, and hopes to the end. It moderates extremes, labours to accommodate differences, and had rather suffer than revenge; and is so far from exacting the uttermost farthing, that it had rather lose, than seek its own violently. As it acts freely, so zealously too; but it is *always for good.* An universal enemy against discord, and a holy cement for mankind."

"All zeal for a reform, that gives offence
To peace and charity, *is* mere pretence;
A bold remark; but which, if well applied,
Would humble many a tow'ring [zealot's] pride.
Perhaps, enchanted for the love of fame,
Some seek the jewel in their neighbour's shame."

"Lastly, charity *is* love to God, and the brethren, which raises the soul *above* all worldly considerations; and as it gives a taste of heaven upon earth, so it *is* heaven in the fulness of it, to the *truly* charitable here. This *is* the noblest sense charity has, after which all *should* press, as that "more excellent way." Nay, most excellent; for as faith, hope, and charity, were the more excellent way that the great apostle discovered to the Christians, (too apt to stick in outward gifts and church performances,) so, of that better way, he preferred charity as the *best* part, because it would outlast the rest, and abide forever. Wherefore, a man can *never* be a true and good Christian without charity, even in the lowest sense of it; and yet he may have that part thereof, and still be none of the apostle's *true* Christians; since he tells us, "That though we should give all our goods to the poor, and *want* charity, (in her other and higher senses,) it would profit us nothing." Nay, though we had all tongues, all knowledge, and *even* gifts of prophecy, and were preachers to others; aye, and had zeal enough to give our bodies to be burned; yet, if we wanted charity, it would *not* avail us for salvation. It seems it was his (and indeed ought to be our) "one thing needful," which our Saviour attributed to Mary, in preference to her sister Martha, who seems not to have wanted the lesser parts of charity. Would to God this divine virtue *were* more implanted and diffused among mankind, the pretenders to Christianity *especially;* and we should certainly mind piety *more* than controversy; and exercise love and compassion, *instead* of censuring and persecuting one another in *any* manner whatsoever."

"True charity, a plant divinely nurs'd,
Fed by the love from which it rose at first,
Thrives against hope; and, in the rudest scene,
Storms but enliven its unfading green;
Exub'rant *is* the shadow it supplies;
Its fruit on earth, its growth above the skies.
To look at Him who form'd us and redeem'd;
So glorious now, tho' once so disesteem'd;
To see a God stretch forth his human hand,
T' uphold the boundless scenes of his command;
To recollect that, in a form like ours,
He bruised beneath his feet th' infernal pow'rs;
Captivity led captive,—rose to claim
The wreath he won so dearly in our name;
That thron'd above all height, he condescends
To call the *few* that trust in Him his friends;
That, in the heav'n of heav'ns, that space He deems
Too scanty for the exertion of his beams,
And shines, as if impatient to bestow
Life and a kingdom upon worms below;
That sight imparts a never-dying flame,
Tho' feeble in degree, in kind the same.
Like Him, the soul, thus kindled from above,
Spreads *wide* her arms of universal love;
And still enlarg'd as she receives the grace,
Includes *creation* in her close embrace."

Moorish Coffee-Houses.

Among the places which I recommend every tourist to visit at Algiers, I must especially mention the Moorish coffee-houses, of which in the upper part of the city alone there are above sixty. I spent an hour there almost every evening, and I seldom regretted my visit; for, whoever is interested in the people and their language, finds instruction here. No place is more favourable for the acquirement of the Arabic language. Even if not much talk is going on, still the Moors are here less taciturn than anywhere else. The long rows of different guests, sitting with crossed legs, offer a most interesting opportunity for the study of physiognomies. At the side of the immovable calm Moor, or Kurugli in gaudy Turkish garb, we behold a sable negro in the same style of attire, but mostly of dirty yellow material. Next to him is a fine tall Arab with sunburnt face, his mighty frame clad in white garments, and a rope of camel's hair twisted round his head. Then again we notice a short grown Kabyle, ragged, wild, and with a piercing glance, or a Mozabite of the Sahara, and a Biskari from the Beladel-Jerid, and among them, again, a Frenchman in regimentals, or clad according to Paris fashion, adapting himself to every society, and everywhere happy by his merry tone of mind.

FRUGALITY OF THE ARABS.

When invited to the table of Christians, they take with pleasure a glass of wine or brandy, in spite of the Koran; but they never become drunkards; they never spend a penny for inebriating drinks: they take them only when asked to do it by their hosts. Spirits never become necessities with them, and all the remembrance of the merriment caused by wine is not able to wrest out a boojoo from their pocket. I never saw a drunken Arab during all my stay in Africa. Only milk and water are tasted in the encampments, and yet this people are not inferior to any other, either in bodily strength or mental energy. Satisfied with the kuskusu, unleavened bread, and a few fruits for his food, the Arab is capable of yet greater abstinence. The army of Abd-el-Kader, before Ain Maadi, for months, lived on nothing but boiled corn. Very few, if any, beasts of burden follow the Arab army with provisions, for every horseman carries a few loaves of bread and a little bag of flour on his horse, which suffices, in case of need, for weeks; and if his provender begins to fail, a few roots of the dwarf-palm, or some cactus figs, keep him in good strength and spirits.

THEIR HABITS UNCHANGED.

The French have effected great improvements in the state of the country; they have constructed roads between the principal towns, and stage coaches run from Algiers in all directions, even across the Atlas, and reach nearly to the desert. Dr. Wagner, however, thinks it very doubtful whether it is possible to induce the Arabs to give up their roving shepherd life under the tent, and to accustom them to fixed habitations, to industry, and to property, according to our notions:—

"Their intercourse with the French since 1830 has not brought about any change in their manner of life. General Bugeaud tried to colonize the tribes allied with France in fixed villages. He gave them all the building material, and the sappers and miners began to erect houses for them. But the half built cottages were soon deserted by the Arabs; and had they not been forced by General Bugeaud to remain, the majority would have rather gone over to Abd-el-Kader than have become fixed to the soil. The love for an entirely independent life is as firmly rooted in the Arab as the belief in Mohammed. The comfortable life of the citizens, their substantial houses, granting shelter against sun and rain; the furniture on which they comfortably recline; the good fare they relish, the good clothes they wear,—all this the Arab has seen for many years; but to him it has no peculiar attraction. He could live himself in the same way if he chose; he is rich, he has hoards of cash, and numerous herds, which he could sell; he could with the money easily buy a Moorish house, good furniture, and splendid clothing, in any of the cities; but he likes better to remain in the wilderness, to live under the tent through which the wind whistles, and to wear the dirty burnus, a beggarly attire, but comfortable to him from habit."

Circular of the Bible Association of Friends in America.

In again calling the attention of Auxiliaries to the Annual Queries to be answered previous to the general meeting of the Association in the Fourth month, the Corresponding Committee would press upon Friends who have been engaged in the distribution of the Holy Scriptures, the importance of furnishing full and accurate answers to *all* the Queries, and of forwarding their Reports *seasonably* to the Depository.

It may be recollected that in making donations to Auxiliaries, the board are guided in deciding what number of Bibles and Testaments shall be sent to each, by the information given in its Report. Hence those Auxiliaries that do not report in time, are liable to be left out in the distribution.

Specific directions should be given in every case, how boxes should be marked and forwarded;

nd their receipt should always be promptly ac-cnowledged.

Address John Richardson, No. 50 North Fourth treet, Philadelphia.

THOMAS KIMBER,
CHARLES YARNALL,
SAMUEL BETTLE, JR.
Committee of Correspondence.

Philada., Second mo. 1855.

QUERIES.

1. What number of families or individuals have been gratuitously furnished with the Holy Scriptures by the Auxiliary during the past year?
2. What number of Bibles and Testaments have been sold by the Auxiliary within the past year?
3. How many members, male and female, are there belonging to the Auxiliary?
4. What number of families of Friends reside within its limits?
5. Are there any *families* of Friends within your limits not supplied with a copy of the Holy Scriptures in good clear type, and on fair paper; if so, how many?
6. How many *members* of our Society, capable of reading the Bible, do not own such a copy of the Holy Scriptures?
7. How many Bibles and Testaments may probably be disposed of by sale within your limits.
8. Is the income of the Auxiliary sufficient to supply those within its limits who are not duly furnished with the Holy Scriptures?
9. What number of Bibles and Testaments would it be necessary for the Bible Association to furnish gratuitously, to enable the Auxiliary to supply each family?
10. What number would be required in order to furnish each member of our religious Society, capable of reading, who is destitute of a copy, and unable to purchase it?
11. How many Bibles and Testaments are now on hand?

Selected.

THE LOVED AND LOST.

Time hath no power to bear away,
Thine image from the heart;
No scenes that mark life's onward way
Can bid it hence depart:
Yet, while our hearts with anguish riven,
Mourn, loved and lost, for thee,
We raise our tearful eyes to heaven,
And joy that thou art free!

We miss thee from the band so dear,
That gathers round the hearth;
We listen still thy voice to hear,
Amid our household mirth;
We gaze upon thy vacant chair,
Thy form we seem to see,
We start to find thou art not there,
But joy that thou art free!

A thousand fond familiar things,
Within our childhood's home,
Speak of the cherished absent one,
Who never more will come;
They wake with mingled joy and pain,
Fond memories of thee,
We would not call thee back again,
We joy that thou art free!

Amid earth's conflicts, toil and care,
When dark our path appears,
'Tis sweet to feel thou can'st not share
Our sorrows, or our tears,
That on thy head no more shall fall
The storms we may not flee;
Oh! safely sheltered from them all,
We joy that thou art free!

For thou hast gained a brighter land,
And death's dark stream is past,
Thine are the joys at God's right hand,
That shall forever last.
A crown is on thine angel brow,
Thine eyes thy King can see,
Thy home is with the blessed now,
We joy that thou art free!

THE RAINBOW.

As brightens the bow of thy promise, O Lord!
The hearts of thy children in thankfulness bend;
'Tis the circle of glory that witness'd thy word,
And wears, in all ages, the smile of a friend.

We bless thee for mercy our forefathers knew,
As we hail the glad sign of the covenant day;
When thy love sealed the heirship of life to a few,
And the wreck of a world put thine anger away.

We bless thee, that still, as the terror-fraught storm
Seems to threaten anew that thy promise shall fail,
Thou giv'st to our vision this beauteous form,
As the dark clouds bear off, on the wings of the gale.

'Tis the emblem, indeed, of our transient delight,
Which fades, ere the wish of the bosom it warms;
'Twas the tempest before it, that gave it to sight;
And life owes its rainbow alone to its storms.

But, bless'd be the emblem that to us conveys,
A lesson of truth in a picture so fair:
As it glows, we will yield thee a tribute of praise,
And as fades its last tints, will thy goodness declare.

Whom the Lord loveth he Chasteneth.

Many years ago, a minister entered the shop of a prosperous London bookseller, with whom he was on terms of intimate and christian friendship. He inquired for his friend, and when told that he was at home, but particularly engaged, sent a messenger to him to the effect, that he wanted an interview with him, if but for a few minutes. This message being delivered, the minister was invited to walk up stairs, into the bookseller's sitting-room. He entered the room, and found his friend sitting by his child's cot-bed. The child was dying, but with affection strong in death, it had clasped its father's hand, and was holding it with a convulsive grasp. "You are a father," said the afflicted parent, "or I should not have allowed you to witness such a scene."

"Thank God, fervently exclaimed the minister, as he comprehended the situation of his friend: thank God, he has not forgotten you! I have been much troubled on your account, my dear sir. I have thought much about you lately. I have been much afraid for you. Things have gone on so prosperously with you for a long time; I began to be almost afraid that God had forgotten you. But I said to myself, surely he will not forsake such a man as this; will not suffer him to go on in prosperity without some check, some reverse! And I see he has not. No; he has not forgotten you." "The Lord doeth all things well."

From "The Leisure Hour."

Drifts of the Ocean.

Concluded from page 183.

If oceanic drifts did not lead directly to the first passage of the Atlantic, and the revelation of the western world, they contributed, in no slight degree, to the enterprise and the discovery. Columbus was strengthened in his belief that land might be reached by sailing westerly from the ports of Spain, by the arrival of objects from that quarter, borne on the billows, and which were evidently not of European origin. Thus, pieces of carved wood, not laboured with any iron instrument, had been observed by mariners floating on the waves. Reeds of immense size had arrived at the Madeiras. Huge pine-trees of novel species had been cast ashore on the Azores; and two dead bodies had been stranded on the island of Flores, whose features proclaimed them to belong to an unknown race. These significant circumstances were sagaciously interpreted by the great navigator, and fortified him in the resolution to venture upon the untracked waste of waters. The objects had been conveyed from transatlantic coasts, by the warm current from the gulf of Mexico, hence called the gulf-stream, the efflux of the waters which accumulate in its basin, where they are exposed to a high temperature. The stream rushes with great velocity through the strait of Florida, passes for some distance in a narrow volume along the United States, turns to the eastward, gradually expands and slackens, crosses the North Atlantic, and extends its influence to the whole of the shores of western Europe. Its impetus conducted fragments of the "Tilbury," an English vessel burnt near Jamaica, to the coast of Scotland; and tortoises inhabiting the waters of the Antilles have undergone a similar involuntary transport by its means.

While objects abandoned to the guidance of the elements, without ship, sail, or steersman, have thus accomplished the passage of the Atlantic from west to east, a similar voyage has been performed in another part of its basin, but from east to west. In the year 1770, a small vessel, laden with corn, was driven out to sea from one of the Canary Islands, while none of the crew were on board. It was carried to the opposite continent, and went ashore near the city of Caracas, in Venezuela. This was owing to the equatorial or tropical current, so named from its position. It blows westward from the shores of Africa, to the north extremity of Brazil, sweeps the northern coasts of South America, and passes through the Caribbean sea into the gulf of Mexico, where, its further progress westward being arrested by the continent, the waters accumulate, owing to the peculiar conformation of the shores, and disengage themselves by forming the returning gulf-stream. Thus the two currents constitute a gigantic whirlpool—perpetually circulating in the same route. When Humboldt was at Teneriffe, he was informed that, a short time before his visit, the sea had left, in the harbour of St. Croix, the trunk of a *cedrela odoratu*, covered with the bark. This tree vegetates exclusively in the tropical regions of America. It had been torn from its native soil, probably by some river in Honduras, and drifted across the ocean by the gulf-stream. If, instead of having been thrown on the strand at Teneriffe, the cedrela had been carried further south, it would have encountered the equatorial current, and might have been conducted back to its original neighbourhood, having made a complete tour of the Atlantic.

Ignorance of the existence, direction, and force of the great sea-streams formerly led to many maritime disasters; but owing to more accurate acquaintance with them, and the better nautical education of commanders, navigation is now more facilitated than endangered by the currents of the deep. While answering this purpose, they are of high service in equalizing temperature and dispersing noxious elements, while, in the lapse of ages, they have acted an influential part in the distribution of vegetable, animal, and human life. Seeds have floated from one region to another, and have germinated on the shore which has finally received them, stocking it with a new race of plants—for the seeds of several terrestrial species are so defended as to preserve their vitality after long exposure to the briny fluid. Thus the *eriocaulon septangulare*, or jointed pipewort, is found in the islands of Skye, Coll, and a few of the other Hebrides, with the district of Connemara in the west of Ireland, but is not known elsewhere in Europe. The plant is an inhabitant of North America, and has, doubtless, established itself in some of our western localities, in the manner described, by means of the gulf-stream. Seeds of the *anicardium occidentale*, or cashew-nut, the *lenticula marina*, or sargasso, and the *guilandina bonduc*, or nicker-tree, all transatlantic products, have thus accomplished the passage of the ocean, and survived to germinate. Animals, likewise, as the polar bear, fox, and wolf, have been borne on ice-fields to fresh localities; and the scattering of the human race over the archipelagoes of the Pacific has been promoted by currents drifting the

crews of canoes to islets previously unknown and uninhabited.

Besides the great sea-streams, there are local currents of great force, confined to the coasts, produced by the antagonism of narrow channels, or projecting headlands, with tidal action. Such are the Race of Portland, and the Roost of Sumburgh, in connection with our own shores. But the most striking examples are on the sea-board of the United States. In 1839, a vessel from New Orleans, laden with a considerable amount of specie, was wrecked at the south end of the island of Galveston. Great efforts were, of course, made to recover the valuable cargo, but in a very short time the vessel was reported to be nearly covered with sand. A few weeks afterwards, at the other end of the island, nearly thirty miles distant, some of the doubloons were brought up by fishermen in their nets. The men were arrested and imprisoned on the charge of having robbed the wreck, and their mode of accounting for the possession of the treasure was not credited for a moment, till careful scientific inquiry convinced the authorities that the metal had actually been carried through the intervening distance by the mere force of the current. The following is still more curious. A ship having been wrecked at one extremity of the island of Nantucket, the keeper of the lighthouse at the other supplied himself for some time with fuel from the coal originally deposited with the wrecked vessel. It had been brought entirely round one side of the island by the action of the tidal current. Near the same spot, bricks have been similarly transported. At Siaconset, there is now a chimney standing, built with bricks which were thus conveyed to the neighbourhood. It is not uncommon for mankind to act a part, utterly unsuspected by their most intimate associates, till sensible evidence of it is afforded. So it seems does the ocean, as in the above instances, where it circulated cash, turned coal-heaver, and served for a bricklayer's assistant!

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 181.)

ESTHER CHAMPION.

Esther Champion was the daughter of Joseph Palmer, of Flushing, Long Island. She was early visited by the Lord's holy Spirit, and through submission to its refining baptisms, she grew in grace, and in spiritual experience. As she sought the Lord in sincerity, she witnessed the promise fulfilled in her own experience, "Seek and ye shall find." As her love for her dear Saviour increased, his favour was manifested largely towards her, causing the dew of Divine grace to descend upon her, and her knowledge and faith to grow. Thus was she fitted for the work and service he designed her to perform, being prepared not only to receive, but to exercise the gift in the ministry of the gospel in his authority. This gift was conferred upon her in early life, and after a season of growth, He sent her forth to visit his people in his love, "to preach the gospel of peace and salvation by Christ;" to declare "his coming by his Divine light and spirit in the hearts of all men, inwardly to teach them," and she laboured earnestly "to gather them to him, in order to their coming to know salvation by him."

In the year 1704, we find Esther Palmer engaged in extensive travels throughout the American provinces, accompanied in part, by that faithful labourer in the gospel, Susanna Freeborn. Of their services on this visit, we find various traces. They were with Thomas Story, towards the close of the Fifth month, in the Island of Nantucket. He says, "Esther Palmer and Susanna Freeborn being there, had good service. They were living ministers, and their testimonies reaching and affecting the people, all objections were removed against women's preaching, without the labour of dispute, or contention, or jar about it."

After visiting meetings and Friends in New England, Esther Palmer and her companion came, about the beginning of the Ninth month, into the limits of Philadelphia Yearly Meeting. Here they remained busily engaged in their Master's work until the following First month, when Mary Lawson having a concern to visit Friends in Maryland and to the southward, Esther Palmer accompanied her, leaving Susanna Freeborn behind, who, after filling up the measure of apprehended duty, returned home about the beginning of the Fourth month, bearing a certificate of the "good unity" of Friends of Philadelphia with her gospel services. Esther Palmer and Mary Lawson visited Friends in Maryland, Virginia, and Carolina, and brought testimonials to Philadelphia Yearly Meeting in the Seventh month, that their gospel labours had been acceptable to Friends. Esther Palmer did not feel her mind quite relieved by this southern journey, and the "good unity" of her friends at Philadelphia being received, she joined Mary Banister, a Friend, from England, in a four or five weeks' visit to some parts of Virginia and Maryland. In the Tenth month, she had returned to Philadelphia, and having completed the labour appointed her, was furnished with a returning certificate of the cordial unity of Friends there, with her conversation and religious services among them. She had been from her own residence about eighteen months.

We find her again labouring in Philadelphia Yearly Meeting, in 1707. Of her various journeys on this continent, her friends say, "She had meetings in several places among many people, where there had been none before, and the Lord was pleased to bless her labour, so that many were gathered to the knowledge of his truth, and therein to worship him in the Spirit of his Son, our blessed Saviour, the Lord Jesus Christ."

"After she had travelled many thousand miles in the Lord's service, in the work of the ministry of the gospel in those American parts, she found for some years a concern, which so continued upon her, that she could not with satisfaction omit it, which was to visit some parts of Great Britain, but more particularly the inhabitants of London."

She was in Philadelphia, in the latter end of the Fourth, and the beginning of the Fifth months, probably on her way to the Chesapeake Bay to take passage for England. She reached London, the 20th of the Eighth month, "and had good service there, which many that were witnesses and sharers, can testify."

Her religious duty performed in England, she married Richard Champion, of Bristol, and settled there. She continued zealously concerned to attend to her Master's service, in her new station, and visited various parts of Great Britain as a minister of the gospel, although she had numerous cares, her husband being a widower with two children when she married him.

"She was a woman of a solid yet cheerful spirit, much abounding in love and true zeal for the Lord and his truth; and would express her great grief when there was any disorder, or want of true love in any church, meeting, or family, where she travelled."

She was taken with a violent attack of disease, on the 23d of the Eighth month, 1714, which proved to be the small-pox. Whilst the distemper increased, "she retained a sound understanding, and oftentimes spoke of the goodness of God to her soul, and by the aboundings of his love, her heart was filled, and her cup made to overflow, to the comfort of those present. She was freely resigned to the will of God, either to die or live, though she had inexpressible love to her husband and children, and desired, if she lived, to be further serviceable to the church of Christ, yet said, 'the Lord's will, and not mine, be done.'"

She often exhorted those who were present, to love, seek, and serve the eternal God with all their hearts. To her physician she said, "Many good and precious opportunities thou hast in thy way of practice, if rightly applied, in seeing the advantage, inexpressibly joy, and comfort, the Lord is pleased oftentimes, on a dying bed to give and afford those who live in his fear; and on the contrary, the cries, bemoanings, and bitter bewailings of others, who have not improved and spent their time well in this world." "It is not a profession of religion only that will render men acceptable to God; but serving him in and by the assistance of Jesus, the Son of God, the only Intercessor for man's salvation."

Her friends, fearing she was exerting herself too much in speaking, reminded her of the weakness of her body. On this she said, "The Spirit of Christ in me raises my spirit and strength to speak of his goodness, and praise his great and good name." She added, "All that man can do, is but his duty; therefore, the Lord, through his Son, our Saviour, the immaculate Lamb, ought to have all the honour." She then expressed her desire, that the Lord would be a shepherd to his people, as he had been and still was to her soul, for he had given her to enjoy sweet pastures, and made her heart exceedingly to overflow. His rod and his staff, she said, had been and still were her inexpressible comfort.

As she had frequently laid in a sweet and heavenly frame of spirit, supplicating the Lord, so she did at this time, praising him for his goodness to her soul, saying that "she knew her Redeemer to live and to be with her. It is an easy thing to talk of death; but it is an inexpressible comfort to be prepared for a dying hour, and to meet death, when it appears, cheerfully; as I now do, by the help of the same Jesus, my Saviour, who suffered without the gates of Jerusalem."

After this she prayed earnestly for the return and repentance of those that run into a loose and libertine spirit; and that the glory of God might appear in a particular manner to the inhabitants of Bristol, and that God's church might be preserved in perfect peace, as a light to the beholders. She also was engaged fervently to crave that the Lord would incline the hearts of the young in the day of early visitations, to seek and serve him, as he had done to her soul in her youthful days. "For this," she said, "I have cause for ever to admire his inexpressible love."

Throughout her illness, she bore the extreme pain and suffering with more than ordinary patience, resignation and cheerfulness. As her close drew nigh, she said, her time in this world was nearly spent, and "desired her husband to resign her up into the bosom of her blessed Saviour." She then exhorted him to live in the fear of God, and to serve him all his days. She expressed her satisfaction that they had been joined together in marriage, and declared that "the same power which engaged and united their spirits, now called her home to God."

After this she was again engaged in supplication, and although weak in body, was fervent in spirit, and earnestly besought her heavenly Father, "that the brightness of his day might appear abundantly in his people and churches, all the

world over." She then embraced her husband, bidding him farewell in the Lord Jesus Christ.

Sending for her two step-children, whom she had most affectionately loved and treated as tenderly as if they were her own, she embraced them, and desired them to seek, serve and love the eternal God in the days of their youth. After showing the advantage they would thereby receive, she commended them to God, fervently desiring that they might be the Lord's servants all their days. She further desired them to be dutiful to their father, and observe his advice, and to love their little brother and sister, her own children. Then taking her own children in her arms, in an affectionate embrace, she desired the Lord would take them, with the two elder ones to himself, when their time here should come to an end.

She then sent for some of her servants, and exhorted them to fear the Lord in the days of their youth. After desiring that the servants not present might be informed of her counsel, she signified that her heart was filled with the love of God, and in this love she desired the prosperity of his church and people. Her speech then failing somewhat, she said, "I desire my dear love in the Lord Jesus Christ may be remembered to all my relations and friends that ask after me, even in the same love, that now makes my heart to overflow." She then spoke of her satisfaction at the prospect of entering eternal rest, and after again taking an affectionate leave of her husband, "she soon departed this life, as quietly as one that sleeps, with much sweetness," the 3d of the Ninth month, 1714. Her sickness had been of eleven days' continuance.

Her labour in Bristol, "in the work of the word of life," had been large for the time of her residence there, and had been "blessed of God, and made successful to the good and comfort of many."

"She was a virtuous woman, of a sound judgment, and very quick understanding, abounding in true love and zeal for the Lord and his truth; solid and grave, yet of a cheerful disposition, greatly desiring the good of all people, and that they might come to the knowledge of the Truth, live therein, and enjoy peace and acceptance with the Lord. She was a faithful minister of the gospel of peace, a good, virtuous, and affectionate wife, a tender mother, a loving mistress, a true friend, and of an examplary conversation in holiness and true piety."

(To be continued.)

Northern Soup House.

Having received various donations from the country, as well as city, we think it due to those aiding us, to inform them, we have erected the fourth kettle, and were able, on Seventh day, to meet the demand, up to one P. M., after which hour, there are not many calls. Quantity of soup given out on that day, 2,188 quarts; and eight barrels of flour and meal, baked into bread, at a cost of about $30. Bread is given only three days in the week.

The demand has continued to increase, but as we may look for milder weather, and with it the opening of trade and business, we hope soon to see the crowd diminished, that daily awaits the opening of our doors. Contributions of money, as well as of articles of food, have been liberal, enabling us thus far, to carry out the design of the institution. Further contributions will be acceptable.

Phila., Second mo. 20th, 1855.

For "The Friend."

In last week's number of "The Friend," my attention was particularly arrested on reading that account of Mary Chapman, where she speaks of "buying the Truth," and feeling it to be very precious; and so much did she love the principles that she had been led to adopt, "that she should be under the necessity to uphold them, even if no one else were of the same sentiment." Deeply was she pained when she saw among Friends those who manifested a conformity to the world and its spirit, and did not support, what she believed to be, the true standard of Christianity.

A similar remark of dear Mary Dudley's, at the time of her early convincement, has often, particularly of latter times, dwelt much with me; when, feeling the value of our precious principles and testimonies, she says: "Were there no Quaker upon earth, I must be one in principle and practice."

There are, I believe, of the present day, not a few who can adopt a similar language, and who are prepared to stand by and uphold those principles and testimonies.

"Be ye steadfast," my dear friends, "unmovable; always abounding in the work of the Lord, forasmuch as ye know that your labour is not in vain in the Lord."

C. C. Second mo. 16th, 1855.

THE FRIEND.

SECOND MONTH 24, 1855.

The present winter has been remarkable chiefly on account of the pecuniary difficulties that have pervaded nearly all ranks in society, and the privation and suffering inflicted on the labouring class, by the want of employment, and the high price of the necessaries of life. As the change from the pecuniary prosperity of the few preceding years, has made itself felt more or less, by all, it has required nothing more; to convince those who still have enough, and perhaps more than is demanded for their comfort or luxury, that large numbers of the industrious poor must necessarily be placed under circumstances that prevents them from helping themselves, and leaves them exposed to the inroads of hunger and nakedness. With this conviction has come a feeling of commiseration, and a recognition of the duty, on the part of those having the means to spare, to impart to the destitute and suffering, that which is required for their relief; so that while there has been no little to bear, from the consciousness of wide-spread want and wretchedness, there has been much to counterbalance it in the evidence afforded of a general disposition to give the funds necessary to supply food to the hungry, and both fuel and raiment to those who have not the means to protect themselves from the inclemencies of the season.

It is impossible to arrive at an accurate estimate of all the money which has been voluntarily contributed during this winter for charitable uses among the poor of our city; but from what we know of the subscriptions to different benevolent societies, not including mutual beneficial associations, the money raised under authority of the town meeting, and funds supplied to temporary organizations for affording relief, we think it may be safely stated that at least eighty thousand dollars have been given for the aid and relief of the destitute amongst us.

It is not to be supposed that all of this large sum has been distributed in the most judicious manner; and cases are occasionally brought to light where gross imposition has been practised; where the vicious and abandoned, taking advantage of the feeling of commiseration and benevolence so generally excited, have secured for their own use, more of the public bounty than was required to relieve their wants, and in some instances have sold what was thus unrighteously obtained, to gratify their debased propensities, with the money thus robbed from both the rich and the poor; nevertheless, we believe all who have acted as almoners of the charitable funds, have had, and still have, abundant evidence, that but for the relief afforded by them, misery and want must have led to despair and crime, and perhaps in a great many cases to death from starvation and cold. Hundreds who were reduced to near the last extremity, who had always been accustomed to depend, under the blessing of Divine Providence, on their own labour, for the maintenance of themselves and families, but who now found themselves cut off from every kind of employment, have been sought out in their cheerless, poverty-stricken dwellings, and with the food and clothing necessary to relieve their immediate wants, have received consolation and encouragement from the conviction that they shared in the sympathy of their fellow-men, and that their merciful Creator forgot them not in the hour of their greatest need. Truly, it is more blessed to give than to receive, and we hope that none will allow the stories of imposition and improvidence which are afloat, and which may be true, to shut up their hearts against the cry of the poor, or induce them to withhold from the needy that which they might otherwise have been willing to bestow.

It is difficult, perhaps impossible, to dispense alms throughout a suffering community, without creating in the recipients more or less of a feeling of dependence on such resources, and in some instances it may have the bad effect of weakening or destroying self-respect and habits of thrift and saving; but a great deal of suffering during the present winter, has been among a class much less likely to be thus injured, than those who have always ranked among the very poor; persons who feel deeply mortified at being obliged to make their destitute condition known, and who are anxiously seeking for any employment they may be able to procure, in order to extricate themselves from the necessity of depending on the liberality of others.

There is reason to fear that the coming month will be a time of sore trial to many; for although business will probably revive, and some of the manufactories may re-commence work, yet it will be impossible for all now idle to find occupation, and there are probably not a few, who have been struggling to make the little they had saved, last through the winter, who will by that time find it all gone, while the meal that was in the barrel has also disappeared, and they cannot see how it is to be replenished.

We desire not to press anything beyond due bounds, but yet are willing to bring these considerations before our readers, with the hope that the generosity which has been so generally manifested, may be cherished; and that those who feel able to contribute may not withhold, from a belief that enough has been given, or from a fear that some portion of what they bestow may find its way into the hands of the unworthy.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 2d inst.—On the 30th ult., a resolution passed the House of Commons by a vote of 305 to 148, for the appointment of a select committee to inquire into the condition of the army before Sebastopol, and into the conduct of the Departments of the Government, whose duty it has been to provide for its wants. Immediately after this vote, the whole Aberdeen ministry resigned; their resignations were accepted, and the members were to retain office only until a new cabinet could be formed.

The Earl of Derby, the leader of the conservative party, had been invited by the Queen to form a new cabinet, but had failed in his attempts to do so. It was supposed that Lord Landsdowne would be placed at the head of the ministry. The Liverpool cotton market was dull, with a slight decline in price. Flour was also dull at from 42s. to 45s. Consols, 91¼.

Peace Negotiations.—The Turkish Ambassador at Vienna has received Plenipotentiary powers to attend the conference. Prussia regards the admission of a Prussian representation to the conference, as indispensable to her accession to the treaty.

THE CRIMEA.—The dates from Sebastopol are to the 22d ult. There had been no fighting of importance, and affairs remained without change. Supplies were arriving, and the condition of the British army was somewhat improved, but the troops continued sickly. The English have ceded to the French a portion of their lines, namely the works commanding the Malakoff town, on which it was expected an attack would soon be made. The French force consisted of eight divisions, and numbered 68,000 men. Two divisions of the French army were immediately to take up a new position, the object of which was, in part, to prevent supplies from reaching the city by a new road which the Russians have made from Inkerman.

On the 15th and 16th ult., there were heavy falls of snow; it lay from three to four feet deep.

It was reported that the Russian army in the field, under General Liprandi, had been largely reinforced.

PRUSSIA.—The demand of France, that a portion of the French army be allowed to pass through the Prussian territory, has been refused. The Prussian army was to be immediately placed on a war footing, and the 4th and 6th corps ordered to occupy the provinces of Saxony and Silesia.

DENMARK has appointed a military commission to place all the Danish forts in a state of defence.

LOMBARDY.—A portion of the French army has been detailed to aid Austria, and will march through Lombardy, to prove to the Italians the reality of the Austrian alliance with France.

SARDINIA.—By the treaty between England, France and Sardinia, the latter engages to send in English ships 15,000 men to the Crimea, under the command of Sardinian Generals. England engages to lend Sardinia one million pounds sterling, or two millions if required, at three per cent., and France and England jointly guarantee to protect Sardinia during the present war.

RUSSIA.—The St. Petersburg Journal gives an official account of the recent crossing of the Danube, and describes it as a reconnoissance in force. Letters, however, say that it was really an advance of the whole Russian army, which was stopped by orders from the Russian Ambassador at Vienna, to prevent embarrassment in the approaching negotiations.

ITALY.—Numerous arrests have been made at Florence, on the pretext of a revolutionary conspiracy having been discovered. Arrests have also been made at Leghorn.

SPAIN.—Arrests have been made of parties supposed to be engaged in a Carlist conspiracy.

HAVANA.—At the latest dates much anxiety and alarm prevailed on account of another apprehended lawless invasion from the United States. Generals Quitman and Henderson were said to be the leaders of the enterprise. In anticipation of the descent of the expedition upon the island, the Governor General had issued a proclamation directing that no quarter should be given the invaders. Numerous arrests of suspected persons had been made.

UNITED STATES.—The reply of the Secretary of the Interior, to the House resolution of inquiry, respecting settlements, illegally made in Kansas, on grounds reserved for the Delaware and other Indians, exhibits a case of great injustice towards those Indians, and also a complicity of government officers in the nefarious transaction. The President has signed the resolution directing vessels to be sent to the relief of Dr. Kane. Steps are to be immediately taken for the departure of the expedition.

Congress.—Both Houses have passed the bill providing for the construction of a line of subterranean telegraph to the Pacific. The principal subjects before Congress have been the Indian appropriation bill, bills for the improvement of harbours, authorizing the construction of more vessels of war, providing more efficient discipline, and increasing the efficiency of the navy, &c. The President has vetoed the French Spoliation bill. A joint resolution of Congress conferring the title and emoluments of Lieutenant General on General Scott, has been approved by the President.

Texas.—The frontiers are said to be suffering greatly from Indian depredations. Eleven men had been recently killed by the Indians, and four captured and carried off, beside much live stock. Five companies of troops were organizing at Fort Chadbourne, to proceed against the Southern Camanches, who are joining the Northern Camanches. An Indian war was regarded as inevitable.

California.—The Northern Light at N. York brought 200 passengers and $476,000 in gold. The California papers contain accounts of trouble with the Indians, and the usual record of affrays in which shooting and stabbing are prominent features.

Oregon.—The news by way of California, is to 6th ult. It was stated that an educated Indian, named Garry, was endeavouring to stir up an insurrection among the Nez Perces and Colville Indians of Washington Territory. The Portland Oregonian of Twelfth mo. 23d, says, Charles Hutchins, of that city, shipped by the last steamer an invoice of leather, amounting to over $2000. This, we believe, is the first shipment of Oregon manufactured leather.

Cincinnati.—On the 17th inst., navigation was fully resumed, and the ice fast disappearing. Provisions were in good demand, with an upward tendency.

Pennsylvania.—The House of Representatives had passed a bill to prohibit the sale of intoxicating liquors on the first day of the week. There were but six negative votes. The late Governor, Bigler, has been chosen President of the Sunbury and Erie Raiload.

New York.—The ship Glance, from Glasgow, recently arrived, brings as part of her cargo *twenty-nine tons of turnips*. The ship Levanter has cleared for *Kamschatka*, with a cargo of 7058 bbls. rye flour, and 495 bbls. wheat flour, for the Russian government. The Belgian paupers and criminals, who for some weeks past have been detained in prison, are to be sent back to Antwerp. The deaths last week numbered 550.

Philadelphia.—The annual report of the Pennsylvania Railroad states the net amount of revenue from the business of last year to be $1,462,376. After paying interest to stockholders, and for borrowed money the surplus profits amount to $287,431. Mortality in this city, last week, 198.

Iowa.—By a letter received from one of our correspondent in Iowa, we learn that throughout the Twelfth and the fore part of the First month, the weather was mild for the winter season. Since the 20th (of First month) it has been regularly severe weather. On the mornings of the 22d and 23d, the mercury stood 8° below zero, which is the lowest point to which it has fallen this winter. On the 26th, it was 2° below, and again on the morning of the 3d of this month, it was 2° below. At noon the mercury has risen as high as 25°. Snow has fallen to the depth of four inches, but it is said to be two feet deep, in some parts of the State. The prices of grain, &c., at the present time are, wheat, from 70 to 75 cts. per bushel; corn, 25 cts.; oats, 20 to 22 cts.; potoes, 50 cts.; onions, 50 cts.; white beans, 75 cts. A large amount of pork has been sold at from $2.50 to $3.00 per cwt.; there are still a large number of swine to be butchered, but not much prospect of a rise in the price.

Miscellaneous.—*The Navigation of the Amour.*—Russia has taken advantage of the Chinese rebellion to obtain from the Imperial government a treaty, yielding to her the navigation of the Amour. This permission, it is supposed, will be construed to amount to absolute possession of the whole course of the river, and an extensive district on each adjacent country.

Lunacy in Canada.—According to the census report, there are 2802 lunatics in Canada. Of these, 1410 are males and 1392 females. The whole population is 1,342,103. The proportion of the insane to the entire population, will, therefore, be 1 to 657.

The Level of Lake Erie, at Cleveland, is 76 feet below the surface of low water in the Ohio river, at Wellsville. The level of the lake and the river at low water at Gallipolis, is about equal. This sets at rest the idea of feeding the river from the lake.

Grinnell's Land.—In the British Admiralty chart of the Arctic sea, lately issued, gives to the land discovered by the Grinnell's Expedition, the name of Grinnell's Land. In a former chart it had been called Prince Albert's Land.

Large Export of Lead.—Galena exported last year 27,285,000 pounds of lead.

French Statistics.—The population numbers 36,000,000. In 1852 there were born in the whole of France 965,080 children, and the deaths were 810,695. The average of life at present is 36 years and 7 months.

Effects of Cold.—The Springfield (Mass.) Republican says, the action of the frost upon the earth, on the night of the 6th inst., maintained a constant succession of explosions, similar to those which occur in the Arctic regions, varying in character and intensity from a light pistol shot, to a slight earthquake. Fissures in the earth were seen in various places, and by one of these operations the file shop of the U. S. armory was cracked from the roof to the ground.

Waste of Life in War.—The losses of the active Russian army, in the year 1854, are stated in official returns to be 111,132 men, of whom 29,204 were killed; 16,156 died from disease; 55,304 wounded; 6460 deserted, prisoners or missing.

This statement takes no account of the losses sustained by the Cossacks and irregular troops; a number of divisions of the regular forces also are not included. The total loss was probably much greater than the numbers stated.

RECEIPTS.

Received from C. Bracken, agt., O., for Sl. Fisher, $2, to 23, vol. 29; from Z. Hampton, agt., Io., for E. Bundy, $2, to 42, vol. 28, for Jon. Bundy, $2, to 23, vol. 29; from H. Robinson, agt., N. Y., for R. J. Murray, $2, vol. 27; from Lewis Forsythe, Del., $2, to 23, vol. 29; from Marshall Feli, O., per N. K., $2, vol. 28; from Z. Webster, N. J., per Joel Wilson, $3, to 26, vol. 28, and Isaac Crafts, $2, vol. 27; from R. Miller, Harrisville, O., $5, a contribution from a few friends for the Northern Soup Society.

WEST-TOWN BOARDING-SCHOOL.

In order to avoid disappointment in case the school should be full, members of Philadelphia Yearly Meeting who intend to enter their children for the summer session, will please make application to Joseph Snowdon, Superintendent at the school, or Joseph Scattergood, Treasurer, No. 84 Arch street, Philadelphia, *by the first of the Third month next*, at which time the parents of the children now at the school, will be expected to inform the Superintendent whether their children are to return to the summer session.

West-Town, First mo. 30, 1855.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah, &c. Friends, who may feel concerned to engage in that station, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Marshalton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

MARRIED, on the 14th inst., in Orchard Street Meeting, New York city, THOMAS H. LEGGETT, JR., to HANNAH H., daughter of Lindley Murray Hoag.

DIED, on the 13th of First month, 1855, at his residence, in Upper Providence, Delaware county, GIDEON MALIN, in the 84th of his age; a member of Chester Monthly Meeting.

——, at Valley Falls, a few miles from Providence, R. I., on the 29th of First month, 1855, RACHEL THORNTON, a minister, and member of the Monthly Meeting of Friends of Philadelphia, aged nearly 68 years. This dear Friend had removed from Philadelphia during the past autumn; and her health, which had for a long time been impaired, gradually declined until the above date. She bore her many afflictions with remarkable equanimity and christian resignation, evincing that her trust was on the unfailing support of the Shepherd of Israel. To some friends who visited her frequently, she expressed, a few days before her decease, the love and sympathy which she had for the little flock in that land, sincerly concerned to maintain the ancient faith of Friends; and the hope she had at one time cherished, of being spared a little longer to mingle with them, and encourage them to faithfulness; but intimated that she was now endeavouring after patient resignation to the result, desiring to acquiesce in the will of her heavenly Father. She was preserved sensible to the last, and as her close drew near, the calmness of her spirit bore evidence to those around her, of the peaceful prospect that awaited her; and in this state she very quietly passed away; we believe to join that blessed company which John saw, who "came out of great tribulation, and have washed their robes, and made them white in the blood of the Lamb; *therefore*, are they before the throne of God, and serve him day and night in his temple."

Progress of the Mechanical Arts.

The following is extracted from a lecture delivered before the Boston Mechanics' Institution, in 1828, by Daniel Webster:—

Human sagacity, stimulated by human wants, seizes first on the nearest natural assistant. The power of his own arm is an early lesson among the studies of primitive man. This is animal strength; and from this he rises to the conception of employing, for his own use, the strength of other animals. A stone, impelled by the power of his arm, he finds will produce a greater effect than the arm itself; this is a species of mechanical power. The effect results from a combination of the moving force with the gravity of a heavy body. The limb of a tree is a rude but powerful instrument; it is a lever. And the mechanical powers being all discovered, like other natural qualities, by induction, (I use the word as Bacon used it,) or experience, and not by any reasoning *à priori*, their progress has kept pace with the general civilization and education of nations. The history of mechanical philosophy, while it strongly illustrates, in its general results, the force of the human mind, exhibits, in its details, most interesting pictures of ingenuity struggling with the conception of new combinations, and of deep, intense, and powerful thought, stretched to its utmost to find out, or deduce, the general principle from the indications of particular facts. We are now so far advanced beyond the age when the principal, leading, important mathematical discoveries were made, and they have become so much matter of common knowledge, that it is not easy to feel their importance, or to be justly sensible what an epoch in the history of science each constituted. The half frantic exultation of Archimedes, when he had solved the problem respecting the crown of Hiero, was on an occasion and for a cause certainly well allowing very high joy. And so also was the duplication of the cube.

The altar of Apollo, at Athens, was a square block or cube, and to double it required the duplication of the cube. This was a process involving an unascertained mathematical principle. It was quite natural, therefore, that it should be a traditional story, that by way of atoning for some affront to that god, the oracle commanded the Athenians to *double his altar;* an injunction, we know, which occupied the keen sagacity of the Greek geometricians for more than half a century before they were able to obey it. It is to the great honour, however, of this inimitable people, the Greeks, a people whose genius seems to have been equally fitted for the investigations of science and the works of imagination, that the immortal Euclid, centuries before our era, composed his Elements of Geometry; a work which, for two thousand years, has been, and still continues to be, a text-book for instruction in that science.

A history of mechanical philosophy, however, would not begin with Greece. There is a wonder beyond Greece. Higher up in the annals of mankind, nearer, far nearer, to the origin of our race, out of all reach of letters, beyond the sources of tradition, beyond all history except what remains in the monuments of her own art, stands Egypt, the mother of nations! Egypt! Thebes! the Labyrinth! the Pyramids! Who shall explain the mysteries which these names suggest? The Pyramids. Who can inform us whether it was by mere numbers, and patience, and labour, aided, perhaps, by the simple lever; or if not, by what forgotten combinations of power, by what now unknown machines, mass was thus aggregated to mass, and quarry piled on quarry, till solid granite seemed to cover the earth and reach the skies?

The ancients discovered many things, but they left many things also to be discovered; and this, as a general truth, is what our posterity, a thousand years hence, will be able to say, doubtless, when we and our generation shall be recorded also among the ancients. For, indeed, God seems to have proposed his material universe as a standing perpetual study to his intelligent creatures; where, ever learning, they can yet never learn all; and if that material universe shall last till man shall have discovered all that is unknown, but which, by the progressive improvement of his faculties, he is capable of knowing, it will remain through a duration beyond human measurement, and beyond human comprehension.

The ancients knew nothing of our present system of arithmetical notation; nothing of algebra, and, of course, nothing of the important application of algebra to geometry. They had not learned the use of logarithms, and were ignorant of fluxions. They had not attained to any just method for the mensuration of the earth, a matter of great moment to astronomy, navigation, and other branches of useful knowledge. It is scarcely necessary to add, that they were ignorant of the great results which followed the development of the principle of gravitation.

In the useful and practical arts, many inventions and contrivances, to the production of which the degree of ancient knowledge would appear to us to have been adequate, and which seem quite obvious, are yet of late origin. The application of water, for example, to turn a mill, is a thing not known to have been accomplished at all in Greece, and is not supposed to have been attempted at Rome till in or near the age of Augustus. The production of the same effect by wind, is a still later invention. It dates only in the seventh century of our era. The propulsion of the saw by any other power than that of the arm is treated as a novelty in England so late as in the middle of the sixteenth century. The Bishop of Ely, ambassador from the Queen of England to the Pope, says he saw, "at Lyons, a saw-mill driven with an upright wheel, and the water that makes it go is gathered into a narrow trough, which delivereth the same water to the wheels. This wheel hath a piece of timber put to the axeltree end, like the handle of a *broch* (a hand organ), and fastened to the end of the saw, which being turned with the force of water, hoisteth up the saw, that it continually eateth in, and the handle of the same is kept in a rigall of wood from severing. Also the timber lieth, as it were, upon a ladder, which is brought by little and little to the saw by another vice." From this description of the primitive power-saw, it would seem that it was probably fast only at one end, and that the broch and rigall performed the part of the arm in the common use of the hand-saw.

It must always have been a very considerable object for men to possess, or obtain, the power of raising water otherwise than by mere manual labour. Yet nothing like the common suction-pump has been found among rude nations. It has arrived at its present state only by slow and doubtful steps of improvement; and, indeed, in that present state, however obvious and unattractive, it is something of an abstruse and refined invention. It was unknown in China until Europeans visited the "Celestial Empire;" and is still unknown in other parts of Asia, beyond the pale of European settlements, or the reach of European communication. The Greeks and Romans are supposed to have been ignorant of it, in the early times of their history; and it is usually said to have come from Alexandria, where physical science was much cultivated by the Greek school under the patronage of the Ptolemies.

These few and scattered historical notices of important inventions have been introduced only for the purpose of suggesting that there is much which is both curious and instructive in the history of mechanics; and that many things, which to us in our state of knowledge seem so obvious that we should think they would at once force themselves on men's adoption, have, nevertheless, been accomplished slowly and by painful efforts.

But if the history of the progress of the mechanical arts be interesting, still more so, doubtless, would be the exhibition of their present state, and a full display of the extent to which they are now carried. The slightest glance must convince us that mechanical power and mechanical skill, as they are now exhibited in Europe and America, mark an epoch in human history worthy of all admiration. Machinery is made to perform what has formerly been the toil of human hands, to an extent that astonishes the most sanguine, with a degree of power to which no number of human arms is equal, and with such precision and exactness as almost to suggest the notion of reason and intelligence in the machines themselves. Every natural agent is put unrelentingly to the task. The winds work, the waters work, the elasticity of metals works; gravity is solicited into a thousand new forms of action; levers are multiplied upon levers; wheels revolve on the peripheries of other wheels. The saw and the plane are tortured into an accommodation to new uses; and, last of all, with inimitable power, and "with whirlwind sound," comes the potent agency of steam. In comparison with the past, what centuries of im-

provement has this single agent comprised in the short compass of fifty years! Everywhere practicable, everywhere efficient, it has an arm a thousand times stronger than that of Hercules, and to which human ingenuity is capable of fitting a thousand times as many hands as belonged to Briareus. Steam is found in triumphant operation on the seas; and under the influence of its strong propulsion, the gallant ship,

> "Against the wind, against the tide,
> Still *steadies* with an upright keel."

It is on the rivers, and the boatman may repose on his oars; it is in highways, and exerts itself along the courses of land conveyance; it is at the bottom of mines a thousand feet below the earth's surface; it is in the mill, and in the workshops of the trades. It rows, it pumps, it excavates, it carries, it draws, it lifts, it hammers, it spins, it weaves, it prints. It seems to say to men, at least to the class of artisans, "Leave off your manual labour, give over your bodily toil; bestow but your skill and reason to the directing of my power, and I will bear the toil—with no muscle to grow weary, no nerve to relax, no breast to feel faintness." What further improvements may still be made in the use of this astonishing power it is impossible to know, and it were vain to conjecture. What we do know is, that it has most essentially altered the face of affairs, and that no visible limit yet appears beyond which its progress is seen to be impossible. If its power were now to be annihilated, if we were to miss it on the water and in the mills, it would seem as if we were going back to rude ages.

Selected.

BACKSLIDING.

"How much to be pitied is that soul, which is just beginning to reject the secret invitations of God, when He demands that it shall die to all! At first it is but an atom; but the atom becomes a mountain, and soon forms a sort of chaos between it and God. We pretend to be deaf when He demands a lowly simplicity; we are afraid to listen; we would be glad enough to be able to convince ourselves that we had not heard; we may say so, but are not persuaded. We get into a tumult; we doubt all our past experience; and the grace which had served most effectually to make us humble and simple before God begins to look like an illusion. We seek without for advisers who may calm the trouble within; we readily find them, for there are so many, gifted even with much knowledge, and some piety, who have but little experience.

"In this condition the more we strive to recover, the sicker we get. We are like the wounded deer, bearing in his side the fatal arrow; the more he struggles through the woods to be delivered of his enemy, the more deeply he buries it in his body. '*Alas! who hath hardened himself against God, and hath prospered?*' Can God, who is himself the true peace, leave that heart peaceful which opposes itself to his designs? Such a person is like one with an unknown disorder. Physicians employ their art in vain to give him any solace. You see him oft sad, depressed, languishing; no food can avail to do him good; he dies day by day; wandering from the true way, he strays further and further from the right course. A jealous God retires: the soul begins to shut its eyes, that it may not see that it has no longer the courage to act, and God leaves it to its weakness and corruption, because it *will* be so left. But think of the magnitude of its error!

"False wisdom is generally the source of the whole difficulty; it is not so much through defect of courage, as through excess of reasoning, that we falter and fall back from following closely the bridegroom of souls. Woe to those from whom He had reason to expect everything, and who do not accept, and continue in his grace! Woe to him who resists the interior guidance! who resists the Spirit, striving for his conversion, and complete redemption! But happy those who hesitate not; who fear only that they follow with too little readiness; who would rather do too much against self, than too little. Oh, Lord! teach us, and write in the depth of our souls, that the clay must suffer itself to be shaped at the will of the potter."

Wintering Milch Cows.

The subject of wintering milch cows is one in which a large majority of our readers are interested, for probably most of people who own but a single domestic animal keep a cow, and those who are not thus limited, generally include more or less of these faithful creatures among their stock. And the milch cow is worthy of this distinction. She produces one of the most wholesome and nutritious articles of food which we possess, one always in demand, which there is no other means of supplying. Good cows always command a high price, for they pay a good profit. But this profit depends largely on the attention they receive from their owners, whether they are so fed and cared for that they are thrifty, healthy, and yield largely of milk at all seasons of the year.

It is poor economy to winter cows upon dry food alone. They need something more succulent and nutritious. A full flow of milk requires a generous supply of the right kind of fodder. Carrots, beets, parsnips, or turnips, in addition to hay, and an occasional feed of meal or shorts, a judicious use of hay, roots, and meal, will keep the animals healthy, and in good flow of milk even in winter. In England milch cows are fed principally on turnips and coarse fodder, and are stabled through the winter. They have a slight feed of straw or hay in the morning, and sliced turnips morning, noon, and evening, with an occasional supply of good straw to their mangers. Their stables are kept clean but well littered, and are also well ventilated, avoiding as far as may be currents of air, from which cattle will take cold as well as human beings. The proper ventilation of stables, both for horses and cows, is too often neglected.

But all have not and cannot procure the proper supply of roots. The drought of the past season injured materially or entirely cut off the root crop in many parts of the country. In this case hay and the coarser grains must be used, and these properly prepared answer very well the desired purpose. Good, well-cured hay is far from being despised, even by the most aristocratic of the Fill Pail breed, though if first passed through a good cutting machine, it will be more readily and more economically consumed. Give cows what hay they will fully dispose of, and a peck or so per day of bran, shorts, or provender, wet to a proper consistence, and seasoned with a little salt, and they will continue in milk almost as long and give nearly as much as when supplied with roots. Oats and barley, or oats and corn, ground together, form a good mixture or provender for this purpose. If corn meal alone is used, it should be mixed with cut straw or hay, and slightly moistened—but a large quantity of this grain has a tendency to dry off the milk. It is better adapted to fattening than to milk-making purposes. Both potatoes and apples are excellent food for cows, but do not produce as rich milk as either beets or carrots. These roots are probably among the best foods which can be provided—to be used in connexion with other kinds of fodder. No single food will succeed as well as a proper variety.

The thrift and health of all kinds of stock require a supply of water, either frequently and statedly, or always within their reach. It should be brought into the barn-yard, that cattle need not be compelled to wander off to a distant stream, or pond, through the storm and cold. Such a journey they will not undertake unless quite thirsty, when, were the water within their reach, they would drink much more frequently, but less at a time, not injuring themselves by abstinence at one time or an over supply at another. Their comfort in this respect, as well as in shelter and cleanliness, is the best economy, as an animal well-cared for and kept warm and clean, requires less food to keep it in thrifty condition. The best management is generally the cheapest in the end, and is always the most satisfactory to the thoroughgoing farmer. We shall be glad if these hints call out from some such any improvement or modification of the course we have indicated, drawn from a wider experience than our own.—*Rural New Yorker.*

For "The Friend."

Will the Editor of "The Friend" please reprint the following excellent hints, well befitting, the present day and time?

"How frequently as the lessening ranks of surviving Friends have closed around the grave of an early associate, has the melancholy question of the great poet been involuntarily asked,

'Who next shall drop and disappear?'

These feelings of the shortness and uncertainty of time, are well fitted to moderate our desires, and to soften the animosities engendered in the conflicts of life. As the sum of our past days increases, as the certainty of the final close draws nearer, and the wish to lie down in peace with all prevails, who is there but must derive consolation from the thought, that no act or word of his, has wantonly inflicted pain on another; and that in maintaining the right, and opposing the wrong, he has scrupulously preserved the just balance of his mind?

There are few who have not, in reviewing their past lives, errors of this kind to regret, and who would not gladly, if they could, recall the hasty action, the unjust suspicion, and the unkind word, which has escaped them in moments of unwatchfulness.

And while feelings of this sort soften the heart, and inspire it with candour and forbearance towards others, they will also, if our minds are wisely governed, awaken us to other considerations. Within the few remaining years of life, whatever remains to be done towards the working out the soul's salvation, must be compressed, or left undone. The duties to which we have felt ourselves called, press upon us with increasing weight, as the time that is left for their fulfilment lessens.

The times in which we have lived, have truly been times of shaking and unsettlement. Truths the most sacred and momentous, have been assailed now on one side, and now on another; and their defence has fallen in a peculiar manner upon the men of the past and present generation.

Let us then with feelings subdued and softened by the contemplations we have suggested, hold on our course unfaltering. The cause of truth and righteousness, like that fire upon the altar which was lighted from heaven, must be kept alive from generation to generation. Let it be our care, that while it is intrusted to us to watch and to feed it it be not obscured, or rekindled with strange fire

through any unfaithfulness of ours, but that it may continue to shine with ever increasing purity and brightness through all coming time. R. S.

"We set our faces towards Edinburgh again, and got as far as Stonehaven to lodge, and next morning went to see Robert Barclay, of Ury; he had three sisters with him, one of whom had lately married; her husband and a young clergyman, who had been tutor to some of their children, were also present. They received us very kindly; we breakfasted with them, and after walking awhile in the garden, which is beautifully situated on a lively running stream of water, and cultivated in great perfection, we returned to the house, which is said to be the same that the Apologist lived in. It is a large stone building, in which still remains the study in which the Apology was written, which is now a library. After we had viewed many parts of that ancient good man's relics, we proposed a religious opportunity with these young people, who had neither father nor mother living, which they acceded to; it was much to the relief of my mind, and I hope will be remembered to profit by most, if not all of them. Robert and his brother-in-law walked with us near a mile, and seemed loth to part with us, taking their leave in a very affectionate manner. Oh, may the lives and testimonies of those eminent instruments and faithful servants of God, in their day, like the blood of righteous Abel, though dead, yet continue to speak to after generations, and to their own posterity in particular, that they may be stirred up to follow them as they followed Christ."—1800.—*Richard Jordan.*

Agriculture in New Mexico.

One of the chief productions of New Mexico is Indian corn, for which the soil seems to be admirably adapted: but the growing season is there so dry, that without artificial irrigation there is generally no success in its cultivation. In preparing ground for cultivation, a thorough irrigation is the first necessary proceeding. The furrows are then opened with the awkward Mexican plough, and the corn is planted in rows. It usually receives from two to four irrigations before arriving at maturity. Lands in New Mexico without water are of no value to the agriculturist.

There is one exception, however, to the above rule of "no water, no crops." The Navajoes, who occupy the western portion of the country, produce abundant crops of corn without irrigating their lands. The method which they adopt is this: Holes are bored in the ground with sticks to a depth of twelve or eighteen inches, and each of these receives one or more grains of corn, each grain being enveloped in a ball of mud about the size of a man's fist. The seeds, thus protected and dropped into the hole, are covered to a depth of two or three inches with light earth, to prevent a too early evaporation of the moisture, and left to germinate. The sharp sticks and the hoe are the only instruments used in the whole operation of planting and cultivating the crop. The great depth of the hole serves to shield the root of the future plant from heat, and enables it to grow by the greater moisture of the subsoil. This fact induces the belief that deep ploughing will greatly increase the agricultural capacity of New Mexico, and diminish the necessity for irrigation.

The New-Mexican plough is of the most primitive construction, and reminds one of the antediluvian times. It consists of a piece of timber, about six feet long, which answers the purpose of a beam, having a short-pointed branch projecting at the end for the share. A straight piece of wood is attached to the after part of the implement for a handle.

The wheat of New Mexico has but little straw, its average height not exceeding three feet. It is cut with a clumsy sickle, and is threshed out upon a circular earthen floor, generally by the feet of goats—sometimes by horses, mules, oxen, and donkeys. The farmer then awaits a suitable wind, when the straw is blown from the wheat upon being tossed high in the air with wooden forks constructed for the purpose. The residue is then repeatedly tossed into the air with a spade until the chaff is blown away; and the sand, gravel, and clay which remain are imperfectly removed by washing. The wheat is sifted through a perforated hide, to separate the small stones from it, and then, being dried, is considered ready for the market or the mill.

Wild potatoes, somewhat similar to the Irish potatoes, abound in the mountainous regions of New Mexico, but are too small to repay the labour of gathering them.—*Late Paper.*

Extracted for "The Friend."

It would be some check to self-confidence, if every one who differs in opinion with another, would *calmly* consider, that as two contraries *cannot* be true, *possibly* he may be wrong, and his opponent right.

As every degree of hatred, envy or contempt, entertained in the mind, must unavoidably cut off its communication with Divine good: surely no one in *that* state can be the instrument, or channel of conveying it to another.

True charity cannot only forbear a retaliation of injuries, but discern the spirit that offers them; which, *if unresisted*, commonly involves its own punishment, and sometimes its own cure.

That which constitutes a good conscience, is a willingness to conform to what we believe to be truth, in *all* its appearances; those, therefore, who act up to their best apprehensions of right, will never incur condemnation for a want of such knowledge, as is providentially withheld from them.

That which constitutes guilt, and incurs condemnation, *is* a man's persisting in *known* error, in contradiction to the degree of truth, of which he *is* clearly convinced; this troubles his spirit, darkens his understanding, and at last may totally incapacitate him for a right perception of those things which belong to his peace.

A *real* seeker after truth, disguises *nothing;* he is not, therefore, offended at a detection of error, *even in himself,* because he knows that if truth be gained, he shall partake of the benefit.

It is the nature of pride to expose what is likely to increase its own reputation, and conceal its defects; but *true* humility is willing to appear *what it is,* and is more afraid of being over than under-rated.

Florida Lemons.—The Jacksonville (Fla.) News has been shown a lemon grown upon the banks of the St. John's river, which measured eleven and a half inches in circumference. Among quite a large lot there were few less than nine inches in circumference.

Because true love to the brethren is such an excellent grace and virtue, the primitive Christians counted it a sign of their regeneration, saying, "We know we have passed from death unto life, because we love the brethren;" but seeing there is an hypocritical fawning that looks like love, the apostle sharply reproves that, saying, "Let your love be without dissimulation."—*J. Crook.*

Conversion of La Harpe.

The following confession, says the New York Evangelist, is too remarkable to be lost. As we have never met with it in English, we translate it from the French. La Harpe was a celebrated infidel writer of the last century, of the school of Voltaire. During the reign of terror he was seized, and narrowly escaped the guillotine. It was while shut up in prison that he became a believer in the Christian religion. He says, "I was in my prison, alone, in a small room, and profoundly dejected. For some days I had read the Psalms, the Gospels, and some good books. Their effect had been rapid, but gradual. Already I was restored to faith; I saw a new light; but it threw me into terror and consternation, for it showed me an abyss—that of forty years of wandering. I saw the whole evil, and no remedy; nothing around me offered the aid of religion. On one side, my life was before my eyes, such as I saw it in the light of celestial truth; on the other, death—which I daily expected. The priest no longer appeared on the scaffold to console the condemned; he ascended it only to die himself. Full of these desolate thoughts, my heart was completely prostrate, and addressed itself but in a whisper to God, whom I had just found, and whom, even then, I scarcely knew. I said, What must I do? What am I to become? I had upon the table the Imitation of Christ, by Thomas a-Kempis, and I had been told that in this excellent book I should often find the answer to my thoughts. I opened it at random, and fell, on opening, upon these words, 'Here am I, my son! I come to thee, because thou hast called me.' I read no more; the sudden effect which I experienced is beyond all expression. It is no more possible for me to describe it than to forget it. I fell prostrate, with my face to the earth, bathed in tears, stifled with sobs, raising cries and broken words. I felt my heart consoled and expanded, but at the same time ready to break. Overwhelmed with a crowd of ideas and of feelings, I wept a long time, without retaining any remembrance of this situation, except that it was without comparison an emotion the most powerful, and the sweetest I have ever known; and these words, 'Here am I, my son!' have not yet ceased to echo in my spirit, and to stir most deeply all its faculties."

For "The Friend."

Institution of Meetings for Discipline.

"Whoso breaketh an hedge, a serpent shall bite him."

The first Friends suffered persecution in the propagation of their religious principles many years; but we do not find that those who lived in the Truth, sacrificed any of those principles to obtain relief from suffering, not even by the payment of a trifling fine, but they endured patiently until the Lord made way for their release. After preaching the truth several years, George Fox was sent forth to call Friends to the necessity of an organization of the Society, according to the precepts and the order of the gospel, under regulations for the government of meetings, and the preservation of the members in consistency with their religious profession. He, and other deeply experienced men believed, that the same Divine wisdom and power, which gathered them out of the various sects in Christendom, and brought them to sit down under the teaching of Christ, who gave them gifts for the work of the ministry, also led them into the establishment of this excellent Christian order, and to issue forth from time to time, those rules and minutes of advice, which constitute the discipline of the society. This discipline, which has been the admiration of others, and a blessing to ourselves, has always been re-

garded by Friends, who were settled in the Truth, as a hedge placed around us by the Great Head of the church, for the help and defence of the members; and whatever may have been the opposition which they met with, they believed themselves bound to support it, as they did the doctrines and testimonies which the Lord raised them up to maintain.

In an epistle written by George Fox, from Worcester prison, in 1674, he says, "My dear friends in England and all parts of the world, the gospel, which is the power of God, which you have received from the beginning, keep in it and the fellowship of it, in which there is neither sect nor schism, but an *everlasting fellowship*, and an *everlasting order;* which gospel brings life and immortality to light in every one of your hearts, and lets you see over him that hath darkened you. Now, every man and woman here will have a testimony in their own hearts of this order and fellowship, being heirs and inheritors of it; by which you will see over all the false orders that are or may be set up or made." Referring to Cain, Corah, and Balaam, he says, "Such opposed Abel, Moses, and Christ, the leader and governor, and his apostles, and set up the many orders and governments in their churches, and broke all into sects." "Christ bruises the serpent's head, who is the head of all false teachers and false orders, that are not in his power, and is the first and last; therefore, keep in his power, and in the unity of his Spirit, which is the bond of peace. Mark, the pure, holy, eternal, invisible Spirit of God, is the bond of peace. Therefore, forfeit not your bond of the Prince of princes; for if you do, *you lose your life*, and go into death, and into an evil spirit, so that you lose your peace with him, Christ Jesus."

Much opposition was encountered by those Friends, who were engaged in the institution of meetings for church government, from the plea that every one had the light and spirit of Christ, and he was to be left to its directions in himself. He was not to be subject to the prescriptions of men, and "if people did not find judgment in themselves for what they did, they must not be judged by others." "They would have had every man independent," says William Penn, "that as he had the principle in himself, he should only stand or fall to that and nobody else; not considering that the principle is one in all, and though the measure of light or grace might differ, yet the nature of it was the same; and being so, they struck at the spiritual unity, which *a people guided by the same principle, are naturally led into.*" "But though some have stumbled and fallen through mistakes, and an unreasonable obstinacy, even to a prejudice, yet, blessed be God! the generality have returned to their first love, and seen the work of the enemy, that loses no opportunity or advantage by which he may check or hinder the work of God, and disquiet the peace of the church, and chill the love of his people to the truth, and one to another, and there is hope of divers that are yet at a distance. In all these occasions, though there was no person the discontented struck so sharply at, as this good man [G. F.] he bore all their weakness and prejudice, and returned not reflection for reflection; but forgave them their weak and bitter speeches, praying for them, that they might have a sense of their hurt, and see the subtilty of the enemy to rend, and divide, and return into their first love that thought no ill." A noble example of following Him, who said, "Father, forgive them, they know not what they do." His "effectual, fervent prayers" were doubtless blessed to himself and to others. A happy thing it would be, if all who profess the same faith, lived in the same Divine charity and spirit of prayer!

The labours and religious exercises of George Fox, are succinctly alluded to, in the conclusion of the epistle we have quoted from. "You have known the manner of my life, the best part of thirty years, since I went forth and forsook all things. I *sought not myself;* I sought you and *his glory that sent me;* and when I turned you to him that is able to save you, I left you to him. My travels have been great in hunger and cold, when there were few for the first six or seven years. I often lay in woods and commons in the night, that many times it was as a by-word, that I would not come into houses, and lie in beds; and *the prisons have been my home a great part of my time*, in danger of my life, and in jeopardy daily. Amongst you I have *made myself of no reputation*, to keep the Truth up in reputation, as you all very well know it, that be in the fear of God. With the low I made myself low; and with the weak and feeble I was as one of them, and condescended to all conditions, for the Lord had fitted me so before he sent me forth; and so I passed through great sufferings in my body, as you have been sensible. Few, at the first took care for the establishing men's and women's meetings, though they were generally owned, when they understood them. But the everlasting God, that sent me forth by his everlasting power, first, to declare his everlasting gospel, and then after people had received the gospel, I was moved to go through the nation, to advise them to set up the men's and women's meetings, many of which were set up; and I was moved to write to other places, for them to do the like, that kept the power. "This was the end, that all that had received the gospel, might be possessors of it, and of *the gospel order which is heavenly*—and that all who had received Christ Jesus, might so walk in him, and *possess his government in the church*, who are members of him, the heavenly Head." "In the church of Christ where he is head, there is his gospel and his order, and his government. There is his power felt in every one's heart; and there are the offices of admonishing, rebuking, exhorting, reproving, amongst them that are convinced and converted, by them that are in the power, for there are several states. So they, that would not have people admonished that go under the name of Truth, and yet go into sin and wickedness, these are out of the gospel order and government of Christ Jesus, and of a loose mind themselves, and would be up themselves, and lords: but that spirit is for judgment, for it is out of the power, and out of the Spirit, in which is the fellowship."

It is remarkable that most of the provisions of the different disciplines containing the regulations of church government, as adopted throughout the society, are to be found in the epistles, which George Fox wrote from time to time, advising Friends on the institution of a proper care over one another. The doctrines held by Friends, and the discipline enforcing the support of those doctrines and testimonies, are the outward bond of our church union and fellowship; and in order to derive the spiritual help which this christian system and fellowship, when rightly maintained, does afford, every one should be on his guard against anything that would lay it waste, or impair it, looking to the Head of the church for a qualification to administer it in the love and authority of Truth. The meetings for discipline, held as they ought to be, are often schools of deep instruction, and to the humble, waiting mind, present opportunities for mutual strength and encouragement, in the exercise of gifts, which are dispensed for the growth of the individual, and the edification of the church of Christ. Without such a system, everything would be in danger of running into confusion, and bringing reproach upon our profession; but the apostle says, "God is not the author of confusion, but of peace, as in all churches of the saints;" and we believe that every true Friend will feel bound to maintain this order and peace, as he keeps under the Divine government.

The following paragraph in another epistle shows how highly George Fox valued this christian order, and how earnest he was that it should be preserved and rightly carried into effect. "My desire is, that all the faithful men and faithful women in the light, power, and Spirit of Christ, may be kept in the possession of the Truth; and that all such may make up the men's and women's meetings, that you all may be in your possession of the order of the gospel, and the government of Christ the Seed, that bruises the head of the serpent, the head of all ill government and disorders. So that all may be in the possession of the JOYFUL AND GLORIOUS ORDER of the everlasting gospel, that in the light, Spirit, and power, ye may *all* have a care of *God's glory*, and *his honour*, and *his churches' peace*, keeping in the *unity* of his everlasting Spirit, which is the bond of the heavenly and spiritual Prince of princes peace. All that are in the possession of this may admonish and exhort all such as walk not as becomes the gospel, and glorify not the Lord in their bodies, souls and spirits; and so see that as every one has received Christ Jesus, *they do walk in him*, in the *holiness* that becomes the house of God, that God may be glorified by his light, power, and Spirit in all, who is over all, God blessed forever."

It is as this christian order is upheld in the same Divine spirit and authority by which it was established, that meetings for discipline will be instrumental in strengthening the members to abide in Christ, producing the fruits of holiness in the discharge of their several duties, and to labour availingly in the love of God, to convince and reclaim the erring ones, and thus to show forth the glory of the latter house. "Though I be absent in the flesh," said the apostle, "yet am I with you in the Spirit, *joying and beholding your order*, and the steadfastness of your faith in Christ. As ye have, therefore, received Christ Jesus, the Lord, so walk ye in him, rooted and built up in him, and established in the faith, as ye have been taught, abounding therein with thanksgiving."

A NOBLE BOY.

Rescue of a Passenger Train from Certain Destruction.—We mentioned a few days since the burning of the tunnel bridge on the Baltimore and Susquehanna railroad, about five miles south of York, and since learn that the conflagration came very near being followed by one of the most terrible disasters that has lately occurred in railroad travel. It is supposed that the bridge took fire from the freight trains, which passed about half-past seven o'clock in the morning, and the structure was totally enveloped in flames before it was discovered by the residents in the vicinity. At about nine o'clock the frame-work of the bridge fell through, and among the spectators, some twenty in number, was a little boy, about twelve years of age, named Eli Rheem, who, remembering that the express passenger train was then due about from New York, started off at the top of his speed to endeavour to stop the train, which he knew must be close at hand. As soon as he reached the curve, about two hundred yards from the bridge, he observed the train coming at full speed, and fearing that he would be unable to stop them unless by the use of extraordinary means, the noble little fellow took his position on the track,

and running toward the approaching train with his hands raised, caught the attention of the engineer, who immediately reversed his engine, and stopped within four hundred yards of impending destruction, the piers being some twenty feet from the rocky bed below, and the gap some sixty feet wide. Had the boy not placed himself on the track, he would doubtless have failed in his noble effort, as the engineers are so often cheated by mischievous boys on the route, that they seldom pay any attention to them. Even when he stopped, he thought that he had been cheated by a youngster with more daring than his associates, and was surprised to see the little flaxen-headed fellow standing his ground, and endeavouring to recover his lost breath to answer his question as to the cause of his interruption. We learn that the passengers, when they ascertained the cause of the stoppage of the train, and viewed the precipice over which they were near being dashed, liberally rewarded the boy for his presence of mind and daring, and that the board of directors, at their meeting yesterday, appropriated $100 as an additional recompense. Eli Rheem, a boy, but twelve years of age, was the only one of twenty persons present, most of them men, who had forethought sufficient for the occasion.—*Balt. Am.*

Encouragement.—"As a tribulated path is our lot: I would have us learn contentment therein, as we have the comfortable assurance in ourselves of having endeavoured to do our part. Let us remember to put in practice the good advice of our worthy friend, Samuel Emlen, which was, 'to commit ourselves and all we have into the hand of Him who can turn the heart of man as a man turns the water-course in his field.' We see that by our over thoughtfulness we cannot add one cubit to our stature, nor make one hair white or black. I have a hope that things will appear rather pleasanter in time; and if we faithfully follow our holy Captain unto the end of this short race, we then shall inhabit a glorious eternity. Let not thy spirit sink too low, neither be over much troubled, for certain it is, that in our Father's house are many dwelling places. Therefore, be of good cheer; many have, and I hope we shall be enabled to overcome this wicked world." 1770.

The First Whaleman.—The Boston Journal, in its antiquarian researches, has discovered that the first person who killed a whale upon this coast, was William Hamilton, a native of Scotland, who in early life settled on Cape Cod, but being persecuted by the inhabitants, as one who dealt in evil spirits, he consequently removed to Rhode Island, and finally to Connecticut, where he died in 1746, at the advanced age of 103. His six children died at the following ages—Joseph, 86; David, 79; Benjamin, upwards of 90; Eliza, 93; Thankful, 102; Mercy, 52.

For "The Friend."

BIOGRAPHICAL SKETCHES,

of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 191.)

SARAH MILLNER.

About 1682, Henry Baker, a Friend, from Lancashire, removed himself and family into the New World, and settled near the Neshaminy in what has since been Bucks county. A meeting of Friends was soon established there, which was held alternately at the houses of two or three of the members, and among others at that of Henry Baker. Sarah Baker was eight or nine years of age, when she accompanied her parents, to settle in the wilderness. She appears to have submitted to the operations of Divine grace at an early period in life, and received a gift of gospel ministry. She had doubtless good instruction at home, for her father was one who had obtained the confidence of Friends of his meeting, and at times represented them in the Quarterly and Yearly Meetings. He also stood high in the estimation of his fellow-citizens generally, and was their representative in the provincial assembly, at different times, from 1685 to 1698.

Sarah Baker married —— Millner, and continued her labours in the gospel of Christ Jesus, until the time of her decease, which took place towards the close of Second month, 1715, she being about forty-two years of age. Her burial was on the 29th. Her friends of Bucks Quarterly Meeting, in a minute on her death, call her "our well esteemed friend." They add, "She received a gift of the ministry since she came into these parts, in and through which she was very serviceable amongst us, with whom we had true unity and fellowship."

REMEMBRANCE GARRETSON.

Remembrance Garretson was born at Gravesend, Long Island, in the year 1670. We know very little of the education which he received, or of the incidents of his youth. Having removed to Cape May, he was there convinced* of the Truth as professed by Friends, and through faithfulness to manifested duty, he became useful in the church of Christ. A gift in the ministry being conferred upon him, he exercised it "to the satisfaction and comfort of his friends." "He was a diligent attender of meetings, and exemplary in his life and conversation." His decease took place in the Third month, 1715, he being in the 45th year of his age.

GEORGE SMITH.

Of George Smith, of Evesham, West New Jersey, who deceased about the year 1715, we have little to record. He enjoyed the confidence and love of his friends, whilst he lived, and they bore this affectionate yet brief memorial concerning him. "George Smith, a ministering Friend, of an innocent and blameless life, being a sympathizer with the afflicted, and of a benevolent mind towards the poor."

WILLIAM DUNKAN.

William Dunkan was born at Mid-Marr, eight miles from Aberdeen in Scotland, in the year 1643. At what time he was convinced of our religious principles, no account is preserved, but he was one of the early settlers in Pennsylvania, and first appeared as a minister of the gospel in Bucks county, in the year 1684. He appears to have had the unity of his friends with his ministry, although no account of his being from home on religious services have been found. In what part of Bucks county his residence was, we know not; the account forwarded to the Yearly Meeting, concerning him, states, he was "buried Eleventh mo. 7, 1715, at Byberry." He was in the 72d year of his age.

* In 1702 and 1703, there was a great convincement at Cape May, and the converts, by the year 1704, were anxious to have a Monthly Meeting established amongst them. Timothy Brandwith, who sometimes appeared in the ministry in their meetings, applied to the Yearly Meeting of Ministers for advice in the matter, but they did not see the way open for the establishment of a Monthly Meeting until the newly convinced were "tried a little further." They advised that the professors at Cape May should for the present be joined to Gloucester Monthly Meeting. The fear of the meeting, on behalf of these converts, was not without a cause, as was proved by the trouble some of them gave a few years afterward, through falling into Ranterism.

THE TRIUMPH OF TRUTH.

There is an eye that marks the ways of men,
With strict, impartial, analyzing ken;
Our motley creeds, our crude opinions, lie
All, all unveiled to that Omniscient eye.
He sees the softest shades by error thrown,—
Marks where His truth is left to shine alone;
Decides with most exact, unerring skill,
Wherein we differ from His word and will.
No specious names, nor reasoning, to His view,
The false can varnish, or deform the true;
Nor vain excuses e'er avail, to plead
The *right of theory* for the *wrong of deed*.
Before that unembarassed, just survey,
What heaps of refuse must be swept away!
How must its search from every creed remove
All, but the golden grains of truth and love!
Yet, with compassion for our feeble powers,
For, Oh, His thoughts and ways are not as ours.
There is a day in flaming terrors bright,
When truth and error shall be brought to light,
Who then shall rise amid the shining throng,
To *boast* that *he* was right and *others* wrong;
When each rejoicing saint shall veil his face,
And none may triumph but in glorious grace.
No meaner praise shall heavenly tongues employ,
Yet they shall reap the more abundant joy,
Who sought His truth, with simple, humble aim,
To do His will, and magnify His name.

THE WHITE CLOVER.

There is a little perfumed flower,
That well might grace the lov'liest bower,
Yet never poet deign'd to sing
Of such a humble rustic thing;
Nor is it strange that it can show
Scarcely one tint of Iris' bow:
Nature, perchance, in careless hour,
With pencil dry might paint the flower,
Yet instant blushed her fault to see,
So gave it double fragrancy.
Rich recompense of aught denied,
Who would not homely garb abide,
If gentlest soul were breathing there
Blessings through all its little sphere;
Sweet flower, the lesson thou hast taught
Shall check each proud, ambitious thought;
Teach me internal worth to prize,
Though found in lowliest, modest guise.

DEVOTION.

There is a bliss no charm bestows,
Nor earthly joys impart,
'Tis when—the passions all composed—
Serenely smiles the heart.
Oft has my mental eye been turned
Its secret self to know,
Expanding love my bosom burned,
'Til tears began to flow.
Oh, then each vain, delusive notion,
Bow'd to thy charm, serene devotion.

Ye hearts untouched, who think that praise
Must be to noise confined,
Who think a silent tongue betrays,
An unaffected mind.
Ne'er on your ceremonies cold
Has turned the heavenly eye,
The warmest prayer that e'er was told,
Ascended on a sigh.
Form, but commands a feigned emotion,
The heart's the seat of true devotion.

From "Friends' Library," Vol. VI, page 476.

I am cheerfully confident that, if those to whom we somewhat look, as watchers, as seers, as standard bearers, as counsellors, are removed, (and they are removing,) to their rest,—or if any of these that remain, should not keep their habitations firm and undeviating, but turn aside in any respect from the ancient testimony,—that he who raised up such a people as we were at the first, will never cease to raise up others, and put forth some into the foreground—into the very seats of the unfaithful. I have seen it wonderfully in my short day,—I have read it of those that have gone before: and therefore, let none ever throw away their shield, and weakly compromise the trust devolving on them.—*J. B.*

OF FRAUD.

"And take double money in your hand; and the money that was brought again in the mouth of your sacks, carry it again in your hand; peradventure it was an oversight."—GENESIS xliii. 12.

A man of justice and integrity in his dealings is a character very desirable; and most people are apt to claim it as their right. On the other hand, there are so many ways of forfeiting this character, without a man's being exposed to the world for his dishonesty, nay, very often without taking notice of it himself, that one cannot be too earnest with people to consider this matter a little more seriously, if it were but to convince them how often they claim a character which they are not always careful to deserve.

But then, when it is considered that for every act of injustice a man is accountable to God, and that restitution, where it can be, must be made as we hope for salvation, though it is a duty which people are very hardly persuaded to submit to,—these things considered, it is everybody's concern to know and to avoid a sin of so much deceit and danger.

Now, there are several parts of injustice, or ways of forfeiting the character of an honest man, which I shall not now insist upon; such are,—the taking what is another man's right by secret or open force, that is, by theft or robbery; by oppression, when he is not able to contend with us; or by extortion, when his necessities force him to submit to the hardest terms we think fit to impose upon him: these are all crimes of so ill fame, that all people pretend to abhor them; the laws are severe in punishing them: and such as are guilty are, for the most part, convinced they do ill.

But, then, there are acts of injustice which, though they are not so barefaced, yet are as evil in the sight of God, as ill becoming an honest man and a Christian, and as hard to be repented of as the former; such are,—the taking advantage of men's ignorance or mistakes; overreaching them in bargains or in suits at law; imposing upon their belief by a pretended sincerity, and then making a hand of their simplicity: these, and such as these, are the sins I would endeavour to set in a true light, that all good men may avoid them, and that all evil men may repent of them.

Now, the text I have chosen, is an instance of great integrity. It is the direction and command of Jacob to his sons, who, returning out of Egypt, where they had been to buy corn, and finding the moneys which they had before taken with them packed up and returned with the rest of their goods, were greatly surprised, and at a loss what to think of so uncommon an accident; in the meantime their father orders them what to do: "Take double money in your hand; and the money that was brought again in the mouth of your sacks, carry it again in your hand; peradventure it was an oversight."

In these words there are two duties of great importance expressly set down. "Peradventure it was an oversight." Here is a direction never to take advantage of other people's mistakes, negligence, or ignorance, &c. "Take double money in your hands," &c. Here is restitution expressly required.

To begin with the first of these duties. Now, there being a world of practices very dishonest, and yet people make a shift to live in them without either public reproach or private regret, it will therefore be proper to consider, how they will be able to justify themselves before the Judge of all the earth.

"Peradventure it was an oversight;" and therefore we must not take our advantage of it. This was Jacob's rule. Let us see how far this rule ought to oblige all honest men, and how well it is observed. Now, people may not see their interest, but overlook their rights several ways; and to take advantage of their circumstances would be manifest injustice. Now, a good man, when he sees this, would reason just as Jacob did: 'It was an oversight, and you shall not suffer by it.'

But is this the practice of the world?—Very far from it. And, though the Apostle expressly declares "that the Lord is the avenger of all such as go beyond or defraud another in any matter," (1 Thess. iv. 6,) yet people will not easily quit a good bargain, for any law of God, if the laws of man will not force them to it.

To proceed. How easily may a poor man, who has a righteous cause, mistake in defending it! But will his oversight give me a right to that to which, in truth, I had no just title before I made this advantage of his weakness or poverty? Or can anybody think that, because the injustice is done in the face of a court, it is a less crime than if it had been done on the high road?

To feed a man with moneys, or to help to run him into debt, by encouraging him to borrow when he has no occasion, that I may get a better bargain of his estate when he shall be forced to sell it—this should seem by the commonness of it to be no great crime. But pray, does the man know what he is doing? If he does not, I take advantage of his weakness; I help to ruin him, and perhaps his family; and, if he is really guilty of a sin in squandering away the inheritance of his forefathers, it is impossible I should be guiltless.

"He that flattereth his neighbour," saith Solomon, "spreadeth a net for his feet." (Prov. xxix. 5.) It is impossible for a man, by fair speeches, to make his neighbour overlook his own interests; but then, to take any ill advantage of a man, because he has an opinion of my judgment and integrity, is a wickedness which God will certainly avenge, though no law on earth can call a man to an account for it. Because it is less hazardous to wrong orphans than older people, is it therefore less criminal? No, surely: so far from it, that God declares himself concerned in the cause of the fatherless and widow; that he will undertake and vindicate their cause against those that oppress them. And why? Why, because they have none else to help them. For which very reason a man should be very careful of taking advantage of the weaknesses or oversights of such helpless people, because such people have a right, and a promise, of redress from God: "Remove not the old landmark; and enter not into the fields of the fatherless: for their Redeemer is mighty; he shall plead their cause with thee." (Prov. xxiii. 10, 11.) How often do wills, and other writings of moment, fall into the hands of such as thereby have an opportunity of wronging their neighbours! And people that will make use of such an opportunity do generally think that this is a less offence than stealing. But for what reason? Why, only because for stealing (if a man is caught) he will be in danger of being hanged; while at the worst he will only be called a dishonest man, if the other be discovered. And yet the crimes are equally forbidden, equally unjust and dangerous in the sight of God, whose judgment will be according to right, and not according to the false opinions of men.

A man who borrows moneys which he knows he cannot repay, plainly takes an advantage of his creditor's ignorance of his circumstances. It is probable he may fancy himself less guilty than if he had stolen so much or taken it by force; but he would not think so if the laws had made these two crimes equally penal, as they are in fact equally unjust in the sight of God and man. There are too many who will make no scruple of imposing upon their neighbour's ignorance in passing off bad moneys, who yet would startle at the thoughts of counterfeiting the current coin: I question whether such people have considered how near akin these two crimes are to one another.

(To be continued.)

"From Friends Library," Vol. VI., page 466.

To ———. Thy last called forth many a fervent aspiration for our mutual preservation, support, and advancement. Ah! we must cleave to our only sure refuge, our stronghold, our very present helper,—and then all will be well; and we shall be conducted through all our exercises and strait places, receiving the end of our faith. It is sweet to be permitted in travelling along this weary land,—to give and receive a greeting in spirit,—to be refreshed together as before the Lord, and to be made to feel that we are members one of another; that we are not without companions in warfare and suffering; and cheered up by the countenance of a friend, by even a few lines, or by a hearty extension of the right hand of fellowship. It reminds me of David, and of his friend Jonathan, who "strengthened his hand in God;" and we may instructively, and without presumption, refer to the circumstances of these individuals, with some degree of application to our own case. O! the trials and strait places, in which some of us are placed in the present day; and how clear does it appear, that if we flinch not, but are faithful to all that the Lord requires of us, to be, to do, and to suffer for his cause and people, we shall be made instruments, in our measure, to carry forward his good work, to stand in the breach, and to be (whatever we may think of ourselves) as saviours on Mount Zion, to judge the mount of Esau, yea, to turn the battle to the gate. The Lord will assuredly, in his own time and way, send deliverance for his little ones, for the Lamb and his followers must have dominion and victory. Those who are engaged on the Lord's side, and bound to stand by and uphold his pure cause, cannot escape the peculiar notice of the all-seeing eye of the Captain of salvation; who will not fail to promote, to honour, to make use of, and to dignify, his true-hearted, firm handed soldiers. So look ye to it; and O! my soul, look thou to it,—that we lose not any portion of that weight of glory, which the Lord designs for us: any portion of that line of usefulness, or of suffering, which should devolve upon us. Let us not plead any excuses, whether it be trade, family, our own meanness or insignificance; nor yet like one of old, say to the servant of the Lord, "If thou wilt go with me, then I will go," &c., lest it be said, "the journey," or the proceeding, "shall not be for thine honour." O for an unreserved sacrifice, and a going on in the strength of the Lord, which is made perfect in weakness; and also a standing still in the true faith, to see and to wait for his salvation revealed, and his arm made bare for our help. I may assure thee, my dear friend, that thy exercises and self-humiliating baptisms, are only such as are common to us all, and no more than needful for the best of us,—to drive us home to the prescrving power, to lay us low and keep us there; and are rather marks, how tenderly and closely our holy Head and High Priest, our keeper and shade upon the right hand, hedges us about, as Satan said was Job's favoured lot; not leaving us to ourselves, as we are ready to suppose; but constantly interposing with his fatherly chastenings and stripes; because He loves us, and hath a purpose of his own glory in our close proving and refining, as his choice jewels and

gold of Ophir. Dear ———, believe it is even so, in all thy overturnings and tossings. Would He have received a burnt-offering at our hands, and would He have shown us all these things, if He were displeased and ready to reject us? as Manoah's wife pleaded. Yea, though He slay thee, trust in Him;—humble thyself low before him, and in due season all will work together for thy exceeding good, for thy great enlargement in the things of God. Therefore, be patient unto the coming, and through all the dispensations, of thy wonderful Counsellor. I believe the little ones have no cause unduly to fear, or to let in discouragement and doubts. However, though we may be permitted to be trampled upon and broken to pieces, yet the blessed Truth will outlive it all. —*J. B.*

Third mo. 19th, 1836.

Coloured Population of the United States.—It is stated officially that the free coloured population which, in 1800, had increased in New England 31.63 per cent. in ten years, in 1850 had increased but 1.71 per cent. in the same time. The corresponding figures for the Southern States were 57.33 and 12.07. In Maine, in ten years, the increase was but 0.07 per cent. Increase of the whole coloured in the slaveholding States, 27.40 per cent.; non-slaveholding, 14.38; 4090 free coloured were born in foreign countries; one-fifth of the free coloured in New York were born in the present slave States. In New Orleans, one-eleventh of the free coloured males were employed in pursuits requiring education. The mulattoes in the United States are one-eighth as numerous as the blacks; the free mulattoes are more than half of the free blacks; in the United States the number of Africans and their descendants is nearly 8 or 10 to 1 of those that were imported; in the British West Indies there are not 2 remaining for every 5 imported, and their descendants. About 10,000 imported Africans survive in the Southern States. About 2,500,000 slaves are connected with the field work of agriculture, in every 100 of whom 2 are employed upon hemp, 5 upon rice, 6 upon sugar, 14 upon tobacco, and 73 on cotton and other products. There are 347,525 families holding slaves, or 2,000,000 persons. One-fifth of the slave properties are in a single slave, and nearly one-half in less than five slaves.

For "The Friend."

"Let him that thinketh he standeth, take heed lest he fall."

My mind has been brought under deep exercise, according to my measure, on account of my dear Friends, as well as for myself, believing, as I do, that the times loudly call for more circumspect walking before God, in all humility, and thankfulness for the manifold mercies vouchsafed to us, poor unworthy beings.

I feel drawn to warn you against some of the popular evils of the day, particularly that which is termed "Spiritual Rappings." My dear young brethren and sisters, let me entreat you to set your faces against everything of the kind, for I believe they are the stratagems of the enemy of our soul's peace, to draw away the unwatchful, and thereby to undermine, if possible, the foundation of our faith. Oh! "put on the whole armour of God, that ye may be able to stand against the wiles of the devil." For "we wrestle not against flesh and blood, but against principalities and powers, against the rulers of the darkness of this world, against spiritual wickedness in high places." May you not give way to making excuses, and reasoning that you will go only so far into new notions, or dangerous habits, and then return; thus making work for repentance and deep suffering of soul in time to come, should time be granted.

Let me also entreat you not to settle down at ease in Zion, contenting yourselves with the mere name or profession of a Quaker, and getting along merely as respectable men and women; for this will not avail you in a time of trial and deep proving. Take heed to the light within you; put on the Lord Jesus Christ, and endeavour to follow his teachings, that so you may experience old things done away, and all things to become new.

Thus you may be prepared to stand faithfully for the testimony of Jesus, in accordance with our high profession, in this day of trial. For the clouds are gathering, and, if I am not mistaken, the storm may carry away many that think they stand, but who are looking too much to man, resting in their own strength, and not sufficiently considering the rock from whence they were hewn. The Lord will sift until the chaff, and that which is impure, will be taken away, but those who stand faithful will be preserved as a right seed; and these will call on the aliens from the north and from the south, from the east and from the west, to come and sit in the kingdom with Abraham, Isaac, and Jacob, to fill the places of those who may have been cast out.

Oh! that you and I may do the part of faithful stewards over God's heritage, though it may be his will to send some as sheep among wolves, to proclaim the glad tidings of the gospel of peace.

It is with me likewise to warn my dear brethren, to be very cautious how they mingle and what steps they take in the political affairs of the day; lest you be found spreading a net to entangle your own feet, and thereby closing up the way for bearing faithfully some of our important testimonies.

In conclusion, I would exhort all, to strive to lay aside the sin that doth most easily beset, and endeavour to run with patience the race that is set before us, that in the end we may be granted an inheritance in the mansions of everlasting rest and peace.

In tender love, I am your brother and fellow-labourer in the cause of Truth. J. W.

Morgan Co., Ohio, Second mo., 1855.

The Supply of Guano.—J. Caird, in a letter to the "Times," says: "An immense deposit of guano has been discovered in the Indian Ocean, between Mauritius and Calcutta. I have seen samples of it. It has been analyzed by Professor Anderson, of Glasgow, and is now also in the hands of Professor Way, of London, for analysis. Four kinds of it have been brought home, two of which are of superior quality, resembling the guano of Saldanha Bay; the other two are comparatively inferior. The discoverer relates, that being becalmed off an island, he sent his boats ashore for water. They returned without it, but told what they had found. The captain of the ship visited it, and, having made several voyages for guano to Ichaboe, he at once pronounced the substance with which the island was covered to be guano. Having traversed the island in various directions, he found guano everywhere; in greatest depth, however, in the caverns and crevices of the rocks. He secured samples and brought them home. The samples having been taken from near the surface, the quality is supposed to be inferior to what may be found beneath, as it is injured by the action of the weather. The deposit is reported to be immense, the island being twenty miles long by seven broad, and thus forty times the size of Ichaboe. There are no strong ocean currents near the island, and it is said that convenient loading-stages can be erected with great facility in the creeks and bays along its coasts. Steps are now being taken to make the guano available to the British farmer. We may hope to have supplies of it ere long. This discovery shows what may be reasonably anticipated from a search in other quarters, and especially off the rainless coast of Peru. This is the true way to break down the monopoly of Peru, and to secure for the agriculturist, abundant and cheap supplies of guano, and thereby to the consumers of beef and mutton an increasing quantity at a more moderate price."

What is the great interest of a nation? What is most advantageous and profitable to a people, even with reference to the things of this life? Godliness is their greatest gain, it having the promise of this life, as well as that to come. The poets feign and fancifully tell us that their God wooed in gold, and descended in a glistening shower. Certain it is, and out of the reach of all fiction, that with God and religion we shall be blessed, likewise, with such a portion of riches as shall be serviceable to our best ends. God oftentimes showers down wealth with a plentiful hand on his friends and favourites. You see the true way and method of prospering in the world. If you fear God, and keep his commandments, you shall be recompensed with the good things of this life. A person or a nation which sincerely endeavours to purchase true wisdom, (which consists in righteousness and holiness,) shall find that (Prov. iii. 16) "in her left hand are riches and honours." —*J. Edwards.*

"Use moderation in your manner of living, and in this way seek relief from the increasing expense of the times in which we live, rather than by engaging in more extensive, and often hazardous schemes of trade. By these latter means the mind becomes encumbered, and unfitted for religious service, yea, often for religious thought, and for breathing daily after the spiritual riches, which are to be enjoyed in close communion with God. Consider how distant that state which would give up all to Him, if required, is from that which indulges itself in ease to the full extent of its power, or is endeavouring by multiplied adventures in trade, to acquire that power which it covets for the purpose of worldly enjoyment."

"It was said of the heathen Socrates, that it was known when he was angry by his being silent."

THE FRIEND.

THIRD MONTH 3, 1855.

The five dollars received by mail, "as a mite towards the relief of the poor," has been handed over to the Southern Soup Society.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 10th ult.—*The New Ministry.*—A new Ministry has been formed, of which Lord Palmerston is Premier. The other members are Lord Panmure, Earl Clarendon, Sidney Herbert, Sir George Grey, W. Gladstone, Sir James Graham, Lord Cranworth, Earl Granville, Duke of Argyle, Sir W. Molesworth, Sir Charles Wood, Lord Canning, and Marquis Lansdowne. In her efforts to reconstruct the British Ministry, the Queen had in turn sent for the Earl of Derby, Lord Lansdowne, Sir John Russell, and the Earl of Clarendon. All, however, failed to accomplish the object, when Lord Palmerston was sent for, and succeeded. This is understood to be a war Ministry, and the expectation was, that the war in the Crimea would be pushed to a crisis, with increased energy and determination. Parliament adjourned for a week, at

the request of the new Premier, and was to reassemble on the 15th ult. Nearly £3,000,000 had been voted for war purposes. The North American fisheries bill passed. The steamship City of Manchester, of the Philadelphia and Liverpool line, arrived on the 5th, and was taken up by the Government, to convey troops to the Crimea. The Liverpool cotton market was without material change. Flour, from 40s. to 43s. 6d. Consols, 91¼. The bullion in the Bank of England has increased £445,000.

The War.—Affairs before Sebastopol remain unchanged. Supplies were reaching the British camp in abundance, but the army continued sickly. A letter from a French officer says, "The English army is no longer an army. It only bears the name. Of the 56,000 men which the British Government sent to the East, there remain at this moment not more than from 10,000 to 11,000, and even these are not all able to carry arms. I must add, that there are, moreover, about 10,000 in the hospitals of Constantinople, and 1000 in the ambulances at Balaklava; the remainder are gone to their long home." This fearful waste of life the writer attributes mainly to the inexperience of the officers in command, and the wretched administration of the department for supplying the wants of the army. The whole of the third division of the French army have taken the place of the English in the trenches, and were continuing their works. The weather had become milder; but the melting of the snow occasioned inconvenience and suffering to the men in the camp and trenches.

The Russian army is reported to be in want of supplies. The Russian forces on the frontier of Austria, have been ordered to retreat into the interior. The feeling at Constantinople was said to be strongly in favour of peace. At the latest accounts, the peace conference at Vienna had not been opened.

FRANCE.—Preparations on a very extensive scale, were going on in every part of the military service. It is said the Emperor will take command of the army of operations on the Rhine.

HOLLAND.—Both Holland and Denmark are desirous of joining the Western Alliance.

POLAND.—The English Missionaries in Poland have been ordered to leave the Russian territory.

RUSSIA.—The Russian Government is making the most vigorous exertions, and appears to be determined to sustain the contest with obstinacy.

SPAIN.—The Minister of Finance has presented a bill to the Cortes, authorizing the complete sale of the church property. The Cortes have voted the first basis of the Constitution—the national sovereignty. Soulé has left Madrid.

EGYPT.—The Viceroy of Egypt has solemnly interdicted for the future the introduction of slaves into his provinces. No change is proposed in the condition of those now in bondage. Bread is now three times the ordinary price in Egypt, owing to the European demand for grain.

CANADA.—The term for naturalization in Canada has been reduced from seven to three years' residence. Any foreigner, having resided that time in the province, becomes a citizen, on taking the necessary oaths or affirmations.

UNITED STATES.—*Immigration.*—During the year 1854, 460,474 persons arrived in this country by sea—27,765 in Massachusetts; 327,976 in New York; 15,032 in Pennsylvania; 13,154 in Maryland; 51,169 in Louisiana; and 14,487 in California. Of the entire number, nearly 49,000 were born in England; 101,606 in Ireland; 13,317 in France; 206,054 in Germany; and 13,160 in China. From Ninth mo. 30, 1843, to Twelfth mo. 30, 1854, 3,174,395 persons arrived in this country, by sea.

Congress.—Treaties have been formed with Holland, and the King of the two Sicilies, on the principle that free ships make free goods. In consequence of a disagreement between the two Houses respecting the amount appropriated in the Texas Creditors bill, a committee of conference was appointed, who increased the amount to $7,750,000, in which form it finally passed. The Senate has passed a bill extending for three years the credit for duties on railroad iron. A bill for the establishment of an Insane Asylum in the District of Columbia, has passed finally.

The Fugitive Slave Law.—Parties engaged in attempts to enforce this law, have often met with great difficulty and opposition, in consequence of the popular aversion to its provisions. A bill having been introduced into the Senate, on the 23d ult., to protect officers and other persons, acting under the authority of the United States, a general discussion of the slavery question and subjects connected with it ensued. Much was said by some Senators in derogation of slavery, and these in return were charged with want of patriotism and devotion to the Union. The bill referred to, passed by a large majority.

New Mexico.—A party of Apacha and Utah Indians, on the 25th of Twelfth mo., attacked a party of whites at Pueblo, and killed 14 men, taking three women and two children prisoners, and leaving two women wounded, supposing them to be dead. Great excitement prevailed in Santa Fe, in consequence of an apprehended general Indian war. Capt. Newall and a party of dragoons killed twelve Indians in a hostile meeting, on the 20th of First month; four of the soldiers were killed.

Kansas.—The Boston Courier says, there are now nearly two thousand persons preparing to remove to Kansas in the spring, under the guidance of the Emigrant Aid Society, the greater portion of whom belong to bands or companies of neighbours or townsmen.

New York.—The city debt is $13,960,856; amount of sinking fund applicable to the redemption of this debt, $5,171,308. The corporation owns property, valued at $37,203,250. The expenditures for the support of the city government last year, were $3,936,675. The export of specie, which had nearly ceased for about two months, has recommenced. The Atlantic, last week, took out the largest amount yet sent by a single steamer, viz., $1,326,167. The export of cotton for the week was also heavy, amounting to 65,000 bales, valued at $2,500,000.

Cincinnati.—The Pork Trade.—Up to the 20th ult., 335,000 hogs had been packed, which is 75,000 less than last year.

Philadelphia.—Mortality last week, 186.

California, dates to Second mo. 1st, have been received, by the George Law, from Aspinwall, which brought 304 passengers, and $1,113,000 in gold. A terrible explosion had occurred on the steamer Pearl, when approaching her landing at Sacramento, by which about seventy persons lost their lives.

Miscellaneous.—Prohibition.—On the 21st ult., a law prohibiting the sale of intoxicating drinks passed the New York House of Assembly, by a vote of 80 to 45.

A similar law which passed one branch of the New Jersey Legislature, was lost in the Senate by a vote of 10 to 9.

A prohibitory law goes into effect in the State of Michigan, in the Fifth mo. next.

A similar law recently passed by the Legislature of Illinois, is to be submitted to a vote of the people, in the Sixth mo. next.

On the 21st ult., a prohibitory law passed the House at Dover, Delaware.

The bill before the Legislature of Pennsylvania to prevent the sale of intoxicating drinks on the first day of the week, has been passed by the Senate, with only two negative votes, having passed the House previously.

Mormonism.—The Mormons have commenced, in New York, the publication of a paper, called the Mormon, devoted to the spread of their principles. It defends polygamy as a Divine ordinance.

Guano.—J. D. F. Wallace, of Philadelphia, has, it is said, succeeded in making a contract with the Venezuelian Government for a lease of fifteen years, of forty-one islands on the coast of Venezuela, which are supposed to be among the richest deposits of guano in the world.

Many Languages in a State.—The Legislature of Wisconsin directs the publication of State documents in English, German, Danish, Dutch and Welsh.

Molasses.—The total consumption of molasses, foreign and domestic, in the United States, for the year 1854, is stated at 54,492,000 gallons.

Imprisonment for Debt.—Under the laws relating to imprisonment for debt, as they now exist in Massachusetts, upwards of eight hundred persons were incarcerated in Cambridge street jail, Boston, during the year 1854. In a previous year, the number of cases amounted to 1300.

The Great Temple.—The Mormon Temple begun at Salt Lake City, will be much larger than the temple built by the Mormons at Nauvoo. It will require ten years to build it, and will cost several millions of dollars.

FRIENDS' ASYLUM.

A stated Annual Meeting of "The Contributors to the Asylum for the Relief of Persons deprived of the use of their Reason," will be held on Fourth-day, the 14th of Third month, 1855, at 3 o'clock, P.M., at Arch Street Meeting-house, Philadelphia.

WILLIAM BETTLE, Clerk.

FALLS MONTHLY MEETING SCHOOL.

The Committee of the above named School is desirous to procure a well qualified female teacher to take charge of the School as instructor, for the ensuing season. Early application is requested, and can be made by addressing, Mahlon Moon, Morrisville P. O., Bucks Co., Pa.

MARRIED, at Friends' Meeting-house, Moorestown, N. J., on Fifth-day, the 22d ult., HENRY R. WOODWARD, of this city, to ANNA K., daughter of Jos. Burby, of the former place.

DIED, at her residence, near Curwensville, 31st of Twelfth mo. last, ELIZABETH BAILY, in the 91st year of her age; a member of Centre Monthly Meeting and West Branch Particular Meeting.

——, on the 31st of First mo., 1855, aged 55 years, at her residence at Cockermouth, Cumberland, England, LYDIA A. BARCLAY, a minister; younger daughter of the late Robert and Ann Barclay, of Clapham, Surrey. Her death followed a second attack of paralysis, the first having so prostrated her feeble powers, as to render her incapable of supporting a recurrence of the disease. In the decease of this dear Friend, the church sustains a severe loss, for her life had been characterized by a simple, faithful dedication to the cause of Truth; an upright maintenance of the doctrines and discipline of the society, in their ancient purity. She was a steadfast example of simplicity in her personal attire, as well as in the furnishing of her house, seeming called upon to appear as a sign, among a people too much departed from the practice of true self-denial, and amalgamating themselves with the world. In her calling as a gospel minister, she travelled considerably in England, Scotland, and Ireland; her offerings, though sometimes in few words, were weighty and powerful, striking at the root of the evil nature in those who heard her, and directing to a close waiting upon, and obedience unto the Divine Teacher manifested in the heart, whom she declared to be none other than the Spirit of Christ, the Saviour. During her last illness, her long tribulated spirit was mercifully filled with peace and joy, and she expressed in writing her feelings of thanksgiving and praise for the mercy, which had been extended to her during her life, but more especially since her illness. Thus, though deprived of the powers of speech, for the last few days of her life, her friends have the consoling belief, that her end was *peace*, and that He who had been pleased to be her Alpha, graciously condescended to be her Omega, and to gather her into his everlasting rest. Perhaps this brief notice of our beloved departed friend could not be better concluded, than by the following lines written by herself, some time since:—"Those who have been, through wonderful and adorable grace, enabled to set their feet in this path [the heavenly path] in measure, can testify, that they never could one half conceive the excellency of the peace, nor the preciousness of the Lord's goodness therein, neither would they exchange it for ten thousand worlds! And oh! if the foretaste, even from season to season in this vale of tears, and often in the midst of much tribulation, be so strengthening and delightfully sweet, what must the full fruition and consummation thereof be in the never-ending period of eternity in the presence of Him, who sitteth upon the throne, and of the Lamb, that hath loved us and washed us in his blood!" "Let us then more and more 'strive to enter in at the strait gate, and to walk in the narrow way,' that we may not only be the called, but the faithful and chosen! let us press towards the mark for the rich prize of our high and holy calling, let us so run that we may, through His wonderful grace in Christ Jesus, be permitted to obtain the prize, the crown of life that fadeth not away!"

——, in Philadelphia, on the 11th ult., HENRIETTA, youngest daughter of O. and E. H. Mitchell, aged 19 years; a member of Philadelphia Monthly Meeting. During her indisposition, which lasted many months, she was patient and cheerful, although seldom entertaining hopes of recovery. She seemed to be gradually reconciled to the approaching event, of which she manifested no terror, remarking to her mother, that "although it looks dark here, it is bright beyond." One reminding her, when in much pain, of the words of the Apostle, "For I reckon that the sufferings of this present time are not worthy to be compared with the glory, which shall be revealed in us," she replied, "Yes, I have known that a long time." Her sufferings, the day before her death, were very severe, during which she frequently made use of the expression, "Oh! preserve me," and once to her sister explained, "I do not mean preserve me in life, but in patience to the end." A request which He who heareth prayer, was graciously pleased to grant.

At a Meeting for Sufferings of Ohio Yearly Meeting, held at Mount Pleasant, on the 16th and 17th of the Second month, 1855.

To the Monthly Meetings and members within our limits:

DEAR FRIENDS,—Since this body was last convened, circumstances have occurred calculated to try closely the faith and patience of the members of our Yearly Meeting, and we have felt our minds drawn forth at this time in affectionate solicitude on your account, and a concern has been raised for the faithful support of the blessed cause of Truth and righteousness, not only by and among you, but throughout the limits of our widely extended Society. The three Yearly Meetings which have occurred since the adjournment of Ohio Yearly Meeting in the Ninth mo. last, to which its epistles were addressed, giving a correct statement of the sorrowful secession that took place from it at that time, have declared their unity with those who separated themselves from their legitimate Yearly Meeting, and refused to remain subordinate to it. The ostensible reasons put forth by those meetings for the course they have pursued, have been widely circulated, and we cannot but believe that all of you who are acquainted with the concern and labour of our Yearly Meeting ever since our present difficulties commenced, must be fully convinced they are inapplicable to that concern and labour, and can in no wise justify the course pursued by them, or palliate the act of separation and insubordination which has produced such mournful disorder and suffering within our limits.

In addressing you, we feel it is not necessary to enter into any argument to prove, that the greater portion of the difficulties into which our beloved Society has been brought, has had its origin, mainly, in the dissemination of works, containing views on some of the important principles and testimonies, which we, as a religious Society, were raised up to support, that are incompatible with the faith ever professed by Friends; and which, if allowed to gain an ascendency among our members, must, we believe, lead them away from the spirituality and simplicity of our holy religion. As consistent Friends, we have felt ourselves conscientiously bound, in common with many other brethren, to bear a testimony against those views and their dissemination among the members of our religious Society, for no other reason than because we love the truths of the gospel, as revealed to our early Friends, and believed *in* by the faithful in the Society since its commencement, and because it rests on us as a duty, to transmit them in their purity to those who are to come after us.

In 1846 our Yearly Meeting, notwithstanding that a contrariety of sentiment was manifested among some of its members on other points, united without a dissenting voice, in informing Friends in England, that "the peace and harmony of this Yearly Meeting in its several branches, as also in its collective capacity, at the present season, have been greatly disturbed on account of the doctrinal writings of a member or members of [that] Yearly Meeting in circulation among us, which are not deemed by us to be in accordance with those on the same subjects, of our ancient approved authors." Here, then, is the original source of the troubles into which, not only this Yearly Meeting, but Friends everywhere in this land find themselves introduced. We are aware that many, who have separated from this Yearly Meeting, and of those who have united with them, declare they have not adopted and do not approve of the unsound views contained in those works, and we hope and trust that to a great extent it may be so; but yet it must be admitted that strong opposition has been manifested by them, to the church bearing its testimony fully and faithfully against those views, and warning its members not to imbibe or promulgate them.

Our beloved Society everywhere, has been weakened and crippled by the inroads of a worldly spirit, and there is a strong disposition manifested by many, to leave the simplicity which its principles enjoin, to copy the manners of the world, and to go back into many things out of which our worthy predecessors were redeemed, and which faithful Friends in every generation, since their rise, have seen in the light of the Lord, are contrary to his will concerning us as a people. We believe the unsound views to which we have alluded, adapt themselves to this weak and faltering state in the Society, and lead into a superficial, outside religion, that takes the place of that thorough heart-changing work which can be effected alone by the baptism of the Holy Ghost and of fire; so that while there may be a show of creaturely performances in will-worship, and in works of philanthropy and benevolence, flowing from it, there is lacking the stability in self-denial and righteousness which is the fruit of the Spirit. Believing this, our Yearly Meeting felt bound to testify against them. And, dear Friends, we think the signs of the times admonish us not to relax in contending for the faith once delivered to the saints, and in love and humility warning our brethren and sisters everywhere to beware of everything that may mar or weaken it.

The difficulties and division in New England, we have always believed, had their origin from the dissemination of, and opposition to, the spread of the unsound doctrines alluded to. Those who felt themselves bound to bear public testimony against them, were brought under the censure of the meetings to which they belonged—party feeling was, we fear, allowed to usurp the place of true judgment, and the unhappy division in that Yearly Meeting was the result. With the views and feelings prevailing in this Yearly Meeting, and the declarations it had repeatedly made, it could not consistently exclude from a seat in the meeting, those members in New England who, it believed, were maintaining a testimony against error, similar with that which it had itself been called on to uphold, pending, as the claims for New England Yearly Meeting, were, before it. This is the position in which Ohio Yearly Meeting has been placed in relation to their brethren in New England, and here is where those who have now separated themselves from it, have refused to submit to its decisions, or to acquiesce in the course it has felt itself constrained to pursue. This insubordination on their part has been, we believe, not a little promoted and increased by the unauthorized and uncalled for interference of some of the other Yearly Meetings and their members, who having exercised their right to come to a judgment in relation to the New England difficulty, should have felt themselves restrained from attempting to influence or prejudice the judgment of this co-equal Yearly Meeting, whereby they have greatly contributed to the sorrowful separation of so many of its members from it. And when the separation took place, and those who seceded from the Yearly Meeting were first together by themselves, and it was proposed and urged by some of their number not to persevere in their undertaking, we have reliable testimony, that those with minutes from other Yearly Meetings, who were with them, urged them not to abandon the course they had commenced, and encouraged them to believe they would be countenanced in it by their respective Yearly Meetings: and after thus identifying themselves with and promoting the separation in our Yearly Meeting, two of those Friends were on the committee that sat in judgment on the claims of Ohio Yearly Meeting and the body they had encouraged in seceding from it.

The appointment of Benjamin Hoyle as clerk of Ohio Yearly Meeting, in the Ninth month last, was in accordance with the deliberate conclusion of that meeting, come to in former years and acted on repeatedly; and in the observance of which, those who have now separated from it, insisted again and again; and moreover, it was fully united with by much the larger portion of those present at the time, as was manifested by the expression, and by the number withdrawing when the clerk read the minute of adjournment: while the nomination and appointment of the Friend who served the Separatists, was in all respects a revolutionary measure; and we cannot but foresee and lament that those meetings that have sanctioned it, have established for themselves a precedent that may, in a future day, afford a plea for insubordination and disorganization within their own borders.

In adverting to these painful circumstances at this time, in order to place the action of Ohio Yearly Meeting in its true light, and to repel the unkind charges that have been pressed against it, we sincerely desire to be preserved from making any unjust or uncharitable reflections on any of our brethren, or in any wise adding to the feelings of disunity and division existing among the members of our once peaceful and united Society. We are persuaded that in the course pursued

towards our Yearly Meeting by the three bodies to which we have before alluded, a great wrong has been done, not merely to it, but to the blessed cause of Truth, which we trust is dear to us, and for and with which we desire patiently to suffer; leaving the event to the Lord, who, we reverently believe, will strengthen and comfort his humble dedicated children, however set aside and contemned, and in his own time make a plain path for them to walk in.

It is our earnest desire that all our members may be brought to feel more and more deeply the responsibility that rests upon them individually, in making profession of those spiritual views of the gospel, for which the Society of Friends has been distinguished; and be led to seek, with earnest and sincere hearts, to learn of Him who is meek and lowly, that so they may be prepared to walk unblamably before men, and thus adorn the doctrines which we profess to love and uphold. This, dear Friends, will preserve you from indulging in hard or uncharitable feelings towards your brethren and sisters who differ from you; and, while it strengthens you to maintain the truth with firmness, will lead you to treat them with Christian kindness, and earnestly to seek for the restoration of the fellowship of the gospel among all who profess our name. "The servant of the Lord must not strive, but be gentle unto all men, apt to teach, patient, in meekness instructing those that oppose themselves, if God peradventure will give them repentance to the acknowledging of the truth." Keep diligently to the attendance of all your meetings both for worship and discipline, and when there, labour to have your minds gathered to the gift of God in yourselves, that so you may witness your assembling together to be in the name of Christ, and his blessed presence to be in the midst of you.

The discipline and organization of our religious Society, had their origin from the same divine source from which have emanated the doctrines and testimonies given to us to uphold, and anything which tends to lay waste or weaken them, must have its origin out of the Truth, and tend to disorder and confusion. We cannot, therefore, view with approbation, or give countenance to any measures which violate the provisions of the discipline, or to proceedings subversive of the wholesome order, established among us in the wisdom of Truth. The design of meetings for discipline, says our worthy elder George Fox, is to promote charity and piety. These being the objects, in order to attain to and promote them, it is needful for the members to be clothed upon with Christian love and humility, and in all their efforts to promote the cause of Truth, to seek unto Him who has promised to be a spirit of judgment to those that sit in judgment, and strength to them who turn the battle to the gate. Beware, then, we beseech you, lest you put forth the hand unbidden, from the promptings of your own will and wisdom, and carefully avoid everything like party spirit, which must always produce heats and spiritual blight. Finally, brethren, farewell. Be perfect, be of good comfort, be of one mind; live in peace; and the God of love and peace shall be with you.

Signed on behalf of the aforesaid meeting,

JOSEPH EDGERTON, Clerk.

P. S. Feeling concerned for the preservation and right settlement of all our members, we would tenderly and affectionately exhort them, not to give way improperly to that unsettlement which prevails so much in the community at large, in relation to removing to the Western country; believing that the dissolving of old and the forming of new associations in life, often have an injurious effect, particularly upon the young and rising generation: and when any may have their attention turned to so important a step—let the motive be ever so plausible—we would advise them to try it by the unerring Spirit of Truth, which, if in humility and reverence sought unto, will not fail to direct us safely; for agreeably to Scripture testimony, the steps of a good man are ordered by the Lord. By this prudent and judicious course, Friends may be preserved from improper removals, which at all times is very desirable, and particularly at this juncture, wherein so much affliction and trouble prevails in our Society.

Should, however, any of our dear Friends, on such solid deliberation, fully believe that they have liberty in the Truth to take such an important step, we would propose to our Monthly Meetings, that all certificates issued for such members, be forwarded to Stillwater Monthly Meeting, a branch of Stillwater Quarterly Meeting, with information of their place of residence; which meetings shall have the oversight of such members, until the Yearly Meeting takes action on the subject; and any application for the establishment of a meeting for worship or discipline shall be made to those meetings, which shall exercise the needful care over them, according to discipline, either by writing or otherwise, and any expense so incurred shall be paid out of the treasury of the Yearly Meeting. This is a measure arising from the action of Indiana Yearly Meeting towards ours; and in order for the preservation of the rights and privileges of our members, it seems incumbent upon us to make some provision to meet the exigency of the case. Any meetings for worship or discipline so set up and established, are to be considered as a branch of Ohio Yearly Meeting.

For "The Friend."

Persecution—Outward Ease.

When Friends were suffering from outward persecution, they were inwardly blessed with the aboundings of the fruits of the Spirit, and having love and sympathy one for another, the pressure of suffering from without, tended only to strengthen the bond of spiritual unity, for they were made to believe in, and have resort to, the alone source of availing help, comfort and support, under all their grievous sufferings.

But as time passed on, the cruel hand of persecution was withdrawn, and as the society increased in worldly prosperity, and outward ease, and became rich and full, the sense of dependance on Divine preservation and direction was lost, little by little, until many became exalted in their imaginations, and came to trust in uncertain riches, and in fleshly wisdom and power, their hearts becoming estranged from the Great Head of the church, in whom, and by whom, our worthy forefathers were happily united, in the *one* body of which we are now professing to be members.

The spirit of the world, which is at enmity with the spirit of Truth, soon came to have dominion in these, until there sprang up a division of feeling, from the apprehension of a *separate interest*.

Surely, we have no greater interest than in the performance of our religious duties, and *no true* interest, separate from this. But it is written of man in the beginning, that he, "being tempted to aspire *above* his place, unhappily yielded, against command and duty, as well as interest and felicity, and so fell below it, lost the Divine image, the wisdom, power and purity he was made in." And is not a love for the display of worldly power, riches or wisdom, causing many of us to become exalted in our minds, to the forsaking of our only hope of mercy? "They that turn aside to lying vanities, forsake their own mercies."

What suffering and confusion has self-reliance and self-seeking led us into, begetting also a spirit of vindictiveness, and resentment in the hearts of those, whose profession should withhold them, even from the least feeling of retaliation; by indulgence in which party spirit has been begotten and fostered, greatly to the detriment of our religious profession. For if there is not virtue enough in the principles of Friends to hold them together, what faith can those have in them, who judge them by their fruits?

If we set up our own judgment and will, in our religious engagements, we may as well look for the whole order of nature to be reversed, as for any good fruits from our labours, however specious they may appear in our own sight, and in the view of others. A *single eye* to the wisdom, will, and honour of our Holy Head, is the only condition upon which we can become children of the light, and true worshippers and servants of Him whom we profess to follow.

As outward persecution tended to unite those who suffered under it, in *oneness* of feeling and purpose, so outward prosperity and ease through the swelling of pride and passion, have reduced the number of the truly faithful, *apparently* to a mere handful. But, however, this may be, we may gather encouragement from the assurance made to the prophet, who formerly lamented in this wise, "I have been very jealous for the Lord God of Hosts, for the children of Israel have forsaken thy covenant, thrown down thine altars, and slain thy prophets with the sword, and I, *even I only*, am left; and they seek my life to take it away."—"Yet I have left me seven thousand in Israel, all the knees which have not bowed unto Baal, and every mouth which hath not kissed him."

As it has been declared of our worthy forefathers, so may it yet be said of us, if we will only turn away from the god of this world, which has been blinding our eyes, to the Light in which they lived and walked. It is testified of them, that "they were an *exercised* people, whose very countenances and deportment declared it. They were in travail for *one another's* preservation; not seeking, but *shunning*, occasions of any coldness or misunderstanding, treating one another as those that *believed* and *felt God present*. They did not think themselves at their own disposal, to go where they list, or say or do what they list, or when they list. They held the truth in the spirit of it, and *not* in their own spirits, or after their own wills and affections; and in the spirit of Truth stood their liberty, and no pleasure, no profit, no fear, no favour, could draw them from a retired, strict, and watchful frame. They were ful and practical believers in the doctrine, that "of ourselves we can do nothing as was testified by one of their number, "We are nothing, Christ is all;" and finally, they were entire and *united* in their communion, as indeed became those that profess One Head, even Jesus Christ, the Lord!"

Origin of Various Plants.—Every gentleman farmer ought to be somewhat acquainted with the origin and history of all ordinary plants and trees so as to know their nature, country, and condition. Such knowledge, besides being a great source of pleasure, and very desirable, will often enable him to explain phenomena in the habits of many plants that otherwise would appear inexplicable.

Wheat, although considered by some as a native of Sicily, originally came from the central table land of Thibet, where it yet exists as a *grass*, with small, mealy seeds. Rye exists wild in Siberia. Barley exists wild in the mountains of Himalaya. Oats were brought from North Africa. Millet

ne species, is a native of India; another, Egypt nd Abyssinia. Maize, Indian corn, is of native rowth in America. Rice was brought from South frica, whence it was taken to India, and thence o Europe and America. Peas are of unknown rigin. Vetches are natives of Germany. The Garden Bean, from the East Indies. Buckwheat ame originally from Siberia and Turkey. Cabage grows wild in Sicily and Naples. The Poppy as brought from the East. The Sunflower from Peru. Hops came to perfection as a wild flower n Germany. Saffron came from Egypt. The Onion is also a native of Egypt. Horse-radish rom South Europe. Tobacco is a native of Virginia, Tobago, and California. Another species as also been found wild in Asia. The Grasses re mostly native plants, and so are the Clovers, xcept Lucerne, which is a native of Sicily. The Gourd is an Eastern plant. The Potato is a well-nown native of Peru and Mexico. Koriander rows wild near the Mediterranean. Anise was rought from the Grecian Archipelago.—*Dollar Newspaper.*

For "The Friend."

EDUCATION.

One of the designs and benefits of religious society, is the concern which is felt for the consistent education of the children, the excellent counsel it imparts, and the united efforts which it makes to aid their parents in preserving them from the corruptions that abound in the world. In the year 1767, the London Yearly Meeting gave the following advice in its printed epistle:—"As next to our own souls, our offspring are the most immediate objects of our care and concern, it is earnestly recommended to all parents and guardians of children, that the most early opportunities may be taken in their tender years, to impress upon them a sense of the Divine Being, his wisdom, power, and omnipresence, so as to beget a reverent awe and fear of him in their hearts; and as their capacities enlarge, to acquaint them with the holy Scriptures, by frequent and diligent reading therein, instructing them in the great love of God to mankind through Jesus Christ; the work of salvation by him, and sanctification through his blessed Spirit. For, though virtue descendeth not by lineal succession, nor piety by inheritance, yet we trust the Almighty doth graciously regard the sincere endeavours of those parents, whose early and constant care is over their offspring for their good, who labour to instruct them in the fear of the Lord, and in a humble waiting for, and feeling after, those secret and tender visitations of Divine love, which are afforded for the help and direction of all. Be ye, therefore, excited to a faithful discharge of your duty. Be examples to them in your meetings, your families, and your employments, of a diligent, humble watchfulness, and steady regard to that holy principle in yourselves, which you recommend to their observance. Be careful not to indulge them in anything of an evil tendency. Keep them, while young, out of the vain fashions, the corrupt customs, and unprofitable conversation of the world; training them up in that commendable simplicity, and plainness of speech, habit, and manners, practised by our Lord, and his faithful followers; and as they ripen in age, guard them against the reading of plays, romances, and other licentious publications, of a nature prejudicial to the promotion of true Christianity; likewise, against the public pastimes, and pernicious diversions of the age: all which are the inventions of degenerate and corrupt spirits, and strongly tend to draw the incautious mind from a sense of religious duty, to bring it into a state of alienation from the life of God, and to deprive it of that inexpressible comfort and delight, which attend the daily exercise of religion and virtue."

The present means employed to give the youth a circumspect course of training and school instruction, and the liberality manifested in obtaining the advantages of these provisions, were perhaps never surpassed in this country among Friends. There can be no doubt that essential benefits are constantly conferred, and that the guards placed around the morals of the young people, have tended to elevate the standard of purity in their actions and language, so that some habits once common, would not now be tolerated. This is a blessing derived from religious society, and the warning voice of the Good Spirit, that should be highly prized, and we believe there are hundreds who do hold it in proper estimation, and would deeply regret its interruption by any cause. But while parents should give to their children the benefits of a guarded system of literary and scientific instruction, the importance of a home education, which from childhood imparts deep and lasting impression, by the example of a life of righteousness and self-denial, should not be lost sight of. A mind fixed on heaven, and pursuing heavenly things above all worldly considerations, with proper culture and restraint, will have a beneficial influence on the tender minds of the children, and may be the means of preparing them to receive the good seed of the kingdom.

Neglecting the culture of our own hearts, and being busied in matters which the Lord has not allotted us, gives Satan the opportunity to steal away the mind from abiding at Jesus' feet, and thereby puts a stop to the work of grace. Many have been caught in this snare,—lost their first love, and become entangled in a wilderness, where they have strayed from the path in which the way-faring man, though a fool, cannot err, and are wandering, they know not whither.

Atmospheric Phenomena in Greenland.—The curious effects of the unequal refraction, produced by the varying temperature and density of the different strata of air, constitute one of the most singular phenomena of Greenland. They usually occur in the evening or night after a clear day, and are most frequently on the approach or commencement of easterly winds. Not only does this state of the atmosphere elevate places above their proper position, bringing objects sunk below the horizon into view, but also changes and contorts their appearance. It most usually produces an increase in the vertical dimensions of the object affected, elevating the coast and giving it a bolder and more precipitous outline; making the fields of ice rise like cliffs of prismatic spar, while the higher and more irregular masses assume the forms of castles, obelisks, spires, or, where the pinnacles are numerous, a forest of naked pines. In other places it displays the resemblance of a naked city, crowded with public edifices, while huge masses of rock seem suspended freely in the air. Sometimes ships are seen with their rigging curiously distorted, an additional sail, or an inverted image of the vessel, many times larger than the real object, appearing above. Such are a few, and but a few, of the changes produced, "as from the stroke of the enchanter's wand:" but many others occur which it is impossible to describe, their forms altering with inconceivable rapidity, and one deceitful image disappearing only to be replaced by another.

Nothing is more needed than love and obedience to God, and hearty love to one another.

For "The Friend."

Mercy and Forgiveness.

Feelings of great destitution, and the fear of getting wrong, and falling away, have been often experienced by devoted servants, especially after seasons of Divine favour. These dispensations are to humble and keep the creature in nothingness of self before the Lord, and greatly contribute to their preservation. The following account is a striking instance given by Jane Pearson:—"Monthly Meeting, Pardshaw Hall, 23d of Seventh month, 1811. Being at Underwood, I attended this meeting, and thought it a very favoured time: the glory of the Lord, as it appeared to me, filled the house; and sitting upon the mercy-seat, *each seemed to have the gracious privilege of pardon.* It brought to my remembrance the apostle Paul, when he was caught up into the third heaven, and saw and heard what was not lawful for a finite creature to hear; neither dared I to utter, *on the side of mercy,* what I then felt. I thought if I had continued thus under the immediate sense of God's presence, I should neither have felt hunger nor pain; but it was not a state to be continued in; for upon my return, the gracious presence was withdrawn. I do not say a messenger of Satan was sent to buffet; but I was plunged into heart-rending doubts, respecting my own salvation; thoroughly preventing my being exalted above measure, for the abundant revelation, vouchsafed to me at that precious season.

"I did not see that I had missed in my communications to the Friends gathered; I had not kindled a fire, and warmed myself with the sparks thereof, that I had thus to lie down in sorrow. How awful would be such another season of rising in my spirit, out of the reach of sorrow, in which there was no partition wall between God and my soul, lest such another fiery baptism should succeed! Oh, Lord, I beseech thee, keep me in thy patience; and let thy refining power leave nothing that is wrong in me, unsubdued. Thou, Lord! knowest what I have gone through in my youth; and all along thy hand has been heavy upon me. Thou, Lord! hast often given me to see that thou imputest no iniquity to me, but hast given me a sense that I had full acceptance with thee. 'Why art thou cast down, O, my soul! and why art thou disquieted within me? Hope thou in God, for I shall yet praise him!'

"In penning these remarks I find good to arise, which rather binds up my broken heart; for although I have heavy trials in the outward, they have had no share in my present plunging. It was, because my beloved had withdrawn himself, and was gone. A dispensation of this nature would not have dismayed me so much, provided I had not been so long in the ministry. The Great Master, I thought, had fully tried me as to exaltation, and proved that I did not dare to say, 'The Lord saith,' when he had not spoken, so that I really hoped I had been established upon the immovable Rock; but I find *they that think they stand, should take heed lest they fall.* Neither are we to recur to those sublime discoveries which the Divine light has manifested; but after great favour in vision, to suffer all to return to the fountain whence it sprung. Ah! then how empty and stripped are we; for vessels used must be washed. How unsafe for us to feed upon any good we have been enabled to do! We experimentally find it to be a truth, that it is not for works of righteousness which we have done, but of his mercy we are saved; and that it is by the washing of regeneration, and the renewing of the Holy Ghost, for which I pray."

Not only is there deep instruction conveyed in the experience of this favoured handmaid of the

Lord, showing the repeated humiliations that must be endured in the heavenly journey, to prepare the soul for the presence of immaculate Purity, and the company of glorified spirits, but the thought is cheering, that evidence is granted that mercy covers the judgment-seat, and that Divine love and forgiveness are extended, so that the gracious privilege of pardon is held out to all. Surely those who desire the forgiveness of their manifold transgressions and deviations from the law of God, have need to cherish the spirit of forbearance, and compassion towards their fellow-servants. When we are about to appear before the judgment-seat of Christ, every one to give account of his *own* stewardship, nothing will be more needed than the forgiveness and blotting out of all past sin, through the mercy of God in Christ Jesus, our Lord and Saviour.

The Philosophy of Rain.—To understand the philosophy of this beautiful and often sublime phenomenon, so often witnessed since the creation of the world, and so essential to the very existence of plants and animals, a few facts derived from observation and a long train of experiments, must be remembered:

1. Were the atmosphere everywhere, at all times, of a uniform temperature, we should never have rain, or hail, or snow. The water absorbed by it in evaporation from the sea and the earth's surface, would descend in an imperceptible vapor, or cease to be absorbed by the air when it was once fully saturated.

2. The absorbing power of the atmosphere, and consequently its capacity to retain humidity, is proportionately greater in warm than cold air.

3. The air near the surface of the earth is warmer than it is in the region of the clouds. The higher we ascend from the earth the colder do we find the atmosphere. Hence the perpetual snow on very high mountains in the hottest climate.

Now, when, from continued evaporation, the air is highly saturated with vapour, though it be invisible and the sky cloudless, if its temperature is suddenly reduced by cold currents descending from above, or rushing from a higher to a lower latitude, or by the motion of saturated air to a cooler latitude, its capacity to retain moisture is diminished, clouds are formed, and the result is rain. Air condenses as it cools, and, like a sponge filled with water and compressed, pours out the water which its diminished capacity cannot hold. How singular, yet how simple, the philosophy of rain? What but Omniscience could have devised such an admirable arrangement for watering the earth?

Who are your Companions?

"He that walketh with wise men shall be wise: but a companion of fools shall be destroyed."—*Solomon.*

It is said to be a property of the tree frog, that it acquires the colour of whatever it adheres to for a short time. Thus, when found on growing corn, it is commonly of a dark green. If found on the white-oak, it has the colour peculiar to the tree. Just so it is with men. Tell me whom you choose and prefer as companions, and I certainly can tell you who you are. Do you love the society of the vulgar? Then you are already debased in your sentiments. Do you seek to be with the profane? In your heart you are like them. Are jesters and buffoons your choicest friends? He who loves to laugh at folly is himself a fool. Do you love and seek the society of the wise and good? Is this your habit? Would you rather take the lowest seat among such than the highest among others? Then you have already learned to be wise and good. You may not have made much progress, but even a good beginning is not to be despised. Hold on your way, and seek to be a companion of all that fear God. So you shall be wise for yourself and wise for eternity.

For "The Friend."

A desire hath been begotten in my heart, and would it could be begotten in the hearts of all—that the camp of our Israel may be searched for every offending and hurtful thing.

It may not be amiss for us seriously to examine how far we are filling up the measure of duty allotted to us in the world; how faithfully as a religious community we are answering the end of our high and holy calling. If the writer of these lines is not mistaken, there are many things within our borders, that should cause great searching of heart. A great deal, both on the right hand and on the left, that cannot fail to clothe the spirit of wrestling Jacob, with mourning and heaviness. Notwithstanding such is the case, yet, if we are the people we profess to be, a remedy is at hand for our every need. Balm is offered for our every wound. A remedy that is ever flowing from the "fountain that was opened to the house of David, and to the inhabitants of Jerusalem for sin and for uncleanness." And oh! saith my heart, that we may wash and be clean; that we may "go up to Gilead and take balm," for in "vain shall we use many medicines." That we may apply to the alone "Physician of value:" for assuredly it will not avail anything, to have "the heart of the daughter" of the Lord's people healed slightly; crying peace, peace, when there is no peace. In vain shall we look to any other source for help, than that from whence alone cometh all true help, even to the outstretched arm of the Lord Most High; which hath ever been abundantly able to deliver to the very uttermost all that put their trust in Him. And weak, indeed, must be our faith, if we cannot place entire confidence in the strong and unfailing arm of the everlastingly unchangeable Jehovah.

As a religious society, we have always professed to depend upon this invincible arm of Divine power, and it hath proved as a strong tower, into which the "righteous have run and found safety." It remains, and will continue to be a safe hiding place for all such to flee to, not only in time of trouble, but at all times, and the gates of hell shall never prevail against it.

But woe betide the few or the many, who shall turn their backs upon this sure defence, close their eyes to the heavenly light, given to poor man as a guide to his feet out of all error into all truth, and refusing to hearken to its warning voice, forsake the "fountain of living waters, and hew out to themselves cisterns, broken cisterns, that can hold no water."

It behooves us to listen attentively to the voice of the true Shepherd; that we may know it, and follow Him, not listening to the voice of the stranger.

There can be no need for us to strike hands with anything that is out of the blessed Truth, nor become partakers, with any, of things that are unclean. "Oh, my soul, come not thou into their secrets; unto their assembly mine honour be not thou united."

Look back and see what the Lord's people were in days gone by, as recorded upon the page of history, and cited by that son of the morning, William Penn, who, speaking of our religious Society in earlier days, says, "I cannot forget the humility and chaste zeal of that day. Oh, how constant at meetings, how retired in them, how firm to Truth's life as well as Truth's principles, and how entire and united in our communion, as indeed became those that profess one head, even Christ Jesus, the Lord." Oh, that we may in time apply our hearts unto wisdom, seriously ponder the path of our feet, and remember from what we have fallen. It is all-important that we seek to get down deep in our spirits, and "cry mightily unto God;" who can tell, if God will turn and repent, and turn away from his fierce anger, that we perish not? His eye is ever upon his poor dependant children, His ear is ever open to their cry, and these waiting, wrestling ones, are known unto and owned by the Lord, and one of another. "And they shall be mine, saith the Lord of Hosts, in that day, when I make up my jewels, and I will spare them as a man spareth his own son that serveth him." "Then shall ye return and decern between the righteous and the wicked; between him that serveth God, and him that serveth Him not." Beware lest we lose our crown, by partaking of any of the baits that Satan is casting in our path; for, knowing how much his kingdom hath suffered, because of the religious Society of Friends, he is anxious to have it shorne of its strength. May the Most High disappoint his expectation, and with an increase of holy zeal, let us "turn to the stronghold, as prisoners of hope;" and resting the cause with the Lord whose cause it is, and in whom all our works must be wrought, seek to have our minds so stayed upon Him, as not only to trust Him with the cause, and with the issue, but with ourselves, and our all. We should not be so much concerned to know what this yearly meeting or the other yearly meeting may do, or this or that class of Friends, as to know what is the will of the Most High concerning us; for if we are concerned above all, to know and do His will, we shall be supported and upheld by Him in every trial, and if we keep the faith that was once delivered to the saints, we shall be kept in the unity of the Spirit, and bond of peace, and in unity one with another, and with the faithful of all generations, "and no weapon formed against these shall ever prosper."

Maryland, Second mo., 26, 1855.

The Expected Great Comet.—The eminent astronomer, M. Babinet, member of the Academy of Sciences, gives some very interesting details relative to the return of that great comet whose periodical course is computed by the most celebrated observer at three hundred years. Our cyclical records show that it was observed in the years 104, 392, 682, 975—again in 1264, and the next time in 1556—always described as shining with the most extraordinary brilliancy. Most of the European astronomers had agreed in announcing the return of this comet in 1848; but it has hitherto failed to appear. In fact it is not so easy or simple a matter to compute those vast cyclical periods as some superficial persons—who do not look beyond the day of the year in which they live—may imagine.

We are, however, assured by M. Babinet, that, up to this moment, this beautiful star "is living on its brilliant reputation;" so that Sir John Herschel himself was wrong when he despaired of its re-appearance, and put crape on his telescope! We are now informed that a celebrated and accurate computer—M. Bomme, of Middleburgh—with a patience and devotedness truly German, has gone over all previous calculations, and made a new estimate of the separate and combined action of all the planets upon this comet, of 300 years; and he has discovered that it is not lost to us, but only retarded in its motion. The result of this severe labour gives the arrival of this rare

nd renowned visitor in August, 1858, with an uncertainty of two years, more or less; so that, between 1856 and 1860, those who are then living may hope to see the great luminary which, in 556, caused Charles V. to abdicate.—*Advocate nd Journal.*

One of the indications of a great mind, is an bhorrence of envy and detraction.

TO MY HERBARIUM.

Ye dry and dead remains!
Poor, wrinkled remnants of a beauteous prime!
Why, from your final doom, should I take pains
To stay the hand of Time!

The world would pass you by;
For beauty, grace, and fragrance all are gone;
Your age is homeliness to every eye,
And prized by me alone.

Not beautiful, but dear,
Your wrecks recall to me the happy past;
Wandlike, your stems can summon to appear
The days that could not last.

I breathe the summer air;
I wander in the woodland paths once more;
Again the copse, the dell, the meadow, wear
The loveliness of yore.

Turned to the blaze of day,
Your little lips come prayerfully apart,
With the soft breeze your leaves, reviving, play
Sweet music to my heart.

The friend who in those years
Shared warmly in my rambles far and wide,
Back, with the same old fondness, re-appears,
And trudges at my side.

These are your charms to me;
While such dear recollections ye awake,
Your ruins, blackened, crumbling though they be,
I treasure for their sake.

May I, like you, dry flowers,
When in young life I can no more engage,
A dear memento be of happy hours
To those who tend my age. *C. J. Sprague.*

THE LILY OF THE VALLEY.

Thou whose sad and darkling brow,
Seems to tell of care and woe,
Dost thou pace beneath the cloud
Which futurity doth shroud,
And thy trembling fancy, fill
With anticipated ill?
Ask the lilies of the field
For the lessons they can yield,—
Hark! to fancy's listening ear,
Thus they whisper soft and clear;
Heaven appointed teachers, we,
Mortal, thus would counsel thee.
Gratefully enjoy to-day
If the sun vouchsafe his ray.
If the darkling tempest lower,
Meekly bow beneath the shower,
But oh! leave to-morrow's fare
To thy heavenly Father's care.
Does each day upon the wing
Its allotted burden bring?
Load it not beside with sorrow
Which belongeth to the morrow.
Strength is promised,—strength is given,—
When the heart by God is riven,
But, foredate the hour of woe,
And alone thou bearest the blow.
One thing only claims thy care,
Seek thou first with faith and prayer,
That all glorious world above,
Scene of happiness and love,
And whate'er thou needst below
He thou trustest will bestow.

From the flame's refining power,
More pure the gold of Ophir flows;
From affliction's fiery hour,
More bright the Christian's virtue flows.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 197.)

GRIFFITH OWEN.

Either in the character of a useful citizen, a wise statesman, a practical Christian, an effective gospel minister, there were amongst the early settlers of the colony of Pennsylvania, few, if any, superior to Griffith Owen. He was a physician in high reputation, and with an extensive practice, but yet standing so loose to the demands of pecuniary interest, that he would not allow worldly considerations to interfere with his religious duties, or to prevent his meeting the demands of the religious Society he belonged to, on his time and talents.

He came over to Pennsylvania from Wales soon after the first settlement of the province, and located himself amongst his own countrymen, at Merion. Here he practised his profession, and soon became eminently useful. We know not when he first appeared in the ministry, but it is probable it was before, or soon after leaving his native country. We first begin to trace his labours in religious Society in 1684, and for a few years thereafter his services of this kind appear to have been much confined to his Monthly and Quarterly Meetings.

In 1686 he was appointed to represent Philadelphia county in the Assembly, in which station he appears to have acted with such wisdom as to have secured the approbation of his constituents, and of the proprietor. He was again elected in 1688, 1689, and 1700. In 1689 he removed within the city of Philadelphia, and from soon after this period he is connected with almost every matter of importance transacted in his Monthly, Quarterly, or Yearly Meeting, until his death, excepting such as occurred in 1695 and 1696, which he spent in England.

In 1689, he, with others, was appointed by the Yearly Meeting to draw up a paper earnestly to incite the Quarterly Meetings to keep up a godly discipline, and tender inspection over the youth, and to give advice on whatever other matters they may judge needful. The same Friends were desired to prepare an epistle to London Yearly Meeting, to give a salutation of love, and information of the blessed presence of the Lord Jesus being with the meeting.

When Griffith Owen and other Friends in Wales found their minds drawn to come and settle in the province, then about being granted by Charles II. to William Penn, they were desirous of retaining their language, laws and customs, in the New World. They were desirous that the proprietor should set apart a large tract of land, of which the Welch should alone have the right of purchase, and within the limits of which, the language of ancient Britain should prevail, so that it should be used in all courts, whether lower or higher. They applied to William Penn to grant them the privilege, and he consenting thereto, set apart 40,000 acres as the Welch Tract. The intended settlers then agreed to purchase, and took up smaller or larger lots as suited their ability. This was consummated soon after the proprietor first came to his colony.

In the Eighth mo., 1690, the "Commissioners" found that a large portion of the Welch Tract was still unseated, and they considered "the want of seating and improving of which, has been of great damage to the proprietary, and of exceeding loss and hindrance to the well seating and strengthening the province; several honest, able and substantial persons having either left it for want of such convenient seats that are unsettled in that tract, or hindered from seating such as have been formerly laid out unto them in it." They therefore summoned David Powell, or some other of the Welch purchasers, to appear before them, on the 19th of Eighth month, to show cause why they should not bring the part of their tract not already seated into the market for sale. Griffith Owen was one of the commissioners at the time, but he was not present with them when the above minute was made, and the summons agreed to. He appeared at the next meeting, and had the consideration of the subject postponed until 13th of the Tenth month, when he came before them, accompanied by divers of those concerned, and for himself and them presented the following statement, which also is a protest and appeal:—

"We, the inhabitants of the Welch Tract, in the province of Pennsylvania, in America, being descended of the ancient Britains, who always in the land of our nativity, under the crown of England, have enjoyed that liberty and privilege as to have our bounds and limits by ourselves, within the which all causes, quarrels, crimes, and titles were tried, and wholly determined by officers, magistrates, and jurors of our own language, which were our equals. Having our faces towards these countries, made the motion to our Governor that we might enjoy the same here, which thing was granted by him before he or we ever came to these parts, and when he came over, he gave forth his warrant to lay out 40,000 acres of land to the intent we might live together here, and enjoy our liberty and devotion in our own language, as afore in our country. The 40,000 acres were surveyed out, and by his own warrant confirmed by several orders from the commissioners of the proprietary, and settled upon already with near four-score settlements, and as we have good grounds to believe, if the way had been clear from troubles, there might have been so many settlers upon it by this time as in reason it could contain, and besides, as it is well known there were several scores of our men servants who were very desirous to have out their head land, according to promise, but could have none with any conveniences that was worth to settle upon, whereby many are like to desert the province and to go to other countries. Also, some of our Friends that have concerned themselves with the first that came to this country, have lived awhile here and returned again for their families, friends and relations, that had disposed themselves to come over with all speed if Providence had permitted; and, as far as we are given to understand, are still waiting for the opportunity, to their great damage. Now, to deprive these of their lands and liberties, which they depend upon when coming here, and that in their absence, we look upon it to be a very unkind dealing, like to ruin many families,—as also a subtle undermining to shut that door against our nation,—which the Lord had opened for them to come to these countries. We can declare with an open face to God and man, that we desired to be by ourselves for no other end or purpose, but that we might live together as a civil society, to endeavour to decide all controversies amongst ourselves in a gospel order, and not to entangle ourselves with laws in an unknown tongue; as also to preserve our language, that we might ever keep correspondence with our friends in the land of our nativity. Therefore our request is, that you be tender, not only of violating the Governor's promise to us, but also of being instrumental of depriving us of the things which were the chief motives and inducements to bring us here, and that you would be pleased, so far as in you lies, to preserve us in our properties, by removing all such encroach-

ments as are made upon the lines and boundaries of our said tract, and by patent or otherwise in due form of law, to establish and confirm the same unto us, so that we may not by any further pretences be interrupted in the peaceable enjoyment thereof, according to the Governor's true intent, and then we shall report and submit to his consideration. And if these, our reasonable desires be not answered, but our antagonists gratified by our being exposed to those uncertainties that may attend,—we shall choose rather than contest, to suffer, and appeal our cause to God, and to our Friends in England."

This document did not find favour with the commissioners. They were desirous of selling the land and raising an income therefrom for William Penn, and as no quit rent could be claimed on the part of the 40,000 acres not seated, they determined, if the Welch settlers already there did not take the whole tract and become responsible for the purchase-money and rent, that they would sell it to others. Thus the Welch colony and Welch language were lost in Pennsylvania. Other settlers came in, and no courts to try offences in Welch were held in the tract. Still, the language in many places prevailed during the lifetime of those who came from Wales; and belonging to their meetings were a number of valuable ministers who were not acquainted with English, and others who, though they were, yet still preached in their native tongue when attending Haverford, Radnor or Merion Meetings, because it was more generally understood and acceptable there.

(To be continued.)

OF FRAUD.

(Concluded from page 198.)

Now, gain being the end of trade, and every man having a right to a reasonable advantage, of which he himself must very often be the sole judge, he lieth under a great temptation of being favourable to his own interest, and of overlooking that of others; to prevent which, these considerations should always be present with men of business: That "he that maketh haste to be rich, can hardly be innocent," (Prov. xxviii. 20); that every man has a right to be dealt with fairly; that all depends upon God's blessing; that the fear of wanting what is necessary is the fear of infidels, who know not God; and that a man's life (and happiness) consisteth not in the abundance of the things which he possesseth.

When a man can consider such truths as these seriously, he is then disposed for saving instruction; he will easily hearken to the rules of religion; and a few rules will serve to direct him to keep a good conscience in the way of business. I shall recommend one very plain rule, which will go a great way towards directing every conscientious man how to act safely with respect to gain; and that is, to take such a gain, advantage, or consideration, as the person with whom I deal would be satisfied with if he knew my business as well as I do, and the reasons which oblige me to take such a profit. That this is a safe and good rule in trade is pretty plain from matter of fact; for, whenever two persons deal together who both understand their business well, a few words serve their turn: he that sells asks a reasonable gain, and he that buys sees it is fit he should have what he asks, all things considered. Now, if men would but make this their rule when they deal with such as are ignorant, it would prevent a great deal of guilt, which the Wise Man saith is almost inseparable from buying and selling.

There are certainly secrets in dealings, which everybody cannot be acquainted with; but, to prevent my being partial to myself, I may suppose the person I deal with knew the reasons why I insist upon such a price, and then, if I am conscious to myself that I need not be ashamed of such gain, I have a good testimony of my honesty, and my conscience will never reproach me for injustice. But if, instead of doing so, I take what I can get, make a hand of the negligence, ignorance, or simplicity of those with whom I have to do, I practise what is unjust, I have no regard to the laws of the Gospel; and, if ever I do repent of this sin, I make myself liable to one of the most difficult duties of Christianity—that of restitution and satisfaction, without which my repentance will never deliver me from the sad consequences of such injustice.

But to prevent, as much as may be, any occasion for the exercise of the duty of restitution, I would lay before you, 1st, the greatness of these sins; 2ndly, the temptations which lead to them, that we may avoid them; 3rdly, such considerations as are most likely to keep us from running into them. And, first, we are not to judge of the greatness of crimes by the opinion the world has of them. At this rate, we should not only make a jest of taking advantage of and cheating one another, as is too common; but even some other crimes which a Christian should not mention without horror, would be counted failings, rather than sins that will shut us out of heaven. But we are to judge of the greatness of the crimes by the authority that forbids them; by the punishment threatened; and by the mischiefs that attend them.

Now, all sins of this kind are plainly against the great rule of justice given by our Saviour. "Whatsoever ye would that men should do to you, do ye even so to them." People are very sensible of any such injury done to themselves, and give very ill names to such as overreach them. This shows that men do not think these small faults when they themselves are the sufferers. And, then, it is said expressly of these sins, "that the Lord is the avenger of all such," (1 Thess. iv. 6), perhaps because men are too apt to overlook them. And in another place St. Paul saith, "that the unjust shall not inherit the kingdom of heaven."

Lastly, the mischiefs of these sins are very apparent; they harden the conscience; they provoke and encourage others to sin; and, what is worst of all, it is seldom that people think it necessary to repent of them.

Christians are for the most part convinced that great and crying sins, such as are liable to infamous punishments in this world—that these are to be particularly repented of, or no pardon is to be expected; but the sins of fraud are often committed without remorse, and without punishment, or easily forgotten, and therefore seldom truly repented of; which, in the end, make them as damnable sins as those that people seem to be more afraid of.

Let us, in the second place, consider the temptations to this vice, and what it is that occasions people to take advantage of their neighbour with so little regret and fear of punishment. Is it ignorance? That cannot be: there is not the most ignorant person but knows well enough, when anybody wrongs him, that *that* man does ill. Is it for want of faith, and that people do not believe that they are to give an account for their injustice? Few people will own such a degree of infidelity. Is it for want? No, surely; for it is too often that those that have the least need are aptest to wrong and overreach their neighbour. Is it an immoderate love for their children, and that people will venture at all rather than not leave them all they can? That cannot be the reason, where people have none to provide for, or where they are undutiful, and take ill ways.

What, then, is it which shall tempt men to run such hazards? Why, an excessive love for the world. People think they have still too little; that more would make them more happy: this makes them forget the account they must give, and those rules which are prescribed by God for the peace and good government of the world: this makes them overlook their neighbour, as if he had not a right to be fairly dealt with: this makes them forget that death is not far from them, when they shall part with all they have unfairly gotten, and, if they know their danger, will wish a thousand times they had starved sooner than have done the least injustice.

You see how much this sin is to be feared; and that it is possible for people, by increasing their substance, to increase their damnation. Let me, therefore, recommend to you a few considerations, to make you abhor so base a vice. Let us seriously think of it, that all things are naked and open unto the eyes of Him with whom we have to do; so that what may be an oversight to man cannot be so to God. Nay, a man may be shut out of heaven for that very thing which no law on earth could take hold of him for; or, if he repents of it, it will cost him dear before he can be forgiven.

Believe it, Christians, the Lord is nigh them that are wronged, to do them justice when they call upon Him in the bitterness of their soul; and it will be no advantage to a man to have doubled his talents, when he has doubled his guilt and his punishment. Even your posterity shall suffer for your fraud: and you are only laying up a treasure of judgments for those very children whom you are so passionately fond of. God will lay up the iniquities of sinners for their children, saith Job. (Job xx. 10.) So that it were much better they were left to the wide world than with anything that is got by deceit.

Depend upon it, neither your care in settling what you will have, nor your advice to your heir, nor lands, nor securities, nor bonds, nor locks, can preserve what you shall get by fraud—no, not repentance itself. 'That is hard,' you will say; 'will not God pardon me upon my repentance?' Why, you think, perhaps, that repentance consists in confessing your faults, and asking God's pardon without making restitution; as if a thief, who has got enough to live upon, should ask God's pardon, and then think all is well and forgiven. Who does not see the wickedness of such an opinion?

To conclude. If we would follow the good patriarch's advice, and be innocent, it is necessary that we have his faith and affections. How? Why, the Apostle tells us, that "he looked for a city, whose builder and maker is God," (Heb. xi. 10); that is, he did not so much concern himself with what he might get in this short life, but he was for securing, by all means, an inheritance in heaven. He kept his eye and his heart there: and this made him despise all unjust advantages that came in his way, knowing that this was not the world that he was made for. And, in truth, unless this consideration be always present with us, the world has so many temptations to draw us out of the way, that it will be impossible for a man to resist them. Self-interest—a present advantage—the slight opinion the world has of such crimes—will all contribute to draw a man into a snare who is not steadfastly purposed in his heart that no worldly advantage shall prevail with him to forfeit his inheritance in heaven: "For what shall it profit a man, if he shall gain the whole world, and lose his own soul?" (Mark viii. 36.) We have not now time to consider particularly what is to be done where people have by design, or un-

wittingly, fallen into this error. The text directs us to restitution, as the only means to preserve the character of honest men and of Christians; and justice and conscience say the same thing. It is a difficult and it is a necessary duty: these two considerations should prevail with people to beware of a sin which requires so ungrateful a remedy. WILSON.

Old Book.—The oldest book in the United States, it is said, is a manuscript Bible in the possession of Dr. Witherspoon of Alabama, written over a *thousand years ago!* He describes it as follows: "The book is strongly bound in boards of the old English oak, and with thongs, by which the leaves are also well bound together.—The leaves are entirely made of parchment, of a most superior quality, of fineness and smoothness little inferior to the best satin. The pages are all ruled with great accuracy, and written with great uniformity and beauty in the old German text hand, and divided off into chapters and verses.

The first chapter of every book in the Bible is written with a large capital of inimitable beauty, and splendidly illuminated with red, blue and black ink, still in vivid colours; and no two of the capital letters in the book are precisely alike."

THE CROSS.

"Search the scriptures, and ask the saints of every age, and place, and they will unanimously agree that the holy cross of our Lord Jesus Christ is the safeguard, the peace and rest, the security and happiness, the boast and glory, of Christians. Not that wooden cross on which the Prince of Life shed his blood and poured out his soul unto death; but the whole process of Christ in the flesh, or rather our entering into and conforming thereunto, particularly *his humility, his poverty of spirit, his contempt of the world.* This is that cross on which we die with him, that we may be capable of a spiritual resurrection with him, and of walking thenceforward in newness of life. Let us then, with a firm and unshaken faith in his infinite love and all-powerful intercession, enter upon this path of total self-denial, or abnegation of ourselves; sacrificing all *our own wisdom and will;* all our senses, appetites, and passions; that we may live and act only by his Spirit, directing all our thoughts, desires and designs, in simplicity to Him, that he may reach, guide, uphold, and govern us, in all our ways. Then will the old man shortly die in us, and we shall feel that daily renewal in the spirit of our minds; that glorious liberty and divine confidence toward God, which other souls who are ignorant of, or unfaithful to that grace, cannot ever conceive, much less partake of."

"The secret direction of Almighty God is principally seen in matters relating to the good of the soul;—yet it may also be found in the concerns of this life; which a good man that fears God, and begs his direction, shall very often if not at all times, find. I can call my own experience to testify, that, even in the external actions of my own life, I was never disappointed of the best guidance and direction, when I have, in humility and sincerity, implored the secret direction and guidance of divine wisdom."—*Matthew Hale.*

Meteorological Notice.

West-town.—Average temperature of the three winter months, about 28°, or about the same as that of the cold winter of 1851-2, and nearly 5° below the usual average. Amount of rain and melted snow, 8.37 inches—of snow, 16 inches. The coldest day was the 7th of Second month, when the thermometer ranged from 5° below zero to 3° above, and averaged 1° below, with a severe snow storm throughout the day, and a pretty stiff breeze, that made the cold much more piercing. Average temperature of the First month, about 32°, range of thermometer, from 8° to 58°; amount of rain and melted snow, 2.53 inches—of snow, 5 inches. Much of the early part of this month was warm and foggy; but gradually became colder towards the latter part. Average temperature of the Second month was 24½°, being 7° colder than Second month of last year, and nearly 10° colder than Second month, 1853. Range of thermometer from 5° below zero on the 7th, to 51° above on the 22d. On the 11th, the thermometer was 2° below zero; on the 6th, 1° above, and on the 4th, 5th, 10th, 12th, 24th, 25th, 26th and 28th, each about 7° above zero: and on every day of the month, except the 13th, the wind came from N. W. or N. E. during most of the day.

Silk Culture.—Attempts to introduce the silkworm, Bombyx Cynthia, from Assam into Malta, have proved eminently successful. They are acclimated and thriving, and the Governor, Sir William Reid, has sent specimens of the silk to England. Already the eggs have multiplied so as to allow of distribution; the Agricultural Society of Grenada, West Indies, have asked for a supply, and are going to try them; and in Piedmont the new worms have proved themselves as productive and industrious as in their native country. Signor Griseri, and some of the nobility, have met with such success with the Assamese worm, that they are now experimenting on the native Italian grubs which feed on the leaves of the willow and lettuce,—"Where is the limit to be placed," observes the Turin Gazette, "when the object is nothing less than to convert the vegetable matter of the most common leaves into the valuable substance of silk?"

The great fact in relation to this new Bombyx is, that its food is the castor-oil plant, *Palma christi*, and not the mulberry, and that plant can be produced in warm countries in any quantity. The French are busying themselves with it; they have naturalized the worm at Algiers, and find it to be one that keeps them fully employed, for the eggs are hatched very soon after they are laid, and the second generation of worms comes in to work in about nine weeks, and so on all the year round. Owing to the cocoons having a hole in the end by which the grub escapes, the silk cannot be reeled off in the usual way, but is stripped off and carded. A trial is to be made in Algiers as to whether an acre of mulberry or an acre of the caster-oil plant is the more profitable: the latter produces leaves in abundance. The Museum of Natural History at Paris is distributing eggs of the new silk-worm to any seri-culturists willing to give it a trial.—*Atlas.*

For "The Friend."

From J. Pennington's Writings.

"The great error of the ages of the apostacy hath been, to set up an outward order and uniformity, and to make men's consciences bend thereto, either by arguments of wisdom, or by force; but the property of the true church government is to leave the conscience to its full liberty in the Lord, to preserve it single and entire for the Lord to exercise, and to seek unity in the light, and in the spirit, walking sweetly and harmoniously together in the midst of different practices; yea, and he that hath faith, and can see beyond another, yet can have it to himself, and not disturb his brother with it, but can descend and walk with him according to his measure; and if his brother have any heavy burden upon him, he can lend him his shoulder, and bear part of his burthen with him. Oh! how sweet and lovely is it, to see brethren dwell together in unity, to see the true image of God raised in persons, and they knowing and loving one another in that image, and bearing with one another through love, and helping one another under their temptations and distresses of spirit, which every one must expect to meet with." Page 323.

"Uniformity is very lovely; and to be desired and waited for, as the spirit of the Lord, which is one, leads and draws into one. But for the fleshly part, (the wise reasoning part in man,) by fleshly ways and means to strive to bring about fleshly uniformity, which ensnares and overbears the tender conscience, this is not lovely, nor spiritual, nor christian, and the apostle who exhorts Christians to one mind, yet doth not bid them force one another into one mind, but walk together sweetly so far as they had attained; and wherein they were otherwise minded, God in his good time would reveal more to them.—Philip. iii. 15, 16. 'He that hath, to him shall be given,' and the intent and work of the ministry, (with the several ministrations of it,) is to bring into the unity—Ephes. iv. 13, as persons are able to follow, and not to force all men into one practice or way; that is the way to destroy the faith, and the true unity, and at best can introduce but a fleshly appearance of unity, in such a form of worship and godliness as eats out the power. And for being of one heart and one way, blessed be the Lord, this is in measure known and witnessed. The way is one; Christ, the truth of God; and he that is in the faith, and in the obedience to that light which shines from his Spirit into the heart of every believer, hath a taste of the one heart, and of the one way; and knoweth that no variety of practices, which is of God, can make a breach in the true unity. This is the one way, for every one to be subject to that light of Christ's Spirit which he hath received from Christ; and every one keeping here, there is also one heart kept in the midst of all the variety, and diversity of practices. And the unity being thus kept, all will come into one, outwardly also, at length—as the light grows in every one, and as every one grows into the light; but this must be patiently waited for, from the hand of God, who hath the right way of effecting it, and who alone can do it, and not harshly and cruelly attempted by the rough hand of man."

"Care must be had that nothing govern in the church of Christ, but the spirit of Christ; that nothing else teach; nothing else exhort; nothing else admonish and reprove; nothing else cut off and cast out. Every minister in the church is to watch over his own spirit, that it intrude not into the work of God, that it take not upon it to be the teacher, the exhorter, the reprover, &c. And every member is to wait in the measure of the Spirit, which he hath received, to feel the goings forth of the Spirit in him who teacheth and governeth; and so to subject not to man, but to the Lord; to receive from the Lord, to obey the Lord, not to know any minister according to the flesh, but to receive and submit to what comes from the Spirit, in the Spirit. Not to know Paul, or Apollos, or Cephas, but the Spirit ministering in them. Paul may err, Apollos may err, Peter may err, (and did err, when he compelled the Gentiles to live as the Jews,—Gal. ii. 14,) for which Paul withstood him to the face, ver. 11, and Barnabas also did err, ver. 13. But the Spirit cannot err. And he that keeps to the measure of the Spirit in himself, cannot let in any of their errors, if they should err, but is preserved. For the least measure of the Spirit is true, and gives true judgment; but he that receiveth ever so great a measure of the Spirit, yet if he keep

not low therein, but lifteth up himself because thereof above his brethren, may easily err himself, and draw aside others into his error."—page 322.

See "The authority and government which Christ excluded out of his church," &c. Page 314.

THE FRIEND.

THIRD MONTH 10, 1855.

An epistle from the Meeting for Sufferings of Ohio Yearly Meeting, issued about the middle of last month, will be found in the columns of the present number of our journal.

We doubt not our brethren and sisters within the limits of that Yearly Meeting, who have maintained their allegiance to the doctrines and discipline of the Society faithfully, feel keenly the course that has been pursued towards them by the Yearly Meetings which have given countenance to those who seceded from that meeting; and which must necessarily introduce them into many trials and difficulties; nevertheless, we believe as they cherish the Christian spirit which breathes throughout this address, and labour to walk consistently with our profession, they may (to use their own words) "leave the event to the Lord, who we reverently believe, will strengthen and comfort his humble, dedicated children, however set aside and contemned, and in his own time make a plain path for them to walk in."

Ohio Yearly Meeting is large, notwithstanding the separation that has taken place from it; several of its *Monthly* Meetings number as many in usual attendance, as did Baltimore *Yearly* Meeting prior to the separation in it. How sad is the reflection, that the individuals composing this large body, cannot participate in the rights of membership within the limits of the meetings that have united with those who have separated from it. Owing to the action of Indiana and North Carolina Yearly Meetings, certificates of removal granted by the Monthly Meetings of Ohio Yearly Meeting, will not be accepted by their subordinate meetings; consequently, let persons so removing be situated where they may, within the limits of those Yearly Meetings, they must remain members of Ohio Yearly Meeting; and be under its care. We see by the postcript to the epistle, the Meeting for Sufferings has endeavoured to make provision to meet this difficulty, and we trust, the members will see the propriety, of making the burden resting on the meetings named in it, as light as possible, by acting in accordance with the advice given, and refraining from changing their places of abode.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 17th ult.—Parliament reassembled on the 16th, when Lord Palmerston explained the circumstances attending his coming into power. Admiral Dundas has been appointed to the chief command of the Baltic fleet. The army estimates for the current year, amount to £13,500,000. Last year the expenses were £7,000,000. At Liverpool, there was great distress among the poor, in consequence of the want of employment. Fifteen thousand men were out of work. High easterly winds prevailed off the English coast, which had prevented the arrival of American shipping. The cotton market was down; the range of price, from 5*d.* to 5⅝*d.* Flour was slightly lower. The iron market dull; rails, £6 10*s.* to £6 15*s.* per ton; Scotch pig iron, 51*s.* Consols, 90¼.

The War.—All the five powers have signified their intention to participate in the conference, which was to meet in Vienna on the 26th ult. Lord John Russell is to represent Great Britain; Riza Bey, Turkey; Prince Gortschakoff and M. Titoff will represent Russia, and Count Buol, Austria. The Western Powers are seeking to unite all the secondary States in a general European league against Russia. Naples is said to have joined the alliance, France having given a guarantee to prevent a revolution in Italy.

THE CRIMEA.—There is nothing new of much moment from the seat of war. On the 1st ult., the Czar's two sons entered Sebastopol, and made a reconnoissance of the allied front. The allies were in daily expectation of an attack from the Russians. The weather had become mild. In a sortie, on the previous night, 300 French soldiers were killed or wounded, two regiments of French having, in the obscurity of the night, fired upon each other. The Russians had received considerable reinforcements. On the 8th, Menschikoff reported that the general position of affairs was unchanged. *The Sick and Wounded.*—There were in the Hospital at Scutari on the 1st, 78 officers and 4794 non-commissioned officers and privates, beside which a large number of invalids remained on ship-board, in the harbour. The interments from the hospital continued to average about fifty a day. The number for the First month was 1480.

RUSSIA.—On the 12th ult., the Emperor issued a manifesto in which he calls upon the entire male population for an additional force of 300,000 men is to be sent to the Crimea.

FRANCE.—A French company has offered to raise in France a legion of from 16,000 to 25,000 men, for the service of the English government, half of the number to be ready in fifteen days. Forty bales of Algerian cotton resembling the Sea Island, have been sold at auction, at Havre, for from 2*f.* 37*c.* to 4*f.* 50*c.* per pound.

SWITZERLAND.—The Swiss Federal Government desires to remain neutral, and forbids the enlistment of soldiers for foreign service.

AUSTRIA, continues her warlike preparations with energy. Negotiations are on foot for an Austrian loan of £15,000,000 in the English market.

PRUSSIA.—The entire Prussian army is to be immediately made ready for the field. The opinion prevails that no terms can be come to between Prussia and the Western Powers, and that Prussia will be left to neutrality and its consequences.

TURKEY.—The Government is endeavouring to obtain a loan of £2,000,000 at 10 per cent. interest.

EGYPT.—The railway between Alexandria and Cairo, a distance of 130 miles, is now complete, with the exception of the three bridges on the two branches of the Nile, and the Delta canal.

INDIA.—Bombay dates to First mo. 16th had been received. A formidable insurrection had broken out in Cabool. A battle had been fought at Bundez Abbas, between the Persians and Arabs; between five and six thousand men were killed and wounded, on both sides. The Persians took the place.

UNITED STATES.—*Congress.*—Both Houses have passed the Bounty Land Bill, disposing of many millions of acres of the public domain. The bill provides lands for persons of all grades serving by land and sea, including the Indians, wagoners, &c., who have served in the wars of the country, since 1790. It gives 160 acres in all to each person, who has served not less than fourteen days. The widows and minor children of soldiers are to receive the benefit, in case of the death of the persons so entitled.

The Collins' Line.—Both Houses have agreed to continue the present extravagant compensation to the line for carrying the Atlantic mails, until 1860. The price paid is $33,000 a trip, or $858,000 per annum. Responsible parties offered to perform the service for less than half the price paid. The President vetoed the bill. *The Tariff.*—Near the close of the session, an attempt was made to effect important modifications and reductions in the tariff of duties. In the House of Representatives, a bill for that object was passed, in the form of an amendment to the civil and diplomatic appropriation bill. It, however, failed in the Senate, that body directing all that related to the tariff to be stricken from the bill.

The 33d Congress adjourned *sine die* at noon, on First-day, the fourth instant.

The amount in the Federal Treasury, on the 1st inst., was, $23,439,550.

Pennsylvania.—Our State Legislature seems disposed to follow the example of Congress in talking a great deal, and doing very little. After being in session two months, but one bill had passed both branches, viz., that prohibiting the sale of intoxicating drinks on the first day of the week, which has received the Governor's sanction, and become a law. The attempt to elect a United States Senator has failed, here as in some other States, where the members of the Legislature consist of three or more political parties. After many fruitless ballotings, the election has been postponed until the Tenth month, when the Legislature will not be in session.

New York.—The whole number of inmates received into the City Prisons, during the year 1854, was, 30,69 of whom 6,966 were natives, and 23,725 foreigners. There were 10,130 females and 20,561 males—5,32 were people of temperate habits, and 25,371, intemperate. *Real Estate.*—At recent auction sales, good price have been obtained; rents of dwellings are lower tha last year, but rents of stores keep near former rates Money has accumulated since new years, and lender now part with it freely on what they deem good secu rity. Mortality last week, 532.

St. Louis.—The population of St. Louis, according t a census just taken, is 97,642, of whom 2,956 ar coloured. Including the suburbs, the population i nearly 120,000.

Philadelphia.—The receipts at the Custom-house las month, were only $280,356; a falling off of one half, a compared with the two previous years. The mean temperature for the Second month, was 27½°, which i 5½° below the average of the preceding thirty years The lowest of the thermometer was on the 7th, when i stood at 2° below zero. The snow storm of the 7th wa remarkable for the low temperature, which prevaile during its continuance, the thermometer ranging from 2° below, to 5° above zero, during the day. This is be lieved to be without precedent in this latitude. Mortality last week, 226; 59 deaths were from consumption and inflammation of the lungs and bronchi.

Miscellaneous.—Prohibition.—Both branches of the Delaware Legislature have passed the prohibitory liquor bill. It will take effect on the 1st of Sixth month next.

Church and State.—The Senate of Massachusetts has passed, in concurrence with the House, an order directing the committee on constitutional amendments, to report an amendment prohibiting Roman Catholics from holding office in that State.

A Valuable Crop.—E. A. McKay, of Naples, Ontario county, N. Y., raised, last year, from one acre of land, eleven thousand pounds of Isabella grapes.

Burns, the Fugitive Slave, whose reclamation led to such serious results at Boston, is now at liberty, the Bostonians having paid $1300 for his freedom.

Freedom in Peru.—President Castilla has published a decree, giving freedom to all the slaves, except those who had volunteered to serve in the army of Echenique. The government promises to pay the owners for the loss of their slaves in five years.

Cold Weather.—On the 26th ult., the thermometer at Chicago and Milwaukie fell to 20° below zero. At Cincinnati, it was 6° above; the navigation was again suspended on account of the ice. Another great snow storm in the latter part of the month, rendered the Illinois railroads impassable.

Low Stage of Water.—The Pilots on the Lower Mississippi say, they never saw the river in such a bad state as at present. It is almost impossible to run clear of bars and snags.

Education in California.—The common school system is being extended in this State. The number of schools increased last year, from 51 to 168, and the expenditures, from $54,231 to $272,829. The number of children reported is 20,075, of whom nearly three-fourths are growing up, without any instruction.

RECEIPTS.

Received from Jesse Hall, agt., O., $2, vol. 28, for J. W. Smith, $2, vol. 28, for John Hall, $4, vols. 27 and 28; from C. Bracken, agt., O., for John Hirst, $2, vol. 28, for Jas. Cook, $2, to 11, vol. 29; from H. Knowles, agt., N. Y., for Saml. Bowerman, $1, to 52, vol. 28, for J. C. Hopkins, $2, vol. 28.

FRIENDS' ASYLUM.

A stated Annual Meeting of "The Contributors to the Asylum for the Relief of Persons deprived of the use of their Reason," will be held on Fourth-day, the 14th of Third month, 1855, at 3 o'clock, P.M., at Arch Street Meeting-house, Philadelphia.

WILLIAM BETTLE, Clerk.

FALLS MONTHLY MEETING SCHOOL.

The Committee of the above named School is desirous to procure a well qualified female teacher to take charge of the School as instructor, for the ensuing season. Early application is requested, and can be made by addressing, Mahlon Moon, Morrisville P. O., Bucks Co., Pa.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From Tait's Magazine.

The Jewish Subjects of the Russian Czar.

Much interest was awakened, a short time ago, by an account in the daily papers of a visit paid by Moses Montefiore to what were called his *Russian* co-religionists among the prisoners of war brought home by our ships. The interest felt would no doubt have been greater still, had the history of the Jewish communities to which these individuals belong been better known. This history, in a consecutive form and in a philosophical spirit, remains to be written; but in the meanwhile a few jottings relative to the past and present condition of the Jews among whom Russia recruits her fleets and her armies, may prove acceptable.

The indiscriminate application of the name of Russian to the various peoples under the dominion of the Tzar, is one among the many indications of how imperfect a knowledge we have hitherto had of the true constitution of the colossal empire with which we are at present engaged in so close a struggle. In no case is the denomination more inapplicable than in that of the Israelites who live under the sceptre of the Tzars, but who have never been tolerated on Russian soil. From the early times, this people was denied the right of establishing themselves in the Russian dominions, and to this day they are not allowed to sojourn for any length of time in Russia proper; and it was not until Poland was brought under subjection to the Russian Tzars, that the latter ever counted any Jewish communities among their subjects. Poland, on the contrary, may be considered the home of the Jews in Europe; for in that country their numbers amount to that of a nation, and they hold a position which, however degraded it be, gives them a certain weight in the State, and could under present circumstances be filled by no other class. In every town throughout the countries which once constituted the independent kingdom of Poland, all handicrafts, with the exception of that of the smith and the carpenter, all branches of trade, be it *en gros* or *en détail*, are in the hands of the Jews; and no business, be it of the most important or the most insignificant nature, can be transacted without their aid. Through the mediation of a Jew the nobleman sells the corn grown on his estate to the skipper who exports it; and through the mediation of a Jew the serf sells his pigs and his fowls to the consumer in the town. Through the mediation of a Jew the upper classes engage their servants, and sometimes even the tutors and governesses for their children; and through the mediation of a Jew the *voiturier* settles his contract with the traveller who requires his conveyance. Through the mediation of the Jews landlords settle conditions with their tenants, and housewives lay in their winter provisions. In short, whether you would eat or drink, rest or travel, change your lodging or renew your toilet in Poland, you must have recourse to the Jews, who divide among themselves houses, inns, lands, and every description of property belonging to the Christians; so that each Jew has his prescribed field of activity, from which he may draw as much profit as it will yield, while he is strictly prohibited from trespassing upon the hunting-grounds of his neighbours.* The Jews swarm in the streets of the towns throughout all the Polish provinces, and are met also in great numbers in the villages and on the high-roads; ever busy in turning a penny, but almost invariably presenting a picture of squalid misery, and mental and moral degradation painful to behold, and in strange contrast with their importance as the monopolizers of almost all the industrial activity in the society amid which they live, and with their numbers, which amounting to upwards of two millions and a half, must give them a certain weight in the State: and the stranger inquires, with startled curiosity, how it is that a people has so multiplied on a soil which seems to deny them every comfort of life.

There are, perhaps, few instances in history in which we can trace in such unmistakable evidences the elevating influences of just laws, and the debasing effects of lawlessness and persecution, on communities as well as on the individuals who compose them, as in the case of the Jews of Poland. At a very early period of Polish history, when in other Christian countries the commonest rights of humanity were denied to the Israelites, they enjoyed in Poland the protection of the laws; and in the 14th century, when the most atrocious persecutions drove them from all the Western countries of Europe, they flocked in thousands to the banks of the Vistula, where the Polish king, Casimir the Great, afforded them an asylum, and extended to them privileges commensurate with those of his other subjects. Invested with the rights of citizens, the Jews soon became such in the best sense of the word, and Casimir reaped his reward in the rapid development of the prosperity of his realm. The people of Poland were divided into two classes: the nobles and the peasants; the first of which considered the pursuit of commerce or of the useful arts as beneath their dignity, while the second occupied themselves exclusively with the tillage of the soil. The Jews thus proved most useful in filling up the gap between the two; and during Casimir's reign already seventy towns arose on the banks of the Vistula, and commerce and industry were developed and flourished, these branches being entirely in the hands of the Jews; who, enjoying the protection of the laws, and being free to follow their religious convictions unmolested, soon ceased in all other matters to distinguish themselves from the people of which they formed a part, and proved themselves as estimable as patriots as they were useful as citizens.

The consideration which the Jews enjoyed in Poland during this period is by popular tradition attributed to the influence of the beautiful Esterka, or Esther, a Jewish maiden, who for a time held captive King Casimir's fickle heart. But although Esther's influence may have been great, and may have been exercised in favour of her race, Casimir's extension of favour and protection to the industrious and persecuted Jews was too much in accordance with the general character of the system of wise and beneficent policy which acquired for him the surname of the "King of the Peasants," whom also he protected from the oppression of the nobles, to need any such inspiration; and as long as his spirit continued to animate the Polish rulers, the country was prosperous and powerful. Cardinal Commendoni, the Pope's legate in Poland during the reign of the last of the Jaghellons in the 16th century, expresses as follows his surprise at finding the Jews in that country enjoying the rights and well-being of respected citizens, while in other parts of Europe they were only able to purchase a contemptuous toleration at the cost of immense sums of money:

"There are in these provinces a large number of Jews, who are not despised as elsewhere. They do not live on the vile profits of usury and service, although they do not refuse such gains; but they possess lands, are engaged in commerce, and even apply themselves to literature and science, particularly medicine and astrology. They are almost everywhere entrusted with the levying of customs and tolls on the import and transport of merchandise. They possess considerable fortunes, and are not only on a level with gentlemen, but sometimes hold authority among them. They do not wear any mark to distinguish them from Christians, but are even allowed to wear a sword and to go about armed. In short, they enjoy all the rights of other citizens."

But with the extinction of the Jaghellon dynasty matters took another turn in Poland. The monarchy, which had until then been elective in name only, now became so in fact, and the reign of anarchy commenced. The kings, holding the crown by the suffrages of the nobles, ventured not to restrain their unlawful proceedings; and, fanned by the Jesuits—whose disastrous influence in Poland also dates from this period—the superstitious and fanatic hatred of the Jews, which the Polish Christians shared in common with those of Western Europe, though it had been held in check, now burst forth with indescribable fury. Forbidden thenceforward the privilege of bearing arms or of serving the country in a civil capacity; forced to take up their abode in the lowest and dirtiest quarters of the town, apart from all the other inhabitants, and to wear a distinguishing badge of infamy on their vestments; fleeced by all kinds of taxes and extortions, and impeded in every way from gaining openly an honest livelihood, the persecuted race soon sunk down, morally and materially, to a level with their oppressed brethren in other countries, and became deserving of the repugnance they inspired; while the prosperity of the towns, the centres of the industry,

* This strange custom is called *Chazak;* and, though now prohibited by law, continues in a great measure to prevail.

commerce and riches of the country, declined, and with them the power and independence of Poland, which, invaded and partitioned, fell a victim partly to the anarchy of the nobles, partly to the influence of the Jesuits.

The numerous laws concerning the Jews which emanated after this period, having merely reference to their relations with the Christians, while all transactions between themselves were left to the jurisdiction of the rabbis, who even possessed the right of pronouncing sentence of death or of exile, the Israelites of Poland were thrown back upon the Books of Moses and of the Talmud for their laws. Jewish customs in their most rigid form became in consequence their rule of conduct; and thus the chasm between them and their fellow-citizens grew wider and wider; and what was at first merely a religious difference, became a strong national antipathy, and Jew and Pole, though remaining necessary to each other, became animated by mutual hatred, disgust, and contempt. The strong prejudices which have always characterized the Hebrew race, being not only strengthened by the injustice and persecution of their antagonists, but by the study of the works, which were to them the sole fountains of law and justice, they sunk deeper and deeper in the scale of civilization, while their brethren in other lands were slowly emerging from the bondage in which the religious fanaticism of the people and the mistaken policy of the Governments had held them; and the great mass now represent, in a hideous picture, the degrading influences of popular fanaticism and exclusive legislation.

(To be continued.)

For "The Friend."

From I. Pennington's Writings.

"The apostle warns believers to take heed of drawing one another on too fast, or of judging one another in some things as some of them might have light in, others not. He that eateth, not to judge him that did not eat; and he that did not eat, not to judge him that did eat; yea, in matters of worship, he that observed a day, and kept a sabbath, not to judge him that observed not a day, and kept not a sabbath, for the Jews which were truly converted, were yet hard to be drawn off from the observation of their sabbath, and could hardly bear with the believing Gentiles, who were never taught to keep their sabbath with them, but were taught to esteem every day, and sanctify it to the Lord.—Rom. xiv. 5. And those who esteemed every day, and dedicated it to the Lord, (ceasing from sin, and resting in him; for under the gospel we are not to set up a new type, but to enter by faith into the true rest, which is the substance of what the other signified,) could hardly bear with them, who observed a day. Even in the apostle's days, Christians were too apt to strive after a *wrong unity* and *uniformity* in outward practices and observations, and to judge one another *unrighteously* in these things. And, *mark*, it is not the different *practice* from one another that breaks the *peace and unity*, but the judging of one another, because of *different practices*. He that keeps not a day, may unite in the same spirit, in the same life, in the same love with him that keeps a day, and he who keeps a day, may unite in heart and soul with the same spirit and life in him who keeps not a day, but he that judgeth the other, because of either of these, errs from the spirit, from the love, from the life, and so breaks the bond of unity, and he that draws another to any practice, before the life in his own particular lead him, doth as much as in him lies, destroy the soul of that person, ver. 15; this was the apostle's rule, for every one to perform singly to the Lord, what he did, and not for one to meddle with the light or conscience of another, undervaluing his brother, or judging him, because his light and practices differed from his, chap. xiv. 10, but every one to keep close to their own measure of light, even to that proportion of faith and knowledge which God of his mercy hath bestowed on them. And here is the true unity in the spirit, in the inward life, and not in an outward uniformity. That was not necessary in the apostle's days, nor is it necessary now; and that eye which so dotes upon it, overlooks the one thing which is necessary. Men keeping close to God, the Lord will lead them on fast enough, and give them light fast enough; for He taketh care of such, and knoweth what light and what practices are most proper for them; but for men to walk on faster than the Lord holds forth his light to them, this overturns them, raising up a wrong thing in them, and the true birth hereby comes to suffer, to shrink and be driven back. And oh! how sweet and pleasant is it to the truly spiritual eye, to see several sorts of believers, several forms of Christians in the school of Christ, every one learning their own lesson, performing their own peculiar service, and knowing, owning, and loving one another, in their several places, and different performances to their Master, to whom they are to give an account, and not to quarrel with one another about their different practices.—Rom. xiv. 4. For this is the true ground of love and unity, not *that such a man walks*, and does just *as I do*, but because I feel the same *spirit and life* in him, and in that he walks, in his rank, in his own order, in his proper way and place of subjection to that. And this is far more pleasing to me, than if he walked just in that track wherein I walk; nay, so far as I am spiritual, I cannot so much as desire that he should do so, until he be particularly led thereto, by the same spirit which led me, and he that knows what it is to receive any truths from the Spirit, and to be led into practices by the Spirit, and how prone the fleshly part is to make haste, and how dangerous that haste is, will not be forward to press his knowledge or practices upon others, but rather wait patiently till the Lord fit them for the receiving thereof, for fear lest they should receive and practise too soon, even in that part which cannot serve the Lord. And this I can truly say concerning myself, I never found my spirit forward to draw any, either to anything I believed to be true, or to any practice or way of worship I observed or walked in, but desired that the power and leadings of life might go before them, and was afraid lest men should receive things from my hand, and not from the Lord." Page 322.

"It is not an easy matter in all cases, clearly and understandingly to distinguish the voice of the Shepherd, the *motions of God's Spirit*, and certainly to distinguish the measure of life, from all other voices, motions and appearances whatsoever. Through *much growth* in the truth, through *much waiting* on the Lord, through *much* fear and trembling, through much sobriety and meekness, through much exercise of the senses, this is at length given and obtained. And yet there is a preservation in the meantime to that which is lowly and submissive, looking up to the Lord continually, and not trusting to its own understanding, sense and judgment. But that which is hasty and confident, and so ready to plead for its own sense and judgment, according to the measure of life, as it calls it; that is commonly out; entered into the erring spirit, pleading and contending for, it knows not what, and is very apt to judge and condemn others in that very respect, wherein itself is most justly and righteously judged and condemned by the Lord, even by his pure life and Spirit in His people.

Internal Slave Trade.—The ratio of increase of the whole slave population, from 1840 to 1850, is stated at 28.87. But this, be it recollected, is the average ratio. Of course, the ratio is far greater in Virginia, where the climate is mild, the labour light, and the treatment comparatively kind, than on the cotton, rice, and sugar plantations of the South. It is a well-ascertained fact, that slaves employed in the cultivation of sugar do not increase. On the contrary, after the abolition of the African slave trade, there was a constant decrease in the number of slaves in the British sugar islands; and now, in the State of Louisiana, there is no increase of slaves except by importation. Hence, if the average ratio is 28.87, it is a very moderate estimate that the natural ratio in North Carolina, Virginia, Maryland, and Delaware, must be at least 30 per cent. Now, what are the facts?

In the last ten years, the ratio of increase in Virginia, is 5.21 per cent. Maryland, 0.07 per cent. Delaware, decrease, 12.09 per cent. North Carolina, increase, 17.38 per cent.

Do we ask what has become of the slaves thus disappearing from these States? The answer is found in the ratio of increase in the importing States. Thus, in the last ten years, slaves have increased in Georgia, 35.85 per cent. Missouri, 50.10 per cent. Florida, 52.85 per cent. Mississippi, 58.74 per cent. Arkansas, 136.26 per cent.

In various other States, the increase is far above the average ratio. Hence we see that there is a prodigious transfer of slaves; or, in other words, a vast internal slave trade. The slaves of Virginia, Maryland, and South Carolina, supposing them to increase in the ratio of 30 per cent. since 1840, would,

In 1850, have amounted to	1,020,033
Whereas, they number only	851,444
Exported . . .	168,589

Should these slaves average $500 a head, we have a receipt by these three States, of $84,294,500, or $8,429,450 yearly, for their staple article of export.—*Tribune.*

Proverbs in "Night Thoughts."

The "Night Thoughts," by Edward Young, contains many an apt line that has "passed into a proverb." Here is a budget gathered in the North American Review.

"We take no note of time
But from its loss."

That is a proverb; so is the pointed declaration,—

"All, all on earth is shadow, all beyond
Is substance;"

and still more unquestionably the following, for it has long since passed into the common parlance of the world, in use among many people who know not the name of its author:

"All men think all men mortal but themselves."

What fitter apologue to the conscience than this imaginative line?

"The spirit walks of every day deceased."

An aspiration is hardly proverbial, or we would instance the appeal to Lorenzo:

"O for yesterdays to come!"

Of the following there is no question: it is declarative, and fulfils every condition of a proverb.

"Love, and love only is the loan for love."

Similar to this is the expression:

"Hearts are proprietors of all applause."

So, too, the oft-remarked creative efforts of the imagination in enhancing the terrors of death:

"Man makes a death which nature never made."

It is to Young, and not to Goldsmith, that we should assign the sentence—they both have it, but the latter *borrowed* it—

"Man wants but little; nor that little long."

A proverb should be in one line; but the privilege may be extended to so fine a saying as the celebrated,

"Earth's highest station ends in 'Here he lies,'
And 'dust to dust' concludes her noblest song."

It would be well if some of those loudest in their praises of Young, would bear in mind the following:—

"'Tis impious in a good man to be sad."

The concluding line of the Fourth Night is memorable:

"Men may live fools, but fools they cannot die."

What a world of trouble the following might save critics and fault-finders! It quite puts out the lantern of Diogenes:

"'Tis vain to seek in men for more than man."

Solomon has been before Young with this:

"The man of wisdom is the man of years."

How often has the experience of the world pointed the following:

"Death loves a shining mark, a signal blow!"

There is a nobleness which cannot be too familiar to us in this:

"Our hearts ne'er bow but to superior worth,"

with its accompanying gloss:

"Pigmies are pigmies still, though perched on Alps."

A great hero who acquired a reputation some years since by jumping off precipices into rivers, immortalized himself by an advance beyond the proposition—

"And all may do what has by man been done."

The alliteration does justice to a noble sentiment in the following:

"'Tis moral grandeur makes the mighty man."

There is also much virtue in the line—

"The man that blushes is not quite a brute."

"Procrastination is the thief of time,"

you may hear anywhere, on 'change, in counting-houses, in the streets.

These examples might be multiplied at will. The most cursory perusal of the poem will suggest others, which, if not exactly proverbs, bear a strong family relationship to those tenacious dwellers in our memories.

How few have faithfully followed that holy Leader, who prepares his people to labour for the *restoration of true harmony* among our fellow-creatures! In the pure gospel spirit, we walk by faith, not by sight. In the obedience of faith, we die to the *narrowness of self-love*, and our life being hid with Christ in God, our hearts are *enlarged towards mankind universally.*— *Woolman.*

"There is no method more certain to know whether we walk uprightly before God, than to consider whether we are in such a condition as to be ready to die whenever he thinks fit; and the best way to clear this, is to reflect whether, in the constant course of our daily actions, death would not surprise us. Now, if we find anything that would trouble us on its approach, let us quit it immediately. How exactly just would the tradesman be in buying and selling, if he thought it the last bargain he should make. How innocently would he converse, if he thought the present company the last he should keep."

For "The Friend."

The Wellingtonia Gigantea.

This name has been given by English botanists to the large coniferous tree recently discovered in California. It inhabits a solitary district on the elevated slopes of the Sierra Nevada, near the head-waters of the Stanislaus and San Antonio rivers, in lat. 38° N.; long. 120° 10′ W., at an elevation of 5000 feet from the level of the sea. From 80 to 90 trees exist, all within the circuit of a mile, and these varying from 250 to 320 feet in height, and from 10 to 20 feet in diameter. A tree recently felled measured about 300 feet in length, with a diameter including bark of 29 feet 2 inches at 5 feet from the ground; at 18 feet from the ground it was 14 feet 6 inches through; at 100 feet from the ground, 14 feet; and at 200 from the ground, 5 feet 5 inches. The bark is of a pale cinnamon brown, and from 12 to 15 inches in thickness. The branchlets are round, somewhat pendant, resembling a cypress or juniper. The cones are about 2½ inches long and 2 inches across at the thickest part. The trunk of the tree in question was perfectly solid from the sap wood to the centre; and judging from the number of concentric rings, its age has been estimated at 3000 years. The wood is light, soft and of a reddish colour, like redwood or Taxodium Sempervirens. Of this vegetable monster, 21 feet of the bark from the lower part of the trunk, have been put in the natural form in San Francisco, for exhibition; it there forms a spacious carpeted room, and contains a piano, with seats for 40 persons. On one occasion, 140 children were admitted without inconvenience.

A piece of the wood recently examined by Prof. Gray, of Cambridge, was found to contain, on an average, 48 annual layers to the inch. The semi-diameter of the tree, at the point where the specimen examined was taken from, being 5 feet 2 inches, (viz. at 25 feet from the ground,) supposing the tree increased in diameter at the same rate during its whole life, there would be nearly 3000 annual layers; but Dr. Gray, in consideration of the greater thickness of the layers of a young tree, and from comparison of sections of the so-called cypress of the Southern States, Taxodium Distichum, assigns about 2000 years as its highest probable age.

Dr. C. F. Winslow, formerly of Boston, furnishes to the California Farmer the following description of a visit to the localities of these gigantic trees. He says, "The road was more or less shaded all the way by pines so gigantic as to awaken in me, who had never before seen the native and lofty forest scenery of the north temperate zone, the strongest feelings of wonder and admiration. I had never before conceived of the capacity of the various species of conifera to attain such enormous dimensions. They were often six feet through, and from 130 to 300 feet high, and so symmetrical and perfect in form, as to impress me with new and more commanding ideas respecting the force and operation of the vital principle, presiding over the nourishment and growth of organized bodies.

"The height of the locality is about 5000 feet above the sea. So far as known, the vegetable growth, to which the name of 'Big Tree' has been attached, grows in no other region of the Sierra Nevada, nor on any other mountain range of the earth. It exists here only, and all the individuals of its kind, so far as I can learn, are localized to this vicinity. They are embraced within a range of 200 acres, and are enclosed in a basin of coarse silicious material, surrounded by a sloping ridge of sienitic rock, which in some places projects above the soil. The basin is reeking with moisture, and in the lowest places the water is standing, and some of the largest trees dip their roots into the pools or water runs. The trees of very large dimensions number considerably more than 100. Mr. Blake measured one 94 feet in circumference at the root, the side of which had been partly burned by contact with another tree, the head of which had fallen against it. The latter can be measured 450 feet from its head to its root. A large portion of this fallen monster is still to be seen and examined; and by the measurement of Mr. Lapham, the proprietor of the place, it is said to be 10 feet in diameter at 350 feet from its uptorn root. In falling, it had prostrated another large tree in its course, and pressed out the earth beneath itself so as to be embedded a number of feet in the ground. Its diameter across its root, is 40 feet. A man is nothing in comparison of dimensions, while walking on it or standing near its side. This to me was the greatest wonder of the forest. The tree which it prostrated in falling, has been burned hollow, and is so large, a gentleman who accompanied us from Murphy's, informed us, that when he first visited the place two years ago, he rode through it on horseback 200 feet, without stooping but at one spot, as he entered, at the root.

"The wood of this tree, I am told by Mr. Lapham, is remarkable for its slow decay. When first cut down, its fibre is white, but it soon becomes reddish, and long exposure makes it as dark as mahogany; it is soft, and resembles in some respects pine and cedar. Its bark, however, is much unlike these trees; nearest the ground it is prodigiously thick, fibrous, and, when pressed on, has a peculiar feeling of elasticity.

"The cone of this tree is small and compact, and nearly regularly oval; and although the tree itself is the largest of the conifera, its fruit is as small as that of the dwarfish pines of North Carolina and Cape Cod."—*From the Annual of Scientific Discovery for* 1855.

Eruption of the Volcano of Cotopaxi.—For some time past, says the Panama Star, this stupendous volcano has been in a state of eruption, and the cause of much alarm to the inhabitants of the surrounding country. After having given frequent indications of activity for more than a year, it has at length thrown out over the plains of Callo enormous masses of rock, torrents of brackish water, and burning lava. The waters have broken down the bridge of Cunchi, and carried off in their course much property and many cattle, but the buildings in Latacunga and other towns in the neighbourhood have not been injured. By the last accounts the alarm still continued, as the volcano is still in a state of activity and vomiting out fire day and night.

Cotopaxi is the highest volcano in the world, having an altitude of 18,895 feet. The town of Latacunga has been destroyed eight times already, and fears are entertained that in the present eruption the city will again suffer, the inhabitants having fled in consternation. The eruption of 1743 was attended by loud reports and noises, and immense issue of burning lava, that flowed down on all sides, and made the mountain look like one mass of fire. In 1768 it threw out an immense quantity of fine ashes, some of which fell a hun-

dred leagues distant, producing a total obscurity for some time. This eruption was accompanied with earthquakes, which were felt as far as Guayaquil and Popayana.

It frequently happens that during the most violent explosions the earthquakes are not felt in the vicinity of the mountains, though violent shocks are experienced at some distance.—*Compiled from the Democratia of Quito.*

RALPH DIXON,

An Elder. Aged 68. Deceased Third mo. 20, 1854.

From memoranda left behind, this dear Friend seems to have been early visited by the convictions of the Holy Spirit. His father had married out of our Society, but his mother was a serious woman. Speaking of her, he says,—"One day (it is amongst the earliest of my recollections) she addressed me very seriously; and, among other cautions, warned me against using improper language. It immediately occurred to me that I had once offended in this respect, and conviction seized me so strongly, that I was almost frantic with grief. Seeing my distress of mind, she kneeled down and supplicated the throne of grace on my behalf; after which, my feelings subsided. I was not more than four years of age at this time, but my infant years did not exempt me from the temptations of the enemy of souls. When six years of age, I was accused of a fault which, though guilty, I denied; but I had no sooner uttered the falsehood than a dark cloud came over my mind, and I felt awfully condemned. I relate these circumstances to show, that the Almighty does not leave himself without a witness, even in the hearts of children, condemning the evil and approving the good."

He seems to have suffered much in his boyhood from evil communications. His parents, from reverses in business, were much reduced in their circumstances, and in order to lessen their expenses, bound him apprentice to a shoemaker in his native village of Staindrop, when he was only twelve years of age. He says, "the morals of my master's workmen were very loose indeed, and although they were often changed, yet, with the exception of one man, who only remained in the shop a few days, I do not recollect, during the whole of my apprenticeship, one serious person being amongst them. I am sorry to say, I was too ready a learner in this school of vice and immorality; and though followed by an accusing conscience, yet I turned a deaf ear to its admonitions. I well remember, about this period of my life, being brought into very great distress at my awfully lost condition; I passed a sleepless night, and resolved in future, to live more circumspectly; but these resolutions, being made in my own strength, were soon forgotten, and I plunged again into folly."

At the expiration of his apprenticehip, he visited Leeds for improvement in his business; but trade being greatly depressed in consequence of the war, he found great difficulty in obtaining regular employment. Speaking of this period of his life, he says, "The war with France at this time was very hot, and the government was forming an 'army of reserve,' and to induce young men to join it, were offering large bounties. My fellow-traveller and myself, being under great discouragement, owing to the difficulty of obtaining work, determined to enlist. We had no sooner put our resolution into effect, than I became very much distressed at the rash act which I had committed; but finding I could not retrace my steps, I determined to make the best of my new situation."

He afterwards volunteered into the 31st regiment of foot for regular service. He states in the narrative, "It was very evident that this 'army of reserve,' and 'army of defence,' as they were called, were nothing more than decoys, into which, under the expectation of not having to leave their native country, young men were induced to enlist; and afterwards either tempted by bounties, or forced by ill usage, to volunteer into the regular service."

The 31st regiment was sent into Ireland. During his sojourn in this island, he married the daughter of a soldier—the dear friend who yet survives him. They had not been long married before they sailed from the Cove of Cork for actual service in Spain and Portugal, and landed at Lisbon. The soldiers' wives being found a great encumbrance, were all sent back to England. The 31st soon joined the army under Sir Arthur Wellesley, and met the French at Talavera. A most sanguinary battle ensued, in which our dear friend was severely wounded; a bullet having passed through his left shoulder, and one through the middle finger of his right hand; his cap was either shot from his head or lost off, and a bullet passed through his haversack. Although he was able to walk, yet, in consequence of the great loss of blood, it was with difficulty he got from the battlefield to the hospital at Lisbon. A few days after his arrival, the wound in his shoulder mortified, and the medical men considered his case hopeless; but a gracious Providence had better things in store for him. To the great surprise of all, the mortified part sloughed out, bringing away with it splinters of bone, after which, the wound so far healed as to enable him to undertake the voyage back to his native country. Twelve months after his arrival, he was discharged an out-pensioner of Chelsea Hospital, with one shilling per day; and returned, with his wife and infant son, to his native village, to the great pleasure of his parents, especially of his dear mother, who loved him most tenderly, and whose petitions at a throne of grace for his preservation had been many and fervent. For the maintenance of himself and family, he turned his attention again to shoe-making; but in consequence of the weakness of his wounded shoulder, the loss of a finger, and want of practice, he only made poor wages, which compelled him to work long hours to make up deficiencies. Finding his health giving way under such close application, he opened a little shop for the sale of provisions and drugs, which he gradually extended, and which soon required his undivided attention. His sufferings in the army had so undermined his constitution, that he seldom enjoyed good health, and repeated attacks of hemorrhage from the lungs rendered him an infirm man for the rest of his life.

But to return to his own simple narrative:—"Soon after I had settled down in my native village, my mind took a serious turn, and I was pretty punctual in attending a place of worship of some kind. My youngest and surviving brother had joined the Methodists, and often preached amongst them. He was a schoolmaster, and being very intelligent, it was pleasant to me to have his company. One day he gave me an outline of a sermon he had just preached from the text, 'The wicked shall be turned into hell, and all the nations that forget God.' The words of the text took great hold on my mind, and I saw that although I was not outwardly wicked, I was among those that were forgetting God. My convictions gradually deepened, but I was not brought to that state of distress which some experience, and I often sorrowed because I thought I was not sufficiently sorrowful. One First-day, feeling my mind more than usually burdened, I retired to a private place, and kneeling down, opened my Bible, when this passage caught my eye: 'What God hath cleansed, that call not thou common or unclean.' The cloud dispersed, and my contrite heart was favoured to feel a measure of peace.

"About this time I joined the Methodists. My wife, becoming serious, joined them a little after. I attended class-meetings regularly, but with them I was very much dissatisfied; finding that some gave evasive answers to the interrogations of their leader, and others made an ostentatious display of their experience; errors into which I was insensibly falling myself. I was zealous in attending prayer-meetings, and prayed with my family morning and evening. About this time I had a little book put into my hands, called 'A Guide to True Peace, or, How to Attain Inward and Spiritual Prayer:' from perusing which I was led to see, what I had often felt, that my lifeless performances only tended to poverty of spirit, and came under the condemnation of 'vain repetitions,' against which the blessed Redeemer warned his followers. My mind was now turned to the Society of Friends. I read several of their books; and, a minister of their persuasion holding a public meeting at Staindrop, I attended it. The opportunity was a very favoured one; and doctrinal points were so far explained to my satisfaction, that I said in my heart, 'This people shall be my people, and their God my God.'

I soon left the Methodist society, and became a regular attender of Friends' meetings, both First-days and week days. The more I examined their principles, the more congenial they appeared to my own mind and feelings, and in accordance with the Scriptures of Truth. I had nothing but love to the Methodists. The greatest trial was the displeasure of my brother. My wife continued to attend the Methodists' meetings, and I did what I could to promote her doing so; but getting uneasy with many of their ceremonies, without any persuasion of mine, she left them, and attended the meetings of Friends. I found it required of me, if I wished to be faithful to what I felt in my own mind to be in accordance with truth, to adopt the address and dress of Friends; the latter cost me no sacrifice, but to use the plain language was a great mortification. My views respecting war were now changed, and my pension became a subject of serious consideration, as it stood in the way of my being received into membership. I could not, however, see my way clear to give it up. I had to appear before a magistrate half-yearly, and swear before him that I was the person mentioned in the instructions given me from Chelsea Hospital, before I could obtain my pension. This brought me into a very strait place, for I was fully convinced that the taking of an oath was contrary to the command of our Saviour. I therefore determined, the next time I appeared before a magistrate, to offer him my affirmation. The magistrate who generally signed my affidavits was a clergyman. On the road to his house, a distance of four miles, I was much cast down, and earnest were my cries to the Lord, that he would give me strength to be faithful. On my arrival at his house, I offered him my affirmation, which he accepted, and took no offence, either at my hat or plain language. I returned home, thankful in having thus far succeeded. My pension still burdened my mind; but in reading Sewel's history of Friends, I found William Penn had received from James II. a large tract of land, partly in lieu of wages due to his father, Admiral Penn. I looked upon this as a parallel case, and thought I had just as much right to my pension as William Penn had to receive his father's wages for warfare. But the unflattering witness in my own breast showed me, that if I would be faithful to this unerring

guide, I must make the sacrifice. Friends were very tender over me, seldom mentioning the subject, believing, no doubt, that in time, faith would gain the victory.

(To be concluded.)

Selected.

HONOUR.

We ask for *honour:* and to us is given
To be the sons of God, the heirs of Heaven!
The "King of Kings" prepares above the sky,
At his right hand, a seat of royalty;
But we accept it not; earthly renown
Is all we ask—we spurn a heavenly crown.

We seek for *wealth.* The "pearl of price unknown,"
At once a bounteous God would make our own.
Freely would his munificence dispense
An "incorruptible inheritance."
But no; when perishable things are o'er,
We seek enduring treasures—not before.

We pant for *fame.* In characters of gold,
The "Book of Life" is to our view unroll'd;
And there Jehovah would record our name,
Among the chosen friends of Christ the Lamb.
But our ambition soars not to the sky—
Enough, an earthly immortality!

We ask for *bliss.* God has for us in store
"Fulness of joy—pleasures forevermore."
But here, too, we refuse the proffered good,
Because 'tis given us in such plenitude.
We would for Time's few fleeting days be blest,
Heedless of an eternity of rest!

Oh, how unworthy the immortal mind,
Its every wish to fleeting time confined!
If from this transitory scene we rise,
To a bright home of glory in the skies,
How like the vision of an infant's dream
Will such low thoughts, such mean conceptions seem!

Selected.

SUBMISSION.

There is a secret in the ways of God,
With his own children, which none others know,
That sweetens all he does; and if such peace,
While under his afflicting hand, we find,
What will it be to see Him as he is,
And past the reach of all that now disturbs
The tranquil soul's repose, to contemplate,
In retrospect unclouded, all the means
By which his wisdom has prepared his saints
For the vast weight of glory which remains?
Come, then, affliction, if my Father bids,
And be my frowning friend: A friend that frowns,
Is better than a smiling enemy.
We welcome clouds which bring the former rain,
Though they the present prospect blacken round,
And shade the beauties of the opening year,
That, by their stores enriched, the earth may yield
A fruitful summer, and a plenteous crop.

Swaine.

Education in Scotland.—From a recent Parliamentary report, it appears that there are in Scotland 4984 schools, whereof 1138 are burgh or parochial schools, 2104 endowed (other than burgh and parochial) schools, 1567 adventure schools, and 175 charity schools. The burgh or parochial schools have 1342 teachers, and educate 85,190 scholars, of whom 10,257 are educated gratuitously; the endowed schools, with 3263 teachers, educate 175,031 scholars, (20,362 gratuitously;) and the adventure schools, with 2150 teachers, educate 87,660 scholars, of whom 2173 are gratuitously educated; and the charity schools, with 284 teachers, educate 16,000, all gratuitously, with the exception of about 300 children, who make some slight payment. The total number of teachers is 7041; of scholars, 364,481; and of gratuitously educated children, 49,100. The total salaries and incomes of these schools amount to £271,641 13*s.* 2*d.*, of which the burgh or parochial schools have £78,382 3*s.* 6*d.*; the endowed, other than burgh and parochial schools, £117,844 15*s.* 2*d.*; the adventure schools, £64,621 1*s.* 6*d.*; and the charity schools, £10,793 13*s.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

GRIFFITH OWEN.

(Continued from page 206.)

In the year 1689, certain priests of New England of whom Cotton Mather was one, having published an attack on some of the principles as held by Friends, George Keith wrote an answer, which was submitted to the Meeting of ministering Friends, held Fourth mo. 9th, 1690. This paper was too long to be read and examined by that body, but it appointed Thomas Lloyd, George Hutchinson, Samuel Jennings, Griffith Owen, Paul Saunders, John Delaval, George Keith, Jacob Tillnor, and John Willsford, of West Jersey, to peruse it, and if it were suitable to be printed, send it to the press. They were also to examine any other papers written by Friends for publication, except that no one of them was to sit in judgment on anything he had himself written. From this time a committee on the press was kept up generally in the Yearly Meeting until the appointment of the Meeting for Sufferings, to which all such matters were referred.

Griffith Owen was much interested in the school which Friends in Philadelphia had established, and was often appointed to raise funds for its support and enlargement. In the year 1691, he was appointed by the Yearly Meeting to make arrangements respecting such printing as the meeting should direct.

George Keith, soon after his removal from East Jersey to Philadelphia in 1689, began to assume airs of superiority among the Friends, and to manifest dissatisfaction when his will and way was not submitted to. He soon made violent attacks on some of the aged and less educated of the ministers, charging them with unsoundness, because they held forth the sufficiency of the Light of Christ for the salvation of man. George was jealous, also, of the literary attainments of Thomas Lloyd, and disposed to quarrel with him, because, it was supposed, he was as great a scholar as himself. Friends found on examination, that those ministers against whom George Keith principally inveighed, were sound in the faith; that whilst they held the sufficiency of the Light of Christ for the salvation of all those who walked in it, and obeyed its leadings, they also held that it was the gift of the Holy Spirit, purchased for the comfort and guidance of his church and people by the one offering of the Lord Jesus Christ. Therefore, all who received and obeyed it, were of those who were reconciled to God by the death of his Son, having, through the one offering upon Calvary, and the cleansing, sanctifying operations of the Spirit, been accepted in the beloved and justified before God.

Griffith Owen, although not one of those against whom George Keith made at first any attacks, was soon brought into collision with him, when his turbulent behaviour and unfounded charges began to disturb in various ways the peace of the body. In the Third month, 1691, various letters were sent to George Whitehead and others in London, complaining of the disputes prevailing amongst some in Philadelphia, and the public notoriety George Keith was giving to the disunity he had with certain ministers of that place, and the doctrines they held. Believing, or at least strongly hoping, that the disputing parties were all sound, and their differences merely verbal, the London Friends, in an epistle, dated Seventh mo. 28th of the same year, contented themselves very much with advising love and charity, and a giving up of all disputes and contention. The epistle contained much excellent advice, and set forth sound doctrines enough, but it did not bear a testimony against George Keith, his doctrinal departures and unruly behaviour, and he took strength therefrom to continue the course he was pursuing, evidently believing that however Friends in Philadelphia might believe and contend for the ancient principles of Truth, he would be sustained by Friends in England.

During the whole of the latter part of 1691, George Keith was fomenting the difficulties he had originated. At the General Meeting of Ministers held in Burlington, at the house of Thomas Gardner, on the 5th day of the First month, 1692, many ministering Friends were met, and George Keith was amongst them. Before the meeting proceeded to business, various "living testimonies" were borne "in and to the ancient power of Truth," and Friends were exhorted to persevere in the unity thereof. When the meeting proceeded to business, the first thing that claimed its attention, was various statements made relative to the continued gross abuse and unchristian reflections, which George Keith continued to promulgate in public and private. George had, that very morning in that solemn meeting, declared, "You come here to cloak error and heresy." During the discussion which arose, he said, "There is not more damnable heresies and doctrines of devils amongst any Protestant professions than among the Quakers." After various attempts to convince him of his error, the meeting adjourned until the next morning when John Simcock, Griffith Owen, and Samuel Jennings were appointed to admonish him for his evil conduct, and to advise him to forbear the like for the future.

Griffith Owen and Samuel Jennings visited George, according to this appointment, but little christian love or courtesy was manifested by him. They told him of the concern of the Meeting of Ministers on his behalf, and that the Friends constituting it, did expect that he would condemn the abusive and reviling expressions he had made use of against them. George told them he denied their authority and their judgment; that he did not value it a pin, and would trample it under his feet. He added that he would prove they maintained rank popery, and said there was not one among them that did preach Christ rightly. "You do not," said he, "preach the birth, death, sufferings, and resurrection of Christ."

To this false and unfounded charge, Griffith Owen said, "We have a reverend esteem, both for the birth and death, sufferings and resurrection of Christ." George replied, "You do not preach those things." Griffith, with earnest zeal, answered, "We preach what God hath put into our hearts, and into our mouths." George at this charged Griffith with being in a passion, who replied, "I speak in the fear and dread of the Lord, and I can appeal unto him, how I am here before him."

The testimony of Griffith on behalf of himself and the sound and faithful ministers of that day, "We preach what God hath put into our hearts, and into our mouths," is interesting and instructive. They did not deem that if an exercise was raised in them to bear testimony to any fundamental truth, or against any error,—to offer consolation to the humble, or reproof to the lukewarm and indifferent, that on every such occasion they must give forth a code of doctrine to prove the general soundness of their faith. They endeavoured to speak that, and that only, which was given them. If they kept to their guide, the spirit that opened to them an exercise and concern for the good of others, they would be sound in that which they delivered, and though it might be

a few brief sentences would only be required at their hands, it would be accompanied by a good degree of life and spirit quickening virtue.

Griffith Owen was one of those who prepared the testimony of the "Public Friends" against George Keith, and also one appointed to answer the epistle before referred to, of Friends in London. In this last, after informing them of the reception of their epistle, and of George Keith's having set up a separate meeting, they go on to state further particulars relative to his false charges against Friends. They say that in all cases where he has brought a regular charge against any one, the truth of the charge has been examined into, and Friends have endeavoured to give a just decision between them. His general charge, they say, is that they do not preach Christ rightly, and that they have not a right faith in him, nor in the resurrection, nor eternal judgment. Friends had replied to him, that they believed respecting these, according to the Scriptures, and that they were willing to sign any of the declarations of faith, which had been put forth by "ancient approved Friends." George, they say, was not satisfied with this proposition, and they add, "We told him that it was very hard that we that had been so long a people, and had given forth so many declarations of our faith, should now be put upon doing it anew, and that by one that had walked so long with us, and sometimes seemed zealous to defend our faith and principles so long since published and known to the world; and that we thought it both safer and modester to own as we had always done what was already public, than to give forth any such thing by ourselves, which carried with it too much the countenance of an impeachment of all that had been done before. This not satisfying him, a Friend asked him if he believed that Friends had ever yet given forth a sufficient declaration of their faith and principles? He replied, he did not know that they had. Upon which Friends told him they despaired then of giving him satisfaction, and so left that point. As to his charge that we do not preach Christ aright, but halve and divide him, preaching Him mostly within, and seldom faith in him without, as he suffered, died, and rose again, and ascended into heaven, and there remains in the glorified nature of man, our Advocate and Mediator, we shall not say much, knowing that your experience hath long since informed you, that no true minister can *premeditate* or resolve what or when he shall preach; and to this effect we have answered him, and that all that preach Christ rightly, whether it be within or without, which is but the same Christ, must do it in Christ's own power. We have no great reason to be much offended at this his charge against us, since it is his opinion, and he hath said he doth not know six men in the whole world that preach Christ rightly. As to that of the resurrection and general judgment, we have told him we believe them as far as declared in Scripture, but this will not do except we will say further, which we find not safe to do."

By this we may see that although George made loud profession of being a "Christian Quaker" at this time, and for a year or two after, that he had found, according to his judgment, imperfections in all the standard authors among Friends. Neither the writings of Fox, nor Penington, nor Barclay could satisfy him. We have seen parallel passages in modern time.

(To be continued.)

"When the oil of grace actuates the soul, the wheels of obedience move with celerity; but when this is wanting, every duty, if not neglected, will be indifferently performed."

Sagacity of an Elephant.—We passed an elephant working on the road, and it was most interesting to watch the half-reasoning brute; he was tearing out large roots from the ground by means of a hook and chain, fastened round his neck with a species of collar. He pulled like a man, or rather like a number of men, with a succession of steady hauls, throwing his whole weight into it, and almost going down on his knees, turning round every now and then to see what progress he was making. Really the instinct displayed by the elephant in its domestic state is little short of reason in its fullest sense. There is no doubt they do think, and also act upon experience and memory, and their capacity seems to increase in an extraordinary degree from their intercourse with man. The remarkable nicety and trouble they take in squaring and arranging the blocks of hewn stone when building a bridge, is incredible, unless seen; they place them with as much skill as any mason, and will return two or three times to give the finishing touches when they think the work is not quite perfect. They retire a few yards and consider what they have effected, and you almost fancy you can detect them turning their sagacious old noddles on one side, and shutting one eye in a knowing manner, to detect any irregularities in the arrangement.—*The Bungalow and the Tent, by E. Sullivan.*

For "The Friend."

In reading a sketch of the life of John Smith, in a recent number of "The Friend," my attention was particularly arrested with this address, made to his children when the hour of his departure was at hand:—"I was never covetous to get a great deal of this world's riches, but I have endeavoured to bring you up in the fear of the Lord, and educated you in the way of his truth, according to the best of my understanding." How consoling to the heart of the dying parent must this reflection have been—that he had faithfully discharged his duty towards the lambs committed to his charge—that he had endeavoured, according to the best of his understanding, to train them up in the way they should go. That *his* might be *our* experience would doubtless be desirable to all. "Let me die the death of the righteous, and let my last end be like his," is doubtless often the aspiration of those, who are yet unwilling to submit to the mortifying, crucifying terms of living the life of the righteous. Often, when I have observed with sorrow the inconsistencies so prevalent amongst the youth of our day, has the query arisen, have the parents of these done all that they could to prevent them from trampling upon those precious testimonies for which our forefathers suffered, even unto death?

I believe there may be cases in which the pious exercise of parents, appears wholly disregarded; and admonition and reproof are alike unavailing. Still, if all has been done that could be done—if, before Him who searcheth the heart and the reins, and in whose balance actions are weighed, we feel that we stand acquitted, it is enough. "The soul that sinneth it shall die." But that parent who, as a "watchman" over his little flock, seeth the sword coming, and neglecteth to give warning, his flock shall be scattered, but their blood shall be required at his hand.

We read, that though Eli reproved and admonished his sons, yet, because he restrained them not, a heavy judgment was denounced upon him. "Train up a child in the way that he should go, and when he is old he will not depart from it," was the saying of the wise man; but where children are accustomed, even from infancy, to apparel inconsistent with the simplicity of our profession, what may the parents reasonably expect, but to see them go farther and farther astray, whilst their own hands are weakened, and their spiritual eye dimmed through unfaithfulness.

Morgan Co., 3d mo., 1855.

From "The Leisure Hour."

CUT NAILS.

Passing through Lancaster street accidentally, our ears are assailed by the din of machines at work, and we step into Farmer's factory to witness their performances. The owner politely accompanies us round, and explains the process, which, tremendous as its effects have been upon the fortunes of the nail-makers, is one of exceeding simplicity. A nail-cutting machine is but a ponderous mechanical contrivance for causing the sharp square edge of a massive cutting tool to rise and fall at regular intervals and with irresistible power some hundred times a minute. If the nail requires a head—and they may be made to pattern by these machines—additional mechanism is necessary. In this case the nail is caught, the instant it is cut off, in a kind of vice, which holds it fast while it receives a heavy blow from a lateral punch, cut so as to give the form of head desired.

The first step towards the making of cut nails is the rolling out of iron in sheets about three feet in width and six in length, and of various thicknesses for nails of various descriptions. This is done at the rolling-mill; and piles of these sheets are standing in the sheds ready for cutting. The first operator to whom we are introduced, stands in front of a huge pair of shears, worked by steam, between the blades of which he lays the end of one of the sheets of iron, which is about the eighth of an inch in thickness; the shears make no more of it than a housewife's scissors of a strip of linen. The whole sheet is in a very few minutes cut up into ribbons of about two and a half inches wide, the exact width being regulated by a gauge, which insures that all shall be cut alike: the gauge can be set to any measure, according with the length of the nails to be cut. We now turn to the nail-cutters: they are seated in rows, each in front of the ponderous machines, of which some half-score are at work at once, creating an indescribable din, amid which we strive in vain to catch the accents of our guide. The work-people are of both sexes, and each of them is incessantly twisting half round and then back again a sort of mop-stick, which he or she holds in the hand, while the nails are falling in a clinking shower into baskets placed on the ground. It is the falling of the nails and not the voice of our guide—of which we cannot hear a syllable—which brings us to a comprehension of the mystery. The fact is, that at the end of each of these jumping mop-sticks protrudes one of the aforesaid iron ribbons cut off by the shears, the extremity of which ribbon each operator is poking into the jaws of the iron-eating machine as fast as wrist and elbows can manage it. Now the cutting tool of the machine does not descend in an exactly horizontal position (because if it did it would cut the ribbon into small bars of iron and not into nails), but in a slightly angular direction, which causes it to cut off a wedge of the iron, having a point at one end while it may be the sixth of an inch wide at the other, or, in other words, a nail. It is plain that if the iron to be cut were to be presented to the knife twice following in the same position, the second piece cut off would be a uniform bar and not a wedge or nail; consequently this is never done, the operator turning over the ribbon by a semi-twist of the broom-stick, and changing sides to the music every time. Considering that this goes on a hundred or more times

n a minute, and that the nail-machine has no otion of occasional relaxation, we should imagine he nail-cutters enjoy but few idle moments, and, urther, the noise being incessant and rather louder han the rush of an express train through a tun-el, they are not very favourably situated for gossip.

There is more variety in the nails cut by this ingular machinery than one would be led to ex-pect; we were shown nails of all sizes and shapes, nd with every form of head in use; and saw nails f a shape entirely new, making to order, to suit ome whim or useful purpose. One of the great-st advantages of machine nail-making is the eco-omy of the material: when nails are forged, wenty to twenty-five per cent. of the iron is vasted; when they are cut, there is positively no vaste at all to speak of. Some of the machines which are used for cutting what are called brads, ut the heads complete without striking; and it would be possible to catch them as they fall from he machine, and to fit them together again into he form of the strip of iron from which they are ut; and if they were weighed before and after utting, it is a question if any appreciable loss of netal would be found to have ensued. In addi-ion to the machines above described, which cut ut a single nail each at a blow, there are others vith broader blades, and of a more complex de-cription, which cut as many as six nails at each escent of the tool. These are chiefly used for utting the smaller sorts of headless nails used by hoemakers: the strips of iron from which they re cut are laid in trenches side by side, and a whole row of them cut at once; in this case there s no turning round of the metal to be cut, the notion which produces the wedge-like shape of he nails being effected by a modification of the achinery. So rapidly do some of these machines o their work, that several thousands of nails are roduced in a single minute. The fruits of their abours lie around, packed in bags of about fifty ounds each. From twenty to thirty tons of iron re thus cut up weekly in this factory, producing robably not less than fifteen hundred millions of ails in a year. When we remember that nearly ive hundred tons of iron are cut up into nails very week in Birmingham, and that each ton, aking one sort with another, is calculated to pro-uce a million of nails, by far the major portion f them being very small, we may form some idea f the cut nail trade, and may well wonder what ecomes of its tremendous product.

A New Mode of Building Ships.—M. Lombo-Miraval called the attention of the "Society for he Encouragement of National Industry," to a node of building vessels, which is entirely origi-nal. The boats, in this system, are entirely built f iron wire and hydraulic cement, and the author ttributes to them the following advantages:—Great strength, absolute impermeability, quick epair in case of damage, perfect stability obtained by the ballast being at the bottom and making part of the hull; finally, incomparable quickness of building. A vessel built on this system six years ago, has been running ever since, without requiring any repairs, although it has gone through rough trials. Nothing easier, says M. Miraval, than to build in a few days, on board a fleet, as many gun boats, or rafts for disembarkation, as may be wanted.—*Cosmos.* vol. v., p. 292.

"Our dependence must be upon the Lord; we are strongest when we feel ourselves weak, and best qualified for service when most sensible that without him we can do nothing."

Marriage and Celibacy.—Marriage has in it less of beauty but more of safety than the single life; it hath not more ease but less danger; it is more merry and more sad; it is fuller of sorrows and fuller of joys; it lies under more burdens, but is supported by all the strengths of love and charity, and those burdens are delightful. Marriage is the mother of the world, and preserves kingdoms, and fills cities and churches, and heaven itself. Celibacy, like the fly in the heart of an apple, dwells in perpetual sweetness, but sits alone, and is confined and dies in singularity; but marriage, like the useful bee, builds a house, and gathers sweetness from every flower, and labours and unites into societies and republics, and sends out colonies, and feeds the world with delicacies, and obeys their king, and keeps order, and exercises many virtues, and promotes the interest of mankind, and is that state of good to which God hath designed the present constitution of the world.—*Jeremy Taylor.*

For "The Friend."

Sardinia and the Pope.

The contest, which for some time past has been going on between the government of Sardinia and the head of the Romish church, possesses interest as a sign of the times, and as illustrating the character of popery. Sardinia has a more liberal government than most Catholic countries, and its power is to some extent employed in promoting the intelligence and welfare of the people. The monastic and other religious communities of that country are over six hundred in number, and they hold a domain valued at nearly eighty millions of dollars. In accordance with what appears to be the popular wish, the government proposes to suppress the convents and other communities, except those whose vocation is to preach, to instruct, and to attend the sick, and to devote their revenues to the establishment of public schools, asylums for children, houses of public industry, and to ameliorate the condition of the lower clergy. These and other innovations upon what are called the rights and dignity of the church, have aroused the indignation of the Pope and his councillors, and he has issued a *monitorio*, or warning, to the offending parties. In this document he denounces the proposed measures as contrary to natural and divine right, and opposed in the highest degree to the well being of human society; and then goes on to say: "The same bill also attributes to the lay authority the power of prescribing the conditions which such associations as are not destroyed are to be subjected to. Words fail us to express our grief at such criminal, and almost incredible acts, against the church, and against the inviolable supremacy of the holy see in that kingdom, where there are so great a number of fervent Catholics, and where, formerly, and in particular among the sovereigns, such examples were to be found of piety, religion, and respect for the chair of St. Peter. We reprove and condemn, not only all the decrees already issued by that government to the detriment of the rights and authority of religion, the church, and of the holy see, but likewise the bill lately proposed; and we declare all these acts to be entirely worthless and invalid." He concludes with a threat of the extreme penalties and censures of the church if the obnoxious measures are persisted in. It is not considered probable that the king and government of Sardinia will recede from the ground they have taken.

Selected.

HABITS.

Like flashes of snow that accumulate unperceived upon the earth, the seemingly unimportant events of life succeed one another. As the snow gathers together, so are our habits formed. No single flake that is added to the pile, produces a sensible change; no single action creates, however it may exhibit a man's character; but as the tempest hurls the avalanche down the mountains, and overwhelms the inhabitant and his habitation, so passion, acting upon the elements of mischief which pernicious habits have brought together by imperceptible accumulations, may overthrow the edifice of truth and virtue.

Hydraulic Cements.

There are quite a number of natural hydraulic limestones—experiment alone is the true test of their quality, but artificial hydraulic cement can be made, and is made, and used extensively in many countries. Slacked lime, when mixed with a certain proportion of clay, then burning this, and reducing it afterwards to powder in a grinding-mill, makes an excellent hydraulic mortar, both portable and convenient for use, by simply mixing it with cold water until it acquires a proper consistence, to be applied with the trowel like common mortar. About twenty-four parts of dry clay are mixed with about eighty parts of pure rich lime, to make this cement. Another kind is made by mixing one hundred and forty parts of chalk with twenty parts, by measure, of clay, and then reducing the whole to a paste, by grinding them together in a pug-mill. This latter hydraulic cement is manufactured in great quantities in Paris. The chalk is dividcd into pieces about the size of a man's hand, and mixed with clay in the proportion of four of the former to two of the latter, and ground in a mill, with a plentiful supply of water. The liquid mixture, as it is ground, is allowed to flow over a lip of the mill, and run into four or five troughs placed at successive differences of level, where the matter held in suspension by the water is deposited. The water is run off these troughs alternately, and the sediment is moulded into small blocks, and allowed to dry in the air on platforms, until they have attained to the dryness of freshly quarried limestone. They are then put into a kiln and burnt like lime, then ground into powder, in which state it is ready to be used as has been described. The famous Portland Cement of England is made in this manner, excepting that the burning is conducted farther than in the case of Paris cement, the contents of the kiln being heated to vitrification. Great care must be exercised in the burning and grinding of these materials.

Hydraulic cement can also be made in a more simple manner (but it is not quite so good) by mixing two parts of well burned lime, slacked and in powder, with one of brick dust, and mixing them well together into mortar with cold water. The brick for this purpose should be pounded and passed through a fine sieve.

Hydraulic cement can be made of a putty composed of linseed oil mixed with fresh slacked lime, into which is stirred some coarse cotton; this is simply a cheap substitute for white lead, and is principally used for cementing the joints of pipes laid under ground, but is also very excellent for the outer coating of water cisterns.—*Scientific American.*

THE FRIEND.

THIRD MONTH 17, 1855.

In a letter received from a Friend, dated at Oskaloosa, in Mahaska Co., Iowa, after alluding

to the efforts made in this city to relieve the poor, the writer queries, "Could not Friends send some poor, honest families, or labouring men and boys into this, or some other part [of the country,] where labourers are wanted, and provisions are plenty, as is the case in many places in the western States? It appears as though you were overstocked with such, [poor but industrious people,] and we are in want of help. Corn is now selling at from twenty to thirty cents per bushel, wheat flour from $2 50 to $3 00 per hundred, and pork from $3 00 to $4 00 per hundred."

We quote these remarks, not because we think *Friends* could undertake to send labourers to the west, but because we believe all who have been engaged in visiting among those requiring help during the winter, must have been struck with the great numbers living in the city who are not artizans, but whose occupation is labouring from day to day, at any kind of employment they can obtain, and who are liable at any time to be deprived of their means of subsistence and thrown upon public bounty for food for themselves and families. How much better off, and more independent would such be, if living in the country, where, though they could not command as high wages as they may procure here while their labour is in demand, would find constant employment, with a remuneration sufficient to enable them to obtain plenty to eat, and to wear, throughout the whole year. It would benefit both town and country if a portion of the operatives and labourers who crowd the courts and alleys of the former, would remove to the latter; and engage in agriculture, thus becoming producers instead of consumers, and we understand that a strong effort is making to promote this exchange through the agency of the Emigrant's Aid Society, instituted for the purpose, and having offices, we believe, both in New York and this city. Persons residing in remote parts of the country, furnishing the society with information of the number of labourers required, of the kind of work to be done, and the wages commonly paid, are supplied by it with such operatives as are deemed suitable, the expense of transportation being paid by those who may employ them, to be deducted from their wages. There is also a register kept at the office of the Union Benevolent Association, on the west side of Seventh street, one door above Sansom, on which there are now entered the names of several hundred men, mechanics and labourers, anxious to obtain employment in the country. A note addressed to the agent would, we have no doubt, receive prompt attention. We mention this for the benefit of Friends at a distance.

SUMMARY OF EVENTS.

EUROPE.—The steamship Pacific having failed to arrive at the usual time, we are without later news from abroad at the time of making up this summary.

The War.—Although we hear much of the miseries of war, we probably realize in a very faint degree the atrocities attending that now raging in Europe. That nations standing in the front rank of civilization and intelligence, should have permitted themselves to become involved in such a contest, evinces a lamentable degree of imbecility or wickedness on the part of their rulers. What a picture is presented in the following extract: "The allied soldiers in the Crimea have been congratulating themselves on the termination of winter, when their sufferings, they hope, will cease. But from all accounts there will be only a change from one form of suffering to another, for as soon as the warm weather and the spring rains commence, the animal decomposition from the multitudes of dead bodies of men and horses lying unburied, will spread pestilence through the camp, which will depopulate it faster than sickness is now doing. A French officer of rank says, since the first landing of the troops in Turkey, 80,000 men and 40,000 horses have perished. Vast numbers of both now lie in masses, or scattered over the earth as they fell, it being impossible to inter them in the present state of the weather there, and they present a spectacle that is disgustingly horrid."

MEXICO.—Advices from the city of Mexico, to the 19th ult., represent Santa Anna as daily losing, and Alvarez gaining ground. It is said that Santa Anna has steamers in readiness to receive him on the approach of Alvarez, and that he has already sent large sums of money and valuables out of the country.

UNITED STATES.—*Congress.*—In consequence of the veto, the bill continuing the appropriation to the Collins' Line until 1860, was amended and deprived of its most objectionable features. The same compensation will continue for the present, but the Government has the right to terminate or modify the contract after six months' notice. In his veto message the President says, "During the period of time from the commencement of the service of these contractors, on the 27th of April, 1850, to the end of the last fiscal year, June 30, 1854, the sum paid to them by the United States, amounted to $2,620,906, without reckoning public money advanced on loan to aid them in the construction of the ships, while the whole amount of postages derived to the department has been only $734,056."

Various apparently good laws were enacted by the late Congress.

The Court of Claims Bill, establishes a tribunal for the adjudication of private claims, which will not only save Congress a great deal of time, but is expected to secure greater promptitude and justice in the disposition of this kind of business. *The Ship Passengers' Bill*, supplies important additional securities to the health and comfort of the emigrants, who crowd to our shores; and the *Shipwreck Bill*, furnishes new and valuable facilities for rescue in cases of shipwreck, or of serious danger on our coasts.

The Appropriations.—An overflowing treasury leads to a wasteful application of the public funds, the following are only three items of the many large sums set apart by Congress for the coming year, viz., for the expenses of the Navy, $11,681,156; of the Army, $9,721,650; for ocean mail service, $3,597,608.

California.—A late arrival at New York brought $646,659 in gold. The passengers who left New York on the 12th of First mo., in the Star of the West, reached San Francisco on the 4th of Second month; this is the shortest passage ever made. The gold hunters were flocking by thousands to the Kern River diggings, which were reported to be very productive. The papers furnish evidence of a rude and demoralized condition of society. As many as twenty men had been hung by mobs, since the first of the year. The most recent instances were the hanging of a man at Oakland, on a charge of horse stealing; a young man at Red Bluffs, suspected of stealing a mule, but afterwards found to be innocent; and James Moran, for murder, at Salmon river. The San Francisco Chronicle, basing its calculations upon the number of homicides committed in 1854, comes to the conclusion, that one person of 600 in California, will be killed by his neighbour the present year.

The Illinois, from Aspinwall, on the 2d, arrived at New York on the 12th inst., bringing intelligence from California to the 16th ult., 300 passengers, and $1,165,000 on freight. The Legislature was still balloting for United States Senator, with little prospect of success. No news of importance. But little rain had fallen; business somewhat improved.

Utah.—The Deseret News to First mo. 4, had been received at San Francisco. Adams' Express has been extended from California to Utah. Up to the close of the year, the weather was warm, and garden and field work was going on. Governor Young, in his message, at the opening of the Legislature, says that peace has been kept with the Indians, though at considerable expense for presents, and assistance rendered them. The need of a system of public education is urged, and greater attention to domestic manufactures strongly recommended. A great snow storm occurred on New Year's day.

Indiana.—The Legislature of Indiana has adjourned *sine die*, without electing a U. S. Senator, or any of the other State officers, and these cannot be filled by the Governor.

The Ohio River.—On the 8th inst., at Wheeling, there was about eight feet of water in the channel, large class boats were running, and the freight business brisk. At Cincinnati, on the same day, there were ten feet of water in the channel, and a fair amount of business doing.

Arkansas.—It is stated by the Helena (Ark.) Shield, of Second mo. 10th, that no rain of consequence had fallen in that section since the Ninth month, and no snow.

New York.—On the 3d inst., the city banks ha $16,531,279 in specie on hand, and their circulatio amounted to $7,106,710. The money market was eas and rates low. The steamers of last week took o $1,448,490 in specie. Official information having bee received by the Mayor, that the immigrants by the Sa dinian frigate Des Genys are not convicts, but person banished for political offences; permission has bee given them to land. Mortality last week, 491.

Philadelphia.—The coinage at the U. S. mint, in th last month, consisted of 285,039 pieces, of the value o $3,213,725. The spring trade opened later than usual but a large business is now doing on Market street, an the season may yet close with nearly an average amoun of sales. Mortality last week, 218.

Miscellaneous.—Tonnage of the Lakes.—There are en rolled and licensed at the several American ports, 11 steamers, 97 propellers, 33 barks, 101 brigs, 639 schooners, and 216 sloops and scows, making an aggregat of 237,830 tons, and valued at $10,185,000. In 1845 the total tonnage was only 76,000.

The Pork Trade.—The Cincinnati Price Current pub lishes nearly a complete statement of the number o hogs, packed this season in Ohio, Kentucky, Indiana and Tennessee, showing an aggregate of 1,366,00 against 1,788,000 to the same time last year. The hog also weigh about 8 per cent. less than last year.

High Price for Wheat.—In St. Louis (Mo.), on the 2 inst., 600 bushels of prime white wheat was sold a $2.00 per bushel. This is said to be the highest price ever obtained in that market.

Fire at St. Mary's, Geo.—On the 3d inst., nearly th whole of the business portion of St. Mary's, Georgia was destroyed by fire.

The Diplomatic and Consular Bill.—Under the law recently enacted, consuls are to have fixed salaries, an some of them are to be confined to consular business alone. Others are to have small salaries, and be allowed to engage in commercial pursuits. Citizens of the United States alone to be appointed, and ministers d not get any salary till they reach their respective posts and enter upon their duties, outfits being entirely abolished.

Georgia Gold.—The mine recently discovered in Har county, Geo., promises to be very productive. At depth of 30 feet, the vein is about three feet wide, and very rich.

Scarcity of Provender for Cattle.—In various sections of the western country, there is great want of hay and other food for cattle. Many had died from starvation in Clark co., Ky. There was much suffering from th same cause, in North Western Virginia; the Morgantown Mirror says, that if the cold weather continues much longer, great numbers of cattle must perish.

RECEIPTS.

Received from Jer. Hadley, Ind., $5, to 52, vol. 28 from M. Willits, agt., O., for F. McGrew, $2, vol. 28; fro C. Bracken, agt., O., for S. Chandle and Saml. Russe $2 each, vol. 28; from Sol. Hull, Io., $4, to 30, vol. 2 from Jehu Faucett, agt., O., for Mary W. Woolman, $2 vol. 27, for David Satterthwaite, $2, vol. 29, for Robe Elison, Jon. Faucett, Ind., Saml. Hollingsworth, Joshu Stafford, Thos. Heald, Benj. Winder, W. R. French, $ each, vol. 28.

FALLS MONTHLY MEETING SCHOOL.

The Committee of the above named School is desirou to procure a well qualified female teacher to take charg of the School as instructor, for the ensuing season Early application is requested, and can be made by ad dressing, Mahlon Moon, Morrisville P. O., Buck Co., Pa.

DIED, on the 12th of First month last, at the resi dence of M. J. Faucett, Salem, Ohio, ABIGAIL, relic of William Faucett, in the 68th year of her age; member of Upper Springfield Monthly Meeting.

——, on the 27th ult., at his residence, in Monro county, Pa., JASPER COTANT, in the 62d year of his age a member of Stroudsburgh Preparative Meeting. It wa the portion of this dear Friend to suffer much from protracted sickness, by which the outward man wa greatly wasted; but being favoured to bear his afflic tion with patience and resignation to the Divine will he was, we reverently believe, prepared for the solem close.

——, at Lynn, Mass., on Second-day morning, th 5th inst., HANNAH, daughter of Isaac Bassett, in the 40t year of her age.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From Tait's Magazine.

The Jewish Subjects of the Russian Czar.

(Continued from page 210.)

The rabbis—who have much to answer for in relation to the degraded state of their co-religionists—having held the threat of anathema over those who learnt the Polish language, or who adopted the dress or manners of their Christian countrymen,—the greater number of the Polish Jews understand no other language than the corrupt German, which has always been their spoken idiom; and they are thus excluded from such culture even as they might pick up in their business intercourse with the educated classes. Indeed, all studies, except that of the Talmud,—the Zoar, and the Commentaries upon these are held in utter contempt among them; and the Jew who, emancipating himself from the trammels of strict orthodoxy, attempts to raise himself to the level of the age in which he lives, is scouted as a traitor to Israel. He who would enjoy the esteem of his co-religionists, on the contrary, must dress strictly after the Jewish fashion; must let his beard and his *peysi*, or long side-locks, grow; must go at least twice a day to the synagogue; must every morning exhibit large *thephilin** on his forehead and on his hand; must remain a long time before *Themona Ethra*;† must pour water over his hands, or rub them on the ground, every time he has touched anything, be it only his own hair; he must shun even the neighbourhood of a Christian temple;‡ take care that the *zizesses*, or tufts attached to the skirts of his caftan in memory of the commandments of God, be of the orthodox length; and kiss the *mesures*, or words of the law engraven on his door-posts, each time he enters or goes out. He must, moreover, when rising in the morning, wet his hands three times with water, to drive away the evil spirits that settle upon the nails (the evil spirit of dirt being alone left unmolested), taking care that the ewer containing the water be of the prescribed form, and that he begin with the right-hand; and if he would have reputation for piety, he must three times a-day repeat various prayers, and read passages from the Talmud, the Mishna, the Zoar, and other holy books, written in Hebrew or Chaldean, of which languages he most likely does not understand a word; and he must pare his nails every Friday, and carefully burn or conceal the parings, and then make a notch in his table or his window-post, to mark that it has been done, lest after death he should be condemned to return to earth to fetch the spoils.

Such, and many more, are the observances which occupy the leisure time of the Jews in Poland, and which are considered necessary for peace with God; and it is plain that the violence done to the religious feelings of those who serve in the armies and navy of Russia, must tenfold aggravate all the other sufferings they have to endure. Well may Moses Montefiore have been greeted as an angel of consolation, when he brought to the poor prisoners the means of celebrating one of their most important religious festivals. To how many of these poor Russian prisoners will not, in every respect, captivity in England seem liberation from the house of bondage!

The strict orthodoxy that prevails among the Polish Jews is farther evidenced by certain cords or wires, called *aireph*, or Sabbath-cords, which run from roof to roof across the openings in the streets in the quarters of the town inhabited by the Jews, and which have so much puzzled travellers in Poland, and given rise to so many absurd stories. The origin of these cords is derived from the law which forbids the Jews to carry anything in their hands or about their persons on the Sabbath, and which being attended with great inconvenience, mothers being even interdicted to carry their babes in their arms, it became necessary to invent some lawful means of evasion. The *aireph* marks the boundary within which the law may be transgressed without sin; beyond these precincts, however, the Jew must not even carry his handkerchief in his pocket on the Sabbath; but if he cannot do without such useful appendage, must tie it round his arm or wrap it round his hand, in which case it passes for part of his vestments, so well has Jewish ingenuity known how to evade the inconveniences of Jewish orthodoxy. Whoever destroys an *aireph* is severely punished. The fact of the destruction or dissevereance of such a cord, in whatever manner it may have occurred, is made known in the synagogue, and until it be repaired, the encircled precincts cease to enjoy the immunities it conferred. Happily, children under the age of thirteen do not come within the ordinances of the *aireph* law; and by their aid the inconvenience is in some measure mitigated. The reknitting of the broken line cannot be performed by a lesser personage than the rabbi of the place. If it be a rope, it must not be mended by the application of a knot, but an entirely new cord must be provided; if it be a wire, the dissevered parts may be linked together again by means of a hook and eye. Among the things interdicted on the Sabbath are also driving in a carriage, or walking to a greater distance than 2000 ells from the house in which they dwell,—which distance may, however, be doubled, if, on the preceding Friday, a fresh wheaten loaf be deposited midway on the rope.

The customs here alluded to no doubt are, or, at least, have been, common to the Jews all over the world; but the distinction between the Polish Jews and their co-religionists of the West, is that the former adhere to them in the present day as rigidly as in the middle ages, and mix them up with as numerous superstitions. Scenes are of daily occurrence in Poland, and attract no attention, which would excite the greatest wonder in other parts of Europe, were they exhibited there. At full-moon tide, for instance, you may, in any Polish town, come upon a crowd of Jews in the street, performing what looks very much like worship of the moon, some gazing at the luminary with fixed glance and murmuring indistinct prayers, while others make obeisances to it and cry out in a loud voice: others again, in long, white, flowing robes bordered with black, grouped around small reading-desks on which their holy books lie open, read in these by the light of lanterns, and from time to time lift up their voices and smite their foreheads.

When observing the rigid orthodoxy of these stagnant Israelites, one cannot help regretting that among the religious observances so staunchly adhered to, there are none that enforce cleanliness; for the reverse of this virtue is so prominent a quality in the Polish Jews, as to make them objects of almost unconquerable repugnance, and the filth and discomfort in their dwellings is as great. The dirt, the misery, the squalor, and the extreme poverty of the great majority of the two millions and a half of Israelites who inhabit the Polish provinces, is the more surprising, as they are addicted neither to drunkenness, gambling, nor idleness; and it must, therefore, in a great measure, be attributed to their extreme ignorance, and to the fanatic zeal with which their rabbis and congregational superiors have resisted every reform and innovation proposed by the Government; for however many sins the Poles, as all the Christian nations of Europe, may have to answer for as regards the Jews, it cannot be denied that during the present century at least, a great part of the nation has sincerely desired to ameliorate their position. Even the Emperor Nicholas, at one period, made a pretence of wishing to enforce enlightenment among them. He invited Dr. Lilienthal, a learned German Jew, to St. Petersburg, to assist with his advice a commission instituted for the purpose of devising means for diffusing light among his Jewish subjects. The advanced minds among the Jewish population in the Emperor's dominions hailed these preparations as the dawn of a new day; but the orthodox Jews fasted and smote their breasts, and prayed, fearing that a fatal blow would thus be levelled against Judaism. Happily for them, according to their own ideas, Nicholas seems to share the views of the great Catharine, who, writing to the governor of Moscow once, on the subject of schools, said: "If I institute schools, it is not for us but for Europe, where we must maintain the rank we hold in public opinion; but the day that our peasants evince a desire to become enlightened, neither you nor I will remain in our places." Dr. Lilienthal sojourned in Russia many years, enjoying a high salary, but the schools that he was to organize were never established.

Even when not discriminated by their filth and

* Words from the Scriptures, worn thus in literal accordance with the words in Deut. vi. 5.

† The fourteen benedictions of Esdraz.

‡ As late as 1834, some Jews who had followed the funeral of a Polish nobleman, whose virtues had made him beloved by all classes of his countrymen, were anathemized by their Rabbi, because of their having entered a Christian church.

rags, the Jews are distinguished from the rest of the population by their dress, which is of a decidedly Oriental character; but among themselves the similarity is so great, that in travelling through the Polish provinces from the Black Sea to the Baltic, one might fancy oneself pursued by the same individuals, the illusion being further encouraged by the similarity in the size and figure of the men, who are almost invariably tall and thin, and distinguished by the pallor of their countenances, which seems more a characteristic of the race than the result of individual suffering. Their complexion is clear and transparent, their eyes dark, their features delicate and chiselled, and their hair and beards dark, curly and glossy, their hands being remarkable for great delicacy and elegance of shape. The contrast between the beauty and noble expression of the countenances of these men, and the abjectness of their character and meanness of their pursuits is a source of constant wonder to the stranger. As some one has strikingly remarked, it is as if you beheld King David or King Solomon engaged in the pursuits of hucksters and pedlers, or the patriarchs committing petty roguery. If nature be not a deceiver, how much nobler destinies might not these men have worked out for themselves, had not bigotry and persecution done their worst against them! In Lithuania, in particular, some travellers aver that every Jew is a handsome man; and the meekness, mildness, and gentle melancholy expressed in the countenances of the younger men especially, is described as singularly touching.

As a general rule, the women are less handsome, and are much inclined to a degree of *embonpoint* which oversteps the limits of the beautiful; however, their turban-like head-dresses, formed of gaudy-coloured handkerchiefs, give them a certain picturesqueness of appearance; and the rich coronets of pearls and precious stones with which the wealthy Jewish ladies encircle their brows on festive occasions, harmonize well with their dark hair and brilliant eyes. Altogether, however, the male attire, consisting of a long, dark caftan, fastened round the waist with a broad, silk sash, and a high, conical, fur cap, is more striking than that of the women. But when, in summer, the fur cap is exchanged for a low-crowned, broad-brimmed hat, the dignified Oriental sinks down into the common-place Jew. Says a traveller, who visited the country lately:—

"The hundreds of thousands of the poorest Jews in Poland would afford an excellent study to any one who should desire to ascertain the minimum of nourishment on which the human body can be sustained, or to what perfection the art of making a whole garment out of innumerable rags can be carried, or in how far the air inhaled by human beings may be loaded with pestiferous smells without becoming deadly, or how children may be reared without clothes, without water, without soap, without comb, without brush, without medicine, without instruction, or without care of any kind. . . The misery, the want, the sickness, the hunger, the suffering of all kinds that reigns in the damp, filthy, pestiferous dwellings of the poor Jews in Warsaw, Cracow, Lemberg, Mittau, Wilna, and Odessa, where half a dozen families, all richly blessed with children, live in one wretched cellar, amid dirt and rags, with little light and less heat—the squalid figures, the many coloured tatters, worthy of being exhibited in an ethnographical museum, which may be seen in the Polish market-places, only those can picture to themselves who have read descriptions of the Esquimaux, of the New Hollanders, or of the inhabitants of Terra del Fuego."

This is a distressing picture, and it is not viewed with indifference in Poland; but the hands of the nation are tied by the tyrannical despotism which weighs upon Christian and Jew alike.

(To be concluded.)

For "The Friend."

Meeting for Divine Worship.

It seems to me a solemn thing, when rightly considered, to meet together for the purpose of worshipping the great I AM in spirit and in truth, and assured I am, that this worship cannot be performed in the will and wisdom of man, nor yet, unless we are so gathered, that his presence is known to be among us. But when He deigns to favour us with his life-giving presence, it is a privilege unknown to the world, a favour, the value of which, cannot be expressed. Why, then, do so many of our members absent themselves from our meetings, perhaps on account of very trifling hinderances, such as inclement weather, bad roads, or perhaps slight indisposition? And alas, too many, for the sake of the gain of a few cents, have so disregarded this privilege, and trampled on their duty, as of choice, to leave their meetings, and go in search of gold—perishing gold. Ah! this will not do for a people professing as we do: this is not following the example which our ancient worthies have left us. No, no. How many instances have we on record of their assembling together, when to all appearance they were doing it at the risk of their lives, for the same purpose that we profess to meet together for, that of worshipping our merciful Creator.

But when met, this worship cannot be performed, whilst the mind is allowed to rove on the perishing things of time, or whilst we are sunk in a state of drowsiness or into sleep. Surely no one could give way to sleep, if the mind was alive to the solemn purpose for which they were met. May each one of us then endeavour, when in our meetings, to get into the passive state of a little child, and earnestly strive to sit, as it were, at the feet of our Divine Master, to receive a cramb from his hand: and should this crumb be withheld from time to time, from meeting to meeting, despair not, wrestle on, wrestle on; the blessing will come if we fail not, but persevere in a right manner; for, "hear, (said our Lord,) what the unjust judge sayeth: and shall not God avenge his own elect, which cry day and night to him, though he bear long with them?" and we have very many promises in the holy Scriptures, encouraging us to hold on our way, and not despair. But should we become impatient, and not wait for his coming, what will it advantage us? to whom shall we go? there is no other place of safety, nowhere that we can find shelter save under his fatherly protection. The world, although we may be entrusted with a large share of its riches, cannot shield us in the hour of trial, nor afford us one ray of comfort, when Death, the undeniable messenger, shall arrest us; a messenger that sooner or later will be sent to our dwellings.

The blessing of the sensible presence of the Almighty, must be sought not only when we are in meeting, but must be striven for more often than the morning; must occupy the chief place in the heart. Its enjoyment must not be a secondary desire, as I fear is too much the case with many. It seems to me, that if it was more our primary object and determination to seek the Lord above every other consideration, we would more often know what it was to receive a little bread from his hand, which would be precious, and the feeling would circulate, as it were, from one to another, and we should individually know that we were filling up our rank in the Christian warfare, not only when we were assembled in a mee ing capacity, but in our every day walk amor men; and then should we, indeed, be as a ci set on a hill that could not be hid.

Our poor Society cannot shine in its ancie brightness and purity, unless the members becon more crucified to the world, and are more willi to sell all that we have, and give to the poor, a follow our Redeemer wheresoever he may lead u Oh! the beauty of our profession; would that mo were in possession of the substance. May th reader of this join with the writer, in making a honest inquiry, Am I faithfully fulfilling my du in advancing the Redeemer's kingdom on th earth? If we are not, if we are living in an eas unconcerned condition, O let us be aroused to sense of our awful situation, and be engaged i labour while it is day, for the night comet wherein no man can work. The uncertainty time, the certainty of death, and the awfulness an endless eternity, ought to be enough to arou any of us to a strict obedience to the Divine Ma ter's will.

Harrison Co., Ohio, Third mo., 1855.

From the Annual of Scientific Discovery, 1855.

On the Construction of a Submarine Transatlant Telegraph.

The following communication, on the feasibilit of constructing a submarine telegraph across th Atlantic, has been addressed to the Secretary the Navy by Lieutenant Maury:

Sir,—The United States brig Dolphin, Lieu Commandant O. H. Berryman, was employed las summer upon especial service connected with th researches that are carried on at this office cor cerning the winds and currents of the sea. He observations were confined principally to that par of the ocean, which the merchantmen, as they pas to and fro, upon the business of trade betwee Europe and the United States, use as their gree thoroughfare. Lieutenant Berryman availed him self of this opportunity to carry along also a lin of deep sea soundings from the shores of New foundland to those of Ireland. The result is highl interesting, in so far as the bottom of the sea i concerned, upon the question of a submarine tele graph across the Atlantic; and I therefore be leave to make it the subject of a special report.

The line of deep sea soundings seems to be de cisive of the question as to the practicability of submarine telegraph between the two continent in so far as the bottom of the deep sea is concerned From Newfoundland to Ireland, the distance be tween the nearest points is about 1,600 miles; and the bottom of the sea between the two place is a plateau, which seems to have been placed ther especially for the purpose of holding the wires o a submarine telegraph, and of keeping them ou of harm's way. It is neither too deep nor to shallow; yet it is so deep, that the wires, bu once landed, will remain forever beyond the reac of vessels' anchors, icebergs, and drifts of an kind, and so shallow that the wires may be readil lodged upon the bottom. The depth of this pla teau is quite regular, gradually increasing fro the shores of Newfoundland to the depth of fro 1,500 to 2,000 fathoms as you approach the othe side. The distance between Ireland and Cape St Charles, or Cape St. Lewis, in Labrador, is some what less than the distance from any point o Ireland to the nearest point of Newfoundland But whether it would be better to lead the wire

* From Cape Freels, Newfoundland, to Erris Hea Ireland, the distance is 1,611 miles; from Cape Charles or Cape St. Lewis, Labrador, to ditto, the distance 1,601 miles.

rom Newfoundland or Labrador is not now the uestion; nor do I pretend to consider the ques-on as to the possibility of finding a time calm nough, the sea smooth enough, a wire long nough, a ship big enough, to lay a coil of wire ,600 miles in length; though I have no fear but hat the enterprise and ingenuity of the age, when-ver called on with these problems, will be ready ith a satisfactory and practical solution of them.

I simply address myself at this time to the uestion in so far as the bottom of the sea is con-rned, and as far as that the greatest practical ifficulties will, I apprehend, be found after reach-g soundings at either end of the line, and not in he open sea.

A wire, laid across from either of the above-amed places on this side, will pass to the north f the Great Banks, and rest on that beautiful lateau to which I have alluded, and where the aters of the sea appear to be as quiet and as ompletely at rest as it is at the bottom of a mill-ond. It is proper that the reasons should be ated for the inference that there are no percept-ble currents, and no abrading agents at work at he bottom of the sea, upon this telegraphic pla-eau. I derive this inference from a study of a hysical fact, which I little deemed, when I sought , had any such bearings.

Lieut. Berryman brought up with Brooks's deep ea sounding apparatus, specimens of the bottom rom this plateau. I sent them to Prof. Bailey, f West Point, for examination under his micro-cope. This he kindly gave; and that eminent icroscopist was quite as much surprised to find, s I was to learn, that all these specimens of deep ea soundings are filled with microscopic shells; o use his own words, "not a particle of sand or ravel exists in them." These little shells, there-ore, suggest the fact that there are no currents the bottom of the sea whence they came—that rooks's lead found them where they were depo-ted in their burial place after having lived and ied on the surface, and by gradual sinking were odged on the bottom. Had there been currents at he bottom, there would have swept, and abraded nd mingled up with these microscopic remains, he debris of the bottom of the sea, such as ooze, nd, gravel, and other matter; but not a particle f sand or gravel was found among them. Hence he inference that these depths of the sea are not isturbed either by waves or currents. Conse-uently, a telegraphic wire once laid there, there would remain, as completely beyond the reach f accident as it would be if buried in air-tight ases. Therefore, so far as the bottom of the deep ea between Newfoundland, or the North Cape, at he mouth of the St. Lawrence, and Ireland, is oncerned, the practicability of a submarine tele-raph across the Atlantic is proved.

In this view of the subject, and for the purpose f hastening the completion of such a line, I take he liberty of suggesting for your consideration he propriety of an offer, from the proper source, f a prize to the company through whose tele-raphic wire the first message shall be passed cross the Atlantic. I have the honour to be, espectfully, &c., M. F. Maury,

Lieut. U. S. Navy.

Hon. J. C. Dobbin, Secretary of the Navy, Washington, D. C.

A Toad Insulated.—One of the operators of the House Telegraph, states that while repairing the telegraph wires at Fairfield a few days since, a ive full grown toad was found under the glass nsulator, on the top of a pole, which was a ches-ut, perfectly smooth, twenty-five feet high, and ot near any tree or building.

RALPH DIXON.

(Concluded from page 213.)

"My appearing before the collector of excise, dressed as a Friend, and with my hat on, to receive my pension, appeared strange, no doubt, to many. On one occasion, an exciseman came towards me in a hasty manner, intending to take off my hat; but another officer who knew me, said, 'Let him alone, he is a Quaker.' He immediately replied, 'If he is a Quaker, what business has he with a pension?' I keenly felt this rebuke, and it was indeed a word in season. I now saw more clearly the inconsistency between my profession and practice, besides depriving myself and family of many religious privileges. I began to be more in earnest in a matter of such great importance. Taking a walk one day in the fields, with a heavy burden upon my mind, I earnestly besought the Lord to show me, in some particular way, his will in respect to my pension, and I would obey it. In great condescension to my weakness, he answered my prayer; for, a day or two afterwards, Jonathan and Hannah Backhouse came to our Week-day Meeting very unexpectedly, having been with us only a few days before; and what they had to say, the one in testimony and the other in supplication, was in such a remarkable manner applicable to my case, that I could no longer doubt."

About this time he addressed the following letter to the Duke of Wellington:

"*To the Duke of Wellington.*

"Respected friend.—I was formerly a soldier in the 31st regiment of foot; but, in consequence of wounds which I received at the battle of Talavera, (namely, shot through the left shoulder and wounded in the right hand,) was discharged with a pension of one shilling per day, which I have received ever since. But having been long convinced that all war is anti-christian, I have felt at times uneasy under a persuasion that the receiving of a pension was inconsistent with that belief; besides, being a burden to the public in these times of distress, I have often felt painfully. So that, notwithstanding I have a large family to maintain, and not in any great circumstances, I have found it my duty to resign again into the hands of government the pension which was kindly given me, and for which I return thanks.

"Next to Divine Providence, my thanks are due to thee, O Duke! for the great care that was taken of the sick and wounded in the Peninsula, otherwise my life could not have been preserved; a grateful remembrance of which, with the foregoing reason, is the cause of my taking the great liberty of troubling thee with this letter. Desiring thy present and everlasting welfare, I remain,

"Thy friend—Ralph Dixon.

"Staindrop, County of Durham,
"Sixth mo. 27, 1830."

To this letter he received the following reply:

"Royal Hospital, Chelsea, 27th July, 1830.

"To Ralph Dixon.

"I laid before the lords and other commissioners of this hospital, at their late meeting, your letter of the 1st instant, addressed to the Duke of Wellington, which has been referred to this department; when their lordships, upon considering the same, directed me to acquaint you, that so long as you may think proper to discontinue to transmit the usual quarterly affidavits, no pension can be issued on your account; but in consideration of your wife and family, their lordships have desired that, in the event of your making application for your pension at any future period, the same is to be paid to you as heretofore.

"Richard Neave,
"Secretary and Registrar.

"Staindrop, Durham."

He thus continues,—"I had no sooner given up my pension, than the enemy of souls was permitted to come in like a flood, and lead me to query the correctness of Friends' principles. Thus every inch of the ground was disputed. In this tried state of mind, with desires for right direction, I took the Bible in one hand and Barclay's Apology in the other; and after careful and prayerful investigation, I was favoured again to see and believe that the views of Friends were the principles of Christianity, and in accordance with the Scriptures of truth. After passing through this fiery ordeal, I made application to Darlington Monthly Meeting, for my wife, six children, and myself, to be received into membership. We met the committee appointed to visit us in the meeting-house at Staindrop. The opportunity was to me a highly favoured one. The Monthly Meeting kindly acceded to our wishes.

"Fresh trials now awaited me. To purchase the premises in which I was carrying on my business, I had borrowed a sum of money, which I was paying off by instalments. By repaying it too rapidly, I had crippled myself for capital in my business. I had lost my pension, and £20 being required for the admission of two of my children at Ackworth School, besides their outfit and travelling expenses, led me to fear I should not be able to meet my pecuniary engagements. In order to lessen the expenses of my journey to Ackworth, I concluded to take my children by wagon to York; but on making inquiry at the office of the owner, I was informed they did not take passengers. It was intimated to me, by one of the men, that if I walked a little way out of the town, the wagoner would take us up on the road. I did not feel satisfied to act in this underhand way. At our Week-day Meeting, the enemy suggested to me that I was too particular, and that there could be no great harm in my going with the wagon. After a little struggle, truth prevailed, and I determined to go by coach. A holy calm spread over me, and my mind became peaceful the remainder of the meeting. A few minutes after, a kind friend called and put £10 into my hands towards sending my children to Ackworth. I could not look upon this in any other light than the interposition of a kind Providence."

The narrative, from which the above is chiefly taken, was written a few years before his death, at the request of one of his dearest friends. It is to be regretted that he did not bring it down to a later period of his life. After he was received into membership, those that knew him best can testify that, as he grew in years, he grew in grace; his feelings, once too sensitive, became remarkably calm and peaceful. The following lines from his own pen were doubtless descriptive of them:

"As deeper—deeper still—the river grows,
More calm, serene, and peacefully it flows;
But loudly, and more loudly still, it roars,
As shallower runs the stream upon the shores:
Thus man, as deepenèd in grace, doth grow,
More quiet and profound his peace doth flow."

His increasing bodily infirmities very much deprived him of the pleasure of assembling with his Friends to transact the business of the church at Quarterly and Monthly Meetings. When his health permitted, he was very regular in attending those for worship, both on First and week-

days, and his serious deportment therein evinced the deep exercise of his soul before the Lord. He sometimes alluded to them, though generally held in silence, as highly favoured seasons, and times of spiritual refreshment to him.

He was not unfrequently called upon to explain to others the principles and peculiarities of Friends —a work for which he was peculiarly qualified; and it was instructive to hear how clearly he proved them in accordance with Scripture, and generally satisfied the inquirer of their soundness. He used to say, "it is easy to convince; but the cross,—the narrow, self-denying path, is the great stumbling-stone."

He loved to peruse the sacred page, alluring his children to the practice, by narrating to them the most striking parts of Scripture history. Very precious is the remembrance of some of the daily Scripture readings. The heavenly wing of Ancient Goodness was sometimes so remarkably spread over the family that all were in tears.

He had, for some time, a depository for Friends' tracts in his shop, and used to lend them out to any of his customers who wished to be informed of our views. From an account which he kept, it appears that, for a long time, a large number were put in circulation in this way. At one time, he established a drapery business in connection with his provision and drug trade; but having to recommend to others articles of apparel which he could not allow his own children to wear, was such a burden to his tender conscience, that he gave it up. After advising with his friends, and obtaining their approval of his plans, he erected a small steam corn mill, which gave additional and profitable employment to his numerous family. Lest he should fail in performing his pecuniary engagements, he was very particular in inspecting the state of his affairs. That his annual savings should increase, notwithstanding the loss of his pension, made his heart overflow with gratitude to his heavenly Father. The assurance which had been given him that he should be able to bring up his family without it, was strikingly realized; for his youngest son finished his apprenticeship about the time of his father's death.

The poor always found in him a kind and sympathizing friend; and to the utmost of his ability he administered to their wants. His skill in medicine often enabled him, from his own little stock of drugs, to alleviate their bodily sufferings. His neighbours frequently sought his advice when difficulties and perplexities overtook them, and on the bed of sickness he often directed them to the only source of help.

The following memorandum, written on the 41st anniversary of the day on which he was wounded, was found in his pocket-book:

"Seventh mo. 28th, 1850. Forty-one years to-day since I was wounded at the battle of Talavera. What a mercy that I was not then cut off! Although utterly unworthy, truly I may say, the Lord was my salvation. He covered my head in the day of battle. Notwithstanding the many hardships and troubles I have since passed through, goodness and mercy have followed me all the days of my life. To-morrow, if all be well, my wife and I intend setting out for Ayton, and it is not without some degree of pleasure that I look forward to our visit. Yet I am not without solicitude for those we leave behind. It will be forty-two years to-morrow since we were married—one year and a day from the time of our marriage to the day on which I was wounded."

The lingering illness and death of several of his children had a chastening effect upon his spirit. He felt these bereavements keenly; yet it was instructive to those around him, to witness the Christian fortitude with which he bore them. He believed that in inscrutable wisdom they had been taken whilst in comparative innocence; and firm was his belief, that through the redeeming love and mercy of God, in Christ Jesus, they were in a better and happier world.

He had for many years been afflicted with a cough; and in the spring of the present year, he was seized with an influenza cold, which very much prostrated his strength. His breathing became laborious, and he felt the end rapidly approaching. The accuser of the brethren was again permitted to come in like a flood; but He who had brought him through so many perils, enabled him again to triumph.

He addressed his family individually as opportunities occurred, giving them suitable admonition, and committing them to the Lord. To one of his sons, who arrived a few hours before his death, he said, "I have had to come down very low, but I have not been forsaken; my sufferings have been great, but I have desired patience, and it has been mercifully granted. Blessed be His holy name, 'He giveth to all men liberally and upbraideth not,'" raising his voice, and looking at his son with great earnestness, he reiterated, "No upbraiding." All his family were now around him, and it was evident to them that life was fast ebbing. He was perfectly sensible, and took leave of an invalid daughter who addressed him very sweetly. Her desire that he might have a short and easy passage was remarkably granted. All was now peace and serenity. His breathing became gradually shorter, and in a few minutes, without a sigh, or the least appearance of suffering, his purified spirit took its flight, doubtless to join the church triumphant in heaven, and swell the ranks of those "who have come out of much tribulation, and have washed their robes and made them white in the blood of the Lamb."

Singular Optical Illusion.—The Paris correspondent of the New York Times states that a gentleman living in Brussels, somewhat troubled by cobwebs and spots in his eyes, rubbed them one night with a few drops of extract of belladonna. In the morning the cobwebs had gone, but the whole outer face of the world had changed. His newspaper, which had been placed by his bedside, was composed of type so small that he could hardly decypher it. He rang the bell, and his stout serving woman had shrunk into a thin little girl of ten years. He got up in a great fright, and looked after his clothing—they were the garments of a child; but as his own limbs had diminished in proportion, he easily got into them. He found his wife and children at the table, the former a dwarf, and the latter a row of dolls. He hurried off to his physician; the horses he met looked like dogs, and dogs like rats. Lotions were applied to the victim's eyes, and the next day ordinary vision returned, bringing back the cobwebs and spots. This phenomenon, called micropie, does not seem to have occurred more than half a dozen times, though it may be brought on at will by the employment of certain substances.

An Excellent Cement for seams in the roofs of houses, or for any similar defects, may be made with white lead, dry white sand, and as much oil as will render it of the consistence of putty; it becomes as hard as any stone in the course of a few weeks. The lead forms a kind of flux with the sand, adapting it to the filling up of cracks in brick buildings, also for pointing up the bases of chimneys, where they project through the roofs of shingled houses.

For "The Friend."

Epistle of George Fox.

The following Epistle from George Fox addressed to Friends in Ireland, possesses increased interest from the circumstance of its being probably the last production of his pen, bearing date only three days before his decease. In his valuable Journal it is introduced by the following remarks:—

"When I had been near two weeks in town, the sense of the great hardships and sore sufferings that Friends had been, and were under, in Ireland coming with great weight upon me, I was moved to write the following epistle, as a word of consolation unto them:

"Dear Friends and Brethren in the Lord Jesus Christ, whom the Lord, by his eternal arm and power, hath upheld through your great sufferings, exercises, trials, and hardships, (more, I believe, than can be uttered,) up and down that nation, which I am very sensible of; and the rest of faithful Friends that have been partakers with you in your sufferings; who cannot but suffer with the Lord's people that suffer. My confidence hath been in the Lord that he would and will support you in all your sufferings, and that he would preserve all the faithful in his wisdom, that the world might give no just occasion to one nor other to make them suffer; and if you do suffer wrongfully or unjustly, that the righteous God would assist and uphold you: and reward them according to their works, that oppressed or wronged you. And now my desire is unto the Lord that in the same holy and heavenly wisdom of God ye may all be preserved to the end of your days, to the glory of God, minding his supporting hand and power; who is God all sufficient, to strengthen, help, and refresh in time of need. Let none forget the Lord's mercies and kindness, which endure forever; but always live in the sense of them. And truly, Friends, when I consider the thing, it is the great mercy of the Lord that ye have not been all swallowed up, seeing with what spirits ye have been compassed about. But the Lord carrieth his lambs in his arms, and they are as tender to him as the apple of his eye, and his power is his hedge about his vineyard of heavenly plants. Therefore, it is good for all his children to be given up to the Lord, with their minds and souls, hearts and spirits, who is a faithful keeper that never slumbers nor sleeps; but is able to preserve and keep you, and to save to the utmost and none can hurt so much as an hair of your heads, except he suffer it, to try you; for he upholds all things in heaven and earth, by the Word of his power: all things were made by Christ; and by him all things consist (mark consist,) whether they be visibles or invisibles, &c. So he hath power over all; for all power in heaven and earth is given to him: and to you, that have received him, he hath given power to become the sons and daughters of God; so living members of Christ, the living head, grafted into him in whom ye have eternal life. Christ, the Seed, reigns, and his power is over all; who bruises the serpent's head, and destroys the devil and his works, and was before he was. So all of you live and walk in Christ Jesus; that nothing may be between you and God, but Christ, in whom ye have salvation, life, rest, and peace with God.

"As for the affairs of truth in this land and abroad, I hear that in Holland and Germany, and there-away, Friends are in love, unity, and peace: and in Jamaica, Barbadoes, Nevis, Antigua, Maryland, and New England, I hear nothing, but Friends are in unity and peace. The Lord preserve them all out of the world, (in which there is trouble,) in Christ Jesus, in whom there is

-cace, life, love, and unity. Amen. My love in he Lord Jesus Christ to all friends everywhere n your land, as though I named them.

G. F."

London, the 10th of
the Eleventh month, 1690.

YOUNG AGAIN.

An old man sits in a high-backed chair
Before an open door,
While the sun of a summer's afternoon
Falls hot across the floor;
And the drowsy tick of an ancient clock
Has notched the hour of four.

A breeze blows in and a breeze blows out,
From the scented summer air;
And it flutters now on his wrinkled brow,
And now it lifts his hair;
And the leaden lid of his eye drops down,
And he sleeps in his high-backed chair.

The old man sleeps, and the old man dreams,
His head droops on his breast,
His hands relax their feeble hold,
And fall to his lap in rest;
The old man sleeps, and in sleep he dreams,
And in dreams again is blest.

The years unroll their fearful scroll;
He is a child again;
A mother's tones are in his ear,
And drift across his brain;
He chases gaudy butterflies
Far down the rolling plain.

He plucks the wild rose in the woods,
And gathers eglantine,
And holds the golden buttercups
Beneath his sister's chin;
And angles in the meadow brook
With a bent and naked pin.

He loiters down the grassy lane,
And by the brimming pool,
And a sigh escapes his parting lips,
As he hears the bell for school;
And he wishes it never were nine o'clock,
And the morning never full.

A mother's hand pressed on his head,
Her kiss is on his brow—
A summer breeze blows in at the door,
With the toss of a leafy bough;
And the boy is a white-haired man again,
And his eyes are tear-filled now.

Believe, that how low soever the church be plunged under the waters of adversity, it shall assuredly rise again. Fear not, for as sure as Christ arose the third day, notwithstanding the seal and watch that was upon him; so sure the church shall arise out of all her troubles, and lift up her victorious head above all her enemies; there is no fear of ruining that people that thrive by their losses, and multiply by being diminished. O, be not too quick to bury the church before she be dead! stay till Christ hath tried his skill, before you give it up for lost: the bush may be all in a flame, but shall never be consumed, and that because of the goodwill of him that dwelleth in it.

Christ hath not suffered it to be devoured yet: for above these seventeen hundred years the Christian church hath lived in affliction, and yet it is not consumed; many a wave of persecution hath gone over it, and yet it is not drowned: many designs to ruin it, and hitherto none hath prospered: this is not the first time that Hamans and Ahitophels have plotted its ruin; still it hath been preserved from, supported under, or delivered out of, all its troubles: and is it not as dear to God as ever? Is he not as able to save it now as formerly? Though we know not whence deliverance should arise, "yet the Lord knoweth how to deliver the godly out of temptation."—*Flavel.*

No man can safely rejoice, but he that has the testimony of a good conscience.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

GRIFFITH OWEN.

(Continued from page 214.)

The epistle then states that George Keith had endeavoured to induce Friends in Philadelphia to adopt a new code of discipline prepared by him, and which he called "Gospel Order improved." This code made the signing the name to a prepared creed the terms of admission into religious communion, and was in various other respects contrary to the order adopted by Friends as they believed in the wisdom of Truth. The epistle further shows that George was inclining to the Baptists, and began to have so much sympathy with other apostates, as to express the opinion that Thomas Hicks had greater cause for his charges against Friends than he had previously supposed. The writers of the epistle then say, "Note, dear friends, he would sometimes insinuate and deceitfully say that he had dear unity with honest Friends in *England*, and that his dissatisfaction was mainly with some *Pennsylvania Quakers!* But we *hope* we are not *singly* chargeable with these errors which, as he saith, gave occasion to Thomas Hicks to do as he did." They conclude their long, interesting and important document in these words,—"Dear Friends, this is our durable comfort, the Lord whose we are, and whom we serve, is with us, gracing our meetings with his holy and glorious presence, sufficiently rewarding his faithful witnesses, according to his wonted kindness, who fails not to proportion our consolation through Christ, suitable to the tribulation we endure for his sake. Friends are here, and hereaway generally well, and the honest-hearted, profitted by these trials; *being driven nearer to the Lord, and one another.* In this blessed union and fellowship may we be all kept, is our supplication to the God of our help and safety."

As Friends in England seemed very desirous of having George Keith and his company in membership, the Meeting of ministering Friends of Philadelphia Yearly Meeting, in the Fourth mo., 1693, at the request, and in condescension to the wishes of the Second-day morning meeting at London, once more invited George and his followers to a conference, in order to a settlement of differences, and their reconciliation to the church. The attempt, as was foreseen by Philadelphia Friends, and might have been expected by any one who knew George, ended in strife and confusion, encouraging the wrong-doers, and adding to the trials of those, who had, for their honest support of the Truth, long been in suffering. At the Meeting of Ministers, in the Seventh month following, two more communications were received from the Second-day morning meeting urging further efforts for composing and reconciling the differences with George. After weighing this advice given in a mistaken supposition, that good could result from restoring an outward connexion, without inward unity, the meeting minuted its unanimous conclusion not to meet any more with the Separatists, until they should give satisfaction for the injuries done by them to Friends and Truth. Griffith Owen and a few other Friends were appointed to reply to these two epistles, and to inform the Second-day morning meeting of the judgment and conclusion of the meeting.

In the Eleventh month, 1693, Griffith was set at liberty by his Monthly Meeting to pay a religious visit to Friends in Maryland and Virginia. He appears to have been absent from Philadelphia, in fulfilling this concern, about two months.

The ministering Friends of Philadelphia Yearly Meeting now deemed it proper to issue a document setting forth their faith on the points, in which it had been questioned by George Keith. Friends in London had done so in 1693, but the document issued by them at that time, was not deemed so suitable to represent the views of Friends of Philadelphia as one prepared by themselves. They accordingly appointed a committee to prepare it. Of this document Griffith Owen was, without doubt, the principal composer. As no allusion is made to this document in Sewall, or in the later history of Bowden, we shall introduce it. Its title is, "Our Ancient Testimony renewed, concerning our Lord and Saviour, Jesus Christ, the Holy Scriptures, and the Resurrection. Occasioned at this time by several unjust charges published against us, and our truly christian profession, by some late adversaries, who have unfairly and untruly misrepresented us. Given forth by a meeting of publick Friends and others at Philadelphia, in Pennsylvania." In the address to the reader,* they say, "We faithfully and sincerely own and confess Christ Jesus, our Lord and Saviour, according to the Divine testimonies of the Holy Writ, and according to his spiritual manifestations upon our souls; and it is for our christian vindication herein, and not for controversy; for a contest with contentious persons is endless, this following confession is writ, and submitted to thy perusal. Farewell."

"Our Scripture confession concerning our Lord Jesus Christ.

I. *Concerning his Divinity and his being from the beginning.*

We believe, that in the beginning was the Word, and that the Word was with God, and the Word was God; the same was in the beginning with God; all things were made by him, and without him was not anything made that was made: whose goings forth have been from of old, from everlasting: for God created all things by Jesus Christ, who is the image of the invisible God; the first-born of every creature, the brightness of the Father's glory, and the express image of his substance.

II. *Concerning his appearance in the flesh.*

We believe, that the Word was made flesh, for he took not on him the nature of angels, but took on him the seed of Abraham, being in all things made like unto his brethren; touched with a feeling of our infirmities, and in all things tempted as we are, yet without sin. He died for our sins according to the Scriptures, and he was buried, and rose again the third day, according to the Scriptures.

III. *Concerning the end and use of his appearance.*

We believe, that God sent his own Son in the likeness of sinful flesh, and for sin condemned sin in the flesh. For this purpose the Son of God was manifested, that he might destroy the works of the devil. Being manifested to take away our sins, for he gave himself for us, an offering and a sacrifice to God for a sweet smelling savour, having obtained eternal redemption for us, and through the eternal Spirit offered himself without spot to God, to purge our consciences from dead works to serve the living God. He was the Lamb that was slain from the foundation of the world: of whom

* In the original preface they gave a short sketch of the kindness and liberality that had been shown to George Keith in Philadelphia, first giving him £50 a year, with rent of dwelling and school-house, and all the pay of the scholars, in the second year, raising the salary to £120, which allowed George to pay an usher, which allowed him to travel about, without loss to himself.

the fathers did all drink; for they drank of that spiritual Rock that followed them, and that Rock was Christ; the same yesterday, to-day, and forever. Who suffered for us, leaving us an example, that we should follow his steps; that the life also of Jesus may be made manifest in our mortal flesh; that we may know Him, and the power of his resurrection, and the fellowship of his sufferings, being made conformable to his death.

IV. *Concerning the inward manifestation of Christ.*

We believe, that God dwelleth with the contrite and humble in spirit; for he said, I will dwell in them, and walk in them; and that Christ standeth at the door and knocketh, if any man hear his voice, and open the door, he will come into him, and sup with him. And therefore ought we to examine ourselves, and prove our own selves, knowing how that Christ is in us, unless we be reprobates. For this is the riches of the glory of the mystery which God would make known among, or rather in, the Gentiles, Christ within the hope of glory.

V. *Concerning his being our Mediator and Advocate.*

We believe, there is one God, and one Mediator between God and men, even the man Christ Jesus, who gave himself a ransom for all to be testified in due time. My little children, these things write I unto you, that ye sin not; and if any man sin, we have an advocate with the Father, Christ Jesus the Righteous. And he is the propitiation for our sins, and not for ours only, but for the sins of the whole world. He sits on the right hand of God the Father, and ever lives to make intercession for us.

VI. *Concerning his unity with the saints.*

We believe, that he that sanctifieth, and they who are sanctified, are all of one; for by the exceeding great and precious promises that are given them, they are made partakers of the Divine nature; because for this end prayed Christ, saying, that they 'all may be one, as thou, Father, art in me, and I in thee, that they also may be one in us; and the glory which thou gavest me I have given them, that they may be one, even as we are. I in them, and thou in me, that they may be made perfect in one.'

VII. *Concerning his coming to judgment.*

We believe, that we must all appear before the judgment-seat of Christ; that every one may receive the things done in his body, according to that he hath done, whether it be good or bad: knowing therefore the terror of the Lord, we persuade men.

VIII. *Concerning the resurrection.*

We believe, there shall be a resurrection of the dead, both of the just and unjust; they that have done good to the resurrection of life, and they that have done evil to the resurrection of damnation. Flesh and blood cannot inherit the kingdom of God, neither doth corruption inherit incorruption. Nor is that body sown that shall be, but God giveth it a body as it hath pleased him, and to every seed his own body. It is sown in dishonour, it is raised in glory; it is sown in corruption, it is raised in incorruption; it is sown in weakness, it is raised in power; it is sown a natural body, it is raised a spiritual body.

IX. *Concerning the Scriptures.*

We believe, that whatsoever things were written afore-time, were written for our learning, that we, through patience and comfort of the Scriptures, might have hope—which are able to make wise unto salvation through faith, which is in Christ Jesus. All Scripture given forth by inspiration of God, as we believe the Holy Scriptures of the Old and New Testament are, is profitable doctrine, for reproof, for correction, for instruction in righteousness, that the man of God may be perfect, thoroughly furnished unto all good works. And knowing also, that no prophecy of the Scriptures is of any private interpretation; for prophecy came not in old time by the will of man, but holy men of God spake as they were moved by the Holy Ghost."

(To be continued.)

The Straits of Magellan.

The passage of the straits is not often made by navigators of late years, the longer route around Cape Horn being generally preferred. The U. S. steamer Massachusetts, and sloop of war Decatur, passed through on their voyage to the Pacific, which they entered on the fourth day of First month last. The Decatur was eighty-three days working through, and probably would not have succeeded without the aid of the steamer, which had twenty-two days experience of the difficulties of the strait. B. Rush Mitchell, M. D., surgeon of the Massachusetts, has furnished the press with an interesting account of the incidents of the undertaking, and a description of the wild and peculiar regions which came under their view. The voyagers were several times obliged to take refuge from the strong opposing winds, in Borja Bay, of which place, and of some of the natives of the adjacent country, Dr. M. gives the following account:—

"'Borja Bay' is surrounded by high mountains, which rise precipitously from the water, the peaks and sides being covered with snow. In some instances, the snow descends almost to the base, whilst from the sides leap forth in fantastic cascades, numerous streams of water born of the melting snow above. It is the most disagreeable place I was ever in. Every day but one, it blew in terrific gusts down the ravines. The natives call these gusts "Williwaws." Every day it rained, and that, too, without any marked effect upon the snow, except the formation of glaciers.

"Borja Bay is on the north or Patagonian side of the strait, and from the appearance of the island of 'Terra del Fuego,' on the south shore, I feel warranted in the inference, that bad as Borja is, Terra del Fuego is far worse. Whilst at anchor in Borja, we were visited by three canoes of the natives of Terra del Fuego. They are short, stupid, half naked, and at times, cannibals. They look like anything but human beings. Their language is a deep guttural; of the words, from very frequent repetition of them, we could make out 'galita' or bread, and 'tabac,' which, from similarity to a well-known English word, is easily understood. They are by no means a timid people, but on the contrary, courageous, for they made for a fight with some of the Decatur's crew. For weapons they have bows, arrows and spears, of which I procured some specimens. Their dress is a sort of half cloak, made of the skin of the 'guanaco,' and a piece of ostrich skin tied round the waist, falling nearly to the knees. Their food is whatever they can get, whether it be putrid whale's blubber, muscles, or the food of civilized man. In all cases, when they do eat, it would seem as if they meant to lay up a week's supply. They often cross the straits and venture up some of the small estuaries, to steal the cattle of the Patagonians, and deadly combats not unfrequently ensue. The Patagonians, though tall of stature, are by no means so much so as the popular belief would lead one to suppose. Few are over six feet high, and many under that mark. Their custom of wearing a long 'guanaco' skin reaching to the heels, as a cloak, gives them an appearance of being taller than they really are. To this cause may be attributed the absurd stories of their gigantic size, which have obtained such general credence. Unlike the Fuegians, they are human in appearance, are good riders and fond of horses, of which they have large numbers."

For "The Friend."

"Train up a child in the way he should go, and when he is old, he will not depart from it."

Fathers and mothers, do you feel that you are training the precious offspring entrusted to your care, in the way they should go; and that both by example and precept you are endeavouring to bring them up in the nurture and admonition of the Lord; being careful not to entangle their tottering feet in the fashions and customs of the world? Does the example of you, mothers, in regard to the preparing of their clothing, or the adorning of their bodies, declare to them that you are conscientiously bearing a testimony against the fashions and vain show of the world, however plausible the excuses may be for adopting this or that cut of their garments? Friends have a testimony to bear against all these things; and if the mothers take pleasure in, or suffer themselves to be persuaded to allow their children to follow the mode, for the sake of adorning them, even though they may not go altogether into the fashions, and suppose they can go so far and no further, yet your children can plainly see that you are not standing faithful to the religion you profess; and what can you expect from them in this respect, when they have attained to riper years? They may then think, as you now do, that they are capable of judging how far they may go in the indulgence of pride and vanity, and depart from what simplicity may remain about them, by little and little, until they cannot be distinguished from, the vain people of the world. How often is this result to be attributed to the unfaithfulness of the mother, who attires her innocent child in accordance with the fashion of the hour. Oh, that every mother would ponder deeply the responsibility that rests upon her.

The upright walking of the fathers is of equal importance in the right training of their precious children. Do you, fathers, show to them, both by precept and example, that you are not mainly seeking the things of this world, either for yourselves or for them, nor the praise of men; but that you are seeking a better country, a more enduring habitation, striving to lay up treasure in heaven where neither moth nor rust can corrupt, nor thieves break through and steal? Oh, that Friends may be willing to enter into a strict examination how we are acting in these respects, and how our account will stand when we are brought before the impartial Judge of quick and dead; that we may so act, that the blood of our children will not then be required at our hands, but that it may be said in substance of us, "let her alone she has done what she could."

Ohio, Third mo., 1855.

The religion of some, seems to consist in a remembrance of former experience, a *rational* understanding of our principles and the discipline of the church, a personal communication with divers of the foremost ranks, and some faculty for speaking and writing on religious subjects; when in the meantime, for want of *looking* and *living at home*, for want of watching unto prayer, and waiting for renewed ability to offer the daily sacrifice on the fresh raised altar, insensibility and incapacity gather strength, and leanness enters our souls.—*Kendall.*

The Schoolmaster.

"The schoolmaster's occupation is laborious and ungrateful; its rewards are scanty and precarious. He may indeed be, and he ought to be, animated by the consciousness of doing good, that best of all consolations, that noblest of all motives. But that, too, must be often clouded by doubt and uncertainty. Obscure and inglorious as his daily occupation may appear to learned pride or worldly ambition, yet to be truly successful and happy, he must be animated by the spirit of the same great principles which inspired the most illustrious benefactors of mankind. If he bring to his task high talent and rich acquirements, he must be content to look into distant years for the proof that his labours have not been wasted—that the good seed which he daily scatters abroad does not fall on stony ground and wither away, or among thorns to be choked by the cares, the delusions, or the vices of the world. He must solace his toils with the same prophetic faith that enabled the greatest of modern philosophers, amidst the neglect or contempt of his own times, to regard himself as sowing the seeds of truth for posterity and the care of Heaven. He must arm himself against disappointment and mortification, with a portion of that same noble confidence which soothed the greatest of modern poets when weighed down by care and danger, by poverty, old age, and blindness, still

'——— in prophetic dream he saw
The youth unborn, with pious awe,
Imbibe each virtue from his sacred page.'

"He must know, and he must love to teach his pupils, not the meagre elements of knowledge, but the secret and the use of their own intellectual strength, exciting and enabling them hereafter to raise for themselves the veil which covers the majestic form of Truth. He must feel deeply the reverence due to the youthful mind fraught with mighty though undeveloped energies and affections, and mysterious and eternal destinies. Thence he must have learnt to reverence himself and his profession, and to look upon its otherwise ill-requited toils as their own exceeding great reward.

"If such are the difficulties and the discouragements—such the duties, the motives, and the consolations of teachers who are worthy of that name and trust, how imperious then the obligation upon every enlightened citizen who knows and feels the value of such men to aid them, to cheer them, and so honour them!

"But let us not be content with barren honour to buried merit. Let us prove our gratitude to the dead by faithfully endeavouring to elevate the station, to enlarge the usefulness, and to raise the character of the schoolmaster amongst us. Thus shall we best testify our gratitude to the teachers and guides of our own youth, thus best serve our country, and thus, most effectually, diffuse over our land light, and truth, and virtue.—*Verplanck.*

Right in one thing becomes preliminary towards right in everything; the transition is not distant from the feeling which tells us that we should do harm to no man, to that which tells us that we should do good to all men.

THE FRIEND.

THIRD MONTH 24, 1855.

There can be no doubt that much improvement has been made within the last twenty years in schools, not only as regards the branches taught, but in the manner of teaching. It seems to be much more generally understood than it was formerly, that the great object to be kept in view by the teacher, is to store the mind of the pupil with new and correct ideas of facts and principles, rather than to overload the memory with words which may or may not be understood. But most of those who are acquainted with the ordinary routine of even what are considered the best conducted seminaries, will have to acknowledge there is still room for improvement, and that sufficient confidence is not yet felt by many of those having children to be educated, in the proficiency and experience of those whose business it is to teach them, to restrain such from attempting to interfere in the course marked out for the child to pursue; if that course differs from their preconceived notions, or what they may chance to consider the prevailing mode of the day. Hence those having control of schools, are often obliged to conform to the course of instruction which parents, who may be very incompetent to judge rightly, wish to be carried out in the tuition of their sons or daughters; perhaps for no better reason, than because they hear the children of some of their friends or neighbours are so taught, or such a course is adopted at some fashionable school.

To this cause, in part, may be attributed the general prevalence in the schools, of setting the pupils to learn such a multiplicity of things at once. Not satisfied with a child of from eight to fourteen years of age, labouring to obtain a knowledge of the primary branches of an English education, the little student is expected to attempt learning chemistry, physiology, natural philosophy, and probably anatomy, with two or three other divisions of science, or Belle Lettres. Incapable as the immature mind is, to grasp such a variety of objects, or to dismiss the impressions received while striving to learn one lesson, so as to turn with facility and force to the acquisition of another, it necessarily follows that nearly all the time of the child must be occupied in fatiguing study, and the intellect be kept continually on the stretch.

Having had some opportunity of observing very injurious consequences resulting from this cause, we wish to call the attention of our readers, who are interested in schools or in children, to some well established facts which should be kept in view while training the youthful mind.

There are few, if any, in the present day, who have given attention to the subject, that pretend to doubt that the brain is the material organ through which the mind acts, and by which it manifests its faculties and its feelings. It is also the great centre towards which the nerves over which it may be said to preside, converge from all parts of the system. It is then apparent that a healthful condition of the brain is of the utmost importance to the clear and efficient action of the faculties of the mind, as well as to the proper and sound evolution of the functions of the different organs of the body; and also that it is highly necessary carefully to guard against everything likely to over-excite, or endanger its delicate structure.

Another well known fact is, that whatever excites the mind, stimulates the brain, by causing an increased flow of blood into it; and sad experience has conclusively proved that this stimulation may be kept up so long, or carried to such excess, as to destroy forever the integrity of the organ, or to render it unfit to perform its functions correctly; and thus give rise to insanity.

In childhood, when the different organs of the body have not only to perform the duty assigned them in the animal economy, but also to increase in size, or grow; and when it is necessary, for the perfection of the intellectual being, that the senses should be very acute, the brain and the nervous system are found to be much more largely developed in proportion, than the sanguineous, muscular, or other systems, and also to appropriate a very large supply of blood to their nutriment and support. Bearing then in mind, that a large portion of the nervous system depends upon, and reacts on the brain, and that all mental excitement causes an increased flow of blood to it; and likewise that the brain in childhood is more sensitive and less firm than at mature age, we can readily perceive how unwise it is to keep the cerebral blood vessels habitually distended, and different portions, or the whole mass of the delicate fabric, labouring hour after hour, in the hard service required of it, while the mind of the young scholar is struggling with its task. What would we think of a parent who insisted on his child cramming its stomach throughout the day with one kind of food after another, without regard to the capacity of the viscus to receive it, or the impossibility of its digesting the mass forced into its cavity? It is true that by such a course, if the stomach did not become so much diseased as to reject all nutriment, it might be so distended that the child would be able to swallow as much food as a full grown man, but common sense would dictate that the whole system must pay the penalty for the continued engorgement.

The brain of a child is far more sensitive than its stomach; it naturally has a large proportion of the blood in the system sent to it, and the ordinary curiosity and inquiry of the infantile mind keep it stimulated to as great an extent as it can healthfully bear; it is therefore of great importance, that the natural cerebral and nervous action, be not unduly increased by long continued or exaggerated mental effort, lest disease be induced, which, if not fatal, may entail on the sufferer numerous distressing nervous affections which will embitter after life.

Precocious children almost always have ill-proportioned or diseased brains, inviting too large a supply of blood, and they demand the most careful watchfulness on the part of their care-takers and teachers, to restrain them from study requiring much mental effort, or they will almost inevitably die early, or grow up to be dull or stupid men and women; the over stimulation of the brain finally destroying its capacity for acting with promptness or vigor.

From these few hints it may be inferred, that caution is necessary as to how far the mind of a child should be tasked day after day for the acquisition of knowledge, and that there is real danger, not merely to the physical health, but to the intellectual development, by an over stimulation of the brain from study.

Education should have reference to healthy, physical as well as mental development. Body and mind are so intimately connected, that a violation of the laws instituted by Divine Providence for the government and perfection of the former, cannot fail to react sooner or later with destructive force on the latter. It is a duty of those entrusted with the care of children, to see that they have ample opportunity for exercise in the open air, so that all parts of the corporeal organization may be duly excited and strengthened; and in their efforts to carry out a system of mental culture, to bear in mind, that the brain is the material organ by which all the mental faculties are manifested, and that its over excitement, especially in childhood when it is immature, is always hazardous, and may result in distressing nervous irritability through after life, or in mental feebleness and dulness.

SUMMARY OF EVENTS.

EUROPE.—News from England by the steamer Pacific, to the 27th ult. The Pacific made a long voyage out, and was, therefore, unable to leave Liverpool until three days after the regular time. The return trip was also longer than usual. There had been great destitution and suffering among the poor, arising from the depression of trade, combined with the severity of the winter and high prices of food. The unemployed workmen at Liverpool and London, had been engaged in riots; the weather had, however, become milder, and shipping having arrived in great numbers, furnished work for many of them. There had been some further changes in the ministry, several of the more unpopular members having resigned, and their places been filled by others. Lord John Russell is to take the post of Colonial Secretary, on his return from the Vienna Conference. Lord Palmerston said in Parliament, that compulsory measures must unquestionably be resorted to, in order to fill up the ranks of the service. He contended that the sufferings of the army in the Crimea arose from physical causes in the power of no man to control. The sufferings were not confined to the British army. The Russian sick and wounded, amounted to 35,000 men. Joseph Hume, M. P., the veteran and persevering advocate of reform, died recently at the age of 78 years.

The War.—On the 17th ult., the Russian army, under General Liprandi, attacked the Turkish positions at Eupatoria. The Russians were repulsed with a reported loss of 500 men, killed, and a large number, wounded. The Turkish loss was about 350 men, killed and wounded. The weather had moderated at Sebastopol, and the snow had nearly disappeared. The health of the British army was better, and its effective force had been increased to 21,000 men. They were not all yet provided with winter clothing. The state of comparative inactivity on the part of besiegers and besieged, continued. Orders had been received at Constantinople, to prepare hospital beds for five thousand men, from which it is inferred that an assault is to be made upon Sebastopol.

FRANCE.—It is stated that the Emperor of France will probably soon proceed to the Crimea. It is said he has drawn up a plan of vast military strategy, which he wishes to superintend in person.

Four days later.—The Africa sailed from Liverpool at 10 A. M., on the 3d inst. The most important intelligence is, that of the death of Nicholas, Emperor of Russia, which is announced as having taken place on the 2d inst., at 1 A. M. In the House of Peers, in the evening of the same day, Lord Clarendon rose and said, "I think it my duty to communicate to your Lordships the contents of a telegraphic despatch, that I received half an hour since from her Majesty's minister at the Hague, that the Emperor Nicholas died this morning, at 1 o'clock, of pulmonic apoplexy, after an attack of influenza. I have also received a despatch from her Majesty's minister at Berlin, that the Emperor of Russia died at 12 o'clock this morning. An hour before this despatch arrived, I had received an account from Lord John Russell at Berlin, stating that the Emperor was at the point of death, and had taken leave of his family. Although this event occurred so short a time ago as between 12 and 1 o'clock this morning, there can be no doubt under the circumstances of its authenticity."

The decease of the Czar probably occurred as stated, but the fact cannot be considered as yet established beyond doubt.

The Peace Conference.—All the Plenipotentiaries, with the exception of Lord John Russell, had arrived at Vienna; the conference was to open on the 5th inst. The expectations of peace were daily growing stronger.

The War.—No further events of importance were reported from the Crimea. The condition of the French troops is said to be excellent. The Russians had captured one of the strongest Circassian fortresses.

PRUSSIA.—On Lord John Russell's arrival at Berlin, he immediately obtained audience of the King and Baron Manteuffel. There is said to be more disposition to yield to the wishes of the Western Powers.

FRANCE.—The Emperor is at the camp at St. Omers. Nothing further is known respecting his intended visit to the Crimea. The French frigate Semilante, which left Toulon for the East, with 400 troops, and a large quantity of mortars, shells, ammunition, &c., was totally lost in the Straits of Bonifairo. Nothing was saved, all on board, numbering with crew and passengers 700 persons, perished.

ITALY.—The Sardinian Chambers have voted the suppression of the Monasteries.

SICILY.—French papers mention that the city of Catania has been almost entirely destroyed by an earthquake.

GREAT BRITAIN.—The 21st of this month has been appointed a *National Fast, for the success of the war.* Public meetings have been held throughout England, deprecating the conduct of the war. Quiet had been restored at Liverpool and London. The prices of breadstuffs and cotton were nearly unchanged; the latter being, however, slightly lower, the range was from $4\frac{3}{4}$*d.* to $5d.$

CHINA.—Hong Kong dates to First mo. 15, had been received. The insurgents held Canton in siege, and have command of the whole river. Their fleet had gained several victories over the imperial fleet, and consequently had cut off the supplies of provisions. Rice and other articles of food were rising rapidly in price. The insurgents had met with reverses to the east of Pekin.

CHILI.—At last dates the country was tranquil and prosperous. The mines continue to yield well, and the products are increasing, in consequence of new discoveries which give employment to large numbers of persons. The exports of bullion from Copiapo, during 1854, amounted to $7,371,610, being an increase of $1,971,514 on the previous year.

PERU.—The revolution was at an end, and the country quiet. Castilla refuses the Presidency.

UNITED STATES.—*The Patent Office.*—In the general appropriation bill, it is provided that there shall be, in addition to the present force, four principal examiners and four assistant examiners of Patents; and if there should be a still further necessity, the commissioner of Patents is authorized to employ two other principal examiners and two assistants, until the close of the next session of Congress. *Island Annexation.*—The negotiations for the acquisition of the Sandwich Islands have been discontinued, and the scheme abandoned for the present. Before the adjournment of Congress, the Senate in executive session advised the President to give the notice to Denmark, required for terminating the stipulation for the payment of *Sound Dues*, and the notice has been already transmitted. *Promotion of Agriculture.*—Congress appropriated over forty thousand dollars to reimburse the Patent office funds for the amount heretofore paid out for seeds, and the collection of agricultural statistics. These seeds, collected in various parts of the world, have been distributed in all parts of the United States.

Cincinnati.—On the 17th, there was twenty feet of water in the channel of the Ohio, and business generally active.

St. Louis.—Under the operation of a new liquor law, every bar-room and beer-house in the city was closed on First-day, the 11th inst. The day was consequently unusually peaceful.

Georgia.—Extensive districts in this State, and also portions of South Carolina, have been desolated by most destructive conflagrations, kindled in the pine forests, which swept over a vast surface, destroying mills, houses, fencing, turpentine, cotton, &c. In some instances, plantations with all the buildings had been swept away.

Some of the railroads and telegraph lines were seriously injured. The destruction was arrested by heavy rains.

New York.—The first consignment of merchandise for San Francisco direct, via the Panama Railroad, has been despatched by the steamer Star of the South. The cargo consisted principally of assorted goods.

The Canada, on the 17th, took out $1,267,000 in specie. Mortality last week, 515,

Philadelphia.—Mortality last week, 194.

California.—The steamship Northern Light, from Aspinwall, arrived off Sandy Hook on First-day evening, and reached her dock a little after ten o'clock on Second-day morning, bringing dates from San Francisco to the 26th of Second month, brought down by the steamship Uncle Sam. The Northern Light brings 202 passengers and $92,000 in gold.

Business at San Francisco was entirely prostrated, caused by the suspension of five banking houses.

The news of Page, Bacon & Co.'s difficulty reached San Francisco on the 17th ult., causing a great run on the house, which, however, was promptly met, and half a million paid out. A meeting of merchants and brokers was held, which declared the house sound, and this apparently restored confidence. On the 22d, however, Page, Bacon & Co. suspended, followed on the 23d by Adams & Co., Wells, Fargo & Co., Robinson & Co., and Wright's Miners' Deposit Bank. The excitement which followed these failures was intense. Adams & Co. closed all their branches without paying a dollar, except in San Francisco, where, on the 22d, they stood a run of $200,000. Wells, Fargo & Co. closed in San Francisco, but the country branches paid as long as their coin lasted. There were rumors of heavy failures among the merchants, but nothing authentic had been ascertained.

Owing to the continued scarcity of water, but little gold has been taken from the mines. Heavy rains commenced on the 25th, and still continued when the steamer left.

No election for United States Senator had taken place, and the joint convention had adjourned *sine die* on the 16th, by a vote of 63 to 44, those voting against an adjournment being principally the friends of Gwin.

The news from Kern river is of an exciting character. The miners are said to be averaging from $10 to $20 per day, and steamers are going down crowded with passengers.

On the morning of the 18th, the St. Charles hotel and Hillman's hotel, in San Francisco, were destroyed by fire. The loss is $50,000. In Nevada, on the 16th, sixteen houses were burned. A fire had occurred in Stockton on the 21st, which had destroyed twenty-five houses.

The Indian troubles were on the increase. Further outrages are recorded. Some ten white men and about seventy Indians have been killed. Owing to the monetary difficulties, several recently arrived ships had not discharged. The steamers Oregon, from Panama, and Sierra Nevada, from San Juan, had arrived at San Francisco.

The Legislature of Oregon adjourned on the 18th ult. The Legislature has fixed Olympia as the capital of Washington territory.

We have Sandwich Island dates to the 3d of Second month, but they contain no news.

Miscellaneous.—Loss of Property on the Lakes.—The summary of disasters on the Lakes, from 1848 to 1854, inclusive, shows an aggregate of one thousand five hundred and fifty disasters, and the enormous loss of $6,054,225. Over two millions of the losses occurred in 1854, a memorable year of casualties and catastrophies on land and water.

Direct Trade with Holland.—The Chicago Press states that an agent of the Dutch East India Company, has visited Chicago on a tour of observation, with a view to opening a direct trade through the St. Lawrence, and also through New York, with the North West, for its productions of beef, pork, flour, &c., and with the South West, also, for its cotton, sugar, and tobacco. The extensive operations of this wealthy company, are directed from Amsterdam.

The Louisiana Sugar Crop.—The prospects for the next crop are unpromising, and the unusual dryness of the weather has prevented the planting of the canes.

Shocking Disaster.—On the day of election, about 800 persons were assembled in the town-hall, at Meredith, N. H., for the purpose of voting. Owing to defective construction, the floor gave way under the multitude, and a great number were seriously injured, over 100 persons having bones broken. Five men soon died of their injuries, and many more were not expected to recover.

The United States and Spain.—The Minister of Foreign Affairs stated in the sitting of the Cortes on the 10th, that orders had been given to submit to a new examination, all questions pending with the United States, in order to decide what is just, and expressed his hope of arriving at a pacific solution.

TRACT ASSOCIATION OF FRIENDS.

The Annual Meeting of the Tract Association of Friends, will be held on Fourth-day evening, 28th inst., at 8 o'clock, in the Committee-room, Arch Street Meeting-house.

Friends interested in the object of the Association, are invited to attend.

Third month, 1855. NATHAN KITE, Clerk.

Received from a Friend of Scotsville, New York, an acceptable donation of ten dollars, for the relief of the poor. THOMAS EVANS.

FALLS MONTHLY MEETING SCHOOL.

The Committee of the above named School is desirous to procure a well qualified female teacher to take charge of the School as instructor, for the ensuing season. Early application is requested, and can be made by addressing, Mahlon Moon, Morrisville P. O., Bucks Co., Pa.

MARRIED, at Friends' Meeting-house on Arch street, on the 8th inst., WILLIAM S. KIRK, of West Chester, to ANNA M. KITE, of this city.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, THIRD MONTH 31, 1855. NO. 29.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From Tait's Magazine.

The Jewish Subjects of the Russian Czar.

(Concluded from page 213.)

Towards the close of the last century, when the Polish nobles were in every way exerting themselves to retrieve the errors of the past—while their weak king, the minion of the worst enemy of his country, was unconsciously preparing its downfall, strenuous efforts were also made to ameliorate the condition of the Jews; and a "project of reform" relating to this subject was drawn up in a most just and liberal spirit, by a member of the Diet, and would no doubt have passed into law, had not the partition of the country intervened. According to this project of reform, the Jews were once more to be admitted to all the rights of citizens, while their duties to the country were not made to interfere with their liberty of conscience. It was enacted that as citizens of the State they should learn the language of the country, and should send their children to the national schools, but at the same time their religious rights were secured, and all honorable careers were opened to them. But the vultures that were to rend Poland asunder, were already hovering over the doomed land, and these noble efforts at self-regeneration, which might have served as an example to the freest and most enlightened nations of the times, only hastened the action of its enemies, lest the nation should grow too strong before the blow that was to fell it to the ground was levelled. The Israelites, fully aware of the sincerity of the intentions of the Polish patriots in their favour, proved their gratitude in 1794, when the people flew to arms in despair, by freely mingling their blood with that of their Christian comatriots; and they fought with bravery for the independence of the country which promised once more to become a true home to them.

Those among the Polish Israelites who, in consequence of the partition, were transferred to Russian rule, were the most fortunate. They have obtained many privileges they did not before possess; and they have in consequence abandoned their distinctive garb, and have lost many of their distinguishing features. Under Austrian rule, the influence of the Jesuits, who had contributed so much to their sufferings and degradation in Poland, continued to be felt; and the Jews of Galicia still maintain all their characteristic features. But it was the Israelites transferred to Russian dominion that were the most to be pitied. They were left entirely at the mercy or the caprice of the governors of the provinces, and other ignorant, barbarous, and rapacious officials, who all hoped to make their fortunes by despoiling the Jews, whose riches they conceived to be boundless. If the victims refused to deliver up the gold which in reality they did not possess, the tyrants put them to the torture to wrest it from them. The underlings imitated the example of their superiors; even the Russian soldiers—poor miserable slaves, ill-treated and trampled upon themselves—when they met with a Jew, played the masters for a while, and added their share to the misery that weighed down this unhappy people. The Government also oppressed them in every way, by advancing every pretext to squeeze money out of them, by the creation of monopolies, by increased taxation, and by illegal persecutions, while at the same time it denied them all rights. They were not allowed to hold real property, or to frequent the schools of the country; entrance into the capital was entirely denied to them, as also the right of lengthened sojourn in any of the populous cities.

In 1807, when the Grand-duchy of Warsaw was constituted, equality before the law was proclaimed for all citizens, and the Jews among the rest; but this liberal constitution remained a dead letter under the rule of the House of Saxony, and the Jews continued to be burdened with exceptional taxes; administrative decrees depriving them of the rights which the organic law accorded to them. All attempts to transform the Jews into Polish citizens were abandoned, and except that the additional hardship of performing military service was added to their other burdens, they remained what they had been for centuries. To relieve themselves from this to them most hateful service, they offered to pay an annual sum of 700,000 Polish florins to the Government, and under pretext of raising this sum, a tax called *kosher*,* was imposed in 1810 on all meat consumed by the Jews. This odious and vexatious tax, which weighs most heavily on the poor, is farmed out every year (for the Russian government most unjustly continues the tax, though the exemption from military service, for which it was a commutation, has been withdrawn) to the highest bidder; and it is but too often Jewish speculators who come forward to bid, in the hope of enriching themselves by the oppression of their brethren. However, the extraordinary tenacity and perseverance of the Hebrew character has frequently been exhibited in resistance to this tax, whole communities having for six months together abstained from eating meat, thus reducing to bankruptcy the heartless farmer of the tax. At the same time that this tax was imposed, the right of keeping taverns or public-houses in the villages, was withdrawn from the Jews, and a great number of families thus reduced to a state of perfect destitution.

The treaty of Vienna brought a new change in the state of Poland. Again a charter was given ensuring the rights of the citizens, Jewish as well as others, and again the people were delivered over to arbitrary rule, and this time to that of a capricious and tyrannical despot; for while the Emperor Alexander at St. Petersburg planned benevolent reforms for Poland, the Grand-Duke Constantine, nominated commander-in-chief in the kingdom, was grinding the people under his heel. The burdensome taxes and restrictions weighing on the Jews were not relieved, while the prohibitive commercial system of Russia further injured them in their trading relations. Some sought relief in smuggling, in spite of the heavy penalties attending detection. This led to the establishment of a regular system of extortion, having for its object to despoil the rich Jews for the benefit of their denouncers, who shared their gains with General Roznieçki, the Chief of the Secret Police. The word of a single spy was sufficient to cause the incarceration of the most respectable citizen, and whether innocent or guilty, there was no escape from such captivity except through means of a golden key. The poor Jews, against whom no political plottings could possibly be invented, were made to follow their Polish fellow-citizens to Siberia, under pretext of being guilty of smuggling. At this time also (1823) the Jews were again forced to separate from the other citizens, and to take up their abode in distinct quarters of the town; and, upon the whole, their condition became more intolerable than ever.

An incident, closely connected with an arbitrary measure, from which the Jews, in particular, suffered very severely, will suffice to show how constitutional government was understood by the Russian masters of Poland. Monopoly in the distillation and sale of spirits and beer was suddenly introduced by the Minister of Finance, Lubecki. The monopoly being, however, restricted to the towns, the price of the two commodities soon rose enormously in Warsaw, and other populous cities, as compared with the price in the villages; and many poor Jews, who had been deprived of every honest means of subsistence, were induced to smuggle spirits into the towns, though many lost their lives in conflict with the custom-house officers.

At length, the citizens of Warsaw finding themselves great sufferers by the enhanced price of the two necessary articles, drew up a petition to the Emperor, couched in the most respectful terms, but representing that the introduction of this monopoly was a violation of the rights guaranteed to the Polish people by the charter. The day after the petition had been sent in to the government office at Warsaw, the six respectable citizens, whose names stood first among the signatures, were dragged from their homes, conducted to an open square in the city, and there made to cart earth in wheelbarrows, like common malefactors, in the presence of an immense concourse of people, who looked on in profound and melancholy silence. One of the sufferers on this occasion, a venerable old man with silver hair, was —— Czynski, who had served as captain under Kosciuszko, and whose son has distinguished himself among the Polish emigrants, in Paris, by his generous efforts in behalf of the Polish Jews. Among the means resorted to, at this period, for extorting money from the Jews, were also threats of displacing their cemeteries, and of pulling down their synagogues; and the unhappy people, already reduced to great privations, imposed long and severe fasts

* The word "kosher" signifies permitted food.

upon themselves in order to raise the sums required to bribe the authorities to desist from these plans. So great was the terror inspired by the Grand-Duke Constantine, that it has been observed that not a single Israelite at that time ventured to inform his co-religionists abroad of the dreadful oppression they were subjected to in Poland.

One only of Alexander's benevolent and wise measures in favour of Jewish reform was carried out, at least partially. A commission was instituted at Warsaw to inquire into the condition of the Jews and to propose ameliorations; but the only permanent fruits of its labours, was the establishment of a school in Warsaw for Jewish rabbis, with a view to forming tolerant and enlightened teachers, capable of exercising a salutary influence on their co-religionists; and the suppression of the Jewish authoritative bodies called *cahal*, who exercised a most despotic and tyrannical rule over their fellows by means of the anathema which they had the power of pronouncing. These two measures have at least emancipated a great number of the younger generation of Polish Jews from the thraldom of ignorant orthodoxy in which the rigorous Talmudists endeavour to keep their people.

For the Emperor Nicholas was reserved the distinction of levelling against his Jewish subjects the most cruel blow which has ever yet fallen upon this much-oppressed people. Shortly after his accession, being desirous of creating a powerful navy, and being advised that the Jews, hitherto exempt from military service, possessed peculiar aptitude for naval service—by the stroke of a pen he caused 30,000 children to be torn from the arms of their parents and transported to the coasts of the Black Sea during a most rigorous season. Many perished on the road, others succumbed to the cruel discipline of the Russian navy; and, if we are to believe the Jewish archives, a few years afterwards there remained only 10,000 young men alive of this first levy of Israelites. From one point of view the military service imposed upon his Jewish subjects by the Emperor Nicholas may be considered a step in advance, as it places them on an equal footing with the Christians, and as such it is indeed represented; but we must not forget that this equalization as to burdens has not been accompanied by any equalization as to rights, and that the Jews continue to be excluded from serving the country in any other capacity, and to be burdened with many exceptional imposts. But should the Tzar ever sincerely desire to place the Jews on a level with his Christian subjects of the same rank, he would only be making them the equals of serfs and slaves. However, the sufferings the Jews are exposed to by being subject to military conscription are also of an exceptional character.

By far the greater number of the Jews born in the Polish provinces do not understand the Polish language, and much less the Russian; the position of the Russian soldier, as is now well known, is one of indescribable hardship and privation. He is badly fed, badly paid, badly housed, and ill-treated by his superiors from the sergeant to the commander-in-chief; but added to this the Jewish soldier has to bear the hatred and contempt of his comrades in arms, who look upon him with abhorrence as belonging to the race who crucified their God; and such being the case, it is no wonder that these unhappy creatures resort to the most desperate expedients to evade a service which is also most repugnant to their unwarlike tastes and habits. A few years ago, a sledge with ten corpses was brought into Wilna one morning: they were the bodies of ten young Jews, who had preferred death from cold and hunger in the forest, to life among the barbarous Russian soldiers and officers. Such tragedies are of daily occurrence in Russia; but in 1843, a tragedy of a new character, and on a grander scale than had ever before been witnessed, was got up by order of the Emperor. In that year an ukase was published ordering all the Jews dwelling on the frontiers of Prussia and Austria to remove fifty wersts further into the interior; and thus a population of no less than 200,000 souls were suddenly uprooted from the soil on which their fathers had been established for many centuries, and cut off from their accustomed sources of livelihood.

The Jews exerted themselves to the utmost to avert this dreadful calamity. They sent deputations to St. Petersburg to prove to the Government that not one in a thousand of them had been guilty of the smuggling which served as a pretext of this tyrannical measure; they offered to renounce entirely all participation in the frontier trade, or, if any of their members took part in it, to make all responsible for each; but the Emperor, who no doubt had ulterior objects in view, remained inflexible. Animated by the reforming spirit of his great ancestor, Nicholas has also declared war against the beards and caftans of the Jews, as Peter did against those of his Boyars. It is not, however, European civilization which Nicholas wishes to introduce, but that perfect uniformity which would render the power of his colossal empire more easy to wield. The idea of a wholesale conversion of the Jews is not either foreign to Nicholas, for he cannot renounce the hope of embracing these two and a-half millions of his subjects also within the arms of the orthodox Russo-Greek Church, which are eventually, according to his plan, to encircle all the nations that dwell within the shadow of the Muscovite sceptre. That the Russians are fully aware that hitherto persecution and oppression have only strengthened the faith of the Jews, is proved by the oath that is administered to them on entering the army or the navy: they are made to swear not to abandon the Emperor's banners even when the Messiah appears.

For "The Friend."

The Journal of George Fox, as well as other writings of our forefathers in the Truth, will well repay an attentive perusal, oft repeated. His epistles bear on them the stamp of having been written, as many of them profess to be, under the Divine anointing. The following in his handwriting, and sealed up with this superscription, 'Not to be opened before the time,' was opened after his decease, and may be considered as a dying legacy to the church:

"For the Yearly and Second-days Meeting in London, and to all the children of God in all places in the world. By and from G. F.

This for all the children of God everywhere, who are led by the Spirit, and walk in his light, in which they have life, unity, and fellowship with the Father and the Son, and one with another.

Keep all your meetings in the name of the Lord Jesus, that be gathered in his name, by his light, grace, truth, power, and Spirit, by which you will feel his blessed and refreshing presence among you, and in you, to your comfort, and God's glory.

And now, Friends, all your meetings, both men's and women's, Monthly, Quarterly, and Yearly, &c., were set up by the power, Spirit, and wisdom of God; and in them you know that you have felt his power, and Spirit, and wisdom, and blessed, refreshing presence among you, and in you, to his praise and glory, and your comfort; so that you have been a city set on a hill, that cannot be hid.

And although many loose and unruly spirits have risen betimes to oppose you and them in print and other ways, you have seen how they have come to nought. The Lord hath blasted them, brought their deeds to light, and made them manifest to be trees without fruit, wells without water, wandering stars from the firmament of God's power, and raging waves of the sea, casting up their mire and dirt; and many of them are like the dog turned to his old vomit, and the sow that was washed, turned again to the mire. This has been the condition of many, God knoweth, and his people.

Therefore, all stand steadfast in Christ Jesus your head, in whom you are all one, male and female, and know his government, of the increase of whose government and peace there shall be no end; but there will be an end of the devil's, and of all that are out of Christ, who oppose it and him, whose judgment doth not linger, and their damnation doth not slumber. Therefore, in God and Christ's light, life, Spirit, and power, live and walk, that is over all (and the Seed of it) in love in innocency, and simplicity. In righteousness and holiness dwell, and in his power and Holy Ghost, in which God's kingdom doth stand. All children of new and heavenly Jerusalem, that is from above, and is free, with all her holy spiritual children, to her keep your eyes.

As for this spirit of rebellion and opposition that hath risen formerly and lately, it is out of the kingdom of God and heavenly Jerusalem; and is for judgment and condemnation, with all its books words and works. Therefore, Friends are to live and walk in the power and Spirit of God, that is over it, and in the Seed that will bruise and break it to pieces. In which Seed you have joy and peace with God, and power and authority to judge it; and your unity is in the power and Spirit of God, that doth judge it: all God's witnesses in his tabernacle go out against it, and always have and will.

Let no man live to self, but to the Lord, as they will die in him; and seek the peace of the church of Christ, and the peace of all men in him; for 'blessed are the peace-makers.' Dwell in the pure, peaceable, heavenly wisdom of God, that is gentle and easy to be entreated, that is full of mercy; all striving to be of one mind, heart, soul and judgment in Christ; having his mind and spirit dwelling in you, building up one another in the love of God, which doth edify the body of Christ, his church, who is the holy head thereof. Glory to God, the Christ, in this age and all other ages, who is the Rock and Foundation, the Emmanuel, God with us, Amen, over all, the beginning and the ending. In him live and walk, in whom you have life eternal, in him you will feed me, and I in you.

All children of New Jerusalem, that descend from above, the holy city, which the Lord and the Lamb is the light of, and is the temple; in it they are born again of the Spirit; so Jerusalem that is above, is the mother of them that are born of the Spirit. These that come and are come to heavenly Jerusalem, receive Christ; and he giveth them power to become the sons of God, and they are born again of the Spirit: so Jerusalem that is above, is their mother. Such come to heavenly Mount Sion, and the innumerable company of angels, to the spirits of just men made perfect, and to the church of the living God, written in heaven, and have the name of God written upon them. So here is a new mother, that bringeth forth a heavenly and spiritual generation.

There is no schism, no division, no contention

or strife, in heavenly Jerusalem, nor in the body f Christ, which is made up of living stones, a piritual house. Christ is not divided, for in him here is peace. Christ saith, 'In me you have eace.' And he is from above, and not of this vorld; but in the world below, in the spirit of it, here is trouble; therefore, keep in Christ, and alk in him. Amen. G. F.

Jerusalem was the mother of all true Christians, efore the apostacy; and since the outward Chris-ans are broken into many sects, they have got any within: but all those that are come out of ie apostacy by the power and Spirit of Christ, erusalem that is above, is their mother, (and one below her,) who doth nourish all her spirit-al children. G. F."

Read at the Yearly Meeting in London, 1691.

A Word about Chimneys.

The London Quarterly Review for January, ontains a capital article on the subject of open re-places, discussing, among other things perti-ent to the theme, the subject of smoking chim-eys. As there doubtless are hundreds, if not housands, of our numerous readers, who are flicted with this household calamity, we shall be oing the public a service by giving the pith of ie Quarterly's remarks on this subject.

Smoke does not, as is popularly supposed, scend a chimney because it is lighter than air. r. Franklin demonstrated, a century ago, that noke is really heavier than air. But the murky oud of gases, acids and vapour, which is called noke, rises in the chimney, because mixed with ie rarified air which is ascending through the me channel. When there is no fire, the draught f the chimney is either small, or wanting alto-ether. Hence it is that even good chimneys, if ey have been long disused, often smoke for the rst five or ten minutes after a fire has been kin-led, because, until the air in the chimney be-omes rarified, there is nothing to draw the smoke owards. It follows from this view of the origin f the draught in the chimney, that if there is an sufficient supply of air, as happens when all the oors of a room are closed and the windows listed, hat the chimney will smoke, because there being n insufficient supply of air to the fire, the coals ily smoulder, there is no air to be rarified, the noke cannot ascend, and so the occupants of the partment suffer.

It is as necessary, therefore, if we would not ave smoke to annoy us, to provide plenty of fresh r for the fire, as it is to provide a chimney. Dr. ranklin found, by experiment, that an open fire, a room of ordinary size, required as much air as ould be admitted through a hole in the wall six ches square. But such a hole, or even the leav-g a door open, produces a draft, and such a draft ves persons cold who sit in it. As far back as a entury and a half ago, a Frenchman, named auger, invented a fire place, in order to obviate is. He opened a hole in the hearth, communi-ating with a channel which passed under the oor, and finally ended at an aperture in the wall f the house. Strange to say, this excellent plan as never yet been generally adopted. It is only ow coming first into use in this country, as ap-lied to supplying hot-air furnaces with air; while omparatively few grates are furnished with air in is way, as they should be, if those sitting around em wish to avoid cold currents on their feet. pen fires are now left to be fed by the air which ey suck in, so to speak, under the doors and rough the crevices of the windows; and hence ie complaint that a grate-fire roasts the front of ie person, while the back is freezing. The hav-ng sufficient air to feed a chimney, is indeed the principal security against a smoky room. There are few smoky chimneys which cannot be cured by simply giving them plenty of air. And this rule applies as well to stoves, furnaces, or other apparatus for heating, as to fires. What we have said about preventing smoke, also refers to prevent-ing gas from anthracite fires.

It was an old notion that chimneys ought not to be crooked, whereas a slight bend towards the top is beneficial, for this prevents the sudden de-scent of wind or rain. Nor is the form of the chimney material; it may be tapering, or of equal bore; pyramidal or square; it is only necessary that it be constructed so as to offer no consider-able resistance to the ascending current, for other-wise the hot air will be delayed in its ascent, and have time to cool. A high chimney always makes the best draught, and hence well-built factories invariably have such chimneys. Dwelling houses do not require such enormously high chimneys, but they must be high enough not to be over-topped by contiguous buildings, else the wind, strik-ing against the superincumbent wall, will be pre-cipitated down the chimney, filling the room below with smoke or gas.

Much of what we have said about smoky chim-neys applies also to ventilation. The combustion of a fire, or of gas-lights, as well as our own breath-ing, vitiates the air, so that every apartment ought to have an outlet for carrying off the carbonized and deleterious atmosphere. A hole, opening into the chimney, just below the ceiling, is the best method of meeting this difficulty. Rooms, heated by properly constructed furnaces, which admit fresh air raised to a temperature of sixty-five de-grees, and supplied with such an opening, are the healthiest that can be had, unless it is apartments warmed by grates, and fitted with such a ventil-ator, the grates and room being fed with cold air in such a way as to prevent draughts on the person.—*Ledger.*

For "The Friend."

Sarah L. Grubb.

I have lately been reading a letter of Sarah L. Grubb, dated Sudbury, Sixth mo. 24th 1837, page 356, and have no doubt the "truly fearful meet-ing" she alludes to, was the one before which Jo-seph John Gurney opended his prospect of coming to America. I doubt not its insertion in "The Friend," would be interesting to many of your read-ers —*Bucks Co., Third Month*, 1855.

Sudbury, Sixth mo. 24th, 1837.

My dear Friend,—. . . . . I was so ill, both in London and since, as scarcely to be able to put pen to paper; indeed it was under much weight of indisposition that I left home, but my mind being drawn to the Yearly Meeting, the attempt was made. On second day morning I attended the Select Meeting, and communicated what was on my mind; after which I was not able to stop, and did not get to the afternoon sitting. Had an interview that day with our friend ———, and managed to sit pretty nearly throughout the truly fearful meeting of third day, where I was the first to express anything but unity with the concern laid before friends. Many followed me in the same strain. . . .

I was not at the adjournment, but understood that more objected then. However, the prospect was ultimately encouraged, and a very full certifi-cate issued. I may say that my place seemed to be *that which I stood in*; in decidedly giving my judgment, as an individual, that it would be best to lay the concern aside at present. I fully concur in the belief of some valuable Friends, that the disaffection in this country arose out of the un-sound writings, &c., of the Friend in question.

. . . . . I confess that nothing short of an ac-knowledgment of error, and deep sorrow for the past (though done with good intentions) appears sufficient to satisfy my tried mind, with respect to one so influential, and whose sentiments on things of great importance to us as a body, are published to the nations. . . . What occasions me the most sorrow is, that in this day of sifting as from sieve to sieve, we have, in a Society capacity, retarded the great work, and owned much which the great Lord of the heritage has appointed should be win-nowed away. Oh! the consideration hereof weighs down my spirit; and because there appears at pre-sent no remedy, my soul weeps in secret places, and I go mourning all the day long; yet there is, at times, a humble but sure hope, that there will be a discerning more clearly between thing and thing; between the covering that is not of God's Spirit, and that which He prepares and grants to those who are truly watchful, and dependent upon Him alone. I trust that, among our youth, some see with an evidence indubitable, that nothing will avail but a new heart; which cannot be effected, save by the inward operations of the hand of the holy Redeemer, who sitteth "as a refiner with fire, and as a fuller with soap."

I was particularly struck with thy allusion to my not being without tribulation; for at the time I received thy letter, I was pressed down with pain-ful feelings, which increased until what I had to suffer (particularly in the great city) became fully equal to any capacity afforded to sustain it; but my poor mind was mercifully favoured to witness, that such a helpless worm was under the notice of Him who "weigheth the mountains in scales, and the hills in a balance;" so that not an atom too much is permitted to come upon us. I shall be glad of further information from thee of how thou fares, and whether thy dear sister is still a sufferer or not. I trust that if patience has already had her perfect work, or still a little may remain to be effected, as the service due to a Master richly re-warding, the immortal spirit triumphs over all, through Him who conquered, and still is known to conquer, death, hell, and the grave. Believe me to be, very sincerely, thy affectionate friend,

Sarah Grubb.

Extinguishing Fires by Steam.—The *Peoria Press* has the following account of the method by which —— Fridley & Lincoln, furniture makers of that place, extinguished a fire recently in their factory:—"The main building of their establish-ment is three stories high. The engine used in running the machinery occupies a shed in the rear. The fire was caused by the burning of some lumber which had been placed on the boiler to dry for the use of the workmen engaged in making chairs and other furniture. When first discovered by Fridley, the flames had burst through the roof of the engine room, and were rapidly fastening upon the main building. Seeing the imminence of the danger, and believing the fire engines would not arrive in time, he concluded, by way of experiment, to try the efficacy of a rather novel 'annihilator.'

Finding there was a good 'head of steam,' after 'clearing the coast,' he opened the safety valve, and let it 'rip.' And 'rip' it did. Knocking a hole through the roof of the engine room, and fill-ing the building with vapour, the steam literally followed the rushing flames to the roof of the main edifice, and suddenly and completely subdued the fiery foe. When our active firemen arrived on the ground, they found the work had been effectually done."

As rest to the weary traveller, so is true silence to the deeply exercised mind.

Letter of Mary Capper.

The secret language and aspiration of my spirit is, O! that our youth, entering the field of faith, and of responsibility, O! that they may be kept from the strange disputations of this day. But why think it strange? Look at the history of mankind from the fall of Adam; disobedience has marked every succeeding generation; subtle device or open rebellion has drawn aside thousands, and continues, in various ways, to allure and deceive the children of men. The natural, uncontrolled, active mind delights in doing something that shall appear goodly; yea, can make sacrifices in its own will and way, and is gratified in self-complacency, and it may be applause; yea, in external acts of religious worship. My long life and observation, tossed and sifted as I have been, have given me a measure of experience in the delusions of self. O! how different, how widely different, from the lowly, humble waiting at the feet of Jesus, the highest Teacher, as with our mouths in the dust; feeling our own impotency, our own blindness! Here is subjugation, indeed, bearing the true cross. Ah! my dear, say not in thine heart, "Who shall show us any good?" Who shall ascend, or who shall descend, to bring our best Teacher? Believe me, he is nigh thee; the living Word! writing the new covenant on the tablet of thy heart. Believe and obey this, and thou wilt be led gently along, as thou canst bear it. When we are faithful in the little, the way is made for farther manifestations of the Divine will concerning us. Avoid speculations, and vainly exercising thyself in things too high for thee. If I know anything of true peace, it is in simple, child-like obedience to the still, small voice of the good Shepherd, who instructs the lambs and sheep of his fold; a stranger's voice they will not know nor follow. This gracious, enduring mercy was the guide of my youth, turning my steps into the narrow way; and it is the stay and the staff of my old age; and never did I more fully appreciate what I believe to be the genuine principles of the society to which I am conscientiously united, than at this day.

Sacrifices, not a few, have been called for, but not one which is not doubly repaid by sweet peace. Not one painful accusation is permitted to trouble me; thankfulness and cheerfulness clothing my spirit, in the midst of great reduction of bodily strength.

Though I know not the heart of a parent, I feel much for the rising generation; if there was not faith in an over-ruling Power, our poor thoughts might trouble, if not overwhelm us; for what a sifting day is this, among professors of religion! our own little favoured band not exempt. There seems a prevailing mania, a strife of words and of strange voices! But the good Shepherd knoweth his own sheep, and they follow Him.—*Friends' Library.*

A Spot in Massachusetts where there is no Crime.—The rum traffic on Martha's Vineyard has been outlawed for more than eighteen years. Rumselling is not known in that locality. What has been the result? Crime has not only diminished, but it seems to have almost entirely left the Vineyard. We are informed that no case of crime has come before the Courts for something like sixteen years. The Judges go down in one boat and back in the next. While the traffic in liquor continued, the Courts were in session for about two weeks each term. Civil cases have been greatly diminished, and there are now very few that come up for trial. Here is a fact of immense importance. Crime and the grog-shops always go together. Stop rum-selling, and nearly all kinds of misdemeanours and offences against the law will instantly cease. This fact furnishes an argument in favour of prohibiting the rum traffic, against which no man can say a word.—*Boston Telegraph.*

For "The Friend."

Are not pride and the love of popularity slaying thousands in this day of outward ease, causing the people to walk in the broad road that leads to destruction, as the sons of Eli did? And will not separations in the Society of Friends strengthen these in their evil courses, and cause there to be more infidels? Are not too many boasting of their numbers, and saying this or that is the larger body? Cannot the Lord cause one to chase a thousand, and two to put ten thousand to flight? Did David gain anything by numbering the Lord's people, and does not the Pope at Rome boast of the number and the strength of his followers?

I believe there are many true mourners at this time in our religious Society, who cannot boast of numbers, but who would rejoice to hear of a general uniting of all our members in worshipping and serving the Lord in spirit and in truth. Why should so many be striving to deceive themselves and their neighbours, when they know they cannot deceive God?

Iowa, Third mo., 1855.

Saint Paul at Athens.

At Athens, the centre at once and capital of the Greek philosophy and Heathen superstition, takes place the first public and direct conflict between Christianity and Paganism. Up to this time there is no account of any one of the apostles taking his station in the public street or market-place, and addressing the general multitude. Their place of teaching had invariably been the synagogue of their nation, or, as at Philippi, the neighbourhood of their customary place of worship. Here, however, Paul does not confine himself to the synagogue, or to the society of his countrymen and their proselytes. He takes his stand in the public market-place (probably not the Ceramicus, but the Eretriac Forum), which, in the reign of Augustus, had begun to be more frequented, and at the top of which the famous portico from which the Stoics assumed their name. In Athens, the appearance of a new public teacher, instead of offending the popular feelings, was too familiar to excite astonishment, and was rather welcomed as promising some fresh intellectual excitement. In Athens, hospitable to all religions and all opinions, the foreign and Asiatic appearance, and possibly the less polished tone and dialect of Paul, would only awaken the stronger curiosity. Though they affect at first (probably the philosophic part of his hearers) to treat him as an idle "babbler," and others (the vulgar, alarmed for the honour of their deities) supposed that he was about to introduce some new religious worship which might endanger the supremacy of their own tutelar divinities, he is conveyed, not without respect, to a still more public and commodious place, from whence he may explain his doctrines to a numerous assembly without disturbance. On the Areopagus the Christian leader takes his stand, surrounded on every side with whatever was noble, beautiful, and intellectual in the older world,—temples, of which the materials were only surpassed by the architectural grace and majesty—statues, in which the ideal anthropomorphism of the Greeks had almost elevated the popular notions of the Deity, by embodying it in human forms of such exquisite perfection—public edifices, where the civil interests of man had been discussed with the acuteness and versatility of the highest Grecian intellect, in all the purity of the inimitable Attic dialect, when oratory had obtained its highest triumphs by "wielding at will the fierce democracy"—the walks of the philosophers, who unquestionably, by elevating the human mind to an appetite for new and nobler knowledge, had prepared the way for a loftier and purer religion. It was in the midst of these elevating associations, to which the student of Grecian literature in Tarsus, the reader of Menander and of the Greek philosophical poets, could scarcely be entirely dead or ignorant, that Paul stands forth to proclaim the lowly yet authoritative religion of Jesus of Nazareth. His audience was chiefly formed from the two prevailing sects, the Stoics and Epicureans, with the populace, the worshippers of the established religion. In his discourse, the heads of which are related by St. Luke, Paul, with singular felicity, touches on the peculiar opinions of each class among his hearers; he expands the popular religion into a higher philosophy, he imbues philosophy with a profound sentiment of religion.

It is impossible not to examine with the utmost interest the whole course of this (if we consider its remote consequences, and suppose it the first full and public argument of Christianity against the heathen religion and philosophy) perhaps the most extensively and permanently effective oration ever uttered by man. We may contemplate Paul as the representative of Christianity, in the presence, as it were, of the concentrated religion of Greece, and of the spirits, if we may so speak, of Socrates, and Plato and Zeno. The opening of the apostle's speech is according to those most perfect rules of art which are but the expressions of the general sentiments of nature. It is calm, temperate, conciliatory. It is no fierce denunciation of idolatry, no contemptuous disdain of the prevalent philosophic opinions; it has nothing of the sternness of the ancient Jewish prophet, nor the taunting defiance of the later Christian polemic. "Already the religious people of Athens had, unknowingly indeed, worshipped the universal deity, for they had an altar to the unknown God. The nature, the attributes of this sublimer being, hitherto adored in ignorant and unintelligent homage, he came to unfold. This God rose far above the popular notion; he could not be confined in altar or temple, or represented by any visible image. He was the universal father of mankind, even of the earth-born Athenians, who boasted that they were of an older race than the other families of man, and coeval with the world itself. He was the fountain of life, which pervaded and sustained the universe; he had assigned their separate dwellings to the separate families of man." Up to a certain point in this higher view of the Supreme Being, the philosopher of the Garden as well as of the Porch might listen with wonder and admiration. It soared, indeed, high above the vulgar religion: but in the lofty and serene Deity, who disdained to dwell in the earthly temple, and needed nothing from the hand of man, the Epicurean might almost suppose that he heard the language of his own teacher. But the next sentence, which asserted the providence of God as the active creative energy,—as the conservative, the ruling, the ordaining principle,—annihilated at once the atomic theory and the government of blind chance, to which Epicurus ascribed the origin and preservation of the universe. "This high and impressive Deity, who dwelt aloof in serene and majestic superiority to all want, was perceptible in some mysterious manner by man: his all-pervading providence comprehended the whole human race; man was in constant union with the Deity, as an offspring with its parent." And still the Stoic might applaud with complacent

tisfaction the ardent words of the apostle; he ight approve the lofty condemnation of idolatry. We, thus of divine descent, ought to think more bly of our Universal Father, than to suppose at the godhead is like unto gold, or silver, or one, graven by art or man's device." But this vine providence was far different from the stern d all-controlling necessity, the inexorable fatal- m of the Stoic system. While the moral value human action was recognized by the solemn tributive judgment to be passed on all mankind, e dignity of Stoic virtue was lowered by the neral demand of repentance. The perfect man, e moral king, was deposed, as it were, and ased to the general level; he had to learn new ssons in the school of Christ, lessons of humility d conscious deficiency, the most directly opposed the principles and the sentiments of his philo- phy.

The great Christian doctrine of the resurrection osed the speech of Paul; a doctrine received with ockery perhaps by his Epicurean hearers, with spension of judgment probably by the Stoic, ith whose theory of the final destruction of the rld by fire, and his tenet of future retribution, might appear in some degree to harmonize. me, however, became declared converts; among om are particularly named Dionysius, a man of fficient distinction to be a member of the famous urt of the Areopagus, and a woman named maris, probably of considerable rank and in- ence.

At Athens, all this free discussion on topics re- ing to the religious and moral nature of man, d involving the authority of the existing reli- on, passed away without disturbance. The jea- us reverence for the established faith, which, nspiring with its perpetual ally political faction, d in former times caused the death of Socrates, e exile of Stilpa, and the proscription of Diagoras e Melian, had long died away. With the loss independence, political animosities had subsided, d the toleration of philosophical and religious difference allowed the utmost latitude to specu- ive inquiry, however ultimately dangerous to e whole fabric of the national religion. Yet olytheism still reigned in Athens in its utmost lendor; the temples were maintained with the ghest pomp; the Eleusinian mysteries, in which igion and philosophy had in some degree coal- ced, attracted the noblest and the wisest of the mans, who boasted of their initiation in these blime secrets. Athens was thus, at once, the ad-quarters of Paganism, and at the same time e place where Paganism most clearly betrayed approaching dissolution.—*Milman.*

Geology at a Discount.—The geologist, if he be rly in earnest, is far too tired, after his day's rk, to trouble himself about the aristocratic air his quarters, and besides, generally manages to t his outer man into so uncleanly a condition, t a grand hotel would have some scruples in king him in. Professor Sedgwick, after a hard rning's work, betook himself to a village inn for unch of bread and cheese. When he asked at he had to pay, he was told, "fourpence!" e could not avoid remarking on the smallness of e charge. "Ah, sir," said the landlady, "I uld ask eighteen pence of any one else, but I ly ask fourpence from you, for I see you have n better days." At another time a lady stopped the roadside, where he was working, made some quiries, and gave him a shilling, because his an- ers were so intelligent for his station. He met e same lady at dinner next day, to her great onishment. A well-known geologist, long sec- ary to the Geological Society, was once taken up while at his vocation, and dragged to the Bristol Asylum for an escaped lunatic. On another occasion, tired, and with his pockets full of the day's treasures, he mounted a stage-coach, and fell fast asleep. Waking at his journey's end, he was horrified to find his pockets as empty as when he set out. An old woman, who sat beside him, feeling the pockets full of stones, took him for a madman, who had loaded himself more effectually to secure drowning; so she slily picked out the fossils one by one, from the drowsy philosopher, and tossed them on the roadside.—*Musical World.*

Selected.

WHAT IS THY HOPE?

What is thy hope? O, if to the earth,
Like the grovelling vine it clings,
Nor shoots one aspiring tendril forth,
In search after higher things—
In vain 'tis nurtur'd with ceaseless toil,
Confined to the world's ungenial soil,
Each prop that supports it must perish, and all
Its buds of fair promise unopened fall.
Alas for the hopes which are nourished here,
'Midst the storms of earth's changeful atmosphere.

Then what is thy hope? To what pitch of pride
Would thy restless ambition tower?
Wouldst thou ever fallen empires stride,
To the summit of human power?
Couldst thou conquer realms, make thy will their law,
And hold the subject world in awe;
Should kings as vassals attend thy nod,
Thou must die, and thy spirit return to God;
And how worthless are sceptres and thrones of power,
To a monarch's soul in his dying hour.

Say, what is thy hope? Dost thou pursue
Of pleasure the giddy round?
With the phantom of happiness ever in view,
Where true happiness never was found.
O plunge not in search after bliss supreme,
'Midst the whirlpool of pleasure's polluted stream;
Amidst her alluring orgies thou never canst find,
Joys worth the pursuit of a rational mind;
O fly her seductions, resist her control—
She poisons, debases, and ruins the soul!

But what is thy hope? Dost thou pant to find
Of riches a treasure untold?
Thou never canst purchase peace of mind,
Nor length of days with gold.
It procures no exemption from worldly woe,
Nor will Death for a bribe his prey forego;
Though thou hoardest up wealth, layest field to field,
No advantage in death will thy treasure yield:
Thou must leave thy possessions to other men,
And where will thy *hope* and thy *soul* be then?

Yet what is thy hope? Is it that which leads
The aspirants to glory forth—
To win for themselves heroic deeds,
The fleeting applause of earth?
Thou mayest couple thy name with high renown,
And send it to future ages down,
And men yet unborn may applaud the tale;
But what will their plaudits to thee avail,
When thy form shall be mouldering amongst the dead,
And thy soul to the last great audit fled?

Then what is thy hope? Consider how high
Is thy destiny; think on the worth
Of a soul that is born for eternity,
Though it sojourn a while upon earth.
O why are the views of immortals confin'd
To narrower limits than Heaven assign'd?
Why, when form'd to exist in a happier sphere,
Should we bury our expectations here;
And vainly think for substantial good,
In a world of unceasing vicissitude?

What is thy hope? Will it stand the test
Of nature's expiring hour?
Like armour of proof, will it shield thy breast
Against the grim tyrant's power?
Will it gladden thy soul and dispel the gloom,
The horrors of darkness that veil the tomb,
When the damps of death to thy brow shall start,
And the life-blood ebbs from thy freezing heart?
Away with it else; it is worse than vain,
To cherish a hope that will fail thee then.

But hope thou in God, for a dying hour,
This hope a sweet assurance brings,
When worldly preferments, wealth, and power,
Shall all be forgotten things.
Aye, hope thou in God, though a feeble worm;
Thy soul shall be safe, and thy confidence firm,
Thou shalt traverse in safety the gloomy abyss,
Which divides the eternal world from this;
And consigning in hope thy frail flesh to the sod,
Thy soul shall ascend to thy Saviour and God.

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 222.)

GRIFFITH OWEN.

Our ancient Testimony.

"*Our solemn confession, in the holy fear of God, concerning our Lord and Saviour Jesus Christ, according to the several testimonies given forth by our faithful brethren.*

We sincerely believe, own and confess no other Lord and Saviour than our Lord Jesus Christ, the Son of the living God, to whom the prophets and apostles give witness, and who, in the fulness of time, took flesh of the seed of Abraham, and of the stock of David. We confess to his miraculous conception by the power of the Holy Spirit overshadowing of the virgin Mary; and to his being born of her, according to the flesh, and that he took upon him a real body, and that he was a real man, and that in the days of his flesh he preached righteousness, wrought miracles, was crucified, being put to death by wicked hands; and that he was buried, and rose again the third day, according to the Scriptures; and after he rose, he really appeared to many brethren, and afterwards he ascended into glory, according to the wisdom and power of the heavenly Father, and is glorified with the same glory which he had with the Father before the world began, being ascended far above all heavens that he might fill all things, whose glory is incomprehensible. We also believe, that he is that one Mediator between God and man, viz., that entire, perfect, heavenly, and most glorious Man, Christ Jesus, who ever lives, and endures in his soul, or spirit, and glorious body. We further believe, that according to his promise to his disciples before he left them, viz., that he would come unto them again, and that he that was with them, should be in them; they in Christ, and Christ in them. That accordingly he came; and that he who appeared in that body which was prepared for him, full of grace and truth, and received the Spirit, not by measure, appeared by a measure of his grace and spirit in his apostles and disciples, and doth since in all his faithful followers. That he is their King, Prophet, and High Priest, and intercedes and mediates in their behalf, bringing in everlasting righteousness, peace, and assurance for ever into their hearts and consciences. To whom be everlasting honour and dominion. Amen.

Concerning the soul's immortality, and the resurrection.

We believe our souls are immortal, and shall be preserved in their distinct and proper beings, and shall have spiritual, glorious bodies, such as shall be proper for them, as it shall please God to give them in the resurrection, that we may be capable of our particular rewards, and different degrees of glory after this life in the world to come.

GRIFFITH OWEN,
JOHN WILSFORD,
GEORGE MARIS,
JOHN ADAMS,
NICHOLAS WALLN,
and 34 others."

At Philadelphia Monthly Meeting held about

the close of the Sixth month, 1694, Griffith Owen informed his friends of a prospect, which had attended his mind, of a temporary sojourn in England, and of some religious service whilst there. He left it with his friends, and they having unity therewith, he made preparations for his journey, and Thomas Janney having been liberated to perform a religious visit in England, they went together. Griffith says, "About the latter end of the Third month, (1695,) in the unity of the brethren in Pennsylvania, we took our leave of them, and went to Maryland, to take our passage for England. I may safely say, the presence of God went along with us, and preserved us, through exercises and some perils we met with. We came safely to London, where we visited our friends and brethren."

After travelling for some months, they addressed a letter to Friends of Philadelphia Quarterly Meeting, which was read to the "satisfaction" of that meeting, First mo. 2d, 1696. They soon, after writing this epistle, parted company. Thomas Janney's health failed, and he at different times was obliged to lay by to rest and recruit. About the beginning of the Eleventh month, they were preparing to leave England, and Samuel Waldenfield and John Field addressed an epistle to Philadelphia Quarterly Meeting, to send by them. It bore date, Tenth mo. 31, 1696, and informs the meeting they embrace the opportunity of writing to them "by our dear and well beloved friends, Thomas Janney and Griffith Owen, whose labours of love in the gospel of Christ we truly esteem. We have unity with them, and were glad of their kind visit. Our prayers unto God are, that they and you with all who are made partakers of life in Christ Jesus, and of the comfortable fellowship of the gospel of peace, may be preserved in the love and obedience unto the Truth to the end. It is in the Truth that our peace and acceptance with God is known, and our unity and fellowship with God and one another, is felt and increased. In this, although many members, we are one body. Although at a great distance outwardly, we are near and dear unto the Lord and one another, knowing and witnessing to our comfort that we are the Lord's heritage, and people, and that our righteousness is of him. No weapon formed against us, shall prosper, and every tongue that rises in judgment against us, the Lord will confound. This is our joy and comfort, in the midst of our many exercises, and in the time when many pens and tongues are employed against us."

Thomas Janney's health continuing to decline, he never left England, dying in the Twelfth mo. Griffith appears to have returned to Philadelphia, in the following Third month.

Diligently labouring to fill up his religious, his social, and professional duties, Griffith Owen was for some years much about home. In the Sixth month, 1698, William Ellis, then from England on a religious visit, writes that he was about leaving Philadelphia to attend a country Quarterly Meeting, adding, "And hope to return and stay some time with Griffith Owen, and take something to help my body." Griffith had prepared a memorial concerning his friend and late travelling companion, Thomas Janney, which was read and approved in the Meeting of ministering Friends, held at Burlington, in the Seventh month.

Early in the year 1699, William Ellis being about leaving America, Griffith Owen addressed him this brief epistle.

"Philadelphia, 3d of Second mo., 1699.

My dear Friend,—I cannot forget thee, nor thy service or labour of love amongst us, the remembrance of which draws my sincere love as a stream unto thee, which I believe distance of place or length of time cannot wear out nor stop. Mayst thou feel my brotherly love to thee beyond what my pen can express. I earnestly desire the Lord to accompany thee with his power and presence in all thy undertakings, and to make thee more and more instrumental in his hands. Dear Friend, remember us and the little flock in this wilderness, when thou art far from us, in thy nearest approaches to the Lord; and I desire thee to mind my love to all friends in England.

I remain thy friend and brother,

GRIFFITH OWEN."

Towards the close of the Third month, that year, Griffith Owen attended the Yearly Meeting for the Western Shore of Maryland. The meeting commenced on the 27th of the month, and it was in the language of one of the members of it, "A very glorious Yearly Meeting; the Lord's heavenly power was over all, and Friends were greatly comforted and strengthened." When the Yearly Meeting was over, Griffith with Aaron Atkinson, and Thomas Story with his companion, went over the Chesapeake Bay to the house of W. Sharp, near which, on the 4th of the Fourth mo., they held "a large and good meeting." A few days after this meeting, Griffith returned to the city.

At the request of the General Meeting of Ministers, he drew up this year an account of such of the "Separates" as had gone "to the Priests." He also prepared an epistle to Friends of the Second-day Morning Meeting, which was read in the Meeting of Ministers, and being approved by them, it was adopted, and he was directed to forward it to London. This year was one of great mortality in Philadelphia, a highly malignant fever prevailing during the Seventh and Eighth months, which cut off a great number of people, among whom were a number of valuable Friends. Griffith Owen appears to have been actively engaged in ministering to the sick and suffering in the city, in the Seventh month; but, on the 30th, he left it to attend the General Yearly Meeting for Maryland. He returned from this service before the end of the Eighth month, and found the health of the city improved. On the 1st of the Tenth month, he was at Chester to receive William Penn, and toward the close of the month at a "small but comfortable" meeting at Haverford.

Friends of Philadelphia felt a concern for the prosperity of Truth everywhere, and manifested it in labours of love by them. At the Quarterly Meeting held there, Tenth mo. 5th, 1698, Griffith Owen was appointed to draw up an epistle "to encourage Friends living near Elizabethtown, to be faithful to the truth," and at the following Monthly Meeting, he was desired with others to prepare an epistle to Jamaica Friends, for a similar purpose. Jamaica Friends were under suffering at this time, and those near Elizabethtown needed sympathy and counsel.

In the year 1700, we have little account of his religious labours further than the many appointments in his Monthly, Quarterly, and Yearly Meetings. Early in 1701, he spread before his friends a concern he had felt to visit the meetings of Friends in New England, in company with John Salkeld. With the unity of his Monthly Meeting and the Meeting of Ministers, he proceeded on this journey, which occupied him about three months. He was at his own Yearly Meeting in the Seventh month, where an exercise arose in relation to members coming from England extravagantly dressed. Of this concern the epistle to London informed Friends there, and Griffith was one appointed to prepare it. During the rest of this year, we find frequent traces of his religious labours. Soon after Yearly Meeting, we find him with his warm friend, John Salkeld, attending a "large, quiet, and orderly" meeting at Darby. On the 19th of the Eighth month, he was at a good meeting at Merion, and we find him twice at the meeting held in Germantown before the close of the year. On the 30th of the First month, 1702, he attended a meeting at Frankford. Going into the house, he found none there, but soon after his friend, Nicholas Wallin, came with his family. Griffith says, that sitting there he "felt great tenderness and comfort, but as the meeting gathered, a dark, drowsy spirit came over it, under which he and Nicholas laboured a considerable time in secret." In the distress this spirit occasioned "he was ready to wish himself at some other meeting. But at length the Lord's power sprung up, and they then had power to relieve themselves, and came away easy."

For "The Friend."

Loving and Forgiving.

"Oh, loving and forgiving—
Ye angel words of earth,
Years were not worth the living,
If ye two had not birth.

"Let *him*, who has never in his life done wrong, be allowed the privilege of remaining inexorable. But let such as are conscious of frailties and crimes, consider forgiveness as a debt which they owe to others. Common failings are the strongest lessons of mutual forbearance. Were this virtue unknown among men, order and comfort, peace and repose would be strangers to human life.

"Oh, loving and forbearing—
How sweet your mission here,
The grief that ye are sharing,
Hath blessings in its tear.

"Of all the passions which invade the human breast, *revenge* is the most direful. When allowed to reign with full dominion, it is more than sufficient to poison the few pleasures which remain to man, in his present state. How much soever a person may suffer from injustice, he is always in hazard of suffering *more* from the prosecution of revenge. The violence of an enemy cannot inflict what is equal to the torment he creates to himself, by means of the fierce and desperate passions, which he allows to rage in his soul.

"Oh, stern and unforgiving—
Ye *evil* words of life,
That mock the means of living
With never ending strife.

"All that is great and good in the universe, is on the side of clemency and mercy. The Almighty Ruler of the world, though for ages offended by the unrighteousness, and insulted by the impiety of man, is "*long-suffering and slow to anger.*" His Son, when he appeared in our nature, exhibited both in his life, and his death, the most illustrious example of *forgiveness*, which the world ever beheld. If we look into the history of mankind, we shall find that, in every age, they who have been respected as worthy, or admired as great, have been distinguished for *this* virtue. Revenge dwells in little minds. A noble and magnanimous spirit is always superior to it.

"Oh, harsh and unrepenting—
How would ye meet the grave,
If heaven, *as* unrelenting,
Forbore not, nor forgave!

"To promote the virtue of *gentleness*, we ought to review *our* character with an impartial eye; and to learn from *our own* failings, to give that indulgence which in our turn we claim. It is *pride* which fills the world with so much harshness and severity. In the fulness of self-estimation, we forget what we are. We claim attentions to which

e are not entitled. We are rigorous to offences, s if we had never offended; unfeeling to distress, s if we knew not what it was to suffer. Have we lone of that forbearance which we all so earnestly ntreat from heaven? Can we look for clemency om our Judge, when we are so backward to show to our brethren?

For "The Friend."

send for insertion in the Friend some remarks taken from the Diary of Alexander Jaffray, who died in Scotland, in the year 1673.

It was said of him by the Monthly Meeting of riends at Aberdeen, that he was a sincere, upght-hearted man all his time, and one that had een a seeker of the Lord from his youth up, and ad much of the life of Jesus and spirit of holiess attending his heart all along, as his conversaon witnessed; and died with blessed and living stimonies to the honour of Truth, before many rofessors and profane who came to see him.

During his last illness, which lasted twelve ays, he gave forth, in the presence of many riends and others, very substantial attestations that most excellent dispensation of gospel light nd truth, unto which he had of late years been lore perfectly and fully brought; in which also had given up, with all readiness of mind, to alk, and in defence of which, resignedly to suffer. mong other expressions, these following abunantly prove the blessed condition of his spirit, o the awful change.

He remarked, "it was his great joy and comfort, that trying hour, that ever he had been counted orthy to bear a testimony to, and suffer for that valuable principle of *Christ's inward appearance in the hearts of the children of men, visiting d by his light, grace, and good spirit, which conceth of sin. And, further, that the great judgent and condemnation of many in the nation, pecially the religious professors, was and would , their having so slighted and despised, yea, hated is Divine Light and the witness of it.*"—Third onth, 1855.

How needful is it for young men to look back on their young and tender years, how these ere spent in vanity, and many times in much bseness. How few are there that rightly conler how they are kept underlings in grace all eir days, and temptations many times *for this y cause*, are let loose upon them; that they ve not considered, nor rightly been humbled for e sins of their youth. It is said of the wicked ob xx. 11), "Their bones are full of the sins of eir youth." So may it be many times, even th the dear children of God, if they do not adrt to and consider what they were in that time their youth. David, in Psalm xxv. 7, prays vently for pardon of these sins. And how few there that consider that the very *remembering* the sins then committed, without humiliation them, and loathing of them, is, in the sight of d, a multiplying of the same sin upon them. e this clearly from Ezekiel, xxiii. 19, 21.

How far are right thoughts of this matter from e consideration of many young fools, who excuse emselves from these things, as being but the cks of their youth! and thus notably play the l, not considering, as the wise man says, (Eccl. 9), that for these things God will bring them judgment. Happy is the young man that beis early to seek after God, while his mother is teacher (Prov. xxxi. 1); that timely inquires th the prophet (Ps. cxix. 9) wherewithal he y cleanse his way. And, for this purpose, he ould not faint nor be weary, nor mistake God's dings, if he be accustoming him to bear the ke in his youth. 'It is good,' says Jeremiah in Lamentations, iii. 27, 'for a man to bear the yoke in his youth,' when, like a bullock, he is unaccustomed to it. Jer. xxxi. 18. I may, if I mistake not my case, speak something of this from my experience, and exhort my dear children to walk more warily and circumspectly in their youth than I have done. It is not enough to be of a mild and douce nature, and blameless as to public ways before men. I thought in some measure I could say it had been so with me; that for many years together, I had lived in a blameless way before men, and had never thought all this while of the sins of my youth; or if there was, it was but a very overly word of confession, until I was near forty years old; and then, and ever since, how have the sins of my youth been presented to me! How many times have I been laid in the dust, upon the consideration of them! Yet—to the eternal praise of the free grace of my God, I desire to speak it—his goodness was such to me, pitying my poor and weak condition, that I was not much troubled with thoughts of desperation; which might justly have been my case, considering how vile and loathsome a wretched creature I have been. But all this while, for some years together, there was left for me good and solid grounds to have hope in his mercy; only some vile and violent temptations, as messengers of Satan, were let loose to buffet me. And among other ends, which I consider the Lord pointed out by these unto me, was the bringing me more solidly to remember and be humbled for the sins of my youth, than ever formerly I had been; and to make me in his strength seek and resolve more closely to walk with him, and to make use of that Scripture (1 Thess. v. 22), 'Abstain from all appearance of evil.' O! what a mercy is it, when the creature is helped rightly and timely to consider the great advantage it will be to him, when the case seems doubtful, to incline to the safest hand of abstaining; and not only then, but to abridge himself in the extent of his liberty, not coming near to the out-most bounds of what is lawful. For, if he make use of taking liberty to come this length, he cannot long escape falling into the ditch; and how deeply he may be plunged ere he recover again, the Lord knows.

Thrice happy is he that is helped of the Lord timely and seriously to think of this, and to make conscience of such abstinence and abridging, &c.

Educational Statistics.—In the United States there is one child attending school to every five persons. In Denmark there is one to every four. In Sweden one to five. In Prussia one to six. In Norway one to seven. In Belgium and Great Britain one to eight. In France one to ten. In Austria one to thirteen. In Holland and Ireland one to fourteen. In Greece one to eighteen. In Russia one to fifty. In Portugal one to eighty.

THE FRIEND.

THIRD MONTH 31, 1855.

To the few hints offered in the last number, on the effect of long continued study on the brain of a child, we will add some remarks relative to the effect of continued confinement in School on the muscular system, and the general health.

Boys are generally much less exposed to the ill consequences of deficient exercise in the open air, than girls; and girls attending day-schools, less than those placed at boarding-schools.

The muscular fibre in children is comparatively lax and deficient in firmness, and consequently lacks strength and endurance. Being freely supplied with nervous stimulation the muscles act with great celerity, but quickly tire. It is a well established law that every contraction of muscular fibre, which gives rise to action, depends on some unknown influence, transmitted through the nerves, from some part of the cerebro-spinal system; and that intervals of relaxation are indispensibly requisite, otherwise this influence, whatever it may be, will be exhausted, the muscular fibre become inert, and cease to obey the will, however strongly it may demand exertion. This is what produces the sense of fatigue, and invites to repose, in order to prepare for renewed effort. No set of muscles should then be kept so long in action, as to exhaust the nervous centres from which they derive their stimulus, but care should be taken so to change from one set to another, that each will have their appropriate portion of exercise, so that none will be left unused, and none paralysed by fatigue.

It is a fact which common observation has probably brought home to the experience of most of our readers, that to whatever particular object the energy of the brain or nervous system under control of the will, is kept ordinarly applied, whether it be a mental effort, or the exercise of a certain set of muscles, the extra demand made to carry out that object, will be satisfied at the expense of other parts. Thus, if the mind makes constant use of the brain for the acquisition of knowledge, the muscular system will not be fully developed, or it will want power; the muscles will contract with feebleness; and if the only exercise taken, is walking, the muscles of the lower limbs will be well developed and strong, while those of the chest and arms will be small and weak.

Children kept many hours in school, especially if obliged to sit long at a desk, must necesarily greatly exhaust the nervous energy directed to the muscles employed in holding the body erect; they become weary, and the posture must be changed, or the child suffer. This bears harder on girls than boys, because the former are expected to maintain what is called a good carriage, whilst the latter are not so likely to be reproved, if they lean to one side, or *lounge* on their seats. In schools where no support is allowed to the backs of young girls, and where they are long confined, this often gives rise to serious evils. In their continued effort to comply with the demand for an upright position, they exhaust the supply of nervous energy required for the continued contraction of the muscles of the sides and back; consequently these give out, and refuse to obey the will, and the child is then too often said to have a weak spine. To remedy this supposed defect, it is quite probable, resort will be had to mechanical means, and stays or a laced bodice are called in, to give their support in aid of the enfeebled members.

Nature does nothing in vain. If she finds that we habitually neglect the use of certain parts of the body, she ceases to make provision for their maintainance or repair. Let the stoutest man bandage his arm to his side so that it cannot be used, and in a short time its muscles will shrink and lose their power. Thus it is with the body encased in stays or bodice. At first, the end desired appears to be attained: the child can sit erect for the required length of time, but the primary injury instead of being repaired, is increased, and unless circumstances change so as to free the sufferer from the long continued confinement, and allow her free exercise to reinvigorate the body and call back the healthy power of the exhausted muscles, permanent disease must follow.

These things should teach us that children should not be kept many hours in school, and that both boys and girls should have ample time allowed them for unrestrained indulgence in those innocent sports which bring all the muscless of the body, in turn

into active exercise, in order that their full growth and vigor may be promoted, and general health of body and mind be the result.

It is well known to the members of the medical profession, that not a few of the cases of deficiency in general strength, and disorder of the nervous system among the comparatively young, for which they are called on to prescribe, have had their origin in what are called *the happy days* of childhood when so many of their *sunny hours* were passed within the four walls of a school room.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 10th inst. The Czar's death occurred shortly after noon on the 2d inst., as reported by the last arrival. His disease was atrophy of the lungs, and he suffered only a few days' illness. His last words to the Empress were—"Tell Frederick, King of Prussia, to continue attached to Russia, as he has hitherto been, and not to forget his father's words." It is said that a few days before his death he succeeded in effecting a complete reconciliation between his two eldest sons, Alexander and Constantine, who were at variance. The news of the Emperor's death was received in England with demonstrations of joy. In several theatres the managers came before the curtain, and announced the fact, which was received in most instances with tumultuous cheering. On the reception of the news at Berlin, the Court placed itself in mourning, and orders were issued for the whole Prussian army to wear the symbols of mourning for four weeks. At Vienna the news caused much agitation. The Emperor of Austria directs, "in acknowledgment of the services rendered by Nicholas, the Nicholas regiment of Cuirassiers shall always preserve that name as a souvenir in the Austrian army." At Paris the police arrested several ballad singers for chaunting verses disrespectful to the dead Czar.

On the 2d inst., the Emperor Alexander the Second ascended the throne, having peacefully succeeded his father. He has issued a manifesto stating that he will adhere to the policy of his father Nicholas. The Duke Constantine and the other brothers and officers have taken the oaths of allegiance to the new Emperor. Alexander has confirmed the diplomatic instructions issued by Gortschakoff for the negotiations of the Peace Congress, and the first preliminary conference has been held at Vienna. The Emperor Nicholas, prior to his death, had recalled Menschikoff, and appointed General Gortschakoff chief in command, Osten-Sacken the second, and given to Gen. Luders the command in Bessarabia. The Emperor Alexander has appointed General Rudiger Minister of War.

SEBASTOPOL.—A despatch from Sebastopol, dated March 5th, reached Paris on the 7th, stating that 50,000 Russians were threatening the English forces at Balaklava. General Bosquet was endeavouring to get his crops in the rear of the enemy with the view of cutting them off from reinforcements, and becoming in turn the attacking party. The weather was very variable, but at the latest dates was fine. A convoy of 200 wagons has succeeded in entering Sebastopol. The firing continued on both sides with more or less steadiness. During the night of the 21st ult., the Russians threw up an armed redoubt on the flank of the fortifications of Sebastopol, and on the night of the 24th it was attacked and stormed by the French. The accounts of the event are directly contradictory. A despatch from Menschikoff says that the French were repulsed with a loss of 600 men, while the French accounts claim the victory with 100 of their men killed. The French likewise destroyed some of the Russian works around the Malakoff tower, but had met with great loss.

The town of Broussa has been nearly destroyed by an earthquake. A large number of inhabitants lost their lives. The despatch says, 2000 perished.

LIVERPOOL.—Breadstuffs had declined largely in price, Western flour selling at 34*s.* to 35*s.*, and Baltimore, 35*s.* to 38*s.* Cotton had advanced from ⅛ to ¼*d.*, and consols had risen to 93.

AUSTRALIA, dates to Twelfth mo. 20, speak of serious disturbances at the gold diggings, in consequence of attempts on the part of the government agents to enforce the license regulations. In a conflict between the miners and soldiers, a number of lives were lost on both sides.

UNITED STATES.—The Black Warrior case is said to be in train for amicable settlement, the Spanish authorities admitting that the Cuban Government exceeded its powers. In consequence, Spain is disposed to accord a just indemnity. *The Search for Dr. Kane.*—The Secretary of the Navy has appointed Lieut. Henry J. Hartstene, of the Navy, to command the expedition to the Arctic Seas, in search of Dr. Kane.

California.—A late arrival at N. York, brings $317,800 in gold, and dates to 1st. The money panic had somewhat subsided in San Francisco. Wells, Fargo & Co. had resumed payment, and other houses, it was expected, soon would also. Adams & Co. declared themselves insolvent. Copious rains had fallen. Flour, $14; new butter, 45 cents; hams, 18; lard, 13. The last month's coinage at the mint amounted to $1,250,000.

Virginia.—Terrific Colliery Explosion.—On the 19th, a frightful explosion of inflammable gas occurred in the Mid Lothian Coal Pits, near Chesterfield, Va. Thirty-four persons were instantly killed, and seventeen others so badly burned, that in most cases there was no hope of recovery. The explosion shook the earth for miles around. The greater number of the workmen were providentially out of the pit at the time.

Pennsylvania.—New Banks.—The Legislature has passed a great number of bills chartering new banks, and increasing the capital of others. One of the bills, that for the Pottstown Bank, has been vetoed by Gov. Pollock. The reasons assigned for the veto, will apply to most of the others, and probably induce him to withhold his sanction from them.

The Growing Wheat.—In the western counties, there is said to be an increased breadth of ground covered with wheat this year, and the general appearance of the young crop is highly promising.

Ohio.—The breadth of ground covered with wheat in the principal wheat growing sections, is stated to be from one-third to one-fourth less than an average.

New York.—A new city ordinance provides more effectual means to prevent the sale of intoxicating drinks on the first day of the week. It imposes a fine of $10 for every glass of liquor sold. At a late auction sale of real estate, stores on South, Beaver, Murray, and Carlisle streets, of the average size of 25 by 100 feet, sold at from $25,000 to $35,000 each. The shipments of specie last week, amounted to $775,805, and since the first of the year, to $4,554,835. Mortality last week, 456; one hundred and five deaths were from consumption and inflammation of the lungs.

Philadelphia.—There are now, in this city, 288 public schools in which 876 teachers are employed. The pupils number 52,073. The annual average cost of instruction for each scholar, is $8.79. Mortality last week, 234.

Recruiting for the British Service.—Recruiting stations have been opened in New York, Philadelphia, Baltimore and Boston, for the "foreign legion" of the British army. This impudent attempt to violate the laws of the United States, has, it is said, met with considerable success, especially in New York, from which city a large number of men, principally Germans and Irish, have been forwarded to Halifax, whence they will be sent to the Crimea. The miserable dupes each receive a bounty of thirty dollars, and a promise of eight dollars a month after enlistment.

The Indians.—The Chippewa Indians have recently conveyed to the United States about 12,000,000 acres of land, in addition to the 8,000,000 acres, conveyed in the Ninth month last. The Winnebagoes have also conveyed to the United States about 1,500,000 acres, on the Mississippi and Blue Earth rivers, Minesota.

Miscellaneous.—Consumption of Cotton in 1854.—It seems that a larger consumption of cotton took place in Europe last year, than in any previous year. The delivery to the trade in Great Britain, amounted to 780,000,000 pounds, being an increase of 6 2-5 per cent. since the previous year. In France, Belgium, Holland, Germany, and Russia, the consumption increased between 3 and 4 per cent. In the United States, there was a falling off of 3 per cent.

A Hard Winter.—The Cleveland (Ohio) Leader says: The farmers of Carroll county have lost a very large number of sheep. One man's flock in that county has suffered a diminution of 500 head, and almost every sheep grower has sustained loss. The clip of the wool region of Ohio will be considerably reduced from that of last year.

A Lancaster County Hog.—Jacob Leaman, of Lancaster, Pa., lately killed a hog, a little over three years old, which weighed 861 pounds, when dressed.

Maple Sugar.—The sugar making is now in full activity in Vermont. It is an important branch of business in that State, about 6,000,000 pounds being annually produced.

Niagara Suspension Bridge.—On the 17th inst., a freight train, weighing three hundred tons, and extending from town to town, passed over the suspension bridge, at Niagara Falls, settling it less than three inches. The structure just completed cost about $500,000. The old suspension bridge was used as a platform in building the new one, and has been removed. The are three tracks upon the bridge.

Prohibition.—The New Brunswick House of Assembl has passed a bill prohibiting the sale and importatio of spirituous liquors. It is expected to pass the legi lative Council.

State of the Ohio.—On the 23d inst., there were seve feet of water in the channel at Pittsburg, and nine fe nine inches at Wheeling, and falling at both place Freight was arriving freely from the east.

Scarcity of Provender.—Many cattle have perished Russell county, Va., for want of sustenance. The At ingdon Democrat states that several persons in th county have each lost from 40 to 50 head. Others hav preserved the lives of their stock, by felling certain tree the twigs and branches of which the cattle feed on.

WEST-TOWN BOARDING-SCHOOL.

The winter session of the School will close on Sixth day, the 6th of Fourth month. Those pupils, who re turn to Philadelphia, will take the morning cars at We Chester, and arrive at the depot, about half past nin o'clock.

The summer session of the School will commence o Second-day, the 7th of Fifth month next. The pupil will be conveyed by railroad to West Chester, when conveyances will be in waiting to take them and the baggage to the School, on the arrival of the mornin and afternoon cars, on Second-day, the 7th, and Third day, the 8th of Fifth month. The cars leave the depo south side of Market street, above Eighteenth, (former Schuylkill Fifth street,) at 7½ o'clock, A. M., and o'clock, P. M. The agent of the school will be at th railroad depot on Second and Third-day afternoon and will furnish pupils with tickets, and accompan them to West Chester. Those who go by the *mornin* train will be furnished with tickets by a person in a tendance. To those who procure tickets as directe the fare from Philadelphia to the School, including bag gage, will be one dollar, which will be charged to th scholar at the School. All baggage should be distinctl marked West-town, and with the name of the owne and should be sent directly to the railroad depot. Ap plications for admission must be made to Joseph Snow don, Superintendent at the School, or Joseph Scatte good, Treasurer, No. 84 Arch street, Philadelphia.

The West-town office is at Friends' Bookstore, N 84 Arch street, where all small packages for the pupil left before 12 o'clock on Seventh-days, will be forwarde *All letters* for the pupils and others at the School, shoul be sent by *mail*, directed to *West-town Boarding-Schoo West Chester P. O., Chester Co., Pa.* Postage should t *pre-paid*, and packages should be distinctly marked an put up in a *secure manner*, so that their contents will n be liable to be lost by handling. The stage will leav West Chester during the *summer session*, for the Schoo on Second, Fourth, and Seventh-days, on the arrival o the *afternoon* cars from the city, and from the School t West Chester on the same days, to meet the afternoo cars to Philadelphia. The fare for each passenger t and from West Chester *by the stage*, will be 25 cent When special conveyances at other times are provide at the School, an extra charge will be made.

West-town, Third mo., 1855.

For the accommodation of the Visiting Committee, conveyance will be at West Chester on Second-day, th 2d of next month, on the arrival of the afternoon car which leave the city at 4 o'clock.

DIED, at the residence of his father, near Lloydesvill Belmont co., Ohio, on the 19th of Third month, 185 ROBERT LINDLEY, son of Barak and Lydia R. Michene in the 17th year of his age; a member of Plainfiel Monthly Meeting. During his illness, which continue about nine weeks, he suffered extremely, but bore h suffering with christian patience unto the last. He re marked to his mother, a few days before his close, th he should not get well, and that he was willing to g and to one of his brothers, that he was going to h sweet home. His loss will be keenly felt by his famil and friends, but they mourn not without hope, ful believing his spirit has been gathered by Him who ga it, to the fold of rest and peace.

——, at his father's residence in this city, on th 10th inst., after a short illness, PHILIP GARRETT, son William and Elizabeth C. Biddle; aged 15 years and months.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, FOURTH MONTH 7, 1855. NO. 30.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

Sketches from History.

George Fox says, "When the Lord first sent me forth in the year 1643, I was sent as an innocent lamb, and young in years, amongst men in the nature of wolves, dogs, bears, lions and tigers; into the world which the devil had made like a wilderness."

In 1643, G. Fox was but nineteen years of age. The state of England was at that time unsettled and portentous. The aggressions of Charles the First had caused great dissatisfaction among his subjects, giving rise to a party, hostile to the usurpations of that monarch, and with courage and self-reliance sufficient to resist with menacing front the court and its servile supporters. As neither action would recede from the position it assumed, and it was impossible for any government to be executed, while it remained uncertain to which lawful authority belonged, each had determined to submit the issue to the arbitrament of the sword. Civil war was raging throughout the land. Vice and immoralities of various kinds, which had been but feebly restrained under the absolute domination of a national episcopacy, relying more upon the observance of showy but lifeless forms, than on the spiritual energies of the gospel, that evince their divine origin by changing the heart of the believer, when the Archbishop had been obliged to stoop to the block, and the power of the hierarchy was broken, were released from the fear of exposure that had heretofore kept them somewhat in check. Nor had the victories of the Roundheads yet seated them so firmly in power, as to enable them to bring their unsparing zeal and fierce enthusiasm, to bear on the habits and morals of the masses.

No wonder, then, that the stripling who, at eleven years of age, "knew pureness and righteousness," when sent forth to preach the gospel in its purity, its simplicity, and its spirituality, should have felt as a lamb among wild beasts; nor is it to be marvelled at, that at a time when the bonds of society were broken, and iniquity stalked over the land unrebuked, he and his fellow believers and labourers should have met with little but contumely and persecution wherever they went. They not only strove to bring the people home to Christ within the hope of glory, but in their efforts to turn them from darkness to light, they bore an open testimony against sin in all its manifestations. They exhorted the judges upon the bench to do justice, exposing their partiality and oppression in open court; men everywhere, in their workshops, and in the market-places, were warned against dishonesty, and bid to deal justly and speak the truth: the publican was warned not to allow his customers to drink to excess, while an unyielding testimony was borne against plays, games, and shows; in short, against everything calculated to destroy the fear of God in the heart, and lead into vanity and crime. But their sharpest rebuke and protest went forth against the priests, who were preaching up for sin for term of life, and by their own example showing they had no sincere desire to be freed from it. The testimony of Friends, to a free gospel ministry, struck at the root of these men's power, while the purity of their lives was a sharp rebuke of their hypocrisy and deceit, and as might have been expected from such men at such a time, they used the influence they possessed, to stir up and assist others in stifling the voice of their reprovers, by burying them in dungeons, or banishing them from the land.

During the time of the commonwealth, the persecution of Friends went on with but little intermission, sometimes waning a little in one part of the realm, to break out with more unrelenting severity in another. Cromwell feared to do what he knew to be right, in relation to them, and died with the knowledge, that within the noisome jails of England, which with a word he could have unlocked, were shut up hundreds of innocent, upright men and women, whose only crime was keeping a conscience void of offence towards God, and towards man, and of whom he had himself borne testimony, that they "could not be won either with gifts, honours, offices, or places."

After Charles the Second had ascended the throne, from which his father had been driven by his exasperated subjects, and made to pay the penalty of death for his assumption of unlawful power, he seemed disposed partially to fulfil the promise made by him at Breda, of "liberty of conscience." Richard Hubberthorn, having obtained an interview with him, Charles said to him, "None should molest Friends, so long as they lived peaceably," promising this on the word of a king, and telling him Friends might make use of his promise; and upon the intercession of several Friends, but more especially at the solicitation of Margaret Fell, he set at liberty about seven hundred Friends, who had long been suffering in prison, under various frivolous charges, during the Protectorship of Oliver Cromwell and his son Richard.

The Parliament, freed for a short time in some measure from the malevolent instigations of the clergy, also manifested a disposition to listen to the voice of truth and justice, and admitted some of the despised Quakers to appear in the House of Lords, and set forth the reasons why they could not frequent the places of the national worship, pay tythes to the priests, nor take an oath. They were heard with attention and moderation, and the work of securing their rights advanced so far, that an order was drawn up for permitting the society the free exercise of their worship, and only wanted the royal signature to make it a law. This was in the year 1660, seventeen years after G. Fox had been first sent forth, and there was a reasonable groune to believe, that the cruel sufferings, to which Friends had been subjected since he first began to promulgate their faith, would be materially mitigated, if not altogether stopped.

King Charles, though a dissolute, was a kind-hearted man, and some of the royalists, knowing that several of the predictions of the Quakers concerning the downfall of the commonwealth, and the miserable end of their persecutors under it, had been strikingly fulfilled, entertained so strong a feeling of respect for their religious character, as to have addressed to them several queries, as to the king's right to the crown, and their sense as to his reign and government being blessed, and established. These queries had been answered by Edward Burroughs, who, among other things, sought to impress the court and men in power with a conviction, that the reign and government would be blessed or not, according as it avoided the evil courses that had brought the reign of Charles' father to a bloody end, and destroyed the commonwealth, especially persecuting for conscience' sake. This, with the unexceptionable lives and patient endurance of Friends, had undoubtedly made not a little impression, and all dissenters waited in expectation of an act securing liberty of conscience.

During this interval of repose, the meetings of Friends increased greatly, many resorting to them in search of the truth, and some out of curiosity, and great convincements took place, so that the number of members was largely increased. George Fox says, "The everlasting power of the Lord was over all, and his blessed truth, life, and light shined over the nation, and great and glorious meetings we had and very quiet; and many flocked unto the truth."

But the time for a permanent release from persecution had not yet arrived, and a pretext was soon found for commencing it with increased rigor and cruelty. Among the many restless and dissatisfied people, who were then living in Great Britain, were a few zealots, who professed to believe that the time had come to establish the reign of Jesus on the earth, and who were, therefore, opposed to the settlement of Charles on the throne of his ancestors. The millennial kingdom they proposed to set up, was styled by them a fifth monarchy, which was to be under the absolute control of the Prince of Peace, but which, absurdly enough, they declared themselves authorized to inaugurate by force of arms. Accordingly, having made preparation for an insurrection in London, about sixty of them, completely armed, and headed by a man, of the name of Venner, a wine cooper, sallied forth into the streets, in the night of a First-day, and proclaiming King Jesus, strove to incite the people to rebellion, and to drive out the king and his officers. The whole city was quickly in an uproar. The drums were beaten, and the cry, "arm, arm," resounded in every quarter. Being attacked by the trained bands, the deluded insurgents took possession of an house, and defended themselves in it, until the greater part of them were killed. The few survivors being seized, were tried, condemned, and executed. Sewell, in his short allusion to the insurrection, says, "The trained bands appeared in arms, and all was in an uproar, and both the mob and soldiers committed great insolencies for several days,

so that the Quakers, though altogether innocent, became the object of the fury of their enemies, and many were haled to prison, out of their peaceable meetings."

George Fox was at the time in London, and being lodged in Pall-Mall, at night a company of troopers came and knocked at the door of the house where he was, which being opened, they rushed in and laid hold of him. One of them clapped his hand on George's pocket, and asked him whether he had any pistol? George told him he knew he did not use to carry pistols; and asked him why he put such a question to him who he knew to be a peaceable man? Leaving him, they proceeded to search the house, and in one of the chambers, they found Esquire Marsh, one of the king's bed chamber, who, having become acquainted with G. Fox, and formed a strong attachment to him, had, out of affection, come to lodge where he was. On their coming down stairs, a dispute arose among them, whether they should take George a prisoner, or leave him where they found him, one of them asserting that he was one of the ring-leaders. Through the intercession of Marsh with the commander of the party, and his pledge that George should be forthcoming in the morning, the troop went off without him.

G. Fox says, "In the morning before they could fetch me, and before the meeting was gathered, there came a company of foot to the house, and one of them, drawing his sword, held it over my head. I asked him, why he drew his sword at a naked man? At which his fellows being ashamed, bid him put up his sword. These soldiers took me away to Whitehall, before the troopers came for me. As I was going out, several Friends were coming in to the meeting, [held in Pall-Mall,] whose boldness and cheerfulness I commended, and encouraged them to persevere therein. When I was brought to Whitehall, the soldiers and people were exceeding rude, yet I declared truth to them; but some great persons coming by, who were very full of envy, 'What! said they, do you let him preach? Put him into such a place, where he may not stir.' So, into that place they put me, and the soldiers watched over me. I told them, though they could confine my body, and shut that up, they could not stop up the word of life. Some thereupon came and asked me, 'What I was.' I told them I was a preacher of righteousness. After I had been kept there two or three hours, Squire Marsh spoke to Lord Gerrard, who came and bid them set me at liberty."

(To be continued.)

Nutrition in various Grains.—Wheat is one of the most important of all crops. The grain contains from fifty to seventy per cent. of starch, from ten to twenty per cent. of gluten, and from 3 to 5 per cent. of fatty matter. The proportion of gluten is said to be the largest in the grain of quite warm countries.

It is a singular fact, in all the seed of wheat and other grains, the principal part of the oil lies near or in the skin, as also does a large portion of the glutten. The bran owes to this much of its nutritive and fattening qualities. Thus, in refining our flour to the utmost extent, we diminish somewhat its value for food. The phosphates of the ash also lie, to a great degree, in the skin. The best fine flour contains about seventy pounds of starch to each hundred. The residue of the hundred pounds consists of ten or twelve pounds of gluten, six to eight pounds of sugar and gum, and ten to fourteen pounds of water and a little oil.

Rye flour more nearly resembles wheaten flour in its composition, than any other; it has, however, more of certain gummy and sugar substances which make it tenacious, and also imparts a sweetish taste.

In baking all grains and roots which have much starch in them, a certain change takes place in chemical composition. By baking, flour becomes nutritious, and more easily digested, because more soluble.

Barley contains rather less starch than wheat, also less sugar and gum. There is little gluten, but a substance somewhat like it containing about the same amount of nitrogen.

Oatmeal is little used as food in this country, but it is equal, if not superior, in its nutritious qualities, to flour from any of the other grains; superior, I have no doubt, to most of the fine wheaten flour of the northern latitudes. It contains from ten to eighteen per cent. of a body having about the same amount of nitrogen or gluten. Besides this, there is a considerable quantity of sugar and gum, and from five to six per cent. of oil or fatty matter, which may be obtained in the form of a clear, fragrant liquid.

Buckwheat is less nutritious than the other grains which we have mentioned. Its flour has from six to ten per cent. of nitrogenous compounds, about fifty per cent. of starch, and from five to eight per cent. of sugar and gum. In speaking of buckwheat or of oats, we of course mean with the husks.

Rice was formerly supposed to contain little nitrogen, but recent examinations have shown that there is a considerable portion, some six or eight per cent. of a substance like gluten. The percentage of fatty matter and of sugar is quite small, but that of starch is much larger than any grain yet mentioned, being between eighty and ninety per cent., usually about eighty-two per cent.

Indian corn is the last of the grains we shall notice. This contains about sixty per cent. of starch, nearly the same as in oats. The proportion of oil and gum is large—about ten per cent.; this explains the fattening properties of Indian meal, so well known to practical men. There is, besides, a good portion of sugar. The nitrogenous substances are also considerable in quantity—some twelve to sixteen per cent.

All these statements are from a prize essay of J. H. Salisbury, published by the New York State Agricultural Society. They show that the result of European chemists have probably been obtained by the examination of varieties inferior to ours; they have not placed Indian corn much above the level of buckwheat or rice, whereas, from the above, it is to be seen that it is "in most respects superior to any other grain."

Sweet corn differs from all other varieties, containing only about eighteen per cent. of starch. Amount of sugar is of course very large; the nitrogenous substances amount to the very large proportion of twenty per cent.: of gum, to thirteen or fourteen, and of oil, to about eleven. This, from the above results is one of the most nourishing crops grown. If it can be made to yield as much per acre, as the hardier crops, it is well worth a trial on a large scale.—*Prof. Newton.*

For "The Friend."

Sympathy with Sufferings.

There appears to be, even in the hearts of the most feeling, a certain inability fully to appreciate the miseries of others, unless we have in degree, felt them ourselves. It is experience in the schools of disease and distress, which most fully unlocks the heart, and gives us availingly to know how humanity *can* feel under the pressure of mental or bodily suffering. But did not daily experience set the matter beyond doubt, it would be no easy task to comprehend how one individual can, in the pride of selfish ignorance, not only make the miseries and misfortunes of a fellow mortal, the subject of unfeeling speculation and of ridicule also, striving to turn the tide of opinion in others into the same channel with his own and sometimes succeeding in turning away from the sick and afflicted, the widow and the fatherless, that help and sympathy which their peculiar situations and trials, may especially call for. Instances of this kind are sometimes seen, but let me record it as a solemn warning, that I have often, in the course of following events observed, that retributive justice seems to have especial relation to those who seem to say by their conduct, "I sit a queen, and am no widow, and shall see no sorrow." These have been *made* to feel. They have been made to fathom those distresses of body or mind which they once treated with so much lightness and inattention, and been stung too, by the harrowing recollection of their behaviour towards others in like circumstances no matter if they may even have supposed with Paul, that they were "doing God service." I have seen, in the midst of religious society, persons suffering from disease, until apparently standing almost on the verge of the grave, continually (and *they* knew not why) passed by and neglected by those whom they had loved as dear brethern and sisters in the Lord's flock; with whom they had often taken sweet counsel, and gone to the house of God in company, and who occupied the foremost ranks in our Israel; and I have believed that had not these poor, stricken ones felt a much more sure attachment to the Great Shepherd of the sheep, than their fellow professors evinced for them, they must, here, have stumbled and fallen. I would say, dear Friends, let us carefully and seriously weigh our conduct in the unerring balance of the sanctuary, and see whether we are, in this, clear of the blood of all men; see if we have never administered occasion of stumbling, although it may have been only to the hinder most of the flock. I once knew one of these reprimanded for habits of association with irreligious people: His reply was, "I was once very sick and in need of sympathy and help; not one of my fellow professors came to see how I fared, yet these people, who are said to have no religion came and did all they could for me." In the course of time this individual threw off all profession of religion, and became emphatically a wordling, and who can say that the stumbling block thus thrown in his way, was not one inducement to do so. True he had long, perhaps *always*, been one of the weaklings of the fold but this was no reason why others should do wrong. Was it the way to win back to the fold a straying brother or sister? or to evince the spirit of true kindness, and that charity which thinketh no evil, without which all other virtues will not avail? I would not accuse any of evil intentions, but my feelings have been pained in viewing our omissions and commissions in regard to these things. True, we may, hereby, gain a little present ease to the flesh, to that part in us which would shrink from beholding, or participating in affliction, but it will bring bitterness in the end.

There are those (let me speak plainly,) who will say of a brother or sister, borne down, perhaps by the most harassing description of illness, compared to which mere bodily pain, is a thing almost to be coveted. "There is not much the matter it is mostly imagination; if they would but summon up a little resolution they would soon be well, and it would be much better to tell them so than to show them any pity or sympathy;" and carrying these remarks into their practice, they will even in this manner speak to the poor, suffer

ng creatures themselves; forgetting that "with that measure ye mete, it shall be measured nto you again." Alas? they feel not the ounds they thus inflict; They do not feel, as he poor invalid does, that it requires all his or er resolution to *bear* their affliction; nay, that nless Divine Goodness should vouchsafe to help hem, they must sink. But the time may come, hen the dealings of these thoughtless ones will e returned upon their own heads; when they ill see too, that they might have escaped much uffering, many stings of conscience, and humiliat- g recollections, by simply minding their own usiness, and that while so doing, they might ave been messengers of sympathy and comfort. would, dear Friends, that we might narrowly arch our own hearts, and according to our easure, strive in the ability given, to imitate our lessed Master, that faultless pattern of humility nd kindness. Surely, the consciousness of having ndeavoured to sooth the affliction, or bind up the roken heart of a wayworn fellow traveller, will ield far more real satisfaction, than can possibly e derived from a contrary course of action.

B. H.

Ohio, Third mo. 19, 1855.

The Great Salt mines in the Mountains of Virinia.—The state of Virginia is moving in the reat work of internal improvement, and is making railroad that will reach the great salt mines of heir mountains, and in a few years that salt will e distributed over the whole of the Eastern States —its superior quality will insure for it a ready sale verywhere, for it is better worth one dollar per ushel for table use than any other salt that ever ame to our market is worth twenty-five cents It s a pure *chloride of sodium*, and will remain as ry as flour in any latitude from the equator to the ole.

This great salt mine is in a trough between two ountains, at an elevation of 1,882 feet above the evel of the sea, and near the waters of the north ork of Holsten river, a tributary of the river Tenessee, and is near the borders of the States of Kenucky, Tennessee and North Carolina, where these order on a southwestern point of the State of Virginia.

The fossil salt lies about 220 feet below the surface of the ground, and is encased in a vast deposit f gypsum.

About 10 years since, two boxes of geological pecimens were sent to me from these mines and rom the surrounding country. In repacking these nto other boxes, some pieces of the fossil were put n a box with specimens of iron ore from the great ron ore beds of Northern New York, and remained in that connection until the present year. On being opened the specimens were all in good order, the salt not having in the least corroded the iron, or produced any rust.

I have no doubt that deposit of salt resulted from volcanic action. New River, the head of one of the tributaries of the Great Kanhawha river, is near this salt mine, and is undoubtedly the source of the saline supplies of the deep wells of Kanhawha, but in its course thither it undergoes a change, and when raised from the deep wells is found to contain bromine in great abundance.

The Kanhawha Salines are among the wonders of the world; the water comes to the surface from a depth of two thousand feet, and is as cold as a northern blast in winter—thus exploding the theory that the heat increases in the earth *everywhere* as progress is made downward.

The gas which issues from these deep wells is in abundance sufficient to illuminate the entire Northern Hemisphere, and rises with a force that is sufficient to throw a cannon ball a considerable distance.

In the excavations made in the neighborhood of the Salt mines of Virginia, the bones of the Behemoth are found of a size indicating an animal as large as the hull of a ship of the line.

I have no doubt the table salt of our market will, in three years, be supplied by the Virginia Salt mines, and even now, our grocers cannot do better than to send to the Salt mines of Virginia for pure table salt for the supply of their customers who want a good article. E. MERIAM.

For "The Friend."

Charity—an Indispensable Virtue.

"Though I speak with the tongues of men and of angels, and have not charity, I am become as sounding brass, or a tinkling cymbal. Charity suffereth long and is kind; charity envieth not; charity vaunteth not itself, *is not puffed up; doth not behave itself unseemly*, seeketh not her own, is *not easily provoked*, thinketh no evil; rejoiceth not in iniquity, but rejoiceth in the truth; beareth all things, believeth all things, hopeth all things, endureth all things. Charity never faileth." "And now abideth faith, hope, charity, these three; but THE GREATEST OF THESE IS CHARITY." This is a christian virtue of essential importance to the true practical believer, let it be spoken of by some as it may.

About two hours before his death, James Naylor said, "There is a spirit which I feel, that delights to do no evil, nor to revenge any wrong, but delights to endure all things, in hope to enjoy its own in the end." "Its crown is *meekness*, its life is *everlasting love* unfeigned, and takes its kingdom *with entreaty*, and *not with contention*, and keeps it *by lowliness of mind*." "It never rejoiceth, but through sufferings, for with the world's joy it is murdered." He found this spirit in the depth of humiliation, from a sight of his own frailty and backsliding. And the early Friends could never have borne the indignities and the cruelties inflicted on them, in the unresisting manner they did, as became the followers of a suffering and victorious Lord, had they not been well acquainted with the spirit of divine charity.

Stephen Crisp gives this excellent counsel to his brethren. "Let the brotherly love that was sown in your hearts, as a precious seed in *your first convincement*, continue and increase daily, that as ye are made partakers of one hope of salvation in Christ Jesus, so ye may continue of one mind and heart, according to the working of his Spirit in you, having a *tender respect one for another*, as children of one father, and as such as feed at one table For Christ *hath ordained* and *doth ordain in all his churches*, that we should love one another, and that we should *shun all occasions of offence and grief*—that we should walk orderly, and as becomes his holy gospel—that we should be an honour thereunto, and a strength and comfort to one another. This is our great ordinance, our new commandment, which was also from the beginning, and will always abide the same through all generations. Therefore, my friends and brethren, let the fruits of sincere and brotherly love abound amongst you, both in word and deed; and *let none be wanting in fulfilling the law of charity*, without which *all profession will be but like sounding brass*, or a tinkling cymbal.

But if this law be kept to, *the life of religion will be felt*, and each one will be thereby taught their duty and charge concerning another, and know how to comfort *in charity*—to admonish *in charity*—to reprove *in charity*—and also to receive all these *in charity*. This will exclude forever all whispering and talebearing, and bring every one to deal plainly and uprightly with every one, not suffering sin to rest upon the soul of thy brother; but to deal with him quickly, plainly and tenderly, even *as thou thyself wouldst be dealt withal*. And however this kind of dealing be taken, thou shalt not miss of thy reward, but thy peace will remain with thee. While Friends' eyes are fixed upon the power of God, as their guide and leader in all these things, and their design is simply God's glory, the clearing their own consciences, and the good of their brother, they will not be discouraged in their undertakings; for they know the power will certainly come over whatsoever opposeth it, and this will keep your minds quiet and free from disturbances, when you see men and things, and parties arise against the power, knowing that the power is an everlasting Rock. As for these things that appear against it, *they are but for a season*, in which season *patience must be exercised*, and the counsel of wisdom stood in, and then you will be kept from staggering, or *from scattering* by all the *fair shows the spirit of opposition can make*.

They that do enjoy the life and substance, and feed daily of the bread that comes down from heaven, have *a quick sense and discerning of things* that are presented to them, and do know them that are of the earth, earthly, by their earthly savour,—from those that are of the heavenly, with their heavenly savour. They know what feeds the head and the wit, and carnal reason, and what will nourish the immortal soul, and so come to be fixed, and are not ready to feed upon unsavory food, nor to be easily tossed, nor to be troubled at evil tidings, nor can they be drawn *after one thing or man* by an affection, nor *set against another man or thing* by a prejudice. The true balance of a sound judgment settled in the divine knowledge, according to the measure that the Father hath bestowed, keeps such steady in their way, both in respect to their own testimony and conversation, and also in respect to their dealing with others. Oh, my dear friends, in such doth the Truth shine, and such are the true followers of Christ, and they are worthy to be followed, because their way is as a shining light, shining on towards the perfect day. And in this sure and steady way, my soul's desire is, you and I may walk, and continue walking, unto the end of our days, in all sobriety, truth, justice, righteousness and charity, as *good examples in our day*, and *comfortable precedents* in our end to them that shall remain, that so we may deliver over all the testimonies of our Lord Jesus unto the succeeding generations, as pure, as certain, and as innocent as we received them in the beginning; and in the end of all our labours, travels, trials and exercises' may lay down our heads in that sabbath of rest that remains always for the Lord's people."

One of the evils, consequent upon an unsettled state of society, is to produce feelings of coldness towards each other, and thus to lay waste the influence of the law of charity. When the cultivation of this virtue has been insisted on, some regard it as an evidence of design to compromise principle, even by those who have never swerved from the faith of their forefathers, but who, in word, and deed, and life, have shown an unflinching adherence to the doctrines held by them. Such errors in judgment not only prove the want of divine love, the charity that thinketh no evil, but also the want of true discernment. Honestly disposed people may make mistakes in substituting creaturely zeal for the dictates of Truth, when they are not restrained by the controlling and regulating power of charity. It is good to mind the doctrine of our Saviour, "He that doeth truth, cometh to the light, that his deeds may be made manifest that they are wrought in God." Fre-

quent self-examination is all-important, and the beam must be taken out every one's eye, before he can see clearly to take the mote from his brother's eye. A clear view of his own state will humble and temper the self-whole man, and prepare him to exercise rightly the gift of charity, by which he may be divested of all ill-will towards his neighbour, and be led to pray for his welfare, as well as his own. As he advances in this path, all high thoughts of his own attainments and purity will be banished, and he will covet humiliation in any degree that his Saviour may dispense, if it will bring him into his image, and acceptance. Then, in the love of the gospel he will be fitted to labour availingly for the restoration of those who have missed their way, according to the apostle's injunction: "Brethren, if a man be overtaken in a fault, ye which are spiritual restore such an one in the spirit of meekness; considering thyself, lest thou also be tempted." When this becomes the condition of the acting members, religious Society will recover its strength and brightness, divine love will fill the heart, and all partition walls which obstruct the flow of true christian fellowship, will be taken down—a highway will be cast up to walk in, and our light will invite others into this communion, which is with the Father, and the Son, and one with another in him.

Ether for Steam Engines.—A Paris paper contains the following, from which it seems probable that ether is about to play an important part in driving steam engines.

Experiments with M. du Trembley's system of employing ether in conjunction with steam on board steam vessels, and thereby obtaining a great increase of motive power at less expense than of steam by the existing system, were made four days ago at Toulon, on board a magnificent vessel called the France, which has been supplied with the necessary engines. The experiments took place in the presence of a special commission consisting of four engineers and two captains of the navy, and Rear Admiral Delassaux, and a number of civil functionaries and naval officers. In ordinary machines, steam, after setting the cylinder in motion, is condensed by means of injection of cold water, and is then discharged with nearly the total loss of its heat; but on M. Du Trembley's system, after moving the cylinder it is put in communication with ether, which absorbs and condenses its heat, and, instead of escaping, sets in motion the piston of a second cylinder, and so greatly increases the power of the engines. At eleven o'clock the experiments commenced, and were continued until two o'clock. All the usual movements of a steam vessel were executed with perfect success, and with much more regularity than is usual with new engines. The average speed obtained was nearly nine knots per hour. The saving of fuel which M. Du Trembley's system causes to be effected, compared with the existing system, is 50 per cent. The France is 74 metres long, 10 metres 85 centimetres wide; she can receive 1,400 tons of merchandise, and 90 passengers; her engines are nominally of 300 horse power, and the diameter of her screw is nearly four metres. She carries 300 tons of coal and 4000 killogrammes of sulphuric ether, and due precautions are taken to prevent any danger from the employment of the latter.

Divine Providence always places the remedy near the evil. There is not any duty, to which Providence has not annexed a blessing; nor any affliction, for which he has not provided a remedy.

For "The Friend."

Loving and Forgiving.

"Oh, loving and forgiving—
Sweet sisters of the soul,
In whose celestial living,
The passions find control!

"In the ruffled and angry hour, we view every appearance through a *false* medium. The most inconsiderable point of *interest* or *honour*, swells into a momentous object, and the slightest attack seems to threaten immediate ruin. But when passion or pride has subsided, we look around in vain for the mighty mischiefs we dreaded. But though the cause of contention has dwindled away, its consequences remain. Let us reflect how little we have any prospect of gaining by *fierce contention;* but how much of the true happiness of life we *are* certain of throwing away. Easily, and from the smallest chink, the *bitter* waters of strife are let forth: but their course cannot be foreseen; and he seldom fails of suffering most from their poisonous effect, who *first* allowed them to flow.

"Religion *should* extinguish strife,
And make a calm of human life;
But friends that chance to differ
On points, which God has left at large,
How freely will they meet and charge!
No combatants are stiffer.

"Where there is Christian friendship, there *will* be mutual affection, *oneness* of interest, and reciprocal acts of kindness. So far as friendship is purely christian, it *must* be permanent. That which *assumes* the name, partakes of so large a portion of earthly alloy, as to expose it to accident and decay; but friendship which *has* religion for its basis, is a perennial spring affected by neither summer's heat nor winter's cold—ever full and ever flowing. Religion constitutes a *new* bond of union, and strengthens the ties of natural affection. Christianity is a system of love. Like its Divine Founder, whenever she prosecutes her journey of mercy, she breathes 'on earth peace, good-will toward men.' And in proportion as we cherish her spirit, and are influenced by her precepts, our conduct will exemplify 'whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report.' All the disciples shared in the affection of our Lord, and he evinced the strength of his love, by *patiently* instructing their ignorance, bearing with their infirmities, and dying for their sins; but he entertained a *special* regard for the apostle John. His was the privilege to lean on the Master's bosom, and to be favoured with the vision of the future conflicts and triumphs of the church. He was 'that disciple whom Jesus loved.' As a man, the Redeemer felt the force of natural affection, founded on a congeniality of disposition; for none of his little family exhibited more of the *meekness* and *gentleness* of Christ, than John.

"How blest the sacred tie that binds,
In union sweet according minds!
How swift the heavenly race they run,
Whose hearts, whose faith, whose hopes are *one.*
For each, the soul of each how dear,
What jealous love, what holy fear!
How doth the generous flame within,
Refine from earth, and cleanse from sin!
Their streaming tears *together* flow,
For human guilt, for human woe;
Their ardent prayers *together* rise,
Like mingling flames in sacrifice.

"O, how sweet is love! how pleasant its nature! It is the sweet, tender, melting nature of God, flowing up through his seed of life, into the creature; and, of all things making the creature most like unto himself, both in nature and operation. It fulfils the law. It fulfils the gospel. It wraps up all in *one*, and brings forth all in the *oneness.* It excludes all evil out of the heart; it perfects all good in the heart. How takingly doth it behave itself, in every condition, upon every occasion, to every person, and about everything. How tenderly, how readily, doth it help and serve the meanest. How *patiently*, how meekly, doth it bear all things either from God or man; how unexpectedly soever they come, or how hard soever they seem! How doth it believe! How doth it hope! How doth it *excuse*, how doth it cover. How *kind* is it even in its interpretations and charges concerning miscarriages! It never *overchargeth*, it never grates upon the spirit of him whom it reprehends. It never hardens, it never provokes; but carrieth a meltingness and power of conviction with it. This is the nature of God. This, in the vessels capacitated to receive and bring it forth in its glory, the power of *enmity* is not able to stand against, but falls before, and is overcome by." And "this is the message ye heard from the beginning, that we should love one another; not as Cain who was of that wicked one, and slew his brother;" but as Christ who gave himself for *us;* the just for the unjust; that he might redeem us from all iniquity, and finally present us faultless before the throne of his Father in heaven. Now the faith which is in Him, works by love to the purifying of the heart, and all our works, without this faith, are dead. In this precious faith, we are led to forgive as we would be forgiven; for, if we forgive not men their trespasses, neither will our heavenly Father forgive us our trespasses. The command and promise of Christ is, "Forgive and ye shall be forgiven. Be ye merciful, as your Father also is merciful. Judge *not*, and ye shall *not* be judged. Condemn *not*, and ye shall *not* be condemned. With the same measure ye mete withal, it shall be measured to you again," whether it be of condemnation or forgiveness, judgment or mercy. This is the doctrine of Christ, and will be our experience, therefore let us look well to our doings, before the unalterable sentence may be pronounced, "Let him that is unjust, be unjust still, and him that is righteous, be righteous still."

The Whole Business of Life.—The amiable and gifted Jane Taylor, the last time she took up her pen (it was on the day preceding her death) wrote as follows:—"Oh, my dear friends, if you knew what thoughts I have now, you would see as I do, that the whole business of life is preparation for death."

How much time is spent in preparing to live! How little in preparing to die!

One who had lived more than fifty years said, as the hand of death was upon him, "I have all my days been getting ready to live, and now I must die!"

Would men but spend as much time in preparing to die, as they spend preparing to live, the physical agonies of death would not so frequently be heightened by the agonies of despair.

"The whole business of life is to prepare for death." Thousands of death-beds—death-beds of rejoicing, and death-beds of despair—have borne witness to this truth. The reader will bear witness to it—perhaps at an early day.

In view of this truth, this very day should be spent in preparing to die. Our chief attention should this day be given to those things which shall prepare us for the closing day of life. In the same manner should all our coming days be spent.

Such a course would not render life a dreary

aste. Far from it. That man best enjoys life
ho is best prepared to leave it.
It is a mournful thought that, in all probability,
me reader of these lines will meet death without
eing prepared for its dread realities.

Selected.

THE WINTER ROSE.

he soft blossoms of summer are fair to the eye,
here brightly the clear silver Medway glides by;
nd rich are the colours which autumn adorn—
s gold chequer'd leaves, and its billows of corn.

ut dearer to me is the pale, lonely rose,
hose blossoms in winter's dark season unclose;
hich smiles in the region of winter's stern blast,
nd smooths the rough present by signs of the past.

nd thus when around us affliction's dark power,
clipses the sunshine of life's glowing hour;
hile drooping, deserted, in sorrow we bend,
h, sweet is the presence of one faithful friend.

he crowds whom we smiled with when gladness was
ours,
re summer's bright blossoms, and autumn's gay
stores;
ut the friend on whose breast we in sorrow repose,
hat friend is the winter's lone, beautiful rose.

For "The Friend."

BIOGRAPHICAL SKETCHES,

f Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 230.)

GRIFFITH OWEN.

In the Quarterly Meeting held in Philadelphia, n First month, 1702, Griffith Owen, Thomas Story, Nicholas Walln, William Southeby, John Kinsey, and Penticost Teague were "desired to raw up some heads in order to prevent superluous furniture in houses, and superfluous apparel, vith other disorders that may happen within the imits of this meeting." In the Quarterly Meetng in the Fourth month, a committee of six woen Friends were added to them, and in the Seenth month they presented to the meeting the esult of their labours, which was approved, and y minute was directed to be "sent to each Monthly Meeting in this county, it being the sense and arnest desire of this meeting, that Friends may e careful to put in practice the particulars hereof."

The labours of this committee appear to have een adopted by the Yearly Meeting, who issued t, and directed Griffith Owen to sign it on its ehalf. The document recommends and enjoins n Friends not to place their children apprentice o such as are not in religious profession with hem, and enforces the necessity of taking care hat wherever placed "they may have suitable earning and education, according to Truth." After exhorting all who proceed in marriage to do t with the consent and approbation of the Monthly Meeting they belong to, and directing that all who should do differently, should be dealt with, the document treats upon dress, particularly that of women. It recommends that bonnets should not e lined with gaudy materials, and that their dress should not be open on the breast, nor made with needless rolls on the sleeves, according to the fashion of the world.

It also re-issues former advices as to plainness f apparel, and the making, buying, selling, or wearing of gay stuff. Discouraging all superfluity nd excess in building houses, and in furnishing hem, enumerating various kinds, and adding, "and many such like needless things, which the Truth manifesteth to the humble mind which knows the teachings of the Lord, and the leadngs of his blessed Spirit. For these see that God s leading his servants and handmaids out of all the world's vain fashions and customs, both in words and gestures, apparel and furniture."

The document also advises that none trade by sea or land beyond their ability, and that all Friends keep to a word in their dealings, paying their debts in due time, that the Truth may not be reproached. It recommends that those who do not come to meeting, or misbehave or fall asleep therein, be admonished. Mothers, dames, and mistresses are exhorted to bring up their children and servants in the use of the plain language, and in plain attire. After recommending the calling the days and months in the plain way, such as they bore in the beginning, it thus concludes, "For we are come unto him that is the beginning and ending, the first and last, and he is arisen to put an end to all that which hath been set up in the night of apostacy, and is come to bring the church to her ancient innocency and glory."

During the year 1702, Griffith Owen's field of gospel labour was principally in and about Philadelphia. He was frequently, on First-days, at neighbouring country meetings, and his many appointments in religious society, his diligent attention, also, to his civil and professional duties, must have closely filled up his time. This year he was appointed to correct the testimonies, which should be prepared for deceased Friends, and also one of a committee to collect accounts of the dying sayings of ministers or others, which might be thought worthy of preservation. In the First month, 1703, we find him appointed to abridge two narratives, one of Mary Masters, of York, and one of Jane Hodges, of Philadelphia. These accounts were directed to be forwarded to "John Wills, on Northampton river, in West Jersey, to be sent by him to John Tomkins in London." They do not appear ever to have been printed, sharing a similar fate with numerous other accounts of valuable men and women forwarded from this country, of which no copies have been preserved here.

Friends, in Philadelphia, had from time to time been brought into sympathy with, and concern for their fellow members in Carolina and Virginia, on account of the great deficiency apparent amongst them as respected church discipline. In the General Yearly Meeting of Ministers, held First mo. 27th, the subject was opened, and it appearing from the report of some who had recently visited them that they wished for the assistance of Philadelphia Friends in the matter, the following minute was made:

"Friends in Virginia and Carolina, being sensible of their shortness as to the necessary parts of church discipline, and desiring to be helped therein by Friends here, it is agreed that Griffith Owen, Thomas Story, and Samuel Jennings do prepare what they judge needful therein to be presented to the next Yearly Meeting, and if there approved, to be sent to them with an epistle from the same." In the Yearly Meeting of Ministers held in the Seventh month, one or two Friends were added to the committee, which prepared the following epistle, to accompany the hints on discipline:

"Dear Friends,—In a living sense of the life-giving presence and power of the Lord, and of his universal love, shed abroad in our hearts, by the spirit of his Son, our blessed Lord and Saviour Jesus Christ, in this our Yearly Meeting, a general care and concern rests upon us, for the prosperity of the blessed Truth, and the growth of the churches the world over.

In a more especial manner, through the representation of things among you, by divers brethren, who have been lately travelling in those parts, we are stirred up in the same love to communicate unto you divers things we hope worthy of your notice and observation, as well relating to the necessity of good order and discipline in the church in general, as also some short account of some things, practised amongst us. That as we, hereaway, have reaped and still do, the good and wholesome fruits of our Monthly, Quarterly, and Yearly Meetings, both for worship and management of other affairs of the church, so you, also, through the goodness of God and your like diligence in the same things, may reap the same advantages in time to come. Even as the fruit of that blessed Tree, that beareth variety of fruit, and very often.

It is worthy of our remembrance and consideration, that when Israel was first gathered out of the land of Egypt, from under Pharaoh, and his hard and cruel task-masters, and moved forward under the conduct of Moses, their captain, they had no outward law, either moral, ceremonial or judicial, delivered to them. Yet they were the chosen people of God, at that time, as well as afterwards. But when they had passed the Red Sea, and were delivered from Pharaoh and his numerous and mighty host, and had sung praises on the banks of salvation, and were come into the wilderness, from under the laws of the oppressor, and were travelling towards the land, fore-promised unto Abraham and his seed after him, the Great and Mighty Lord of Hosts, the dread of nations, in his infinite wisdom, seeing the necessity of laws, for the government of so mighty a people, communed with his servant Moses, and appointed him as mediator of his laws, ordinances, and statutes for the government of his people Israel under him, in their duty towards God, and one towards another, and for the preservation of their lives, limbs and properties, and for their comfort and good in all things. Which law of ceremonies being ended, and that Great Prophet come of whom Moses and the prophets testified aforehand, to wit, our blessed Lord and Saviour Jesus Christ; he became the Mediator of a better covenant unto so many of Israel as received him in the way of his coming, according to the dispensation that then was, the fruit whereof now also remaineth. From thenceforth he was no more a Jew that was only one outward,—circumcision was that of the heart and spirit,—the law that is light, was written within, by this Great Mediator of the new and living covenant, which abideth with Israel forever. To which law and covenant, we, the Gentiles, also have a right by virtue of the promises of God. This Mediator and Redeemer, having finished the word of his Testament, and become a propitiation for the sins of the whole world, ascended into the heavens where he ever liveth, to make intercession for us before the throne of the Majesty on High. The Lord having written this law of light in our hearts, by the secret finger of his power, hath opened the Divine mystery of it by the operation of his Holy Spirit and grace, given us in his Son Jesus Christ, according to the promise of the Father. By this [law] we have been convinced of the evil of our ways, every sinful thought hath been reproved, and every evil action brought to judgment. [By it] all the empty inventions and false worships, evil ways and customs of men, which they have invented and imposed in the night of apostacy and darkness, have been laid open and discovered to us, that we might avoid them. The Lord of life and glory, the captain of our Redemption, hath led us out of spiritual Egypt, from under the Pharaoh thereof, and from under his task-masters, and all their hard impositions and cruel ways.

Nevertheless, though the Lord hath wrought mightily for our deliverance, and hath revealed his law and covenant of life and light unto us, his people, gathering us from among the nations, as a peculiar people unto himself zealous of good works,

yet there have been divers among us, and still are, that walk not under the law of God, nor will they be subject unto its reproofs in their own hearts, and who, professing the Truth, walk in their own ways. After it had pleased [the Lord] to bring many of our elders and brethren to the knowledge of the Truth, a holy care and great concern fell upon them that all things might be kept in good order amongst them. In the wisdom of God, and by the openings and directions of his Holy Spirit, they saw it meet and necessary to appoint and establish Monthly, Quarterly, and Yearly Meetings, and to settle in the church such order and discipline, as there should be no place left, for the head of the transgressor to hide or cover him. So all such as profess themselves to be friends of God, and of Christ Jesus, and of the blessed Truth, as now revealed, and are not; but would follow their own ways, and bring reproach upon the way of Truth by their disorderly walking, may be brought to reproof and condemnation, and be testified against as such, with whom we can have no communion.

Though these methods, orders, and discipline, in their first motion and progress, have met with great contradiction and opposition in divers parts of the world, (of which you also may possibly have had a share in time past,) from men of perverse minds, enemies to the government of Christ Jesus, and of his Spirit and grace in the heart, who, under pretence of being accountable only to the light of Truth in themselves, have despised discipline, and the order established by it, yet the Lord hath prevailed by his wisdom and power in the hearts of his faithful people, and order and government is fully settled in most of his churches the world over.

Now, dear Friends and Brethren, the Truth speaks the same thing in all nations and countries, and leads into all Truth, in faith, doctrine and order, and though the churches in your parts have been but small till of latter years, and not that occasion, it may seem, for every branch of discipline as in some other parts of the world, in more numerous gatherings, yet being through the mercy of God increasing, as well by the offspring of Friends educated in the way of Truth, as by the daily addition of the called and faithful out of the world, we think it expedient, the love of Truth constraining us, to communicate unto you certain particulars herewith enclosed, relating to discipline practised amongst us, that, if peradventure we may be thereby helpful to you in the Lord, heartily desiring that the God of truth and love may be pleased more and more to inspire you with an holy zeal against every appearance of evil, first in yourselves, and then in others, that so all things may be kept sweet, pure and clean amongst us as a people, worthy of the name of the Lord, and of so many great and abounding blessings, both spiritual and temporal. For all of which, unto Him the God and Father of our Lord and Saviour Jesus Christ, through His Holy Spirit, be all honour, glory and praise [given] now and forever. So, dear Friends, in the love of the blessed Truth we dearly salute you, and therein remain your loving Friends and Brethren."

(To be continued.)

Wonderful Exemption from Accident.—The Plattsburgh (N. Y.) Republican, noticing the statement of Cunard, that his steamers have carried over one hundred thousand passengers without losing a man, says that Captain Anderson, of the steamer United States, on Lake Champlain, has, in the course of twenty-two years' service, carried over half a million of passengers, and lost but one man, and that without any fault of his or his crew. The steam navigation of Lake Champlain has ever been remarkably exempt from accidents, and probably no equal amount of travel in any part of the world has been attended with so little disaster and loss of life as the travel which has passed through that Lake.

For "The Friend."

Patience.

Perhaps there are very few who have not sometimes to deplore a want of more patience, either in their domestic concerns or social intercourse. In consequence of not having the mind sufficiently strengthened by this inestimable virtue, there is great danger of being drawn aside in an unguarded moment, into some improper or untimely expression, which may sadly embitter many subsequent hours, that otherwise might have proved both peaceful and profitable. There is no situation in life, neither is there any period of our existence, when patience is not required.

It is well, however, to remember, that patience is a virtue, and can only exist acceptably in the sight of our Creator, and promote our increase in godliness, when associated with the other virtues. There is a liability of tolerating iniquity in some way or other, unless a daily concern is maintained to live lives of holiness, so that we may always be enabled to see and to feel the exceeding sinfulness of sin; also from repeated appeals to a spurious patience and forbearance, by the transgressors of the law of the Lord, as we yield to them, there is danger of witnessing a decline of true patience, Christian moderation, and real forbearance. In this condition, patience may be said to lose its genuine character, and to degenerate into a confederacy with evil. It may, in the view of some, have the appearance of the intrinsic virtue in numerous instances, but is uncertain, and apt to make undue allowance for the unjust, while at the same time it is prone to change its appearance entirely, in reference to the righteous.

A continual exercise of patience is highly important for each individual: when this is neglected, there is a probability of receding from the purity of Christianity; for giving way little by little, may become so habitual, as entirely to change the character. During seasons of temptation of whatever kind, patience is needful to secure a firm resistance, and to receive strength from above. In times of trial, when our peace consists in taking that course which the Truth requires, though it lead us counter to the popular voice, and alienate from us many of our former associates and friends, how necessary it is patiently to continue in the path of well-doing, remembering this promise to the church of Philadelphia, "Because thou hast kept the word of my patience, I also will keep thee from the hour of temptation, which shall come upon all the world, to try them that dwell upon the earth."

The Water Buffalo.—The water buffalo is an animal much in use at Singapore for draught. It is a dull, heavy looking animal—slow at work, and I think, disgusting in appearance, but remarkable for its sagacity and attachment to its native keepers. It has, however, a particular antipathy to a European, and will immediately detect him in a crowd. Its dislike to, and its courage in attacking the tiger, is well known all over India. Not long ago, as a Malayan boy, who was employed by his parents in herding some water buffaloes, was driving his charge home by the border of the jungle; a tiger made a sudden spring, and seizing the lad by the thigh, was dragging him off, when two old buffaloes, hearing the shriek of distress from the well known voice of their little attendant, turned round and charged with the usual rapidity. The tiger, thus closely pressed, was obliged to drop his prey to defend himself. While one buffalo fought and successfully drove the tiger away, the other kept guard over the wounded boy. Later in the evening, when the anxious father, alarmed, came out with attendants to seek his child, he found that the whole herd, with the exception of the two old buffaloes, had dispersed themselves to feed, but that they were still there—one standing over the bleeding body of their little friend, while the other kept watch on the edge of the jungle for the return of the tiger.

Samuel Fothergill to Hannah Logan.

Neither time nor distance hath effaced thee out of my remembrance and near regard, though perhaps, thou mayest almost have thought so. Thou hast been the frequent companion of my mind, with desires for thy growth and stability in those things which are most excellent; and well assured I am, thy morning light would be beautified with additional degrees of splendour, if no unfaithfulness or want of right care on thy part defeat the sacred design of that merciful one, who is the Lord of perfection, and would have his sons and daughters like himself; according to their age and growth. That his blessed resemblance may be impressed upon thee, is my earnest prayer; and in order thereto, permit me to suggest a few such hints and cautions as may arise in a mind anxious for thy good, and warmed with the best love. Study to be quiet, and mind thine own business, is one useful, necessary direction, to all who would thrive at home. There is an active enemy, who seeks to draw out the mind after other people's business, to the neglect of our own; whereby hurt and loss attend, and the feet of the mind are gadding from house to house, and abide not within our own doors. The domestic affairs of the soul are neglected, the house gets unclean and confused; and when the holy Head of the family and Husband of the soul, comes, he finds things unmeet for his reception, and refuses to take up his residence. Here some bemoan his absence, which is chiefly or wholly owing to their want of care in having all things clean and in order, and being at home to receive him when he comes. It is a common consequence of wandering much from home, to hear many reports, whereby the mind feeds on wind; this is also ruinous and destructive. It was not upon the mountains, or far off, that manna descended for Israel, but even about their tents; and the celestial bread, which hath been the staff of life to the living of all generations, is in our own houses; the vein of fine gold runs in our hearts; there let us dig, and patiently bear the refiner's hand. Blessed is that servant who is found thus abiding and waiting at home when his Master comes, he will accept him, and make him ruler in his stead. Here stands the power and ability of being rightly useful in the cause of truth, whether in the church, or in our own families. In this authority, the tender connexions of nature, improved by grace and confirmed by prudence, become a threefold cord, that cannot easily be broken; and if we instantly see not the desire of our souls, we shall not assume the Divine prerogative in fixing judgment, or decline our patient waiting until our Lord comes, who can do all for us, yea, more abundantly than we dare expect or ask.—*Friends' Library, Vol. IX.*

Warrington, 1758.

Motion of Insect's Wings.—The buzzing and humming noises produced by winged insects are not, as might be supposed, vocal sounds. They result from sonorous undulations imparted to the

n by the flapping of their wings. This may be ıdered evident by observing that the noise al- ys ceases when the insect alights on any object. le sirene has been ingeniously applied for the rpose of ascertaining the rate at which the wings such creatures flap. The instrument being ought into unison with the sound produced by e insect, indicates, as in the case of any other usical sound, the rate of vibration. In this way has been ascertained that the wings of a gnat p at the rate of 15,000 times per second. The ch of the note produced by this insect in the s of flying is, therefore, more than two octaves ove the highest note of a seven-octave pano- te.—*Lardner's Handbook.*

For "The Friend."

The following views relative to our lapsed condi- on as a people, expressed by a worthy minister t long deceased, may be interesting to some of e readers of "The Friend;" as in measure set- g forth the cause and design of the shaking and ting dispensation through which we are now assing. "In the first place, we had become a osperous People—much flattered and caressed— r leaven had become mixed as with the leaven the Pharisees, (Oh how much have I seen of this ixing of substances). I desire to keep personali- es out of view. It is the Truth I am pleading r, and *not* the persons of men.

"It seems to me, that if we do believe the proph- s of the days in which we live, as well as the an- ent prophets, we must believe that this day of fting, and searching, and separation was not only reseen by them, but that it is permitted by Him hose prescience sees the end of all things from e beginning, and has, by his own ways and eans, been calling to his Church, to 'Come out om among them and be separated.' What is it, I ould query, that we are to come out of, as here luded to?

"Have we not been favoured to see, as in the sions of light, that the Blessed Head of the Church eans for us to come out of the forms of godliness hich have *not* the power, and to show forth by eekness and humility the spirituality of the re- gion of Jesus in all its simplicity and purity?

"Now briefly, it seems to me that *here* is the ontest, between that which is very beautiful nd palatable to the creature, and that which has no comeliness that we should desire' it; but is ross-bearing and powerful in its nature, leading hrough the 'straight gate into the narrow way.'

"Pharaoh was a great man, and king of Egypt; et this very man was an instrument in the hand f the great 'I Am,' to chasten the backsliding nd rebellious children of Israel; and their land as smitten with the Lord's wonders, ere they were elivered from Egyptian bondage. And He may ow be making use of the wise men of this world such as may be 'wiser than the Children of ight,') for effecting the very self-same purpose.

"Ah, yes! and how repeatedly was the true hurch reduced to but a mere handful. I know hat in regard to party feeling, much may be said n both sides of the important question which is ow agitating the Society; and a great deal too nuch *is* said. If, therefore, we can only come at he Truth, and keep in the Truth, the Truth will eep us, and we shall be preserved from hurting it n any way."

These views will, I trust, correspond with those f many of the readers of "The Friend," who are ivingly and tenderly concerned for the welfare of Society; that it should be preserved from evil and eproach, by the exclusion of every doctrine or ractice that would tend to lay waste the principles f our profession, through the exaltation of self, which is the enemy of the prosperity and peace of the Church.

Is it not for want of self abasedness that we are brought into the humiliating position of "a house divided against itself?" And how can we expect to prosper while the will and wisdom of man is seeking to usurp the place and authority of the Truth of our profession? While we are departing from the humility and meekness of Christ, how can we expect to be owned by him?

The Truth will never prosper in our hands whilever we are saying within ourselves—in respect to Him upon whom the government of the Church is to rest—"We will not have this man to rule over us;" but we must come down in the spirit of our minds, to a willingness to submit to the turnings and overturnings of His holy hand upon us; to a desire to be led, directed, and governed by Him in all things, respecting our own and the Church's welfare. Then, and not until then, shall we become the people we are professing to be, even the called and chosen of the Lord, for the support of his Truth.

Let us bear in mind the declaration of our blessed Saviour, "Ye are my friends if ye do whatsoever I command you." This is the condition, and the *only* condition upon which we can justly assume the name we bear. If then, our own fleshly wills are in dominion, we have no just title to the name of Friends; but we are rather enemies to the cross of Christ, which brings into subjection every high thought and lofty imagination, and "every high thing that exalteth itself against the knowledge of God, to the obedience of Christ."

Humility and *selfdenial*, are what *are* wanting to bring us into a *oneness* of purpose and feeling; and *out* of party spirit which would rend and divide, and thereby lay waste the precious testimonies we were raised up to bear to the uniting and preserving power of Truth. If we would only seek to come into that teachable and humble state of mind which would bring us to the feet of Jesus, there to be instructed by Him, as to the way in which we should go, all jarring and contention would cease to be known; for we then should know of a truth, that "one is our Master, even Christ, and all we are brethern."

Postage to be Prepaid.—The new Postage law, which went into operation on 1st inst., requires the Prepayment of Postage of *all* letters, or the letters will not be sent.

THE FRIEND.

FOURTH MONTH 7, 1855.

When the authors of the legislation for the repeal of the "Compromise Act," became fully aware of the dissatisfaction and indignation produced by it among the people of the north and west, to screen themselves from the odium likely to attach to them for their conduct, they asserted that slavery could not exist within the territory thrown open to its inroads by their gratuitous efforts, and that the tide of public opinion would be changed, when it was found, as they believed it would be, that the men who emigrated into that wide spread domain, would secure freedom to all, by their own legislative acts; while the principle established would afford the opponents of slavery an opportunity of carrying out their wishes, within territory now considered doomed to receive the "peculiar institution" of the South.

The slaveholders, confident of the result, were well content to allow this fiction to go forth, and allay the fears of whoever might be silly enough to believe it; while they were maturing their plans, to pour within the limits from which they had heretofore been excluded, a horde of unprincipled partizans, who would wrest the power conferred on the territorial legislature, to the establishment of their darling project.

For a time, it was supposed that the emigration from the north and west, would place the balance of power in the hands of men pledged to freedom; and great efforts were made in many places to aid the transportation, and expedite the departure, of those who were willing to encounter the difficulties of a settler's life, in the broad prairies of Kansas or Nebraska.

The recent election in Kansas has proved, that all hope of excluding slavery from its soil is vain. From the accounts received, it appears that the pro-slavery party has triumphed over all the efforts of their opponents, and secured an overwhelming majority, if they have not elected all the members of the legislature. The particulars of the election have not yet reached us, but it is said to have been conducted without much tumult or rioting, which was hardly to have been anticipated, considering the character of many who crossed the line from Missouri. We think there must be some mistake in the accounts received as to the universal success of the slavery party there, as one section of the country is said to be settled almost exclusively by northern men.

To us, there is something peculiarly affecting in this first demonstration of the successful operation of the schemes of the slaveholders, for appropriating to themselves, soil once dedicated to freedom; and we cannot but feel greatly discouraged at the evident progress made by them, in reconciling the public mind to the encroachments of their abominable system. Is there not something more to be done by our religious Society towards spreading and enforcing the testimony of Truth against this complicated evil, which is threatening to overrun the largest and fairest portion of our favoured country, and to overwhelm every principle of justice and equity on which its government is founded?

SUMMARY OF EVENTS.

EUROPE.—News from England to the 17th ult.—*The Peace Congress* had formally met at Vienna on the 15th. There were present one French, two English, two Austrian, and two Turkish representatives. The Russian Plenipotentiary was not present. The telegraphic reports from thence, say that the discussion of the general basis of negotiation terminated satisfactorily. There were rumors current, that Austria and England would be content without the demolition of Sebastopol; but the French Emperor absolutely insists upon that as one condition.

The War.—The accounts from Sebastopol state that the allies had resumed their firing upon the town. The discrepancy between the French and Russian accounts of the storming of the redoubt on the night of Second month 23d, is explained. The French did storm and capture two Russian redoubts; but finding them untenable, on account of the murderous fire from the walled batteries of the Russians, they blew up the redoubts, and retired with the loss of 100 men killed, and 300 wounded. The dead were buried during a truce of one hour.

A despatch from Menschikoff, dated Third mo. 1, says, "During last night we erected a second redoubt, in front of that which is on the side of our fortifications. It was impossible for the enemy to prevent us." The weather was clear and frosty, and the sickness was decreasing. The Russians were fortifying the valley of Inkermann in a formidable manner, and continued to threaten Balaklava. Two more ships had been sunk in the harbour of Sebastopol.

On the 7th, information of the death of the Emperor Nicholas reached Sebastopol. Gen. Osten Sacken now commands at Sebastopol. Menschikoff has departed for Moscow. The Grand Dukes Constantine and Michael were on their way to St. Petersburg, from the Crimea.

GREAT BRITAIN.—The committee of inquiry into the state of the army in the Crimea, had been ten days in session, and was still prosecuting its labours. The

evidence confirms the worst reports as to mismanagement. The ship Great Republic had arrived at London; there was no dock large enough to admit her. The steamer Great Britain sailed from Cork on the 13th, with 1750 men, for the Crimea. Since the death of the Czar, the general aspect of monetary and commercial affairs has undergone a favourable change, and hopes of a cessation of hostilities are more generally entertained. The supply of gold was increasing, and discounts were made by the Bank of England at from 4½ to 4¾ per cent. on first class short bills. *Liverpool Market.*—Cotton was considerably lower; the range of prices was from 5*d.* to 5¾*d.* Breadstuffs had advanced again; the quotations were, Old Western Canal flour, 41*s.* to 42*s.*; Philad. and Baltimore, from 43*s.* to 46*s.* 6*d.* Prices were unsettled. Consols had risen to 93¾.

FRANCE.—The Emperor's visit to the Crimea continues a matter of doubt. Warlike preparations are going on with as much activity as ever. Orders have been given to prepare to transport from Toulon 50,000 men and 8000 horses.

RUSSIA.—The accounts from St. Petersburg say, that Nicholas passed his last hours in the consolations of religion. All except the family having retired, he asked the Empress to repeat the Lord's prayer. At the words "Thy will be done on earth as in heaven," Nicholas responded fervently, "I always, always." He was partially insensible for nearly two hours at noon, and said something about a message to a dear friend, not named, and something of Alexander and the garrison at Sebastopol. In a few minutes afterwards he expired. The Emperor Alexander has issued a manifesto to the army, in which he quotes the last words of the deceased, as an earnest appeal to the patriotism and devotion of the soldiers of Russia.

AUSTRIA.—The Austrian Government has notified France and England, that the mission of the Austrian Archduke, William, to St. Petersburg, is an act of sympathy merely.

PRUSSIA.—Prussia has issued circulars to her diplomatic and consular agents, stating there is reason to believe that the negotiations now in progress, will terminate in the restoration of peace.

SPAIN AND CUBA.—The Spanish Government had received confidential communications from Gen. Concha, that the condition of Cuba inspires him with considerable uneasiness. He recommends that concessions be made to the colony, and that a Cuban deputy be sent to the Spanish Cortes, and begs the Government not to emancipate the slaves, which, he says, would be a fatal mistake, and cause Cuba to seek admission into the United States. If the Cubans be not pacified by concessions, he says that 20,000 troops cannot retain the Island to Spain. On the 8th, the Ministry announced to the Cortes, that tranquility was restored in Cuba, adding, that the government would do its utmost to prevent further difficulty.

AUSTRALIA.—Dates from Melbourne to First mo. 9, report all quiet again there.

NOVA SCOTIA.—The Legislative Council have refused to pass the Prohibitory liquor bill, deferring its consideration until the next session. The Halifax Journal contains the official orders providing rations for five hundred recruits expected from the United States, and it is stated that three thousand in all were expected.

UNITED STATES.—The initial point of the Mexican boundary is fixed on the west bank of the Rio Grande, in north latitude 31 deg. 47 min. This point was settled with entire accord by the American and Mexican Commissioners, and on the 31st of First month, the ceremony of laying the foundation of the monument, which is to mark the point, took place.

California.—The steamship Daniel Webster has arrived at New Orleans, with dates from California to the 9th ult.

The banking excitement at San Francisco had mostly subsided though the suspending banking houses had not resumed, and probably none would resume, except Page, Bacon & Co. Other firms had failed since the last intelligence.

The Supreme Court of California has decided that persons enclosing land in the mining region, cannot hold against miners.

Public Lands.—An immense number of claims have already been presented for land, under the recently enacted bounty laws for military services.

The Wheat Crop.—The Western papers, (Ohio, Indiana, Illinois, Missouri,) all speak of the fair prospect of the wheat crop in those States. In Illinois there are twenty per cent. more acres in wheat, than in any previous year.

Kansas.—The returns of the recent elections are said to have resulted in the complete triumph of the pro-slavery party, by majorities ranging from two hundred to eight hundred. The elections were conducted with tolerable quietness. The Editor of the "Kansas Free State" was ducked in the Kew river by a mob, in consequence of an objectionable speech. There is probably no anti-slavery man elected to the Legislature.

Tennessee.—The Tennessee Penitentiary at Nashville, was destroyed by fire on the 29th ult. The loss is estimated at $100,000. Only one of the prisoners lost his life, and none of them escaped.

Georgia.—A large portion of the town of Sandersville, Geo., was destroyed by fire on the 24th ult. Over forty buildings were consumed, including the Court-house, Post-office, Public Halls, and every store in the town. The total loss is estimated at $120,000.

Cincinnati.—At the municipal election which took place on the 1st inst., a riot occurred in the eleventh ward, owing to its being alleged that persons were prevented voting the American ticket. Much fighting took place, a cannon being fired, and one American was killed, and three Germans said to have been killed also.

The Ohio River.—On the 30th, there was four feet five inches of water in the channel at Pittsburg, and falling.

New Jersey.—The Legislature has chartered a number of banks, some of them have been vetoed by the Governor, and the bills were afterwards passed by a two-thirds vote, making them laws in spite of the veto.

Buffalo, N. Y.—A despatch, dated Fourth mo. 1, says the Lake is covered with ice as far as the eye can reach; it is thought the navigation of the Lakes will not be fully open before the 1st of next month.

New York.—Information has been received from the U. S. Consul at Zurich, Switzerland, that 320 Swiss paupers of the lowest class were about being sent to New York, by way of Havre, and that another cargo would soon follow. The efforts of the present energetic Mayor continue to be vigorously exerted in abating the intemperance, gambling, and shameless vice and immorality, which, for a long time, had attained a fearful ascendency in this populous city. Mortality last week, 493.

Philadelphia.—The cash duties received at the Custom-house in this city, for the first three months of this year, amount to $958,711; for the corresponding period of 1854 the amount was $1,380,724. On the 1st inst., the State law prohibiting the sale of all intoxicating drinks on the first day of the week, went into effect. The Mayor is determined that this salutary law shall be strictly enforced in the city. Mortality last week, 246.

Miscellaneous.—Export of Coal to Canada.—Instead of the new reciprocity treaty bringing in coal to compete with our native coal to an injurious extent, it will enable us to export our anthracite more largely to the Canadas. Even with the duty, the treasury returns show that there was a total export to Canada, in 1854, of 30,276 tons.

The Telegraph in India.—The Magnetic Telegraph between Bombay, Madras and Calcutta, was opened on the 1st of Second month. The whole enterprise embraces a distance of over two thousand miles, and has been completed in a little more than a year. On the completion of the railroad across the desert to Suez, and the telegraph from Alexandria to Trieste, communication from London to Calcutta can be had in two weeks' time.

The Law in Vermont.—John P. Freeman has been tried by the Supreme Court at Woodstock, Vt., on 115 counts for liquor selling, on 76 of which he was found guilty, fined $720 and costs, and sentenced to three months' imprisonment.

On Peach Culture in Ohio.—The Cincinnati Commercial states that an immense number of peach trees are being planted in the region, round about the city. One cultivator had recently brought from the New Jersey nurseries 18,000 peach trees.

More Snow in Illinois.—The Chicago Journal of Third mo. 21, says, "We learn that the trains on the Aurora railroad are again blockaded with snow, the cars that left here on Monday morning, not having reached further than Mandota yesterday at noon, having ploughed their way through *four feet of snow.*

Prohibition.—The Legislature of Wisconsin has passed a new prohibitory law, omitting the features of the former bill objected to by the Governor in his veto message. The vote on the passage of the bill was about a two-thirds vote.

In New Jersey, the bill which passed the House, has been postponed by the Senate until the next session.

Snow at the North and East.—There is an unusual depth of snow, for the season of the year, on the highlands in New Hampshire, between the Connecticut and Merrimac rivers. For some distance on the line of the Northern Railroad, about Franklin, N. H., the snow was recently three feet deep, and in the eastern part of Maine, the snow was as deep at the last accounts, a during any part of the winter.

English Mormons.—It has been computed that upward of thirty thousand persons have already departed from Great Britain, for the Great Salt Lake.

Foreign Enlistment.—The U. S. authorities have determined to prevent further enlistments for the British service, and the recruiting stations in New York and Philadelphia have been broken up.

High Price of Wheat.—Seven thousand bushels o Genessee wheat was lately sold in New York at $2.7 per bushel.

RECEIPTS.

Received from Jas. T. Frame, agt., Io., for Rache James, $2, to 27, vol. 29, for Benj. Elyson, $2, to 29 vol. 29; from Russel Taber, Io., $2, vol. 28.

FRIENDS' HORSES.

The horses of Friends coming to this city to attend Yearly Meeting, or at other times, on the service o Society, who put up within the limits of the Monthly Meeting of Friends of Philadelphia for the Northern District, will be accommodated at the stables of William A. Scheetz, (Montgomery Hotel,) North East corner of Sixth and Willow streets.

Philad., Fourth mo. 3, 1855.

WEST-TOWN BOARDING-SCHOOL.

The summer session of the School will commence on Second-day, the 7th of Fifth month next. The pupils will be conveyed by railroad to West Chester, where conveyances will be in waiting to take them to the School, on the arrival of the morning and afternoon cars, on Second-day, the 7th, and Third-day, the 8th of Fifth month. The children will get their baggage the day after their arrival. The cars leave the depot south side of Market street, above Eighteenth, (formerly Schuylkill Fifth street,) at 7½ o'clock, A. M., and 4 o'clock, P. M. The agent of the school will be at the railroad depot on Second and Third-day afternoons and will furnish pupils with tickets, and accompany them to West Chester. Those who go by the *morning* train will be furnished with tickets by a person in attendance. To those who procure tickets as directed the fare from Philadelphia to the School, including baggage, will be one dollar, which will be charged to the scholar at the School. All baggage should be distinctly marked West-town, and with the name of the owner, and should be sent directly to the railroad depot. Applications for admission must be made to Joseph Snowdon, Superintendent at the School, or Joseph Scattergood, Treasurer, No. 84 Arch street, Philadelphia.

The West-town office is at Friends' Bookstore, No. 84 Arch street, where all small packages for the pupils left before 12 o'clock on Seventh-days, will be forwarded. *All letters* for the pupils and others at the School, should be sent by *mail*, directed to *West-town Boarding-School, West Chester P. O., Chester Co., Pa.* Postage should be *pre-paid*, and packages should be distinctly marked and put up in a *secure manner*, so that their contents will not be liable to be lost by handling. The stage will leave West Chester during the *summer session*, for the School on Second, Fourth, and Seventh-days, on the arrival of the *afternoon* cars from the city, and from the School to West Chester on the same days, to meet the afternoon cars to Philadelphia. The fare for each passenger to and from West Chester *by the stage*, will be 25 cents. When special conveyances at other times are provided at the School, an extra charge will be made.

West-town, Third mo., 1855.

Died, at his residence in this city, on the evening of the 24th ult., Watson Fenks, in the 61st year of his age. Although his health had been impaired for some time, little apprehension of a fatal result was felt till a few weeks before his death. When suddenly prostrated on a bed of sickness, the composed frame of mind in which, without a murmur, he was enabled to await the approach of death, and the entire resignation wrough in him to leave all his strong earthly ties, afford his bereaved family a consoling hope, that he was washed sanctified, and justified in the name of the Lord Jesus and by the Spirit of our God. "Not by works of righteousness which we have done, but according to his mercy he saved us, by the washing of regeneration, and renewing of the Holy Ghost."

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any rt of the United States, for three months, if paid in vance, six and a-half cents.

For "The Friend."

Sketches from History.

(Continued from page 234.)

The wild attempt of the Fifth monarchy-men roduced great disturbance throughout the nation, lording a pretext for the rude and cruel soldiery commit violence on the persons of whoever they ose to assault, so that for some time it was dan rous for any, not connected with the court and party, to go abroad. When the insurrectionists ere about to be executed, they voluntarily cleared riends of any participation in their councils, leav g it as their dying testimony, that they had no co ection with, or knowledge of their plot. Never eless, they fell under great suffering on account of being abused by the soldiers and populace, their uses forced open and ransacked, their meetings oken up, and they dragged out of them, as well out of their houses, and shut up in jails, until veral thousands of them were crowded into ison.

Taking advantage of the alarm and tumult ex ted by the insurrection, those who hated Friends, d those who cherished a desire to retaliate on e Presbyterians and Independents for the vio nce and loss they had formerly suffered at their nds, and who likewise were determined to put wn all dissent from the established church, pro red the issuing of an order in council against e meetings of [those deemed] sectaries, in great mbers, or at unusual times; and subsequently proclamation came forth, "forbidding Anna ptists, Quakers, and Fifth monarchy-men to semble or meet together, under pretence of wor ipping God, except in some parochial church or apel, or in private houses by persons therein habiting." All meetings in any other place, were clared to be unlawful and riotous.

In order to escape the charge of disregarding e promise made by the king when at Breda, by hich he bound himself and his government, that no man should be disquieted, or called in ques on, for differences of opinion in matters of reli on," it was pretended that all non-conformists ere dangerous, from their political opinions; and e laws made in former reigns for the suppres on of Jesuits and of popery, were revived and ade use of to harass and distress them. It was so required that all persons should, at the option any magistrate or judge, be obliged to take the th of allegiance.

From the storm thus raised, most dissenters runk, discontinuing their meetings in most cases, d resorting to various subterfuges to screen the w they held, from the operation of the law.

Friends, however, could make no compromise, nor shrink from the performance of a duty so imperative as they considered the assembling for the purpose of Divine worship to be. They knew themselves to be innocent of any treasonable or sinister designs, and felt that they were called on by the King of kings, to show their allegiance to him, by obeying his law written in the heart, however the commandments of men might stand in opposition to them, or cruel men tax their cunning and malice, to inflict suffering on them therefor. As, therefore, they dared not withdraw from the attendance of their meetings, nor yet take any oath, they thought it right to put forth a declaration against all plots and insurrections, clearing themselves of the charges brought against them, and setting forth the great persecution to which they were subjected, on account of their religion. George Fox and Richard Hubberthorn, having drawn up a document on behalf of their fellow members, and sent it to the press, it was there seized by some in power, who wished to deprive them of all opportunity for vindicating the hated Quakers. They were not, however, to be deterred from their purpose by this arbitrary act, but quickly preparing another copy, they succeeded in getting it printed; and having sent a copy to the king, they speedily had it distributed over the country. It was styled "A declaration from the harmless, innocent people of God called Quakers, against all sedition, plotters and fighters in the world, for removing the ground of jealousy and suspicion from both magistrates and people in the kingdom, concerning wars and fightings."

But this availed little or nothing in staying the rage of their enemies. Besse states, "Few or no counties escaped this general persecution; but in consequences of the proclamation, the Quakers (so called) were everywhere taken up in crowds, violently haled by soldiers or peace officers before the justices, who generally tendered them the oath of allegiance, (which they knew they had a religious scruple against taking,) and, upon their conscientious refusal, committed them to prison by fifty or sixty at a time. In Bristol, near one hundred and ninety were imprisoned. Soldiers kept guard at the several prisons night and day, with orders to admit nobody to them. Their servants were denied access; what they brought was narrowly searched, and themselves rudely treated. In Lancaster were two hundred and seventy prisoners; in Westmoreland, one hundred and sixteen; in West Riding of Yorkshire, the number committed to prison was no less than two hundred and twenty-nine, for refusing to swear; being taken, many of them from their religious meetings, some on the highways, others from their houses and lawful employments, and some out of their beds." "Whence it is apparent that this insurrection was made a handle to effect a pre-concerted design; for their fidelity appears not to have been called in question, but most or all to have been committed for scrupling to take an oath. And their treatment in prison was generally as inhuman as their commitment was unjust." The cause and manner of committing the innocent sufferers, is shown by the following, taken from Besse.

"Dear Friend,—By reason of some rash, unadvised enterprise of the Monarchy-men in London, which we hear of late hath happened, which we are altogether unacquainted with, and clear in our consciences and practices toward God and men, from the least knowledge of, or hand in, yet we are made as equally guilty with transgressors, amongst whom we are numbered and confined in prison, where we patiently wait until the Lord clear our innocency, and plead our cause. We are in number already one hundred and forty, and expect more to be daily added, and the cry of the innocent babes, who are left as it were fatherless, and of the mournful women, that are deprived of the help of their husbands, by such a sudden surprisal, cannot but reach into the most secret corner of the king's palace, and pierce the hardest heart that hath any affection to nature. The Lord plead our cause, and clear our innocency, and reward them according to their works, that have brought this distress upon the nation. I hope the king knows, or will know, that the persecuted people called Quakers, had no hand in the trespass which occasioned such a proclamation, whereby our meetings are all broken up, and in many places both men and women much abused, beaten, blooded, dragged out of their houses, and some out of their beds, and others from their ordinary employments, and haled before magistrates, and so sent to prison, for not going to parish churches, as they are called; and the oath tendered to them, and for refusing to swear, committed; and on this account there are sent to the jail, some days thirty, some more, and some less, and daily we are in expectation to have friends brought so long as there can be one found to go under the denomination of a Quaker, unless there be a stop put to that spirit, that takes this opportunity to strike at every appearance of truth. The very worst of men in the prison, that suffer for felony and murder, rejoicing to see us so persecuted, and supposing themselves in better condition than men of tender consciences; and the rude, wild and ranting people in the country, take occasion to rejoice that they have now the countenance and authority to apprehend, persecute and imprison the Quakers, and some not satisfied that we are confined in prison, for blood is thirsted after, without which some may hardly escape out of this place, except the Lord restrain the wrath of man.——

"Ilchester, the 22d of the
Eleventh month, 1660."

Commitment to jail in those days, was a very different matter from what it is now. It would be difficult to form a correct idea of the condition at that time of the public prisons in Great Britain. Security was the main thing thought of. Filthy, ill-ventilated, unwarmed, the apartments often underground, with little light, a fetid atmosphere, dripping walls, and mud floors, those thrust into them were favoured when they could obtain clean straw to lie on, and were obliged to procure the food necessary to sustain life, as they could. The jailors corresponded with the jails, being in many cases felons, who had served out their time amid the debauched and wicked inmates of these sinks of sin, or who had been pardoned, and inaugurated into authority over their former companions, by some unprincipled magistrate glad to secure a

pitiful bribe. The habitual injustice and cruelty of these petty tyrants, were sharpened by their being left to extort the greater part of their compensation, as best they could, from the poor prisoners subjected to their custody; and in many instances, they scrupled not to resort to means for obtaining money, that hazarded the lives, and not unfrequently inflicted death on their tormented victims.

The following, given by Besse in his collection of sufferings, will afford a faint idea of the cruelty inflicted:

"A copy of a letter from Leicester Jail, dated the 20th of the Twelfth month, 1660.

"Friends,—It lieth upon us to give an account of our sufferings, we being in number twenty-five, which are imprisoned because we cannot swear, we expecting that more will be brought to prison. We be under the oppression of a cruel jailor, who refuseth to let us have necessary provision brought to us, and one who is a friend, which we have employed for that purpose, when she hath made provision ready for us, and brought it to the door, the jailer hath several times turned it back with cruel, threatening words, saying, *He would break her neck if he took her coming in at the door.* And many of us, being very poor men in the outward, scarce able to provide for our families when at liberty, and some of us being fifteen or sixteen miles from our outward beings, and so unable to buy ourselves provisions at the jailer's excessive rates. Some of us have been imprisoned five weeks. One, his wife being near the time of her delivery of a child, his friends desiring but a short time for him to go and speak to his wife, his brother offering to stay in his room the time, was denied. Another was brought to prison from his wife, she being delivered of a child but two days before. And some of our friends, being brought to prison, had their coats taken off their backs by the soldiers, and not restored again. Another friend's wife being very weak, and not likely to continue long, she desiring much to see her husband, who desired, upon security, so much liberty of the jailer to go and see her, but he denied it; it lying much upon the friend to go and see his wife in that condition, he acquainted one of the commissioners with it, who sent his warrant to the jailer to set the friend at liberty, and that should be his discharge; but the jailer kept the warrant, and refused to let him go, except he would pay him a mark fees. We are forced to hire rooms at excessive rates, by reason that we cannot have a free prison to hold us, so as that we might lie down, there being so many debtors and felons in it. Three of the friends imprisoned are Northamptonshire men. One, whose name is William Vincent, who had been imprisoned at Northampton, near fourteen months, it being but two weeks after he was put out, but he was brought to prison here, he being a man in much bodily weakness, with many running sores upon him, and by outward appearance is not likely to continue long; his wife also being in the town, and bringing him some warm food, which she had provided for him, was turned back, and not suffered to bring it to him. Likewise the jailer denies to let him have a candle at his own charge, whereby he might dress his sores, it being a dark place, where he is locked up by daylight; likewise not suffering a few boards, which were their own, to hold the straw up, but did take them from them."

This was signed by twenty-five Friends.

(To be continued.)

He is a true Christian, who, when injured, is more grieved for the sin of the offender, than for the wrong that is done to himself.

The Salt Mines of Cracow.—A correspondent of the Providence *Journal*, who is a surgeon in the Russian service, writes as follows:

In order to visit the salt mines at Wieliczka, we took an extra carriage, and started some six or seven hours in advance of our diligence or post express wagon. On the road from Cracow to Wieliczka, we were constantly meeting wagons loaded with salt, which, for the most part, was in large pieces or cakes, weighing perhaps one hundred pounds each. Most of the team horses were small, miserably poor-looking creatures, and generally blind. For the entire distance from Cracow to Lemberg, the draught horses on the road were of the same sort. The reason why so many of them are blind, I suppose, is that they are worked very young, before in fact they have got their growth, and are actually made blind by the severity of their labour.

Wieliczka itself is not much of a place above ground, a small village merely, but if you take into consideration the immense extent of excavated passages, which are everywhere beneath it, the whole of Wieliczka exteriorly and interiorly, your conception of the place is quite a diffrrent thing. About 3 P. M., we were conducted to the reception room for visitors to the mines, and together with other strangers, making a party in all of six persons, we enveloped ourselves each in a white linen wrapper, as a protection from anything that might soil our clothes. Then, with an official guide, and some half dozen lamp carriers, we began the descent of a winding stair-case, which at the depth of three hundred feet, brought us to a horizontal passage, along which we travelled for a considerable distance, before arriving at the first of a suit or series of rooms, through which the visitors are conducted. It was a chapel forty feet long by about twenty-five to thirty feet, and thirty to forty feet from the ground to the ceiling. Back of the altar was a figure of Christ on the Cross, of the size of life, and in front of the altar-piece were figures in a kneeling position; also, a figure in the niche, on the left side of the chapel, which was intended doubtless for the Virgin Mary. All of these figures, as well as the pillars which seemed to support the ceiling, the altar-piece, and everything about the chapel, are of solid crystal salt, the interior of the chapel being an excavation.

Just before leaving, a brilliant fire-piece was let off, which beautifully illuminated the whole chapel. I do not propose to give you anything like a full description of what occupied us several hours in seeing, so let me at once give you some particulars about these mines, which, apart from the little that I saw, and the still less that I shall write about, will sufficiently invest them with interest. They have been worked for eight hundred years. Their greatest depth is eight hundred feet, and the entire length of the excavated passages, not less than ninety German miles, equal to three hundred and fifteen English miles. This labyrinth extends several miles beyond the external precincts of Wieliczka. At Bochnia, our first post station east of W., and distance from it about twenty miles, there is an entrance. The number of workmen employed is about fifteen hundred, and the working time is eight hours a day, from 6 A. M. to 2 P. M.

After leaving the chapel, we went on some distance, along a passage, and then descended again something like one hundred feet deeper. In one excavated apartment through which we passed, was to be seen a barrel which some illustrious prince filled with salt of his own digging a hundred years ago, on the occasion of a visit to the mines. When speaking of our mining habiliments, I omitted to observe, that in a case which contains the dresses worn by royal personages, who have visited the mines, is the one which was worn by Alexande the First, Emperor of Russia, who made a descen here in 1814. At the bottom of one immense ex cavation, through which we passed, was a lake across which we were rowed in a boat. Whe half way across, two small cannons were fired, pr ducing the most tremendous reverberations; a illuminating torch was at the same time displayed which brilliantly lighted up the vast cavernou space.

Another excavated apartment, particularly wort mentioning, which we visited, was the Grand Dane Saloon, with an immense pendent chandelier in th centre, cut out of the rock salt crystal. Balls hav been given here which have been graced by th presence of royalty.—We were at last conducte where the mining operations were going on, an saw an immense block of salt, which had alread been cut around, payed off the side of the cavern Its weight must have been at least four or five ton Our mode of exit from the mines was not at al fatiguing, though somewhat calculated to distur the equilibrium of weak nerves.—Each person wa placed in a seat of rope-chair, and then all haule up together by horse power. The depth of ou descent had not been more than half way down t the lower excavations but sufficiently far into th bowels of the earth to satisfy my curiosity for th time.

Selected.

Epistle of George Fox.

"To all that profess the truth of God. M desires are, that you walk humbly in it; for whe the Lord first called me forth, he let me see tha young people grew up together in vanity, and th fashions of the world, and old people went down wards into the earth, raking it together; and t both these I was to be a stranger. And now Friends, I do see too many young people that pro fess the truth, grow up into the fashions of the world and too many parents indulge them; and amongs the elder some are declining downwards, and rakin after the earth. Therefore, take heed that yo are not making your graves while you are aliv outwardly, and loading yourselves with thick clay Hab. ii. 6. For, if you have not power over th carthly spirit, and that which leadeth into a vai mind, and the fashions of the world, and into th earth, though you have often had the rain fa upon your fields, you will but bring forth thistles briers, and thorns, which are for the fire. Sue will become brittle, peevish, fretful spirits, tha will not abide the heavenly doctrine, the admoni tions, exhortations and reproofs of the Holy Ghos or heavenly Spirit of God; which would bring yo to be conformable to the death of Christ, and t his image, that ye might have fellowship with hir in his resurrection. Therefore, it is good for a to bow to the name of Jesus, their Saviour, tha all may confess him to the glory of God, the Fa ther. For, I have had a concern upon me in sense of the danger of young people's going int the fashions of the world, and old people going int the earth, and many going into a loose and fals liberty, till at last they go quite into the spirit o the world, as some have done. The house of suc hath been built upon the sand on the sea-shore not upon Christ, the Rock, that are so soon i the world again, under a pretence of liberty c conscience. But it is not a pure conscience, no in the Spirit of God, nor in Christ Jesus; for i the liberty in the Spirit there is the unity, whic Jesus, in whom is the true liberty; and this is no of the world, for he is not of the world. There fore, all are to stand fast in him, as they hav received him; for in him there is peace, who

he Prince of Peace, but in the world there is rouble. For the spirit of the world is a troubleome spirit, but the Spirit of Christ is a peaceable spirit; in which God Almighty preserve all the aithful. Amen. G. F."

Gooses, the 1st of the Second month, 1690.

Immigration for 1854.—There arrived at the ort of New York during the year just closed, 07,639 emigrants, of whom 168,723 were Gerans, and 80,200 Irish. The immigration at the me port last year was 284,945. The following a comparative table of emigration from the year 847 to 1854, inclusive. It will be seen that in 852 and 1853 the German exceeded the Irish, though in the aggregate for the eight years the tter is in the excess. In the year 1854 the erman emigration has been double that of the ish.

Extracted for "The Friend."

"Man is the genuine offspring of revolt,
Stubborn and sturdy . . . . a wild ass's colt."

"We may be convinced by what passes in our inds, if we will but closely and dispassionately xamine our *motives* to action, that mankind, in a ate of nature, *are* universally governed by self-ill. The perversity of the will is, indeed, the rimary cause of defection and degeneracy in all oral agents; it is the strong man armed, that eeps the house; and while he continues to poss it, all our endeavours, even after natural, and uch more after supernatural excellence, are too uch perverted by passion and prejudice, ever to ach the object we aim at; for whatever our *natral* discoveries of religion, and moral truths may , it is the *will* that determines us to action. The *signation* of the will *is*, therefore, the first step *true* devotion.

"When God and man stand opposite in view,
Man's disappointment must of course ensue.
If led from earthly things to things Divine
His creature thwart not his august design,
Then praise is heard, instead of reas'ning pride,
And captious cavil and complaint subside.

"One objection to controversy is, that those ho are most forward to engage in it, discover uch a propensity to usurp the seat of judgment, nd pronounce sentence upon each other's motives nd opinions. The impetuosity and tenaciousness f disputants, seldom originate so much in a love f truth, as a desire of victory; they sometimes vince a rancour and ferocity like that of warriors; he difference is, that the former fight with their ongues, and the other with their swords; and that n these wordy contest more charity is lost than lood

"'Tis hard, indeed, if nothing will defend
Mankind from quarrels, but their fatal end.
Where men of judgment creep, and feel their way,
The positive pronounce without dismay.
Few competitions, but engender spite;
And those the most, where neither has the right.

"Censorious strictures on the foibles and inadvertencies of others, are often an insidious way of the censor's insinuating that he is free from them himself; but a little reflection may convince us, that it is much easier to make pertinent remarks on an impropriety in the conduct of another, than to avoid it in our own. As in passing along, we see each other more plainly than we see ourselves, it is very common for one man to be exposing the faults of another, while his own conduct is quite as much the subject of concern and disapprobation; so true is the saying of Solomon; 'He that is first in his own cause, seemeth just; but his neighbour cometh and searcheth him.' Were we as vigilant against the approaches of evil in *ourselves*, as we usually are against the errors of *others*, there would certainly be much more harmony and peace in the world.

Truth would be more popular with us, if it proposed *only* to correct the faults of others; for we are apt to value ourselves more on exposing the faults of others, than on correcting our own. Self-conceit is mostly blind to the merits of others, as well as to its own defects; and it is probable that in proportion as we are envious and censorious, we are self-conceited; and entertain so exalted an opinion of ourselves, that we cannot bear to think we are exceeded by others.

"Nothing shows our weakness more than to be so sharp-sighted at spying other men's faults, and so purblind about our own. When the actions of a *neighbour* are on the stage, we can have all our wits about us, and are so quick and critical we can split a hair, and find out every failure and infirmity; but are without feeling, or have very little sense of *our own*. Much of this comes from illnature, as well as from an inordinate value of ourselves; for we love rambling better than home, and blaming the unhappy, rather than covering and relieving them. They have a right to censure, that have a heart to help; the rest is cruelty, *not* justice.

"Of all causes which conspire to blind
Man's erring judgment, and misguide the mind,
What the weak head with bias rules,
Is pride, the never-failing vice of fools.
Though various foes against the truth combine,
Pride *above all* opposes her design;
Pride, of a growth superior to the rest,
The *subtlest* serpent, with the loftiest crest,
Swells at the thought, and, kindling into rage,
Would hiss the cherub *mercy* from the stage.

"Whoever comes to the *real* knowledge of Divine Truth, *will* find, that it is one thing to be convinced of it, as the mark of our high calling, and another for the *will* to be brought into subjection to its discoveries and requirings. Some enlightened persons have approached this mark so near in prospect and confession, as to do almost everything, but really embrace it: yet for want of the *full surrender*, which that attainment calls for, the government has still remained on *their own shoulders*, and they have vainly imagined that the choice of the way, and ordering of their steps, were left to *their own* judgment.

"A servant, who endeavours to please his master by acts of his own choice, may be favourably regarded on the score of his sincerity and diligence; but a *truly* devoted servant *waits* for direction, and if he cheerfully perform the service required, finds his reward in his faithfulness. The first thinks too well of his own ability and skill, to wait for orders; the latter is too conscious of his liability to err, to suppose his master would be pleased with his guess-work. If the one apprehends he has succeeded, he naturally places his success to the account of his own merit; or, if he falls short, may find some relief to his uneasiness, by reflecting upon the uprightness of his intention; while the other, who has taken direction, having peace in his obedience, can quietly leave the event to his employer.

"One trait of zeal without knowledge *is*, that those who are actuated by it, are for pressing a conformity to truth upon others, before they have submitted to its mortifying restraints in themselves; thus, acting without its direction, and in the impatience of *their own* spirits, charity *is* deserted."

A Substitute for Turpentine.—M Pelouze, the son of the distinguished chemist of that name, proposes to use an oily fluid consisting of a mixture of carbo-hydrogens, especially of benzoine, &c., as a substitute for oil of turpentine in painting. He obtains this fluid, which boils from 100 to 168° Centigrade, by the distillation of cannel coal, by means of sur-heated steam. This liquid is colourless, very fluid, and completely volatile, leaving no stain upon paper, and is not altered by exposure to the light. It has a penetrating smell, which reminds one of common coal gas; but this entirely disappears when it has evaporated. A number of comparative experiments have been made with the object of comparing it with the oil of turpentine, by a committee of the Societe d'Encouragement of Paris, all of which have resulted in showing that walls, wood-work, &c., painted with the essence of coal dried far more rapidly, and the smell disappeared sooner, than where essence of turpentine was employed. For example, in one case where the coal essence and oil of turpentine were respectively mixed with three times their volume of oil, and employed under exactly similar circumstances, the smell of the essence of coal was completely dissipated at the end of three days, while that part painted with the turpentine mixture had still a strong smell, and was not completely dry. The introduction of such an oil would be of great importance, not only in a commercial point of view, but in a hygienic one also.—*Bulletin de la Societe d'Encouragement.*

For "The Friend."

Tenacity of Life in Sheep.

There have been numerous instances of sheep living a long time without sustenance when buried under the snow. The following is a remarkable case of the kind. According to the Maine Farmer, a sheep belonging to Eli Fisk, of Freedom, in the county of Waldo, Me., was buried in the snow, during a heavy snow storm on the 19th of First month last. The poor animal was not discovered until Second mo. 13th, a period of twenty-five days, when Eli Fisk accidentally found the sufferer by hearing the grating of its teeth. The sheep was standing erect when found, the wool on its back frozen to the snow above, which rendered it impossible to lie down. The snow was drifted so hard, that all the cattle of the farm travelled over the sheep's back for many days without breaking through. When this account was furnished the animal was alive and doing well

Be silent when blamed and reproached unjustly, and under such circumstances that the reproachful and injurious person will be likely, under the influence of his own reflections, to discover his error and wrong speedily. Instead of replying, receive the injurious treatment with humility and calmness; and He in whose name you suffer, will reward you with inward consolation, while he sends the sharp arrow of conviction into the heart of your adversary.

The desire to be thought humble, is a sure evidence of the want of humility.

For "The Friend."

Society of Friends.

Surely it is very desirable that our Society should come forth in newness of life, shake herself from the dust of the earth, and rise above the contaminating spirit of the world; doubling our diligence in holiness to the Lord; trimming our lamps with greater zeal and integrity for the prosperity of Zion, and the enlargement of her borders, that it may be said of us as it was of our worthy ancestors in the Truth, fathers, elders, young men, and children, viz., "the glory of that day, and foundation of the hope that has not made us ashamed since we were a people, we know is that blessed principle of light and life of Christ which we profess, and direct all people to, as the great instrument and agent of man's conversion to God; it was by this we were first touched, and effectually enlightened as to our inward state, which put us upon the consideration of our latter end, causing us to set the Lord before our eyes, and to number our days, that we might apply our hearts to wisdom."

"In that day, we judged not after the sight of the eye, or after the hearing of the ear, but according to the light and sense this blessed principle gave us; we judged and acted in reference to things and persons, ourselves and others, yea, towards God our Maker. For being quickened by it in our inward man, we could easily discern the difference of things, and feel what was right and what was wrong, and what was fit, and was not, both in reference to religion and civil concerns. That being the ground of the fellowship of all Saints, it was in that our fellowship stood. In this we desired to have a sense one of another, acted towards one another and all men in love, faithfulness, and fear.

"In the feeling of the motions of this principle, we drew near to the Lord, and waited to be prepared by it, that we might feel those drawings and movings before we approached the Lord in prayer, or opened our mouths in ministry. And in our beginning and ending with this, stood our comfort, service, and edification. And as we ran faster, or fell short, we made burthens for ourselves to bear; our services finding in ourselves a rebuke instead of an acceptance; and in lieu of "Well done," "Who hath requir d this at your hands?" In that day we were an exercised people; our countenances and deportment declared it.

"Care for others was then much upon us, as well as for ourselves, especially the young convinced. Often had we the burden of the word of the Lord to our neighbours, relations, acquaintances, and sometimes strangers also: we were in travail for one another's preservation; not seeking, but shunning occasions of any coldness or misunderstanding, treating one another as those that believed and felt God present; which kept our conversation innocent, serious and weighty, guarding ourselves against the cares and friendships of the world. We held the Truth in the spirit of it, and not in our own spirits, or after our own will and affection. We were bowed and brought into subjection, insomuch that it was visible to them that knew us, we did not think ourselves at our own disposal, to go where we list, or say or do what we list, or when we list. Our liberty stood in the liberty of the spirit of Truth, and no pleasure, no profit, no fear, no favour, could draw us from this retired, strict, and watchful frame. We were so far from seeking occasions of company, that we avoided them where we could, pursuing our own business with moderation instead of meddling with other people's, unnecessarily.

"Our words were few and savoury, our looks composed and weighty, and our whole deportment very observable. True it is that this retired and strict sort of life from the liberty of the conversation of the world, exposed us to the censures of many, as humorists, conceited, and self righteous persons. But it was our preservation from many snares, to which others were continually exposed by the prevalency of the lust of the eye, the lust of the flesh, and the pride of life, that wanted no occasions or temptations to excite them abroad in the converse of the world. I cannot forget the humility and chaste zeal of that day. How constant at meetings, how retired in them, how firm to Truth's life, as well as Truth's principles, and how entire and united in our communion, as indeed became those that profess one head, even Christ Jesus the Lord! This being the testimony and example George Fox and his cotemporaries were [sent to declare,] and leave amongst us, and we having embraced the same as the merciful visitation of God to us, that word of exhortation at this time is, that we continue to be found in the way of his testimony with all zeal and integrity, and so much the more by how much the day draweth near.

"And as to you, my beloved and much honoured brethren in Christ, that are in the exercise of the ministry; O feel life in the ministry! Let life be your commission, your well spring and treasury in all such occasions; else you well know there can be no begetting to God, since nothing can quicken or make people alive to God but the life of God: and it must be a ministry in and from life that enlivens any people to God. We have seen the fruit of all other ministries by the few that are turned from the evil of their ways. It is not parts or memory, the repetition of former openings in our own will and time, that will do God's work. A dry, doctrinal ministry, however sound in words, can reach but the ear, and is but a dream at the best: there is another soundness that is soundest of all, viz., Christ the power of God. This is the key of David, that opens, and none shuts; and shuts, and none can open; as the oil to the lamp, and the soul to the body, so is that to the best of words. Which made Christ say, "My words they are spirit and they are life;" that is, they are from life, and therefore they make you alive that receive them. If the disciples that had lived with Jesus, were to stay at Jerusalem till they received it, so must we wait to receive before we ministcr, if we will turn people from darkness to light, and from Satan's power to God.

"I fervently bow my knees to the God and Father of our Lord Jesus Christ, that we may always be like minded; that we may ever wait reverently for the coming and opening of the word of life, and attend upon it in our ministry and service, that we may serve God in His spirit. And be it little or be it much, it is well; for much is not too much, and the least is enough, if from the motion of God's spirit; and without it, verily, never so little is too much, because to no profit. For it is the spirit of the Lord immediately, or through the ministry of His servants, that teacheth the people to profit; and to be sure so far as we take Him along with us in our services, so far are we profitable, and no further. For if it be the Lord that must work all things in us, and for ourselves, much more is it the Lord that must work in us for the conversion of others. If, therefore, it was once a cross to us to speak, though the Lord required it at our hands, let it never be so to be silent, when he does not.

"It is one of the most dreadful sayings in the Revelations, "That he that adds to the words of the prophecy of this book, God will add the plagues written in this book." To keep back the counsel of God, is as terrible; for be that takes away from the words of the prophecy of this book, God shall take away his part out of the book of life. And truly it has great caution in it to those that use the name of the Lord, to be well assured the Lord speaks, that they may not be found of the number of those that add to the words of the testimony of the prophecy which the Lord giveth them to bear; nor yet to mince or diminish the same, both being very offensive to God.—*Penn.*

New Jersey, 1855.

For "The Friend."

The following narrative has been sent to us by a Friend in England; it is extracted from a work by C. Lanman.

Hermit Woman of the Alleghanies.

"Delighted, however, and deeply impressed as I have been, by the scenery of this Alpine land, I have been far more interested by an old woman whom I have had the pleasure of seeing. Her name is Elizabeth Golding, or Goldizen, and she resides in a log cabin, entirely alone, directly at the foot of the gorge, which has taken her name. She is of German origin, and represents herself as 112 years of age. She was born, according to her own words, within a two days' ride of Philadelphia, in Pennsylvania, and her father was a soldier in the Revolution, under Washington, and she herself was in the immediate vicinity of the American camp, at the defeat of Gen. Braddock, of which event she habitually recounts a great number of interesting and thrilling incidents, closing each paragraph with the remark, that the battle field was wet, very wet, with blood. She has been husbandless and childless for nearly half a century, and for many years has lived, as now, in the solitude of the mountains, utterly alone. Indeed, everything about the old woman is peculiar and strange. She is small in stature, and her hair (which is white as snow) is very long; when engaged in conversation, her countenance fires up, and she accompanies each sentence with the most animated gestures; her voice, though still strong, is altogether beyond her control, having an unnatural tone; and the wrinkles running entirely over her face and neck, are as deep as we might imagine them to be after having been furrowed by the tears of even one heart for so long a time as a century. She was clothed in the simplest manner, having upon her head a cap made of common brown cotton, a frock of blue homespun cloth, and upon her feet nothing but woollen socks. During the whole time that we were in her cabin, she was smoking some bitter weed in a corn-cob pipe, and though haggard and worn to a marvellous degree, she had a pleasant smile; and when either of her guests happened to utter something that was novel to her ear, she would exclaim, 'Oh, yes, that is wonderful!' Her only means of subsistence for years past, had been obtained by making hickory brooms; but even this business she had been compelled to give up, for she could no longer climb the mountains to obtain the proper material; and though she seemed to be perfectly certain that she would be provided for, she expressed the greatest dread of the county almshouse. We inquired as to her appetite, and she replied, 'Oh, I eat very little; I never eat much, sometimes nothing in a whole day, and never more than once a day, and I am well acquainted with hunger.' And to her sleep we also questioned her, and she said, 'That 's what troubles me most; I cannot sleep now, I am so old; and so I lie on my bed all night, thinking of my great, good, and sweet Father in the heavens.' We asked her how she managed to obtain the necessaries of life, and she said she did not know, only that people who travelled on the road, sometimes stepped in to give

er a little coffee or flour, her main stay being a mall garden of vegetables, the bush fence around hich had been built by her own hands; and this arden was the neatest one that I ever beheld. As o her sight, it was as good as ever, and she was nacquainted with the use of spectacles. We sked her how much money she would want to upport her for a year, and she replied, that ten ollars would take care of her a long time,—more han a year. As a matter of course, my compaions and I made up a little purse for her benefit; nd when we gave it to her, it seemed as if she ould embrace us in spite of us. Indeed, we made er a number of trifling presents, and she expressed her gratitude by weeping, and assuring us hat her 'Father in the heavens' would bless us, nd make us happy wherever we might go. And can assure the reader that the tears shed by that ld woman of five score years and ten, were not he only ones that sprung into the eyes on that ccasion, albeit we were unused to weeping.

"But I have not yet given the reader an idea f the home of this lonely being; in truth, it affles description. Her nearest neighbour is some our miles off, and her only companions in her olitude are a little dog and a cat. Her cabin tands near the water's edge, and directly on the ill-side; it is without a window, but light in bundance comes in from the gaping roof and ides of the black and mouldering log habitaion, the chimney to which is of mud and sticks, nd in a dilapidated condition. Her bedstead is nade of small pine sticks with the bark still on; er couch, consisting of hemlock boughs covered vith straw, upon which are two or three wretchedly worn bed-quilts; in one corner of the room re two or three shelves, where are displayed her ooking and eating utensils, the original cost of which, (and they were very old and worn,) could ot have been more than one dollar. An old stool nswers the purpose of a chair, and a board nailed o the side of the cabin is her only table; hangng from the logs at the side of her bed are two r three old gowns, which help to keep out the air nd the rain; she is also the owner of a spinning wheel; and from the crevices of the logs around, bove, and everywhere, depend bunches of herbs nd faded flowers which she has gathered in her rambles; but there was a taste and neatness displayed in the arrangement of the miserable furniure of the room which gave it a really cheerful spect.

"We asked the old woman if she never apprehended any danger while thus living so utterly lone, and she replied, 'Of course, not; who would harm a poor forsaken being like me? I in't afraid even of the bears, for it's only last fall hat one came down here, and scratched up my garden, but I drove him off with a big stick.' Up o this point, everything we saw and heard concerning this aged woman, was strange; but, when we rose to depart, we were still more astonished by her wild movements, and her address to the following effect:—

"'Men, I thank you for your goodness; *I cannot read, but my Great Father has told me, in my heart, all about it.* There is a heaven, men, and it's a very happy place; and there is a hell, men, and it's a very dreadful place; they both will never have an end. Now, men, good bye; we shall meet once more, at the judgment, but for only a short time. Live, men, so that you may get to heaven.' And so we left this strange, strange being; and I am confident, that long after her bones shall have mingled with the dust, one trio of travellers, if still living, will remember with wonder and pleasure, their interview with the Hermit Woman of the Alleghanies."

A Lesson from the Camp.—A sprig of nobility, who thought it a nice thing to "go a soldiering," purchased a commission in the allied army, and went to the Crimea. Perhaps he had formed his notions of war from the campaigning at Cobham or Sartory, with their blank cartridge engagements, and mock fights. Or he may have been afflicted with nerves, which no real soldier is supposed to possess. From whatever cause, when his division was brought to the charge in the dreadful battle of Inkermann, poor Lord Forth played the coward, shaking in his shoes and bellowing like a very calf. When the battle was over, his sword was broken before the army; he was thrust out of the camp on board a ship, and sent home in disgrace.

We would not form censorious judgments; but really we cannot help thinking that if there were the same exact discipline in the camp of Israel as in that before Sebastopol, there would be a sad number of broken swords, a great thinning of the ranks, and a terrible crowding of the ships. In many an engagement with the powers of darkness, calling for the united energies of the "sacramental host," there is a cowardly shrinking on the part of some on whom most reliance is placed. *Do nothing* in some circumstances is *doing wrong*, and neglect of duty becomes as palpable a misdemeanor as positive rebellion.—*Am. Messenger.*

Selected.

HYMN.

My God, I thank thee! may no thought
E'er deem thy chastisements severe;
But may this heart, by sorrow taught,
Calm each wild wish, each idle fear.

Thy mercy bids all nature bloom;
The sun shines bright, and man is gay;
Thine equal mercy spreads the gloom
That darkens o'er his little day.

Full many a throb of grief and pain
Thy frail and erring child must know;
But not one prayer is breathed in vain,
Nor does one tear unheeded flow.

Thy various messengers employ;
Thy purposes of love fulfil;
And, 'mid the wreck of human joy,
May kneeling faith adore thy will!

For "The Friend."

TRACT ASSOCIATION.

The following Friends were appointed to fill the respective offices of the Association for the ensuing year:—

Clerk—Nathan Kite.

Treasurer—Joseph Scattergood.

Managers—John C. Allen, Edward Richie, Horatio C. Wood, Samuel Bettle, Jr., William H. Brown, Israel H. Johnson, Charles J. Allen, Joseph Walton, Samuel Allen, Charles Jones, John L. Kite, William Kinsey, Jr., James Kite, Mark Balderston, Jesse Williams.

REPORT.

The managers of the Tract Association report, that there was on hand Third month 1st, 1854,

Tracts, - - - -	181,421
And there has been printed since,	121,261
Making an aggregate of - -	302,682
There has been taken from the Depository at the same time, - -	66,520
Leaving on hand on the 1st instant,	236,162

which is a much larger stock than we have ever had at a similar period.

3,404 Tracts have been taken by three Auxiliaries: 2,524 have been given to the inmates of the Moyamensing Prison; 3,550 were distributed at the meetings of professed infidels; 1,811 to the applicants for soup at one of the soup houses; 500 to First-day school pupils; 400 to the students of Jefferson Medical College; 1,153 were placed on board steamboats and ships; 327 were distributed among the inmates of the Eastern Penitentiary; 200 to the Young Men's Lyceum; 260 were placed in railroad cars and depots; 700 were given to the pupils of coloured schools; and 101 were for the inmates of the House of Refuge.

Besides these, 17,357 were taken for general distribution, principally in this city and its vicinity.

4,868 were taken for distribution in various parts of Pennsylvania; 713 were for Massachusetts; 36 for Connecticut; 142 for Rhode Island; 2,003 were for New York city and State; 605 for Maryland; 2,485 for New Jersey; 1,425 for Ohio; 643 for Illinois; 606 for Indiana; 3,475 for Iowa; 707 for Virginia; 202 for Alabama; 291 for Delaware; 97 for Michigan; 404 for North Carolina; 101 for Kentucky; 202 for District of Columbia; 101 for California; 1,000 for Nova Scotia; and 1,313 for Canada West; 13,204 were sold, a large number of which were bound, being designed for libraries in Liberia, Africa.

The demand for our Almanac last year was such as to induce the Board to have 8,500 copies printed of that for this year, being 1,000 more than the edition of the one for the former year. A large proportion of these have been sold, although so many thousand Almanacs are now distributed gratuitously by vendors of medicine and others. The inmates of the Moyamensing Prison, the men and women attending the adult coloured school, and a few others, have been supplied with copies of it. The matter for an Almanac for 1856 has been prepared, and will be printed in due season.

There were on hand Third mo. 1st, 1854, 16,098 Juvenile Books of 19 different kinds. New editions of several of these have been printed since, amounting together to 10,205, and making the total number 26,303. 3,893 have been disposed of during the year, leaving on hand on the 1st inst., 22,410. A considerable number of those disposed of have been sent to Liberia, Africa.

The stock of Select Readers, reported last year, was 1,147, since then, an edition of 1,012 of No. 1 has been printed, making 2,159. 776 have been disposed of during the year, and the number on hand on the 1st inst. was 1,383. These reading books have been introduced into many schools, under the care of Friends, as well as in some others, and we believe give general satisfaction.

The balance in the hands of our Treasurer at the settlement last year, was $96.37. He has received since in donations and subscriptions from members and interest, $519.20, and from sales of books, tracts, &c., $374.34. He has also received (besides the legacy of $500 reported last year, though not included in his last year's account,) $200.45, the bequest of our late friend, Ann Mifflin, making together $700.45, which, with the balance due him on the 1st instant, of $11.88, amount to $1,702.24. He has paid for printing, paper, binding, insurance, &c., &c., $1,068.99, and for a certificate of $500 loan of Camden and Amboy Railroad Co., $453.75, and for a certificate of $200 six per cent. loan of the city of Philadelphia, $179.50, making together $1,702.24.

The sales of our publications have not been so great in amount as last year by about $170, and the gratuitous distribution is much less than it has been for several years. Although this is the case, our expenses have been much greater, owing to the large number of our publications which have been printed during the year. Besides the balance which is due to our treasurer, there are several bills which remain unpaid. We call espe-

cial attention to the present state of our funds, in the hope that Friends who have the ability, will increase their annual subscriptions, and thus render an extra appeal, such as we have been obliged to make this year, unnecessary. The limited means at our disposal has its effect in preventing the issuing of new publications, most of our funds being absorbed in keeping up the stock of those already prepared. The large amount of pernicious reading furnished at the present day, both in book, pamphlet, and newspaper form, which is rendered accessible by its cheapness to all classes, is, we fear, vitiating the taste, unsettling the principles and corrupting the morals of many in the community. If the dissemination of the sound sentiments and important religious truths which our tracts contain should counteract even in a small degree the evil influence of such publications, we should consider ourselves fully repaid for the labour and expense attending their distribution. In view of the probable effects they may have in this respect, and the beneficial influence, which under the Divine blessing, have in many instances attended their perusal, the ready reception which they meet with among almost all classes when offered to them, we think Friends should be encouraged to persevere in a work likely to be attended with such useful results. We therefore hope, that during the present year, a much larger number of our tracts may be placed in the hands of those to whom their valuable contents are as yet unknown.

By direction and on behalf of the Managers,

EDWD. RICHIE, *Clerk.*

Philada., Third mo. 14th, 1855.

Reports from three of our Auxiliaries were read, and some concern appears to be felt among them to further the design of the Association. We desire that a renewed lively interest therein, may more and more animate the members of the Parent Association, and all its Auxiliaries.

Speak not often of your own actions, nor even, when it can be properly avoided, make allusion to yourself, as an agent in transactions which are calculated to attract notice. We do not suppose, as some may be inclined to do, that frequent speaking of our actions is necessarily a proof, although it may furnish a presumption, of inordinate self-love or vanity; but it cannot be denied, that, by such a course, we expose ourselves to temptations and dangers in that direction. It is safer, and is certainly much more profitable, to speak of what has been done for us, and wrought in us; to speak, for instance, of ourselves as the recipients of the goodness of God, than to speak of what *we* have ourselves done. But even here, also, although it may often be an imperative duty, there is need of deliberation and caution.

The Introduction of Tea, Coffee, and Chocolate.

It is said that the frozen Norwegians, on the first sight of roses, dared not touch what they conceived were trees budding with fire; and the natives of Virginia, the first time they seized on a quantity of gunpowder which belonged to the English colony, sowed it for grain, expecting to reap a plentiful crop of combustion by the next harvest, to blow away the whole colony.

In our own recollection, strange imaginations impeded the first period of vaccination; when some families, terrified by the warning of a physician, conceived their race would end in a species of Minotaurs.

We smile at the simplicity of the men of nature, for their mistaken notions at the first introduction among them of exotic novelties; and yet, even in civilized Europe, how long a time those whose profession, or whose reputation, regulate public opinion, are influenced by vulgar prejudices, often disguised under the imposing form of science! and when their ludicrous absurdities and obstinate prejudices enter into the matters of history, it is then we discover that they were only imposing on themselves and on others.

It is hardly credible, that on the first introduction of the Chinese leaf, which now affords our daily refreshment; or the American leaf, whose sedative fumes made it so long a universal favourite; or the Arabian berry, whose aroma exhilarates its European votaries; that the use of these harmless novelties should have spread consternation in the nations of Europe, and have been anathematized by the terrors and fictions of some of the learned. Yet this seems to have happened. Patin, who wrote so furiously against the introduction of antimony, spread the same alarm at the use of tea, which he calls "l'impertinente nouveauté du siècle." In Germany, Hanneman considered tea-dealers as immoral members of society, lying in wait for men's purses and lives; and Dr. Duncan, in his treatise on hot liquors, suspected that the virtues attributed to tea were merely to encourage the importation.

Many virulent pamphlets were published against the use of this shrub, from various motives. In 1670, a Dutch writer says it was ridiculed in Holland under the name of hay-water. "The progress of this famous plant," says an ingenious writer, "has been something like the progress of truth; suspected at first, though very palatable to those who had courage to taste it; resisted as it encroached; abused as its popularity seemed to spread; and establishing its triumph at last in cheering the whole land from the palace to the cottage, only by the slow and resistless efforts of time and its own virtues."—"Edinburgh Review," 1816.

These now common beverages are all of recent origin in Europe; neither the ancients nor those of the middle ages tasted of this luxury. The first accounts we find of the use of this shrub are the casual notices of travellers, who seem to have tasted it, and sometimes not to have liked it. A Russian Ambassador, in 1639, who resided at the Court of the Mogul, declined accepting a large present of tea for the Czar, "as it would only encumber him with a commodity for which he had no use." The appearance of "a black water," and an acrid taste, seems not to have recommended it to the German Olearius, in 1633. Dr. Short has recorded an anecdote of a stratagem of the Dutch in their second voyage to China, by which they at first obtained their tea without disbursing money; they carried with them great store of dried sage, and bartered it with the Chinese for tea; and received three or four pounds of tea for one of sage; but at length the Dutch could not export sufficient quantity of sage to supply their demand. This fact, however, proves how deeply the imagination is concerned with our palate, for the Chinese, affected by the exotic novelty, considered our sage to be more precious than their tea.

The first introduction of tea into Europe is not ascertained; according to the common accounts, it came into England from Holland, in 1666, when Lord Arlington and Lord Ossory brought over a small quantity; the custom of drinking tea became fashionable, and a pound weight sold then for sixty shillings. This account, however, is by no means satisfactory. I have heard of Oliver Cromwell's tea-pot in the possession of the collector, and this will derange the chronology of those writers who are perpetually copying the researches of others, without confirming or correcting them.

Amidst the rival contests of the Dutch and the English East India Companies, the honor of introducing its use into Europe may be claimed by both. Dr. Short conjectures that tea might have been known in England as far back as the reign of James I., for the first fleet set out in 1600; but had the use of this shrub been known, the novelty would have been chronicled among our dramatic writers, whose works are the annals of our prevalent tastes and humors. It is rather extraordinary that our East India Company should not have discovered the use of this shrub in their early adventures; yet it certainly was not known in England so late as in 1641, for in a scarce, "Treatise on Warm Beer," where the title indicates the author's design to recommend hot in preference to cold drinks, he refers to tea only by quoting the Jesuit Maffei's account, that "they of China do for the most part drink the strained liquor of an herb called *Chia*, hot." The word *Cha* is the Portuguese term for tea, retained to this day, which they borrowed from the Japanese; while our intercourse with the Chinese made us, no doubt, adopt their term *Theh*, now prevalent throughout Europe, with the exception of the Portuguese. The Chinese origin is still preserved in the term *Bohea*, tea which comes from the country of *Vouhi*; and that of Hyson was the name of the most considerable Chinese then concerned in the trade.

The best account of the early use, and the prices of tea in England, appears in the handbill of one who may be called our first Tea-maker. This curious handbill bears no date, but as Hanway ascertained that the price was sixty shillings in 1660, this bill must have been dispersed about that period.

Thomas Garway, in Exchange Alley, tobacconist and coffee-man, was the first who sold and retailed tea, recommending it for the cure of all disorders. The following shop-bill is more curious than any historical account we have.

"Tea in England hath been sold in the leaf for six pounds, and sometimes for ten pounds the pound weight, and in respect of its former scarceness and dearness it hath been only used as a regalia in high treatments and entertainments, and presents made thereof to princes and grandees, till the year 1657. The said Garway did purchase a quantity thereof, and first publicly sold the said tea in *leaf* or *drink*, made according to the directions of the most knowing merchants into those Eastern countries. On the knowledge of the said Garway's continued care and industry in obtaining the best tea, and making drink thereof, very many noblemen, physicians, merchants, &c., have ever since sent to him for the said leaf, and daily resort to his house to drink the drink thereof. He sells tea from 16s. to 50s. a pound."

Probably tea was not in general use domestically so late as in 1687; for in the diary of Henry, Earl of Carendon, he registers that "Père Couplet supped with me, and after supper we had tea, which he said was really as good as any he had drank in China." Had his lordship been in the general habit of drinking tea, he had not, probably, made it a subject for his diary.

(To be concluded.)

Be not disheartened, because the eye of the world is constantly and earnestly fixed upon you to detect your errors, and to rejoice in your halting. But rather regard this state of things, trying though it may be, as one of the safeguards which a kind father has placed around you to keep alive, in your own bosom, an antagonist spirit of watchfulness, and to prevent those very mistakes and transgressions, which your enemies eagerly anticipate.

The Fishery Season.—The period for the annual visit of that delicate fish, the shad, has now arrived. It is a bountiful provision of Nature, and one which is less considered than it should be, which thus brings to our doors shoals of fishes for our food. The Eastern coasts of South America, the coasts of Africa, and the southern shores of Asia, have no such fish as annually swarm to the shores of the United States and Europe: for the fish caught there are tropical bred, and inferior to the shad, herring, salmon, mackerel and black-fish caught here, which are bred in colder waters.

The superiority of fish is attributable to the fact, apparently inconsiderable, that our inshore current sets southward along our shores, as it does along those of Western Europe, Eastern Asia, and wherever good fish are to be had. This great wave, that flows continually from the Arctic regions, hardens the flesh of the fish, enables them longer to resist decay, and renders them in every way more edible. It brings with it also, vast schools of fish, which, if it ran in a different direction, would never visit our shores. If the Gulf Stream ran close along the coast, we should have a milder climate, but no fish; or, at least, none fit to eat. In the same way, if a tropical current ran northward past Ireland, Scotland and Norway, instead of Arctic ones running southward, the common people of Western Europe would have famished and been extirpated long ago, and the civilization of one of the best parts of the world crushed out completely.

Let us illustrate this by a few statistics. The number of persons, belonging to Scotland alone, employed in the cod, herring and tunny fisheries, is 71,000. In addition, the number of sailors engaged in carrying salt, or exporting the fish after being cured, was nearly six thousand. Nearly half a million of people, in that single kingdom, earn a livelihood by the fisheries. In Norway, also, an extensive trade is carried on in fish. The staple article of food, often the only one, among the poorer people, in all the northern countries of Western Europe, is fish, so that, without this edible, those sterile regions would have been comparatively depopulated. In America, the evil as yet, would not be so extensive: but even here, the loss of the fisheries would be a serious blow. The inhabitants of Newfoundland depend almost entirely on fish for their support, and own not less than 10,000 fishing boats. The people of our own New England employ 85,646 tons in the cod fishery, and 58,112 in the mackerel; while thousands, along all our coasts, obtain a temporary livelihood by the shad and herring fisheries.

The whole of this immense business depends on the inshore current, that sets southward, along the coasts of Northern Europe and America; and it is this pregnant fact, the provision of a bountiful Nature, which is less considered than it should be. —*Ledger.*

Memory and *forgetfulness* are both in friendship necessary. Let me remember those kindnesses my friend hath done to me, that I may see his love, and learn gratitude. Let me *forget* those benefits I have performed to him, lest they shuffle out the effect of my love, and tell me he is requited. Thus may we together increase our friendship and comforts, otherwise a man may have many acquaintances but no *friends.*

An English Ducal Residence.—A letter from London states that the Duke of Buccleugh's residence, (Montague House, White Hall Gardens,) is about being pulled down, and his grace has taken the late Lord Brownlow's house, in Belgrave Square. Every year, during the last 24 years, the sum of £20,000 has been laid apart as an accumulating fund, in order to rebuild Montague House in a palatial manner, so as to make it the finest mansion in London. This would make £480,000, but as it was profitably invested, it amounts now to £2,000,000, all of which will be disbursed.

THE FRIEND.

FOURTH MONTH 14, 1855.

The Report of "The Association of Friends for the Free Instruction of Adult Coloured Persons," will be inserted in our next number.

The approach of Yearly Meeting must bring with it feelings of anxiety, even among those whose faith is the strongest; and it is greatly to be desired that all who expect to attend should so feel the seriousness and importance of the occasion, as to have their minds brought under fervent religious exercise, to be prepared to do what may be required of them, and to be preserved from everything that may in anywise retard the designs of the Head of the church.

We commend the following, from one of our valued correspondents, to the attention of our readers:—

"The warrior who *rashly* exposes himself, spreads confusion in the ranks, and often occasions disorder through the whole army."

The Christian progress is termed a warfare; and the disciples of Christ are termed soldiers. Paul says to his son Timothy, "Thou therefore endure hardness, as a good soldier of Jesus Christ." How beautiful,—how imposing to beholders,—how convincing of a right training and subserviency to an all-powerful Captain, is the circumstance of a Christian army all keeping their ranks in righteousness, with their eye and expectation to their heavenly Commander alone; not looking out, or around them; not moved by the sound of firearms; neither rushing into action because they may apprehend a foe is approaching; but who, soldier-like, servant-like, wait for the signal of the Captain, who sendeth not his soldiers "a warfare at their own charges," but who equips them with armour, and supplies all their needs; and whose right in return therefor is, the strictest obedience to all his directions. The well-trained Christian soldier knows that it is of the utmost importance to keep his eye upon his Leader; and not to move unbidden, neither lag behind the motion to proceed. Rightly disciplined soldiers in the Lamb's army, do not look for a loud command from their Captain, but often receive an intimation so gentle, that only the watchful, faithful warrior, can understand it. This state of training is alluded to by the Psalmist, when (personating the Supreme Ruler) he says, "I will instruct thee and teach thee in the way thou shouldst go; I *will guide thee with mine eye.*" Oh, what close watchfulness does this require on the part of his servants! May the tribes who may be permitted to come up to our approaching "Annual Assembly," manifest themselves to be of the number of the well-trained soldiers of the Lamb, who are seeking his honour, and the spreading and exaltation of his kingdom; is the sincere and fervent prayer of the writer of this little hint.

* * *

SUMMARY OF EVENTS.

EUROPE.—News from England by the steamer Baltic to the 24th ult. *The Vienna Conference.*—The first of the "four points" has been agreed to unanimously. It provides for the abolition of the exclusive Protectorate of Russia in Moldavia and Wallachia; a grant of the privileges accorded to these provinces by the Sultan, and placing them under the guaranty of the Five Powers. At the latest dates from the Congress, the second point was under discussion. The probability of these negotiations resulting in peace is increasing. *The War.*—The storming of the Malakoff Tower by the French, and their subsequent repulse by the Russians, appears to have been a sanguinary affair in which nearly a thousand men were killed and wounded on both sides. The French loss was the greatest. In Lord Raglan's latest despatch, he admits that the fortifications of Sebastopol were daily growing stronger. The Russians were in no want of needful supplies. The despatch says, "Vast convoys are daily observed arriving on the north side of the town, and I learn from information entitled to credit, that the road leading from Simferapol, is covered with wagons, laden with provisions and munitions of war." The weather was pleasant, and the sickness and excessive mortality in the allied camps, had in measure abated. In other respects the condition of affairs was unchanged.

TURKEY.—Advices from Constantinople state, that the Porte has determined to maintain an undiminished sovereignty over the Dardanelles, and to protest against the christians of his Empire, being placed under any foreign protection. The Porte also desires the participation of Prussia in the Conference. A French hospital near Constantinople had been destroyed by fire, and about one hundred of the sick and wounded perished in the flames. Shocks of earthquake continued. The sulphurous springs at Broussa had been dried up. Mount Olympus vomits smoke like a volcano.

RUSSIA.—The funeral of the Emperor Nicholas took place on the 11th, with imposing ceremonies. Alexander declares his determination to tread in the steps of his father, and to carry out his policy, but it is believed he desires peace. A large bell fell at Moscow while the oath of allegiance to the new Emperor, was being administered, by which one hundred persons were crushed.

AUSTRIA.—The government was making vigorous preparations for war. It seems to be understood, that if the pending negotiations do not result in peace, Austria is under obligations to declare war upon Russia, without further delay.

PRUSSIA.—Persevering efforts continue on the part of England and France to draw Prussia from the state of neutrality she is desirous to maintain.

HOLLAND.—Much injury has been caused by inundations in some parts of Holland. Houses, cattle and horses have been carried off by the floods, and thousands of families rendered destitute. About seventy villages were submerged. In Vaenendal the water covered the tops of the houses, most of which, it was supposed, would be left undermined and in ruins. In a village near Dusseldorf, the inhabitants had not time to escape before the waters dashed in, sweeping all before them, and drowning many of the unhappy people. It is stated to be 144 years since Holland has been visited with so destructive a flood. This overflow was occasioned by the ice of the Rhine and other rivers, having formed itself at various points into dams or barricades.

ENGLAND.—There had been a small advance in cotton; the sales of the week reached 87,500 bales. Breadstuffs and provisions were unchanged in price. The money market was easy. Consols, 92¾. Large orders had been received for iron, and the price had slightly advanced. Welsh rails are quoted at £6 15*s.*, and bars, at £7. Scotch pig, 57*s.* 6*d.*

CHINA.—Shanghai dates to First mo. 16th, had been received. On the 6th, in consequence of some dispute with the insurgents, who now hold the city, the French attempted to carry it by storm. The attempt failed; the French lost 15 men killed, and 37 wounded. At Canton the river continued to be closely held by the insurgents.

MEXICO.—The latest accounts state, that Alvarez had been defeated by the government forces. The country is distracted in every quarter by insurrections which the government is unable to suppress.

BUENOS AYRES.—Dates to First mo. 27th, have been received. A treaty of commerce and amity had been made between Buenos Ayres and the Argentine confederation. Business was improving, and affairs assuming a more healthy and settled aspect.

NOVA SCOTIA.—The Provincial Parliament has been prorogued. A charter has been granted to Charles Archibald and others, of London, to facilitate the construction of a Transatlantic telegraph line connecting Ireland and Nova Scotia. The capital has been subscribed, and the parties are confident of completing the line, and having it in operation by the fall of 1858.

NICARAGUA.—President Chamorro died at Grenada, on the 12th ult., and was succeeded by General Estrada. The Chamorro party holds the entire state with the exception of Leon, where the democratic party is some three thousand strong, and the city well fortified.

SANDWICH ISLANDS, dates to Second mo. 24th have been received, by way of California. The Collector General of customs states the imports during the year 1854, at $1,265,022; the exports during the same period, at $274,029. During the year there was transhipped 1,683,922 gallons whale oil, 156,484 gallons sperm oil, and 1,497,678 pounds of whalebone.

UNITED STATES.—*New York.*—The number of immigrants arrived at this port for the first quarter of the year, was 15,677; in the Third month they numbered only 2069. The imports of foreign merchandise for the last month, were $10,173,057, and the cash duties received were $2,363,085. In all these figures there is a great falling off, compared with the last two years. The Atlantic which sailed on the 4th, took 170 passengers and $1,276,000 in specie. Mortality last week, 441.

Philadelphia.—The record of the weather kept at the Pennsylvania Hospital, furnishes the following statistics for the Third month. The mean temperature of this month, was 39 deg. The highest of the thermometer was 67° on the 31st, and the lowest, 17° on the 1st. The average temperature is nearly 2½° below that of the last 30 years. Only 1.68 inches of rain fell. At Paoli, the mean temperature was 34½°, and the amount of rain, 1 inch. Mortality last week, 182.

Massachusetts.—At Boston, on the 4th, the House passed to third reading the bill prohibiting the exclusion of coloured children from any of the Public Schools. It will probably pass both branches with slight opposition.

Tennessee.—A fire occurred at Memphis, Tenn., on the 25th ult., which destroyed 43 houses. The loss of property is estimated at $100,000.

Oregon.—Arrangements have been entered into for the extinguishment of the Indian titles to all lands in the Willimette valley.

California.—The steamship Illinois arrived at N. York on the 7th inst., with about 300 passengers and $710,167 in gold. The California dates are to Third mo. 16. None of the suspended banks have resumed. Robinson's Saving's Bank yielded on assets. Its deposits amounted to $207,000, and the parties have been arrested for embezzlement. Abundant rains have fallen. Both branches of the Legislature have passed a bill prohibiting barbarous and noisy amusements on the first day of the week. Another bill prohibits lotteries, raffles, &c.

Miscellaneous.—Steamboat Disaster.—The Vicksburg Whig gives an account of the destruction by fire of the steamer Bulletin on the 24th ult. The boat and cargo were totally lost, and twenty-five persons were missing, who were probably drowned. The disaster occurred on the Mississippi below Lake Providence.

Good Stock.—By the annual report of the Delaware and Hudson Canal Company, it appears that the net profits of the business for the last year amounted to $1,100,141, which is equal to 15½ per cent. on the capital. This company is engaged in the mining and transportation of coal, for the New York market.

A Valuable Capture.—The ship Adeline, of New Bedford, when coming out of the Sea of Ochotsk the last season, took a right whale which made 250 barrels of oil, worth, at present prices, about $5000.

The Mississippi River.—The water in the Mississippi is 13½ feet below high water mark, whereas the average of thirty years shows the usual height to have been at this season only 2½ feet below the point of high water mark. The spring rains are greatly needed.

New Whaling Grounds.—The ship owners of New Bedford are about to despatch two vessels to the waters about Spitzbergen, to try the whale fishery there.

Violent Wind.—The high N. W. wind of the 2d inst. blew down several unfinished buildings in Philadelphia. At the town of Progress, N. J., on the Delaware river, about 12 miles from Camden, the glass house of Julius Kelter, a substantial brick building, 125 feet by 42 feet, with walls 18 inches thick, was prostrated by the force of the wind. A number of persons were in the building at the time, seven of whom were killed, and thirteen injured.

Twenty Tons of Hay per Acre.—It was stated by Cird, at an agricultural dinner given in England, recently, that twenty tons of hay had been raised off a single acre, in Scotland, the last season. It was Italian rye grass, which grows to a great height in the humid climate of Scotland, and he cut from seven to ten times from March to December. In the instance named, it was cut ten times, but after each cutting, an abundant application of liquid manure was made.

A Striking Change.—The news of the death of the Russian Emperor Paul in 1801 was twenty-one days in reaching London. That of the late Emperor Nicholas, four hours and a quarter at the utmost.

Cold Weather at the North.—At Montreal, on the 2d inst., snow had been falling heavily for fifteen hours; at Ogdenburg, N. Y., a severe snow storm was prevailing at the same time, with a temperature of 10°. The cars that left Binghampton for Syracuse, N. Y., were detained more than 24 hours on the road, in consequence of encountering snow drifts, some of which were from twelve to fifteen feet deep.

Prohibition.—Both branches of the Legislature of New York have passed a Prohibitory Liquor Law by large majorities, and it has received the Governor's sanction. The law is to go into operation on the 4th of Seventh month next. As this enactment operates upon several millions of people, and includes the great commercial mart of the country, it is one of no small importance. No means will be left untried to evade or set the law aside.

BIBLE ASSOCIATION OF FRIENDS IN AMERICA.

The stated annual meeting of the Bible Association of Friends in America, will be held at the Committee-room, Arch street, on Fourth-day evening, Fourth mo. 14th, 1855, at 8 o'clock.

Friends generally of both sexes, are invited to attend.

JOHN CARTER, Secretary.

WEST-TOWN BOARDING-SCHOOL.

Assistant Teachers are wanted in the Boys' department of this Institution. Application may be made to either of the undersigned.

HENRY COPE, } Philad.
SAML. BETTLE, JR., }
SAML. HILLES, Wilmington, Del.

WESTGROVE BOARDING-SCHOOL FOR GIRLS.

(*Located at old Westgrove meeting-house, Chester county.*

This School will be opened on the 7th of Fifth month next, and continue in session twenty weeks. It is designed to furnish an opportunity to young women for acquiring economically a competent English education. Attention will be given to the preservation of health, the general cultivation and discipline of mind, and a concern exercised to inculcate principles and habits in accordance with the views of the Society of Friends.

For circulars containing other necessary information, apply to THOMAS CONARD, Principal.

Westgrove P. O., Chester Co., Pa.

Second mo., 1855.

FRIENDS' HORSES.

The horses of Friends coming to this city to attend Yearly Meeting, or at other times, on the service of Society, who put up within the limits of the Monthly Meeting of Friends of Philadelphia for the Northern District, will be accommodated at the stables of William A. Scheetz, (Montgomery Hotel,) North East corner of Sixth and Willow streets.

Philad., Fourth mo. 3, 1855.

WEST-TOWN BOARDING-SCHOOL.

The summer session of the School will commence on Second-day, the 7th of Fifth month next. The pupils will be conveyed by railroad to West Chester, where conveyances will be in waiting to take them to the School, on the arrival of the morning and afternoon cars, on Second-day, the 7th, and Third-day, the 8th of Fifth month. The children will get their baggage the day after their arrival. The cars leave the depot, south side of Market street, above Eighteenth, (formerly Schuylkill Fifth street,) at 7½ o'clock, A. M., and 4 o'clock, P. M. The agent of the school will be at the railroad depot on Second and Third-day afternoons, and will furnish pupils with tickets, and accompany them to West Chester. Those who go by the *morning* train will be furnished with tickets by a person in attendance. To those who procure tickets as directed, the fare from Philadelphia to the School, including baggage, will be one dollar, which will be charged to the scholar at the School. All baggage should be distinctly marked West-town, and with the name of the owner, and should be sent directly to the railroad depot. Applications for admission must be made to Joseph Snowdon, Superintendent at the School, or Joseph Scattergood, Treasurer, No. 84 Arch street, Philadelphia.

The West-town office is at Friends' Bookstore, No. 84 Arch street, where all small packages for the pupils left before 12 o'clock on Seventh-days, will be forwarded. *All letters* for the pupils and others at the School, should be sent by *mail*, directed to *West-town Boarding-School, West Chester P. O., Chester Co., Pa.* Postage should be *pre-paid*, and packages should be distinctly marked and put up in a *secure manner*, so that their contents will not be liable to be lost by handling. The stage will leave West Chester during the *summer session*, for the School on Second, Fourth, and Seventh-days, on the arrival of the *afternoon* cars from the city, and from the School to West Chester on the same days, to meet the afternoon cars to Philadelphia. The fare for each passenger to and from West Chester *by the stage*, will be 25 cents. When special conveyances at other times are provided at the School, an extra charge will be made.

West-town, Third mo., 1855.

MARRIED, at Friends' Meeting-house on Sixth street, on the 10th inst., RICHARD B. FAWCETT, of Salem, Ohio, to REBECCA B. MATLACK, of this city.

DIED, at his residence in this city, on the 16th of Second month last, GEORGE DILKS; a member of the Northern District Monthly Meeting of Friends, in the 51st year of his age.

——, at his residence, in Pennsville, Morgan county, Ohio, on the 24th of Third mo., 1855, RICHARD KENNY, a member of Pennsville Monthly Meeting, in the seventy seventh year of his age. This dear Friend was not born a member of our religious Society, but in early life he became convinced of its doctrines and testimonies, and through the purifying operation of Divine grace, was enabled to take up the cross, and walk consistent with his profession in his intercourse with his fellow men, maintaining a correct example of *honesty, uprightness* and *punctuality* in all his dealings. While health permitted, he was diligent and seasonable in the attendance of all our religious meetings, and while there, he, a solid, weighty deportment gave evidence, that he was engaged in worshipping his Divine Master. In our meetings for discipline, he was engaged to warn Friends to watch against drowsiness, believing it to be a temptation of the evil one. Through all the overturnings that have been permitted to come upon our Society, his faith remained unshaken in its ancient doctrines and testimonies, gaining strength from beholding the deplorable effects of a departure therefrom. He expressed his belief that if Friends would keep near to the Divine witness in their hearts, they would be preserved in purity and simplicity, and from following after the world's wisdom and notions, and from trampling under foot the ledge brown ground and by our Holy Head as the external bonds of gospel fellowship. Unassuming in his manners, simple and plain in language and attire, and economical in his domestic concerns, though his income was small, yet he was always ready to hand forth liberally for the uses of the society, to aid in all benevolent concerns, and for the relief of the sufferings poor of all classes and situations. Through obedience to his Divine Master, he was favoured to feel a blessed reward of peace, which he often expressed, and appeared to be ready, waiting his time to be called home. A few days before his death, he told his wife, (whose health was very feeble,) that he should be first taken, and that his time was near at hand. At that time he was able to get up and converse with Friends, who called to see him, and no important change was perceptible in his health. On the evening of his death, he gave directions to a friend to make certain preparations, as he would soon pass away. About twenty minutes before he died, he rose up in bed, took a little refreshment and a drink of water, and before he laid down, asked the friend who was with him, if he had observed a change in his speech, who replied he had, and asked the cause; he answered, the change is about to take place; and then, in a very solemn, impressive manner, said, "The prospect before me is *very comfortable*;" he then laid down again, and passed away so quietly, that those present thought he was going to sleep. "Mark the perfect man, and behold the upright for the end of that man is peace."

——, at her residence, in Stanfordville, N. Y., on the 3rd of Fourth month, SARAH C. HELL, widow of the late Henry Hull, in the 77th year of her age. Her death of this much esteemed Friend, a great loss will be sustained; not only as a mother and relative will she be much missed, but as a neighbour and benefactor for need or suffering attracted her especial care and regard. As a valuable member and elder in our religious Society, the Monthly Meeting of Stanford will have cause to mourn her loss. Although from the nature of her disease she could converse but little, yet her patience in suffering, and calm and peaceful close, give good ground for believing that her day's work was done, and that she is now at rest in that "city which hath foundations whose maker and builder is God."

——, on the 4th inst., in the 75th year of her age, ELIZABETH WHITE, widow of the late Josiah White; an esteemed member of the Monthly Meeting of Friends of Philadelphia.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, FOURTH MONTH 21, 1855. NO. 32.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

Sketches from History.

(Continued from page 242.)

The most common mode of entrapping Friends, was to require them to take the oath of allegiance to the king, their persecutors well knowing they could not, for conscience' sake, comply with their demands; and therefore were exposed to the penalties imposed for refusal. Repeatedly they offered, instead of the oath, their solemn declaration of allegiance to their sovereign, and rejection of all plots, and of all participation in the views or feelings of the popish recusants; appealing to the whole tenor of their lives to witness their loyal and peaceful principles. The latter was hardly denied even by their bitterest enemies, but the desire of some, (especially the clergy, who could not bear the testimony of Friends to a free gospel ministry,) to root them out of the land, and the covetousness of others, who expected to make a prey of their estates, combined to urge on the host of persecutors, ready to take advantage of every means, however unjust, to subject them to the cruelest punishments the law allowed to be inflicted, while King Charles, who was fairly and frequently informed of the unjust and barbarous treatment of thousands of his innocent subjects, under colour of his authority, had not integrity or moral principle sufficient to check or prevent it.

In London, directly under the eyes of the court, the most violent proceedings were countenanced by its members. Richard Brown was at that time lord mayor, a man of fierce and unrestrained passions, who was not ashamed to prostitute the authority conferred by the office he held, to carry out his implacable hatred of the unoffending but despised Quakers. He pursued them with the utmost violence and rigour, seizing them when in their families, or engaged in their lawful avocations, sometimes dragging the sick out of their beds to hale them to prison, and regularly resorting to their religious meetings, where he and his tyrmidons were sure to find those assembled, who had not yet been consigned to their loathsome prisons. In a short time, nearly four hundred were incarcerated, and Newgate became so full that the sufferers "had not room to sit or lie down, nor scarcely to stand one by another."

Under pretence of detecting treasonable designs, all letters sent to the post-office were opened and read, so that epistolary intercourse was attended with much danger, and was, therefore, almost together suspended. There were, however, ministers and other Friends moving about from one part of the country to another, in the performance of religious services, who failed not to transmit to their brethren in London, accurate accounts of the havoc made among the members in various neighbourhoods, and the intelligence thus received was not long in reaching the ears of the king and his council. Knowing that all letters were intercepted, it seemed incredible to them that the accounts given could have been forwarded, or be known to be correct, inasmuch as they must have travelled faster than the reports required by them from their own officers, and they expressed much surprise when subsequent intelligence confirmed their truth.

Most of the officers under the Government, were either members of what by that time was considered the established church, or anxious to ingratiate themselves with its priests, who had now acquired a large amount of power, and many of them scrupled not to embrace every opportunity that presented, by perverting the language of Friends or their actions, to bring them into difficulty. It was, therefore, not to be wondered at, that some of them should be brought under suffering, on account of the letters they had written to their friends, and entrusted to the public post for conveyance.

This was the case with Thomas Ellwood, who, though he had been convinced of the truth as professed by Friends, but a little more than a year, had, through firmness and suffering, become fully established therein.

Having gone up to London on some business, he attended a little meeting of Friends, held in the house of Humphrey Bache, a goldsmith. As was usual at that time, a crowd of unruly men and boys gathered around the door, ready to bestow vituperation and blows upon the unoffending men and women who should come forth. Thomas, seeing and hearing the abuse to which the Friends were subjected as they left, expected to receive his share also; but to his surprise, on his appearance, the crowd said one to another, "let him alone; don't meddle with him; he is no Quaker; I'll warrant you." "This struck me, (says he,) and was worse to me than if they had laid their fists on me, as they did on others. I was troubled to think what the matter was, or what these rude people saw in me, that made them not take me for a Quaker. And upon a close examination of myself, with respect to my habit and deportment, I could not find anything to place it on, but that I had then on my head a large mountier-cap of black velvet, the skirt of which being turned up in folds, looked, it seems, somewhat above the then common garb of a Quaker, and this put me out of conceit with my cap."

While in the city, T. Ellwood met with Thomas Loe, a highly gifted minister, who had come up out of Oxford in the performance of his religious duty. Being very desirous that his neighbours should have an opportunity of listening to the glad tidings of salvation as set forth in the powerful preaching of this eminent servant of Christ, T. Ellwood proposed to him, that he should come to the town where he lived, and he would undertake to invite his neighbours, and procure a suitable place for holding a meeting. Thos. Loe told him he was at the Lord's command, and not his own master, so that he could make no promise of holding the meeting; but if on his return home, T. Ellwood continued to feel the matter resting on him, and was able to make the necessary arrangements, he might, after doing so, write to him at Oxford, and he would then decide on the matter. This was a short time prior to the insurrection of the fifth monarchy-men. Accordingly, after his return home, the letter was written and sent, as T. Ellwood supposed, by safe hands. But, instead of being delivered to T. Loe, according to its direction, it was seized and carried to Lord Faulkland, the lord lieutenant of the county of Oxford. Lord Faulkland, in consequence of the alarm produced by the insurrection, had broken up Friends' meeting at Oxford, and sent Thos. Loe with many others to the castle as prisoners. When the letter directed to T. Loe was brought to the lord lieutenant, and found to contain a proposal for holding a meeting, he chose to view it in the light of a plot, and to construe it into a treasonable act; he, therefore, despatched one of his officers with a troop of horse, to seize the unsuspecting writer, who was quietly waiting a reply at his father's house, and to bring him to Oxford.

T. Ellwood tells his own story so graphically, that we prefer giving it to using our own language.

"It so fell out, that my father was at that time from home, I think in London; whereupon he that commanded the party alighted, and came in. My eldest sister, hearing the noise of soldiers, came hastily up into my chamber, and told me there were soldiers below who inquired for me. I forthwith went down to them, and found the commander was a barber of Thame, and one who had always been my barber till I was a Quaker. His name was Whatley, a bold brisk fellow.

"I asked him what his business was with me. He told me I must go with him. I demanded to see his warrant. He laid his hand on his sword and said that was his warrant. I told him, though that was not a legal warrant, yet I would not dispute it—but was ready to bear injuries. He told me he could not help it; he was commanded to bring me forthwith before the deputy-lieutenants; and therefore desired me to order a horse to be got ready, because he was in haste. I let him know I had no horse of my own, and would not meddle with any of my father's horses, in his absence especially; and that therefore, if he would have me with him, he must carry me as he could.

"He thereupon taking my sister aside, told her he found I was resolute, and his orders were peremptory; wherefore he desired that she would give order for a horse to be made ready for me; for otherwise he should be forced to mount me behind a trooper, which would be very unsuitable for me, and which he was very unwilling to do. She thereupon ordered a horse to be got ready, upon which, when I had taken leave of my sisters, I mounted and went off, not knowing whither he intended to carry me.

"He had orders, it seems to take some others also in a neighbouring village, whose names he had, but their houses he did not know. Wherefore, as we rode, he asked me, if I knew such and such men, whom he named, and where they lived; and when he understood that I knew them, he desired

me to show him their houses. No, said I, I scorn to be an informer against my neighbours, to bring them into trouble. He thereupon riding to and fro, found by inquiring most of their houses; but, as it happened, found none of them at home, at which I was glad.

"At length he brought me to the house of one called Esquire Clark, of Weston by Thame, who being afterwards knighted, was called Sir John Clark; a jolly man, too much addicted to drinking in soberer times, but was now grown more licentious that way, as the times did now more favour debauchery. He and I had known one another for some years, though not very intimately, having met sometimes at the lord Wenman's table.

"This Clark was one of the deputy-lieutenants, whom I was to be brought before. And he had got another to join with him in tendering me the oaths, whom I knew only by name and character; he was called Esquire Knowls of Grays, by Henley, and reputed a man of better morals than the other.

"I was brought into the hall, and kept there. And as Quakers were not so common then, as they now are, and indeed even yet, the more is the pity, they are not common in that part of the country—I was made a spectacle and gazing-stock to the family, and by divers I was diversely set upon. Some spake to me courteously, with appearance of compassion; others ruggedly, with evident tokens of wrath and scorn. But though I gave them the hearing of what they said, which I could not well avoid, yet I said little to them; but keeping my mind as well retired as I could, I breathed to the Lord for help and strength from him, to bear me up and carry me through this trial, that I might not sink under it, or be prevailed on by any means, fair or foul, to do anything that might dishonour or displease my God."

(To be continued)

The Sin and Folly of Scolding.

Fret not thyself to do evil.—Psalm xxxii. 2.

1. *It is sin against God.* It is evil and only evil, and that continually. David understood both human nature and the law of God. He says:—"Fret not thyself in any wise to do evil." If you cannot speak without fretting or scolding, keep silence.

2. *It destroys affection.* No one ever did, ever can, or ever will love an habitual fretter, fault finder, or scolder. Husbands, wives, children, relatives, or domestics, have no affection for peevish, fretful, fault finders. Few tears are shed over the graves of such. Persons of high moral principle may tolerate them—may bear with them; but they cannot love them more than the sting of nettles or noise of musquitoes. Many a man has been driven to the tavern, and to dissipation by a peevish, fretful wife. Many a wife has been made miserable by a peevish, fretful, husband.

3. *It is the bane of domestic happiness.* A fretful, peevish, complaining, fault finder in a family, is like the continual chafing of an inflamed sore. Woe to the man, woman, or child, who is exposed to the influence of such a temper in another. Nine-tenths of all domestic trials and unhappiness spring from this source. M. D. is of this temperament. She wonders her husband is not more fond of her company—that her children give her so much trouble—that domestics do not like to work for her—that she cannot secure the good-will of young people. The truth is, she is so peevish and fretful. Children fear her, and do not love her. She never gained the affections of a young person, and never will till she leaves off fretting.

4. *It defeats the end of family government.* Good family government is the blending authority with affection, so as to secure respect and love. Indeed, it is the great secret of managing young people. Now, your fretters may inspire fear, but they always make two faults where they correct one. Scolding at a child, fretting at a child, sneering at a child, taunting a child, treating a child as though it had no feelings, inspires a dread and dislike, and fosters those very dispositions from which many of the faults of childhood proceed. M. G. and M. F. are of this class. Their children are made to mind: but how? M. F. frets and scolds her children. She is severe upon their faults. She seems to watch them in order to find fault. She sneers at them—treats them as though they had no feelings—seldom gives them a command without a threat, and a long-running, fault finding commentary. When she chides, it is not done in a dignified manner; she raises her voice, puts on a cross look, threatens, strikes them, pinches their ears, thumps their heads, &c. The children cry, pout, sulk, and poor M. F. has to do her work over pretty often. Then she will find fault with her husband because he does not fall in with her ways, or chime with her as chorus.

5. *Fretting and scolding make hypocrites.* As fretters never receive confidence and affection, so no one likes to tell them anything disagreeable, and procure for themselves a fretting. Now, children will conceal as much as they can from such persons. They cannot make up their minds to be frank and open-hearted. So husbands conceal from their wives, and wives from their husbands. For a man may brave a lion, but he likes not to come in contact with nettles and musquitoes.

6. *It destroys one's peace of mind.* The more one frets, the more he may. A fretter will always have enough to fret at, especially if he or she has the bump of order and neatness largely developed. Something will always be out of place. There will always be dirt somewhere. Others will not eat right, look right, talk right; he will not do these things so as to please them. And fretters are generally so selfish as to have no regard for any one's comfort but their own.

7. *It is a mark of a vulgar disposition.* Some persons have so much gall in their disposition, are so selfish, that they have no regard for the feelings of others. All things must be done to please them. They make their husbands, wives, children, domestics, the conductors by which their spleen and ill-nature are discharged. Woe to the children who are exposed to such influences. It makes them callous and unfeeling, and when they grow up they pursue the same course with their own children, or those entrusted to their management, and thus the race of fretters is perpetuated. Any person who is in the habit of fretting or sneering, taunting their husbands, wives, children, or domestics, shows either a bad disposition, or else ill breeding —*N. E. Farmer.*

Value of a Manuscript.—The original manuscript of Gray's Elegy was lately sold at auction in London. There was really a "scene" in the auction room. Imagine a stranger entering in the midst of a sale of some rusty looking old books. The auctioneer produces *two small half sheets of paper,* written over, torn and mulilated. He calls it "a most interesting article," and apologizes for its condition. Pickering bids £10! Rodds, Foss, Thorpe, Bohn, Holway, and some few amateurs quietly remark, twelve, twenty, twenty-five, thirty, and so on, till there is a pause at *sixty-three pounds!* The hammer strikes.

"Hold!" says Foss. "It is mine," says the amateur. "No, I bid sixty-five in time." "Then I bid seventy."

"Seventy-five," says Foss; and fives are repeated again, until the two bits of paper are knocked down, amidst a general cheer, to Payen and Foss, for *one hundred pounds sterling!* On these bits of paper are written the first drafts of the Elegy in a country church yard, by Thomas Gray, including five verses which were omitted in publication, and with the poet's interlinear corrections and alterations—certainly an "interesting article;" several persons supposed it would call forth a ten pound note, perhaps even twenty.

Selected.

Epistle of George Fox.

"Dear friends and brethren, ministers, exhorters, and admonishers, that are gone into America and the Islands thereaway. Stir up the gift of God in you, and the pure mind, and improve your talents; that ye may be the light of the world, a city set upon a hill, that cannot be hid. Let your light shine among the Indians, the Blacks, and the Whites; that ye may answer the truth in them, and bring them to the standard and ensign that God hath set up, Christ Jesus. For from the rising of the sun to the going down of the same, God's name shall be great among the Gentiles; and in every temple, or sanctified heart, 'incense shall be offered up to God's name.' And have salt in yourselves, that ye may be the salt of the earth, that ye may salt it; that it may be preserved from corruption and putrefaction; so that all sacrifices offered up to the Lord may be seasoned, and be a good savour to God. All grow in the faith and grace of Christ, that ye may not be like dwarfs; for a dwarf shall not come near to offer upon God's altar; though he may eat of God's bread, that he may grow by it. And friends, be not negligent, but keep up your negroes' meetings and your family meetings; and have meetings with the Indian kings, and their councils, and subjects everywhere, and with others. Bring them all to the baptizing and circumcising Spirit, by which they may know God, and serve and worship him. And all take heed of sitting down in the earth, and having your minds in the earthly things, coveting and striving for the earth; for to be carnally minded brings death, and covetousness is idolatry. There is too much strife and contention about that idol, which makes too many go out of the sense and fear of God; so that some have lost morality, humanity, and true christian charity. O, therefore, be awakened to righteousness, and keep awakened; for the enemy soweth his tares, while men and women sleep in careleseness and security. Therefore, so many slothful ones go in their filthy rags, and have not the fine linen, the righteousness of Christ; but are straggling and plowing with their ox, and their ass, in their woolen and linen garments, mixt stuff feeding upon torn food, and that dieth of itself, and drinking of the dregs of their old bottle, and eating the sour, leavened bread, which makes their hearts burn one against another. But all are to keep the feast of Christ our passover, with the unleavened bread of sincerity and truth. This unleavened bread of life from heaven, makes all hearts and souls glad and joyful, lightsome and cheerful, to serve and love God, and to love and serve one another in the peaceable truth, and to keep in the unity of God's Spirit, which is the bond of (the Lord of lords, and the King of king's peace. In this love and peace, God Almighty keep and preserve all his people, and make them valiant for his truth upon the earth, to spread it abroad in doctrine, good life and conversation Amen.

"All the members of Christ have need one of another. For the foot hath need of the hand, and

the hand hath need of the foot; the ear hath need of the eye, and the eye of the ear. So that all the members are serviceable in the body which Christ is the head of; and the head sees their service. Therefore, let none despise the least member. Have a care to keep down that greedy, earthly mind, that raveneth and coveteth after the riches and things of this world; lest ye fall into the low region, like the Gentiles or heathen, and so lose the kingdom of God, that is everlasting; but seek that fruit, and God knows what ye have need of; who takes care for all both in heaven and in the earth; thanks be unto God for his unspeakable gifts, both temporal and spiritual! G. F."

Tottenham, the 11th of the Tenth month, 1690.

For "The Friend."

To the Association of Friends for the Free Instruction of Adult Coloured Persons, the Managers report:

That the schools for men and women were opened in the house on Raspberry street, on the 2d of Tenth month, 1854, and continued open on five evenings in each week, until the 28th of Second month last,—thus completing the usual session of five months.

The schools were organized by the appointment of a principal and three assistant teachers in the men's, and in the women's a principal and four assistants. The course of studies in both schools has been much the same as in former seasons. Besides the elementary branches, attention has been given to exercises in Geography with charts, and a number of the men and women have received instruction in Arithmetic.

It is gratifying to the managers to notice the general care and industry of the teachers, and the application of the scholars to their studies, and their general propriety of deportment.

Many instances of commendable progress in studies have occurred, and with a few scholars the advancement of a single session has been particularly apparent.

In both schools the attendance has been satisfactory, and shows an increase on some former years. The whole number registered for the season in the men's school, was 138, and the average evening attendance, nearly 48. In the women's school, 255 were registered, and the average attendance was nearly 63; on one regular school evening, 106 women were present.

Agreeably with former practice, there has been distributed in both schools at various times, a selection of Friends' Tracts; the Moral Almanac also was distributed with a view of supplying each scholar with a copy.

Several dozens of the New Testament were likewise furnished for sale to the scholars at a reduced price.

The origin of these schools was from a serious concern on the minds of a few Friends to do what they could by means so humble, to promote the welfare and advancement of the adult coloured people living around them. They saw many of their fellow creatures oppressed by the burden of peculiar wrongs and disabilities, and groping their way amidst the gloom of ignorance. To extend to such as these a hand of help, and to be the means of cheering and brightening their humble, and oft degraded lot, was the motive and the endeavour of the early labourers in this concern.

How far these philanthropic efforts, which we trust are with some degree of the same feelings still extended, have been and continue to be appreciated by the scholars, is no mere matter of conjecture; and the managers believe it to be due to those friends whose interest has been lively in the prosperity of the Association, and who have kindly contributed to its funds, to state, that the pupils of both schools have shown many marks of sincere and heartfelt gratitude.

The regular attendance of many of the scholars so far as this lay in their power; their entire decorum and earnest, patient effort to learn under peculiar difficulties, are evidences of this; to which also we would add their hearty and touching expressions of thankfulness, when taking leave of their teachers and friends, at the dismissal of the schools for the season.

In conclusion, the managers indulge a hope, that if the unobtrusive labours of the Association should again be resumed on the recurrence of another autumn, the encouragement and assistance heretofore accorded, and without which the schools could not long be sustained, will continue to be extended by the friends of the concern.

On behalf and by direction of the Managers,

(Signed,) SAMUEL WOOLMAN, Clerk.

Philadelphia, Third month, 1855.

At a meeting of the Association, Fourth mo. 5, 1855, the following officers were appointed for the ensuing year, viz.

Secretary—Chas. J. Allen.
Treasurer—John C. Allen.
Managers—Nathaniel H. Brown, Wm. L. Edwards, Wm. H. Burr, Anthony M. Kimber, Edward Sharpless, Samuel Woolman, Samuel Allen, William L. Baily, and Joseph W. Stokes.

For "The Friend."

Diligent Reading the Holy Scriptures.

While Friends have ever believed that the work of sanctification is effected by the operation of the Holy Spirit upon the heart, they have felt bound to avail themselves of all the means of help, strength, and Divine instruction, which the Lord has provided, and appointed for their benefit. Among these will be found, daily retirement in spirit seeking unto Him, assembling together at stated times for public worship, the ministry of the gospel, and vocal prayer in our meetings under his anointing, also the frequent reading of the Holy Scriptures in their families, and individually apart from others, with hearts turned to the Lord that we may be favoured with the illumination of the same Spirit by which holy men were inspired to write, so as to be truly profited by them. Is there not reason to fear that this excellent practice is greatly neglected by many from suffering worldly concerns, or indifference relating to the work of salvation to induce them to put it by. We know not when the Comforter may come, and apply what we read to our condition, and quicken and strengthen us by this means, to gird up our loins, and run with alacrity the race he would set before us. How often have portions of the Scriptures been livingly brought to remembrance, and opened with deep instruction, so that many have thanked God with contrited hearts, and gone to their temporal duties refreshed, and rejoicing in his condescension and Divine regard. We may often read them without being favoured with such feelings—and so we may retire to wait upon Him, and may go to our religious meetings, and not at the time be made sensible of immediate benefit,—and yet how far his Divine blessing rests upon our faithful efforts to do our duty, we may not at the time be permitted to know. If the sap of life is preserved in the root, it will, under congenial circumstances, show itself in due time, by verdure and fruit. But were we to neglect all the means provided for our preservation and growth in the Divine life, dryness and barrenness and ultimate spiritual death would be the result. Divine grace is the immediate agent to change our vile affections, and set them on things above; and if we are obedient to it, it will incite us to make a right use of all the provisions of our heavenly Father, designed for doctrine, for reproof, for correction and instruction in righteousness, that the man of God may be perfect, thoroughly furnished unto all good works. Those who have not the Scriptures and other outward means with which we are favoured, will not be accountable for what they have not—for where little is given, little is required; but where much is given, much will be required, and this, in an especial manner, is our case. It is observable, that the more spiritually minded, and the deeper his religious experience, the greater is the Christian's love for reading the Holy Scriptures. He loves to dwell on the precious promises which they contain, and to have his faith strengthened by them in the glories that shall be hereafter revealed to the sanctified in Christ Jesus; and encouraged to hold on his way in the path of duty, by the experiences of holy men; that thus through patience and comfort of the Scriptures, by the Holy Spirit, he may also have the same blessed hope.

In the year 1732, Friends, at their Yearly Meeting in London, gave forth this counsel,—"We tenderly and earnestly advise and exhort all parents and masters of families, that they exert themselves in the wisdom of God, and in the strength of his love, to instruct their children and families in the doctrines and precepts of the christian religion contained in the Holy Scriptures, and that they incite them to the diligent reading of those sacred writings, which plainly set forth the miraculous conception, birth, holy life, wonderful works, blessed example, meritorious death, and glorious resurrection, ascension, and mediation of our Lord and Saviour Jesus Christ; and to educate their children in the belief of those important truths, as well as in the belief of the inward manifestation and operation of the Spirit of God on their own minds; that they may reap the benefit and advantage thereof, for their own peace and everlasting happiness, which is infinitely preferable to all other considerations. We, therefore, exhort in the most earnest manner, that all be very careful in this respect; a neglect herein being, in our judgment, very blame-worthy."

Again, in 1789, that meeting says, "We earnestly recommend to all the frequent perusal of the Holy Scriptures; and also the writings of our faithful predecessors, and the accounts that are published of their experiences, labours, travels, and sufferings in the cause of Christ. Those hours of leisure would be profitably employed in this manner, which are often wasted in reading light and trivial publications, calculated to gratify the vain imagination, and to feed that disposition that is always hankering after some new thing."

From "The Leisure Hour."

What I Saw last Summer at St. Petersburg.

A stranger sailing up the Neva for Petersburg is greatly disappointed. On his right hand a rather pretty bank rises, displaying here and there a villa or a palace. On his left, a fringe of trees is all that he can see, the land is so low. In the way of shipping, a few barges, some small sea-going craft, and a little steamer occasionally, are what he usually meets on his two hours' passage from Cronstadt to the city of the Tzar. By-the-by, this appellation should be written as I have now written it, and not with a C, as most of us English pen it, while of course it should be pronounced accordingly. This parenthesis came in just as I was about to say that, once round a corner of the river bank

and you find yourself suddenly at the city, with its golden domes and pinnacles, its splendid wharves, its noble-looking palaces, its iron bridge, and its bridges of boats.

Alongside one of these wharves I found myself one hot afternoon last summer. The passport officers detained us about an hour ere they would allow us to land, and all that time we were broiling beneath a burning sun, with ample leisure to look about us, though I fear, in most cases, with very little inclination. Many were far too excited to care about the picturesque, seeing that they were meeting old friends; others were too dull, seeing that all the wide world lay somewhat blankish before them; and others were too hungry, seeing that we had eaten nothing since we breakfasted that morning on board the ship which brought us from Britain. That this last was certainly the condition of some was soon evident, from the fact that a friend ashore, prevented, like all others, from coming any nearer, threw them a bag of biscuits, which disappeared with wonderful rapidity. But an hour soon passed away, and we were then marched, under the charge of three or four superannuated soldiers, from the landing-place to the custom-house. Once fairly within this building, we created and witnessed a scene of confusion which such places only can present. There were many passengers, some with babies at the breast, some with babies at the knee, and some who, though old enough to be called men and women, were, in their then circumstances, as helpless as the youngest among them. In the custom-house nobody could speak English, and among the passengers only one or two could speak Russ; and the latter, being experienced hands, were too busy with luggage mysteries of their own to pay any heed to the sorrows of other people. However, as we were all in a hurry—indeed, when are people not in a hurry at the custom-house?—each felt called on to speak, insinuate, beg, or insist, that his or her goods and chattels should be examined first. But the difficulty was, where to find them. They had been carried in long before we went; and though nobody doubted that they were in the room, yet as this was very large, and the number of lady passengers considerable, it unavoidably happened that there were a good many great trunks, and a great many small parcels, scattered about, and piled up in a very wonderful manner. You made signs to an official, and darted off for your "things," but before you got back somebody else had secured him. Or it might be that you could not find what you wanted, and were scrambling about the room with a couple of porters at your heels, looking intensely authoritative, and making some one else look very indignant by upsetting his goods in search of your own. One gentleman got fairly addled in the uproar, and wandered about in the most helpless manner; while a few ladies—unprotected, I believe—fairly out of breath from speaking in an unknown tongue, and general excitement, wisely retired to the wall, and resigned themselves to their fate, waiting, apparently, till chance, or the clearance of other people, might leave some one at liberty to help them. It was altogether a scene, once witnessed never to be forgotten. Where did all these people go to in that mighty Russian empire? And when or where will they meet again? One of them returned with me a few months afterwards, and told me that since we parted, she had buried her husband.

George the Fourth styled Edinburgh a city of palaces; had he gone to Petersburg, he might have said the same of it, and with at least equal reason. The streets are wide, and the houses fine. Formerly, many of these were built of wood; but the number of such is rapidly decreasing, as no person is allowed to erect a new one of other materials than stone or brick. That this law is just, wise, and humane, cannot be questioned; for not only are wooden houses comparatively unsightly, but they are intrinsically of little value, and, what is more, the source sometimes of great mischief, often causing most destructive fires. Through the prevalence of wooden buildings nearly two-thirds of Quebec have been burnt down within the last ten years; and I myself witnessed, in the city of Montreal, nearly two hundred houses destroyed in one night by fire between the hours of ten and two. The shingles on the roofs of some, and the wooden sides of others, made all this havoc. It thus becomes an act of mercy to prohibit the erection or re-erection of such; and, in doing so, the autocrat has only followed the mode of free America, in whose greater cities and towns, as well as in St. Petersburg, the construction of timber dwellings is greatly discouraged, and in some cases and places strictly prohibited.

As there is no stone near the Neva, save the ice-carried boulders which lie scattered about, most of the houses are of brick; but the people call all these *stone* houses. They are plastered carefully over, and as the designs are usually excellent, they look very well. As they get older they are coloured, and so continue renewing their youth from year to year. The result of this plastering system is, however, that a constant repairing becomes necessary, in order to efface the inroads which time and frost conjointly make; and into whatever quarter you go, you find buildings, either in need of repairs, or in the hands of workmen who are busy making them.

The *insides* of these houses have but little air of *comfort* about them. The stoves of glazed bricks, so well known to most readers, are found in every direction; and while they give out heat for thirty hours after the fire goes down, they neither look comfortable nor ornamental. The floors, moreover, are usually of polished wood, uncarpeted, giving to the entire room an appearance of coldness, newness, and emptiness, which to *us* is anything but inviting. They are awkward things, besides, over which to lead a lady to dinner; for if your gait be too erect, or your heel be set down too sharply, you are apt to lose your balance, and slide about in a most ungraceful fashion. Some of them are very costly, both because they are made of rare wood, and because great labour and skill are exerted in inlaying them. The palace of Tzarsks Cels, from which Nicholas dated his recent proclamation of war contains floors which must have cost thousands of pounds. The same may be said of the winter palace in town. So particular are the better class of Russians about their floors, that a large number of men live by waxing them. The most that can be said for them is, that they are cool in summer, and always look clean. Indeed, they are, I believe, the cleanest portion of a Russian house; for the people of the land seem as fond of much dirt as they are of much sleep, and no one who knows them will question their partiality and capacity for the latter enjoyment. But their abodes are just what they like—made for show. I am told that their language contains no word equivalent to our word *home*. They have no *homes*, but live in excitement and publicity, neither possessing, valuing, nor missing domestic comfort. I speak, of course, of the mass.

In walking through Petersburg, one is impressed by the emptiness of its streets. You cannot compare them with those of London or any other beehive in Britain. You go through many, filled entirely or chiefly with hospitals, academies, barracks and other public offices, many of which seem as dull as if shut up and deserted. The city appears too big for a population of half a million. Every now and then, too, you come on some grand palace belonging to prince or count Somebody; but these piles look, in many cases as forlorn as dirty windows and impoverished or absent owners can make them. If the great gate should be open, and you look into the centre court, you will probably find it full of stone, wood, and confusion, and void of all living things except a lazy *doornik* or two, who look just like the place. Of course there are others in excellent keeping; but I was much more struck with the pretensions than the consistency of most. What difference winter may make I cannot say, but I speak of what I saw in summer. As for *the* palace, it is built in the Louis Quatorze style, and is capable of housing, some say 4000, some say 6000 souls. The public and private rooms of the imperial family are magnificent,—some of the former almost beyond conception grand. The collection of paintings is imperial, that of jewels no less so, and the *cameos* and *intaglios* can scarcely be counted for number, and cannot be surpassed for value or beauty. But even within these princely walls tidiness has a battle for existence; for although the apartments of the great are all that can be desired, I am told that the kitchens should not be visited before dinner, if visited at all.

With only grand buildings ever before your eyes, you are led to ask, Where do the poor live? There are immense numbers of men and women in the city, who are among the most abject of creatures. Where then do such burrow, and hide their poverty and filth? They do so out of sight somewhere, and yet are in the city. I believe many of these *moujiks* live behind the great mansions, in the spaces which lie between one grand street and another. But their dwellings must not be seen; and Petersburg is so contrived, that the stranger requires to be bolder than I was if he seek them out. The city of the Tzar is indeed a city of palaces; but it is meant only to be looked at from one side—the front. Let no man go behind the ornate facade. This was never intended, and will not do. In this respect it is but a type of the whole empire, which is no better than a rough and rotting plank, whose ugliness and defects are hid by the thick varnish with which it is smeared. Russia and its capital put on as imposing an appearance, and hide as much weakness and misery, as any country or city of the world.

Moscow and Kief are holy cities. In the former there are nobody knows how many churches; and though Petersburg cannot vie in this respect with the ancient metropolis, it can show quite as many such buildings as there is any need for. With few exceptions, they are built in the Byzantine style, and are an odd but sometimes beautiful compound of Greek pillars, irregular towers, and gilt or painted domes. Inside, all is painting, gilding, plating, and pictures. These *pictures* are of course worshipped, although the dignitaries prohibit *images* of every kind in sacred edifices, and take great credit to themselves for so doing. But what matter? Doubtless the Greek church, like the Roman, prohibits in form the adoration of anything or being but God only; and yet any one knows that the deluded souls within her pale do and must worship the pictures set before them. Representations of her saints, the virgin mother, and our Lord, are hung up in the sight of the people, and the people bow before them, and lay their foreheads in the dust, worshipping the creature of man rather than the Creator of all, because wholly unable to understand why they should bow to that which is not sacred, and why, if the thing bowed to be sacred, it should not be adored. Only

ok at the pavement, covered with prostrate men
nd women, and say, are these not worshipping
ie things in presence of which they are abased?
f they be not, what or whom are they thinking of
ad worshipping? Only look at the costly gems,
r votive offerings, with which these daubs are
dorned, and say, did not the giver adore the
gure on which he hung them as much as any
ther man adores the idol which he decorates?
ust reflect on the profound ignorance of the peo-
le, and say, is it possible that, in these circum-
tances, they can do anything else? Every onlook-
r must see that they do worship them. The ques-
on lies beyond argument, and may be decided by
he evidence of the senses. Superstition occupies
he place of religion; and I am sorry to add that
orality, or the practice of it at any rate, forms no
art of the superstition of a Russian. Licentious-
ess too often characterizes the higher classer, kna-
ery the shopkeepers; and drunkenness the common
eople.

LIVE FOR ETERNITY.

bright or dark eternity in view,
With all its fix'd, unutterable things,
What madness in the living to pursue,
s their chief portion, with the speed of wings,
he joys that death-beds always turn to stings!
nfatuated man, on earth's smooth waste
o dance along the path that always brings
Quick to an end, from which, with ten-fold haste
Back would he quickly fly, till all should be re-traced!

Our life is like the hurrying on the eve
Before we start, on some long journey bound,
When fit preparing to the last we leave,
Then run to every room the dwelling round,
And sigh that nothing needed can be found;
Yet go we must, and soon as day shall break;
We snatch an hour's repose, when loud the sound
For our departure calls; we rise and take
A quick and sad farewell, and go ere well awake.

Rear'd in the sunshine, blasted by the storms
Of changing time, scarce asking why or whence,
Men come and go like vegetable forms,
Though Heaven appoints for them a work immense,
Demanding constant thought and zeal intense,
Awaked by hopes and fears that leave no room
For rest to mortals in the dread suspense,
While yet they know not, if beyond the tomb
A long, long life of bliss or wo shall be their doom.

What matter whether pain or pleasures fill
The swelling heart one little moment here,
From both alike how vain is every thrill,
While an untried eternity is near!
Think not of rest, fond man, in life's career;
The joys and griefs that meet thee, dash aside
Like bubbles, and thy bark right onward steer
Through calm and tempest, till it cross the tide,
Shoot into port in triumph, or serenely glide.

C. Wilcox.

SPEAK THE TRUTH.

Oh, ne'er let falsehood stain thy tongue,
Nor let thy lips betray
Thy better reason into wrong,
But Truth's great law obey!
The way to fortune all inquire,
But Truth 's a nobler prize;
For Truth—immortal as its sire,—
Still lives when fortune dies!
Then ne'er let falsehood stain thy tongue,
Nor let thy lips betray
Thy better reason into wrong,
But Truth's great law obey!
'Tis truth that bids the bosom glow
With independent worth;
It is a joy that angels know,
And maketh heaven on earth:
Who keeps the truth—though poor—may look
The whole world in the face!
Then ne'er let falsehood stain thy tongue,
Nor let thy lips betray
Thy better reason into wrong,
But Truth's great law obey!

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 238.)

GRIFFITH OWEN.

We have many proofs, that during the year 1703, our beloved Friend was industriously engaged in his Master's service. There are records of his attendance at many meetings, and he was on various important appointments. In the Yearly Meeting he drew the epistle to London, and he was with others appointed to draft something on Discipline, to be produced to the Yearly Meeting, in 1704. He was appointed in his Monthly Meeting one to prepare a proper form for a marriage certificate; those previously used not having been uniform. The form proposed by the committee, was adopted by the meeting, and is the same now in use.

In the Third month, 1704, he received the unity of his friends in visiting the meetings at West River, in Maryland. In this little journey which appears to have occupied the Fourth month, he was accompanied by his friend, Samuel Jennings. At the Yearly Meeting, in the Seventh month, the committee appointed in 1703, produced two essays, one on discipline and one on practice, both of which were approved and sent down to subordinate meetings for their government. Early in the Tenth month of this year, Griffith Owen was married to Sarah Saunders. Of the time of the decease of his first wife we have no information.

The correspondence with New England Yearly Meeting, having been long dropped, Friends were informed at Philadelphia Yearly Meeting in 1705, that Friends in New England wished to renew it. It was agreed to appoint Samuel Jennings, Thomas Story, Griffith Owen, Edward Shippen, and Thomas Gardiner, "to write as necessity shall suggest to the Yearly Meetings of Maryland, Virginia, Carolina, Long Island, and Rhode Island."

In 1706, a young and zealous man, who wished to be doing something for the cause of Truth prepared a book for publication on a variety of important points. Griffith Owen was one of the committee appointed to examine it. From the minute made on the occasion, it appears that the Friends after examination reported their sense, with which the meeting united, that it would not be well either for the young man or Friends to have it in print, the subject being already treated on by several authors, "And he being but young in the Truth, it would be more profitable for him to forbear much writing after such a manner, until he has come to a greater growth and settlement in the Truth." What a pity it is, that some of the modern writers upon the principles of Friends, had not submitted their works to such discriminating judges and honest advisers. Many unripe sentiments that have been given though the press, as well as not a little unsound doctrine, would have been buried in oblivion, if the writing containing them had been submitted for revision and final judgment, to men lovingly acquainted with the Truth for and in themselves, zealous for its support, and quick of discernment as to the tendency of that they were examining. The warm expressions of the indiscreet zeal of youth really loving the Truth, but laying itself open to the attack of enemies by unguarded language,—the open support of error by those who have not seen into the spirituality of the gospel dispensation,—the sophistry of covert design to make Quaker doctrines appear to conform with those principles of other professors, from which our worthy forefathers were called, and against which they bore a unanimous testimony, all these would have been amended or suppressed by such a tribunal.

From 1706 to 1709, Griffith Owen does not appear to have travelled abroad, unless to attend the Yearly or General Meetings for worship, of which a number were then held at different places within the limits of Philadelphia Yearly Meeting. During those years we have, however, many traces of his labour in various ways for the best interest of religious society, and for the everlasting good of others. These being in many respects similar to what we have recorded of former years, need no especial comment. Patrick Henderson and Samuel Wilkinson, two very valuable Friends in the ministry, from Ireland, on a religious visit, having by some means, in the exercise of their ministerial labours, given offence to some malicious persecutors, they were arrested, imprisoned, and brought to public trial. This occasioned, although the imprisonment was probably very brief, considerable excitement, and the sufferers drew up a statement of the whole affair for publication, but Griffith Owen and a few other Friends, to whom it was submitted, advised that it should not be printed at that time. Patrick Henderson, who prepared the document, yielded to their opinion, and no copy being preserved among the records in Philadelphia, the particulars of this remarkable transaction cannot now be ascertained. During the Yearly Meeting of 1708, a communication was received from the Quarterly Meeting at Flushing, requesting the advice of Philadelphia Meeting of Ministers relative to some points of discipline; the meeting appointed Griffith Owen, John Salkeld, Caleb Pusey, and some others, to prepare an answer thereto. The answer prepared was to the satisfaction of the meeting, and being approved by it, was forwarded to Samuel Bowne.

In the Eleventh month, 1708, Griffith Owen informed the Friends of his Monthly Meeting of a concern, which he had long felt to visit Friends on Long Island, Rhode Island, and New England. In the Twelfth month, the following certificate was approved and signed in the Monthly Meeting.

"To Friends on Long Island, Rhode Island, and New England, whom these may concern, the Monthly Meeting of Philadelphia sends, greeting.

"Dear Friends and Brethren,—In a measure of that Divine love, wherewithal God, in his great mercy and universal grace, in this latter age of the world, hath visited us, and also made us partakers of, do we dearly salute you, desiring that this heavenly love and peace with all other spiritual blessings, may increase and be continued amongst you to our mutual comfort in Jesus Christ our Lord.

"Now we give you to understand that our dear, well-beloved friend, Griffith Owen, laid before our meeting that it had rested upon his mind for a considerable time to visit Friends in the abovementioned parts, and places that way, and desired a certificate of this meeting, which, according to the good order of Truth practised amongst us, appointed some Friends to make inquiry concerning him. This we have to certify you concerning our friend, that he is a man of an innocent life, and blameless conversation, and his service and labour of love in the work of the gospel, as a minister of Jesus Christ, is well esteemed and received amongst us. As such we recommend him to our brethren, where his lot may be cast, desiring that the God of all grace may enable, support and attend him by the assistance of his Holy Spirit, in this his undertaking, for the honour of His truth. That so he may return with sheaves in his bosom, receiving the answer of well-done, good and faithful servant. This is the *one thing needful* for us all

in our particular gifts, stations and places in the church of our Lord and Saviour Jesus Christ; unto whom we recommend this our friend and brother, and subscribe ourselves your friends and brethren therein."

"Signed at our said meeting,
the 25th of Twelfth mo., 1708."

He also laid his concern before the General Meeting of Ministers, held First mo. 26th, 1709, where it was also united with, and soon after in company with his friend, John Salkeld, he left home to perform this visit. They were absent on this journey about four months, attending the Yearly Meeting on Rhode Island, in the Fourth month, from which meeting they brought back testimonial of their gospel service. The account they were enabled to render on their return, of their labour of love, and the effect thereof, under the Master's blessing, was satisfactory and comforting to their friends.

We shall not follow closely Griffith through gospel labours at home, and in its vicinity, during the remaining years of his life. He continued diligent in the attendance of meetings in Philadelphia, and was frequently at others, not far remote. Being, in 1712, appointed by the Yearly Meeting in conjunction with Thomas Story, to prepare an epistle to London, they prepared one of which a considerable part relative to slavery is already in print. Passing by that important measure, we would present an extract from the epistle setting forth the prosperous condition of the Truth in these American parts.

"By the several accounts from our Quarterly Meetings, we understand that the present state of the church in these parts is peace. Our discipline is advanced, advancing, and proceeding towards perfection. Some young men of late have been raised up in the ministry, and the visitation of the Lord still continues and is held forth unto such as are not yet reduced into perfect obedience; and we also understand by such here amongst us as have travelled of late in several other parts of this continent of America, that there is great openness still in divers countries, and in some places new meeting-houses erected, where the sound of the gospel hath not long been uttered. Such is the goodness of our God; such his love to mankind!"

(To be continued.)

The Beginnings of Evil.

Old Humphrey.

As a trickling stream becomes a mighty river, so evils that appear harmless in their origin, oftentimes become fearfully influential. There is not an error, reader, that has not its evil consequences, nor a sin that is long separated from sorrow. A breeze of anger becomes a blast, and a blast increases to a whirlwind. The thought of hatred is followed by words of bitterness and deeds of violence. Some of the direst scourges which plague the world were once other than they are. They were hardly noticed, they are now notorious; they were weak, they are now powerful; they were limited, and now they are extended in the earth: "Behold how great a matter a little fire kindleth!" James iii. 5.

On trifling errors keep your watchful eyes,
For great events from little causes rise.

War did not always exist clothed in scarlet, with a sword girt on his thigh, going forth with the sound of the trumpet. Envy and anger were his parents; covetousness, ambition, and cruelty were his companions. At first he was a dwarf, but afterwards he bestrid the earth as a giant, inventing his hellish instruments of destruction, retaining his warriors ready armed for the battle, and sending forth his legions on lawless errands of rapine and death. War began with the first man that was born of woman. When will men learn to love one another? When will they beat their swords into ploughshares, and their spears into pruning hooks, and practise war no more. "From whence come wars and fightings among you? Come they not hence, even of your lusts? James iv. 1.

War is the friend of sin—the cruel, blind,
Implacable oppressor of mankind.

Idolatry is the seed of error, and abundant is the harvest of iniquity it has brought forth. Man was not satisfied in looking to the Lord, he must needs make himself a god and worship it; he must form for himself a graven image, and fall down to it, and thus a flood of unrighteousness was let loose on the earth. A dead image symbolized the living God; and idols of gold, silver, iron, wood, and stone, were set up as representations of the Lord of lords and King of kings. Dagon, Ashtaroth, and Baal were followed by Jupiter, Apollo, Mars, and Mercury, and the innumerable idols of the Hindoo and Oriental world. Truly the name of idolatry is "Legion," for there is no end of its strange gods and its strange delusions; "Thou shalt not make unto thee any graven image, or any likeness of anything that is in heaven above, or that is in the earth beneath, or that is in the water under the earth: thou shalt not bow down thyself to them, nor serve them."

Bow lowly down at heaven's eternal throne,
And praise and magnify the Lord alone.

Popery was once a little child, harmless and little known; infantine and lisping in its language. So feeble was it that it could not walk alone; but it was nourished at the breast of Error, dandled on the knees of Pride, and brought up by Bigotry, Selfishness, and Tyranny, till it became a man of sin, a monster of iniquity, "a full blown antichrist." Weak and harmless as antichrist was, he became strong, and deceitful, and cruel: for there was "given unto him a mouth speaking great things and blasphemies; and it was given unto him to make war with the saints, and to overcome them. And all that dwell upon the earth shall worship him, whose names are not written in the book of life of the Lamb slain from the foundation of the world." Rev. xiii. 5–8.

O, let us leave all priestly pomp and pride,
And trust alone in Jesus crucified!

Slavery, or rather the slave-trade, was as an acorn set in the soil, springing up, striking its roots deep, and throwing out its branches wide. Covetousness and cruelty formed an unholy compact, might overcame right, one act of oppression succeeded another, till man, instead of being a brother, became a task-master and a tyrant, multiplying the miseries of the earth, crowding the vessels of the deep with cargoes of victims, and loading the air with agonizing sighs and groans. Even now the unrighteous traffic, the Cain-like cruelty is continued, and the blood of ten thousand slaves is crying unto Heaven from the ground: "I returned, and considered all the oppressions that are done under the sun: and behold the tears of such as were oppressed, and they had no comforter; and on the side of their oppressors there was power; but they had no comforter." Eccles. iv. 1.

Not always shall the captive weep and wail,
Not always shall the iron hand prevail.

Intemperance wins its way, at first, by slow degrees: as one evil thought prepares the heart to receive another, so intemperance smooths the path for every evil. What the roll of the drum and the blast of the brazen-mouthed trumpet are to the soldiers on the field of battle, the sparkling glass is to the sinful passions of men—animating, encouraging, and urging them onward in their mad career. Truly has it been said, "War has slain its thousands, but intemperance its tens of thousands." How harmless does intemperance appear in a season of festivity! but, gradually, folly, temptation, and riotous living render it deadly. It deceives the young and the old; it draws together the prodigal, the drunkard, the libertine, and the gamester; it promises pleasure, but it afterwards inflicts pain, and sows the seeds of ruin, remorse, and destruction.: "Look not thou upon the wine when it is red, when it giveth his colour in the cup, when it moveth itself aright. At the last it biteth like a serpent, and stingeth like an adder." Prov. xxiii. 31, 32.

By different names we different sins may call,
But mad intemperance produces all.

Avoid, then, the beginnings of evil; for when sin is once set in motion it is no easy thing to arrest its progress. Cruel war, sinful idolatry, soul-deceiving Popery, oppressive slavery, and destructive intemperance, are but a few of the many evils that cast their shadows on the world. Would you walk safely, walk humbly; would you reach the world of glory, keep in the narrow way, and call upon the name of the Lord; for "the Lord is nigh unto all them that call upon him; he also will hear their cry, and will save them." Psa. cxlv. 18, 19.

In Jesus' holy name put up your prayer,
And God will make you his eternal care.

For "The Friend."

The Wisdom of Jesus.

Nothing which exalts itself against the eternal and immutable wisdom of our Great High Priest can prosper. A counterfeit of this wisdom, by the artifice of the serpent, may for a time pass as the genuine coin, but the skilful will detect its fraudulent and worthless character, and be enabled to discriminate between the true and the spurious. None, however, except those who have been taught in the school of Christ, and who still remain willing that He should continue to rule over and teach them, will be qualified to realize and rightly value the things which belong to the house that wisdom has builded, and that correspond to the "seven pillars which she has hewn out," and have judgment to detect and reject that which does not proceed from her skilful and beautiful workmanship.

How necessary carefully to examine the different influences which surround us, in the light of Christ, before we suffer ourselves to be drawn upon any decided and prominent ground of action; and see if the cause which we are about to espouse, is consonant with the wisdom which cometh from above: for we may rest assured that all the fruits of the wisdom which cometh from beneath, however artfully they may be decorated and concealed for a season, will eventually be seen in their own hideous deformity. This wisdom may acknowledge all the virtues—descant much upon love, impartiality, and forbearance—lay a strong and loud claim to the mantle of charity, while it can not possibly possess any of these in their genuine quality. The frame work of a fabric like this which any may endeavour to raise and support by their own strength, and strive to ornament with the heavenly virtues, is only a house of man's building. If there is a neglect to do His heaven sayings, which can only be heard by the ear which He has mercifully unstopped, no matter how fair the superstructure, it "shall be likened" to a house built upon the sand: "and the rain descended, and the floods came, and the winds blew, and

eat upon that house; and it fell, and great was he fall of it."

The wisdom of man may for a time appear to ourish in religious affairs, but sooner or later it ust wither and die, and all who endeavour to uild under this influence, must work in vain, and ave no other remuneration at the conclusion of heir labours than disappointment and remorse: ut on the other hand, if there is a bowing under he eternal power of Jesus, and confession is made y the mouth to salvation; if there is a submis- ion to his blessed yoke which is easy, and a will- ngness to bear his holy burden which is light, we hall then, and not till then, be followers in the ootsteps of our beloved ancient Friends, and wit- ness the principles and doctrines which they in- ulcated, to brighten in our view, and become nore and more precious in our sight, and shall be repared truly to deprecate as well as commiserate hat misguided vision and perception, against vhich the woe still goes forth, as it was formerly pronounced by the prophet Isaiah, after this man- ner. "Woe unto them that call evil good, and good evil; that put darkness for light, and light for darkness; that put bitter for sweet, and sweet for bitter! Woe unto them that are wise in their own eyes, and prudent in their own sight!"

A life of caution, devotion and fasting is required, hat we may be permitted to stand as in the gates of that wisdom which cometh from above, and experimentally know that all her paths are peace; but how seductive is a pleasure-loving spirit, and uccessful in alluring many from the animating beams of the Sun of Righteousness, under whose invigorating rays we can only breathe the vital air, which is essential for our spiritual health. This condition is necessary, that with innocent boldness we may progress in the work and heavenly war- fare, having an ardent concern to possess all the christian virtues in their reality, showing forth the fruit of the spirit in our daily intercourse:— "love, joy, peace, long-suffering, gentleness, good- ness, faith, meekness, temperance: against such there is no law." (Gal. v. 22, 23.)

New York, Fourth mo., 1855.

If at any time we are injured by others, and ind feelings of anger arising in ourselves, we hould ever be careful, before attempting to re- prove and amend them, to obtain a victory over our own hearts. Otherwise our reproofs, though fully deserved, and although it may be our duty o give them, will be likely to be in vain."

Selected For "The Friend."

Useful Hints.

As every one maintains a holy care and watch- fulness over himself, it will greatly conduce to love and unity, and confirm and strengthen church fellowship and communion, which is in Christ.

In this life, Christians must not only expect to do God's will, but to suffer it: and the latter is often more difficult than the former.

To be able to bear provocation is an argument of great reason, and to forgive it, of a great mind: revenge dwells in little minds.

A little serious reflection may convince a sin- cere mind, that every degree of hatred we conceive, is a proof that we have not yet fully attained the benefit intended for us, by the sufferings and death of Christ.

A professor of christianity, and a follower of Christ, may be very different characters. The Christian's life is in Christ, on Christ, by Christ, to Christ, for Christ, with Christ.

Though sound principles are highly important in guarding the mind against the invasion of error, we may value ourselves upon them so much, as to forget that they can neither divest death of its sting, nor quiet a guilty conscience.

Were men but convinced that the malevolence they feel is altogether their own, and that if it were once subdued in themselves, the malevolence of others could not essentially harm them; they might see the absurdity of expecting to overcome evil by evil, and cease from worrying and destroy- ing each other.

If He who suffered to save us, had been in the smallest degree actuated by a vindictive spirit, it is difficult to conceive how He could have wrung out the dregs of the cup of trembling, which He drank for our sakes; or, in the hour of extremity, have pleaded as He did, for the forgiviness of his crucifiers.

Divine love is a criterion by which not only our own actions, but all religious opinions and doc- trines may be tried; and we may be assured that such as are not consistent therewith, however spe- cious, are defective, and unfit to be entertained.

As sincere repentance ever precedes true con- version, our having undergone this everlastingly important change, ought ever to be doubted, while any degree of rancour, envy, or contempt remains in our minds; because such malignant tempers manifest that those who are subject to them, have not yet yielded themselves to the merciful govern- ment of the Prince of Peace, who, while universal mankind were yet in the bondage of corruption, regarded them with a pitying eye, and clothed himself with human nature for their deliverance.

"God," saith the Apostle, "commendeth His love unto us, in that, while we were yet sinners, Christ died for the ungodly." Here is the pat- tern by which every one who professes to be a follower of the suffering Lamb of God, should try himself; and by which, if he is honest to his own heart, he may discover his advancement in the work of redemption; for it is not difficult for a sincere believer to conceive, that if the Almighty had regarded mankind in their lapsed condition, with such aversion as they often feel towards each other, the work of our salvation could never have taken place, or be ever effected in the soul of any one of all the sons and daughters of men.

A true convert to saving mercy, is he alone, who fleeing for refuge from his own evil tempers and propensities, to the arms of Divine love, expe- riences that holy, seamless garment, which death itself could not divide; to screen him, not only from the punishment due to his own demerits, and from the unkindness of those by whom offences come; but also and particularly, from the inva- sions of that vindictive and implacable spirit, which, so long as it has any room in our hearts, incessant- ly accuses the "brethern before God, day and night;" and of which, every injurious suspicion we entertain, every unkind expression and slander- ous insinuation we are betrayed into, one against another, is an ample and unequivocal proof.

Gunpowder.—The Liverpool (England) Stan- dard says:—"Some of the effects of ignited gun- powder are wonderful. When gunpowder is heaped up in the open air and inflamed, there is no report, and but little effect is produced. A small quan- tity open and ignited in a room forces the air out- wards, so as to blow out the windows; but the same quantity confined within a bomb, within the same room, and ignited, tears in pieces and sets on fire the whole house. Count Rumford loaded a mortar with one-twentieth of an ounce of powder, and placed upon it a twenty-four pound cannon: he then closed up every opening as completely as possible, and fired the charge, which burst the mortar with a tremendous explosion, and lifted up its enormous weight. In another experiment, Count Rumford confined twenty-eight grains of powder in a cylindrical space which it just filled, and being fired, it tore asunder a piece of iron which would have resisted a strain of four hun- dred thousand pounds."

The fountain of content must spring up in the mind, and he who has so little knowledge of hu- man nature, as to seek happiness by changing any- thing but his own disposition, will waste his life in fruitless efforts, and multiply the griefs which he purposes to remove.

THE FRIEND.

FOURTH MONTH 21, 1855.

Philadelphia Yearly Meeting is still in session, when our paper is going to press. We shall defer entering into any notice of its transactions, up to the present time, except to say that the Epistle from the original and regular Yearly Meeting of Ohio, of which Benjamin Hoyle is clerk, was read on Second-day morning, and a committee was subsequently appointed to prepare, as way may open a reply to that, and to each of the other epistles received.

The business of the meeting has continued to be transacted in usual course.

SUMMARY OF EVENTS.

EUROPE.—News from England to 31st ult. *The Vienna Conference.*—The two first of the four bases of peace had been accepted by the representatives of Russia, but se- rious difficulties had occurred in relation to the third, which proposes to put an end to the preponderance of Russia in the Black Sea. The demolition of Sebastopol was not demanded by the allies, but the means proposed by them to effect the reduction of the Russian power in that quarter, were such as the Russian Plenipoten- tiaries were not authorized to accede to. The Plenipo- tentiaries have all sent to their respective Governments for instructions. The fourth point yet remained for dis- cussion. This relates to the protectorate over the chris- tian subjects of the Porte, which Russia claims a right to exercise, by virtue of certain treaties. This claim the allies wish renounced. *The War.*—There had been several attacks and repulses on the lines of the con- tending armies, both at Sebastopol and Eupatoria, in which on the whole the losses were nearly balanced on both sides. The condition of the allied army is said to be much improved, and both they and the Russians continued their works of assault and defence. A formi- dable Russian force is assembled around Eupatoria, and virtually besieges the place. The Russian forces in the Crimea appear to be fully equal in strength to those of the invaders. A manifesto from the "Holy Synod" of the Russian church has appeared, inciting the nation to war, in defence of the faith.

FRANCE.—The Minister of Foreign Affairs has gone to London to hold a consultation with the British Gov- ernment, and will afterwards proceed to the Conference at Vienna. It was officially announced in the Moniteur, that the Emperor and Empress would visit Queen Victoria at London, in the middle of this month.

SPAIN.—A despatch from Madrid, dated Third mo. 29, states that Espartero had resisted the demand for a democratic modification of the Ministry, made by the leaders of the militia. These attempts at disorder failed, and Madrid was tranquil. The cholera was raging in the provinces of Arragon, Zamora, Valencia, and Lo- grono.

PRUSSIA.—The difficulty between Austria and Prus- sia is increasing. The Prussian Cabinet has retorted on Austria's circular of March 8th, by sending a circular to the Prussian representatives at the German Courts, respecting the Austrian intrigues with the Germanic Diet. The language of the document is said to be quite hostile to Austria, which is charged with dissimulation, in threatening Prussia with military dangers, while to the rest of Europe it talks confidently of peace.

SWEDEN.—Notwithstanding the declarations of neu- trality by Sweden, the Government is fitting out a fleet provisioned for three months.

GREAT BRITAIN.—Parliament had agreed to the

request of Sardinia for a loan of £2,000,000 sterling—one million to be immediately advanced from the public treasury, and the other million one year hence, if necessary. It is proposed to borrow this money at 5 per cent., and loan it to Sardinia at 4 per cent. Nine ships of the British squadron sailed from Deal, on the 28th, for the Baltic. It was intended to establish a strict blockade of the ports in the Baltic and White Seas. In the House of Commons, the second reading of the bill to abolish newspaper stamps had passed by a large majority. The disclosures made before the committee of inquiry into the conduct of the war, are stated to be of an appalling nature.

Liverpool.—The cotton market was active, the sales of the week amounting to 82,000 bales, nearly one-third of which was taken by speculators; the range of prices was from 5*d.* to 5¾*d.* The market for breadstuffs was dull, with a downward tendency. Philadelphia and Baltimore flour, new, 36*s.* to 40*s.*; old, 42*s.* to 43*s.* Provisions were dull, and prices had slightly declined.

London.—The money market was easier. Consols, 93¾. The bullion in the Bank of England had increased £700,000.

CHINA.—Shanghai dates to Second mo. 6, state that the French had again attacked the city, and had been repulsed with loss, by the insurgents. The insurgents still hold the country around Canton.

AUSTRALIA.—Sidney dates to First mo. 12, have been received. It was intended to abolish the system of granting licenses to the gold hunters. For a considerable period, there had been a steady decrease in the production of gold. The following is an estimate of the total product of the Australian mines. Previous to the year 1853, 3,538,422 ounces; during 1853, 5,193,057 oz.; during 1854, 3,022,596 oz., making a total of 9,754,077 oz., worth about $195,000,000. An expedition was about to be undertaken by Dr. Leatherwood, an American, to explore the interior of Australia.

CUBA.—Havana dates to the 10th, have been received. The papers furnish little news of interest. A general feeling of discontent is said to prevail among the Creoles. A number of assassinations had been perpetrated during Holy Week.

UNITED STATES.—The Government has determined to despatch a squadron to Cuba, under command of Commodore McCauley. It is reported that the squadron is sent to demand redress for alleged outrages. The Administration have detached Col. Delafield of the Engineers, and two other military officers, on special duty, to proceed to Sebastopol to inspect the works there, and view the operations of the war. They are ordered to depart as soon as possible.

Utah. — Salt Lake dates to Second mo. 7th, have been received. The appointment of Col. Steptoe as Governor of the Territory, in place of Brigham Young, and other changes, took the Mormons by surprise. There had been a serious collision between the U. S. soldiers and the citizens, but the occasion of it was merely a tavern broil. In order to prevent further difficulty, the civil authorities have forbidden the sale of ardent spirits in the city. The Territorial Legislature have passed an act called the "Gift Law," by which the faithful are to vest all their real and personal estate of every kind in Brigham Young. The Mormons were said to enjoy peace, plenty and prosperity. They were busily engaged in fortifying their towns with mud walls, about 8 feet in height.

Louisiana.—There is a very general complaint in this State, of the prospects of the sugar crop. Heavy frosts, cold weather, and want of rain, have seriously injured the cane.

New Hampshire.—The snow was three feet deep at Gorham, N. H., last week. It has been five and six feet deep during the whole winter.

California.—On the 13th, the steamship Prometheus arrived at New Orleans, from San Juan, bringing dates from San Francisco to Third mo. 24. Business at San Francisco was very dull, and sales were being made at greatly reduced prices. The rains had improved the prospects of the miners, and the growing crops promised well.

Pennsylvania.—A law has passed the Legislature, which repeals the existing License Laws of the State. The provisions of this bill in connection with previous enactments, imposes onerous restrictions on the traffic in intoxicating drinks, and goes as near to Prohibition, as the vote of the people on that question is supposed to warrant. The law goes into operation on the 1st of Tenth month next, and makes it unlawful to keep any place, where may be sold and drank any kind of spirituous or malt liquors.

New York.—The President of the Croton Water Board says the importance of more reservoir room. The now furnish 30,000,000 of gallons daily, or 46 gallons to each inhabitant. More than half of this immense quantity is believed to be wasted. The steamship Asia which sailed on the 11th, took out $690,000 in specie. The specie in the N. Y. Banks, is rapidly diminishing, and it is said that some of them have commenced calling in their loans, payable on demand. Mortality last week, 479.

Philadelphia.—Mortality last week, 191.

Miscellaneous.—The Gardiner Fraud.—Corcoran and Riggs have paid into the U. S. Treasury about $100,000, attached in their hands by Government, being about one-fourth the amount fraudulently obtained by Gardiner, under the award of the Mexican Commission.

Expedition against the Indians.—A St. Louis paper contains the general orders issued by the Government, for a military expedition against the Indians of the Plains. The expedition is to be under the command of Gen. Harney.

A Capital Crime.—Richard Winn and Alfred Woodley, two of the crew of a vessel which loaded some time ago in Roanoke river, were tried lately in Bertie county, N. C., on a charge of receiving and secreting a slave on board the vessel, with a view to his escape. Winn was acquitted, but Woodley was found guilty, and will have to suffer *the penalty of death.*

A Substitute for Tobacco.—A patent has been obtained for the preparation of maize leaf, as a substitute for tobacco. It is said to have a sweet and pungent flavour, and the patentees claim that it is a pleasant tonic, and promotive of good health!

Proscription. — The Senate of Massachusetts have adopted a resolve with only one dissenting vote, that no foreigner shall be eligible to office in that State.

Southern Manufactures.—There are now in Georgia fifty cotton factories in successful operation.

Cranberries on Uplands.—It is stated in the New England Farmer, that a man named Needham, of Danvers, Mass., raised, the present season, 83 bushels of cranberries on 100 rods of land, which he sold at $3.00 and upwards per bushel.

The Ton Weight.—The United States District Court has decided that the legal weight of a ton of coal is 2,240 lbs., and that the coal dealers have no right to give a smaller number of pounds.

Women's Rights.—By a law recently passed in Michigan, a married woman may receive, buy, sell, devise, mortgage, &c., her real and personal property, without the consent of her husband, and also sue and be sued, without joining the husband in the suit in either case.

The Death Penalty.—The House of Representatives of Wisconsin, by a vote of 44 to 27, have restored the death penalty in that State. The Senate have yet to act upon the matter.

State of the Ohio River.—On the 13th, there was seven feet five inches water in the channel, and falling.

WEST-TOWN BOARDING-SCHOOL.

Assistant Teachers are wanted in the Boys' department of this Institution. Application may be made to either of the undersigned.

HENRY COPE, } Philad.
SAML. BETTLE, JR., }
SAML. HILLES, Wilmington, Del.

WESTGROVE BOARDING-SCHOOL FOR GIRLS.

(*Located at old Westgrove meeting-house, Chester county.*)

This School will be opened on the 7th of Fifth month next, and continue in session twenty weeks. It is designed to furnish an opportunity to young women for acquiring economically a competent English education. Attention will be given to the preservation of health, the general cultivation and discipline of mind, and a concern exercised to inculcate principles and habits in accordance with the views of the Society of Friends.

For circulars containing other necessary information, apply to THOMAS CONARD, Principal.
Westgrove P. O., Chester Co., Pa.

Second mo., 1855.

RECEIPTS.

Received from J. Maule, agt., O., for Daniel Atkinson, $2, to 20, vol. 28; from J. T. Frame, agt., Io., for Ann Raley, $2, vol. 28, Nath. Satterthwaite, $2, vol. 28, and Benj. Ball, $3, to 9, vol. 29; from Jacob Haines, agt., Pa., $2, vol. 28, and for Jos. McCarty, Aaron McCarty, and C. Ellwood, $2 each, vol. 28.

WEST-TOWN BOARDING-SCHOOL.

The summer session of the School will commence on Second-day, the 7th of Fifth month next. The pupils will be conveyed by railroad to West Chester, where conveyances will be in waiting to take them to the School, on the arrival of the morning and afternoon cars, on Second-day, the 7th, and Third-day, the 8th of Fifth month. The children will get their baggage the day after their arrival. The cars leave the depot, south side of Market street, above Eighteenth, (formerly Schuylkill Fifth street,) at 7¼ o'clock, A. M., and 4 o'clock, P. M. The agent of the school will be at the railroad depot on Second and Third-day afternoons, and will furnish pupils with tickets, and accompany them to West Chester. Those who go by the *morning* train will be furnished with tickets by a person in attendance. To those who procure tickets as directed, the fare from Philadelphia to the School, including baggage, will be one dollar, which will be charged to the scholar at the School. All baggage should be distinctly marked West-town, and with the name of the owner, and should be sent directly to the railroad depot. Applications for admission must be made to Joseph Snowdon, Superintendent at the School, or Joseph Scattergood, Treasurer, No. 84 Arch street, Philadelphia.

The West-town office is at Friends' Bookstore, No. 84 Arch street, where all small packages for the pupils left before 12 o'clock on Seventh-days, will be forwarded. *All letters* for the pupils and others at the School, should be sent by *mail*, directed to *West-town*Boarding-School, West Chester P. O., Chester Co., Pa.* Postage should be *pre-paid*, and packages should be distinctly marked and put up in a *secure manner*, so that their contents will not be liable to be lost by handling. The stage will leave West Chester during the *summer session*, for the School, on Second, Fourth, and Seventh-days, on the arrival of the *afternoon* cars from the city, and from the School to West Chester on the same days, to meet the afternoon cars to Philadelphia. The fare for each passenger to and from West Chester *by the stage*, will be 25 cents. When special conveyances at other times are provided at the School, an extra charge will be made.

West-town, Third mo., 1855.

MARRIED, at Friends' Meeting-house, Haddonfield, N. J., on Fifth-day, the 22d of Third mo., 1855, JOHN H. BALLINGER, of Cropwell, to RACHEL, daughter of the late Simeon Eastlack, of the former place.

——, at Friends' Meeting-house, Twelfth street, Philadelphia, on Fourth-day, the 11th inst., SAMUEL ALLINSON, JR., of Yardville, Mercer county, N. J., to ANN, daughter of the late Josiah Tatum, of Philadelphia.

DIED, at his residence, near Parkesburg, Chester co., PENNA., on the 20th of Third month, WILLIAM B., son of William and Lydia F. Coale, aged 31 years; a member of Sadsbury Monthly Meeting. The deceased was one whose amiable manners and affectionate disposition had gained the love of a large circle of friends. On the commencement of his decline, he was brought into deep conflict of mind, feeling that the all-important work of his soul's salvation had not kept pace with the day. The earnest query, "What shall I do to be saved?" was almost constantly the language of his heart; under great distress and consciousness of utter inability to do anything for himself—this passage of Scripture was at length clearly impressed. "Be still and know that I am God"—attended with calmness and quietude of mind. Committing all unto a faithful Creator, he was enabled to feel the work of purification carried on, and many things plainly unfolded to his mind. The hurtful tendency of reading works of romance, and departure from simplicity in dress and language, was clearly manifested, and his indulgence in these things deeply regretted: expressing willingness to suffer all that his heavenly Father should see fit to lay upon him. As his strength declined, he often said he had been mercifully dealt with, and that "he thought his weakness had been considered, and the power of the tempter stayed." And a few days before his departure, he was enabled to say, "The sting of Death was taken away," and even the pain of parting with those nearest and dearest, swallowed up in the prospect of a happy eternity. His close was calm and peaceful—taking leave of those around him with a bright smile on his countenance. His last audible words were Lord Jesus: uttered as his ransomed spirit departed, we humbly believe, to the mansions of eternal rest.

——, at the residence of his parents, in this city, on the 27th ult., HENRY W. STOKES; a member of the Northern District Monthly Meeting, in the 25th year of his age.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any art of the United States, for three months, if paid in dvance, six and a-half cents.

For "The Friend."

Sketches from History.

(Continued from page 250.)

"At length came forth the justices themselves, or so they were, as well as lieutenants; and after hey had saluted me, they discoursed with me retty familiarly. And though Clark would some- mes be a little jocular and waggish, which was omewhat natural to him, yet Knowls treated me ery civilly, not seeming to take any offence at my ot standing bare before him. And when a young riest, who, as I understood, was chaplain in the mily, took upon him pragmatically to reprove e for standing with my hat on before the magis- rates, and snatched my cap from off my head, Knowls in a pleasant manner corrected him, tell- g him he mistook himself, in taking a cap for a at, for mine was a mountier-cap, and bid him give me again; which he, though unwillingly doing, forthwith put it on my head again, and thence- orward none meddled with me about it.

"Then they began to examine me, putting divers uestions to me relating to the present disturbances n the nation, occasioned by the late foolish insur- ection of those frantic fifth-monarchy-men. To which I readily answered, according to the mplicity of my heart and innocency of my hands; or I had neither done nor thought any evil against oe government.

"But they endeavoured to affright me with reats of danger; telling me that for all my pre- nce of innocency, there was high matter against e, which if I would stand out, would be brought rth, and that from under my own hand. I knew ot what they meant by this; but I knew my inno- ency, and kept to it.

"At length when they saw I regarded not their reats in general, they asked me if I knew one homas Loe, and had written of late to him. I nen remembered my letter, which till then I had ot thought of, and thereupon frankly told them, nat I did both know Thomas Loe, and had lately ritten to him; but that as I knew I had written o hurt, so I did not fear any danger from that tter. They shook their heads and said it was angerous to write letters to appoint meetings in uch troublesome times.

"They added, that by appointing a meeting, nd endeavouring to gather a concourse of people ogether, in such a juncture especially as this was, had rendered myself a dangerous person. And herefore, they could do no less than tender me he oaths of allegiance and supremacy; which herefore they required me to take.

"I told them, if I could take any oath at all, I would take the oath of allegiance; for I owed allegiance to the king. But I durst not take any oath, because my Lord and master Jesus Christ had commanded me not to swear at all; and if I break his command, I should thereby both dishonour and displease him.

"Hereupon they undertook to reason with me, and used many words to persuade me that that command of Christ related only to common and profane swearing—not to swearing before a magistrate.

"I heard them and saw the weakness of their arguings, but did not return them any answer; for I found my present business was not to dispute, but to suffer; and that it was not safe for me, in this my weak and childish state especially, to enter into reasonings with sharp, quick, witty and learned men, lest I might thereby hurt both the cause of Truth, which I was to bear witness to, and myself. Therefore I chose rather to be a fool, and let them triumph over me, than by my weakness give them advantage to triumph over the Truth. And my spirit being closely exercised in a deep travail towards the Lord, I earnestly begged of him, that he would be pleased to keep me faithful to the testimony he had committed to me, and not to be taken in any of the snares which the enemy laid for me. And, blessed be his holy name, he heard my cries, and preserved me out of them.

"When the justices saw they could not bow me to their wills, they told me they must send me to prison. I told them I was contented to suffer whatsoever the Lord should permit them to inflict upon me. Whereupon they withdrew into the parlour, to consult together what to do with me; leaving me meanwhile to be gazed on in the hall.

"After a pretty long stay, they came forth to me again with a great show of kindness, telling me they were very unwilling to send me to gaol, but would be as favourable to me as possibly they could; and that, if I would take the oaths, they would pass by all the other matter which they had against me. I told them, I knew they could not justly have anything against me, for I had neither done, nor intended anything against the government, or against them. And as to the oaths, I assured them, that my refusing them was merely matter of conscience to me, and that I durst not take any oath whatsoever, if it were to save my life.

"When they heard this they left me again, and went and signed a mittimus to send me to prison at Oxford, and charged one of the troopers that brought me thither, who was one of the newly-raised militia troops, to convey me safely to Oxford. But before we departed they called the trooper aside and gave him private instructions what he should do with me; which I knew nothing of till I came thither, but expected I should go directly to the castle.

"It was almost dark when we took horse, and we had about nine or ten miles to ride; the weather was thick and cold, for it was about the beginning of the Twelfth month, and I had no boots, being snatched away from home on a sudden; which made me not care to ride very fast. My guard, who was a tradesman in Thame, having confidence in me, that I would not give him the slip, jogged on without heeding how I followed him. When I was gone about a mile on the way, I overtook my father's man, who without my knowledge, had followed me at a distance to Weston, and waited there abroad in the stables, till he understood by some of the servants, that I was to go to Oxford; and then ran before, resolving not to leave me till he saw what they would do with me.

"I would have had him return home, but he desired me not to send him back, but let him run on till I came to Oxford. I considered that it was a token of the fellow's affectionate kindness to me, and that possibly I might send my horse home by him; and thereupon stopping my horse, I bid him, if he would go on, get up behind me. He modestly refused, telling me he could run as fast as I rode. But when I told him, if he would not ride he should not go forward, rather than leave me, he leaped up behind me, and on we went.

"He was not willing I should have gone at all. He had a great cudgel in his hand, and a strong arm to use it; and being a stout fellow, he had a great mind to fight the trooper and rescue me. Wherefore he desired me to turn my horse and ride off. And if the trooper offered to pursue, leave him to deal with him.

"I checked him sharply for that, and charged him to be quiet, and not think hardly of the poor trooper, who could do no other than he did; and who, though he had an ill journey in going with me, carried himself civilly to me. I told him also, that I had no need to fly, for I had done nothing that would bring guilt or fear upon me, neither did I go with an ill-will; and this quieted the man. So on we went; but were so far cast behind the trooper, that we had lost both sight and hearing of him, and I was fain to mend my pace to get up to him again.

"We came pretty late into Oxford on the seventh-day of the week, which was the market-day; and contrary to my expectation, which was to have been carried to the castle, my trooper stopped in the High street, and calling at a shop, asked for the master of the house; who coming to the door, he delivered to him the mittimus, and with it a letter from the deputy-lieutenants, or one of them, which when he had read, he asked where the prisoner was. Whereupon the soldier pointing to me, he desired me to alight and come in; which when I did, he received me civilly.

"The trooper being discharged of his prisoner, marched back, and my father's man seeing me settled in better quarters than he expected, mounted my horse and went off with him.

"I did not presently understand the quality of my keeper; but I found him a genteel, courteous man, by trade a linen-draper; and, as I afterwards understood, he was the city-marshal, and had a command in the county troop, and was a person of good repute in the place; his name was ——— Galloway.

"Whether I was committed to him out of regard to my father, that I might not be thrust into a common gaol; or out of a politic design, to keep me from the conversation of my friends, in hopes that I might be drawn to abandon this profession, which I had but lately taken up, I do not know. But this I know, that though I wanted no civil

treatment or kind accommodations where I was, yet after once I understood that many Friends were prisoners in the castle, and among the rest Thomas Loe, I had much rather have been among them there, with all the inconveniences they underwent, than where I was with the best entertainment. But this was my present lot; and therefore with this I endeavoured to be content.

"It was quickly known in the city that a Quaker was brought in prisoner and committed to the marshal. Whereupon, the men Friends generally being prisoners already in the castle, some of the women Friends came to inquire after me and to visit me; as Silas Norton's wife and Thomas Loe's wife, who were sisters, and another woman Friend who lived in the same street where I was, whose husband was not a Quaker, but kindly affected towards them, a baker by trade, and his name as I remember was, ——— Ryland.

"By some of these an account was soon given to the Friends in the castle, of my being taken up and brought prisoner to the marshall's. Whereupon it pleased the Lord to move the heart of my dear friend Thomas Loe, to salute me with a very tender and affectionate letter in the following terms:

"'My beloved Friend,—In the Truth and love of the Lord Jesus, by which life and salvation is revealed in the saints, is my dear love to thee, and in much tenderness do I salute thee. And dear heart, a time of trial God hath permitted to come upon us, to try our faith and love to him; and this will work for the good of them who through patience endure to the end. I believe God will be glorified through our sufferings, and his name will be exalted in the patience and long-suffering of his chosen. When I heard that thou wast called into this trial, with the servants of the Most High, to give thy testimony to the truth of what we have believed, it came into my heart to write to thee, and to greet thee with the embraces of the power of an endless life; where our faith stands, and unity is felt with the saints forever. My dear friend, let us live in the pure counsel of the Lord, and dwell in his strength, which gives us power and sufficiency to endure all things for his name's sake; and then our crown and reward will be with the Lord forever, and the blessings of his heavenly kingdom will be our portion. Oh, dear heart, let us give up all freely into the will of God, that God may be glorified by us, and we comforted together in the Lord Jesus; which is the desire of my soul, who am thy dear and loving friend in the eternal truth, THOMAS LOE.

"'P. S. We are more than forty here, who suffer innocently for the testimony of a good conscience; because we cannot swear, and break Christ's commands. And we are all well, and the blessing and presence of God is with us. Friends here salute thee. Farewell.

"'The power and the wisdom of the Lord God be with thee, amen.'

"Greatly was my spirit refreshed, and my heart gladdened, at the reading of this consolating letter from my friend; and my soul blessed the Lord for his love and tender goodness to me, in moving his servant to write thus to me.

"But I had cause soon after to double and redouble my thankful acknowledgment to the Lord my God, who put it into the heart of my dear friend Isaac Penington also, to visit me with some encouraging lines from Aylesbury gaol, where he was then a prisoner; from whence, having heard that I was carried prisoner to Oxford, he thus saluted me:

"'Dear Thomas,—Great hath been the Lord's goodness to thee, in calling thee out of that path of vanity and death, wherein thou wast running towards destruction, to give thee a living name and an inheritance of life among his people; which certainly will be the end of thy faith in him, and obedience to him. And let it not be a light thing in thine eyes, that he now accounteth thee worthy to suffer among his choice lambs, that he might make thy crown weightier, and thy inheritance the fuller. O that that eye and heart may be kept open in thee, which know the value of these things! and that thou mayest be kept close to the feeling of the life, that thou mayest be fresh in thy spirit in the midst of thy sufferings, and mayest reap the benefit of them; finding that pared off thereby, which hindreth the bubblings of the everlasting spring, and maketh unfit for the breaking forth and enjoyment of the pure power! This is the brief salutation of my dear love to thee, which desireth thy strength and settlement in the power, and the utter weakening of thee as to self. My dear love is to thee, with dear Thomas Goodyare, and the rest of imprisoned Friends.

"'I remain thine in truth, to which the Lord my God preserve thee single and faithful.

"'I. PENINGTON.'

From Aylesbury gaol, the 14th of Twelfth mo., 1660.

"Though these epistolary visits in the love of God, were very comfortable and confirming to me, and my heart was thankful to the Lord for them; yet I honed after personal conversation with Friends, and it was hard I thought, that there should be so many faithful servants of God so near me, yet I should not be permitted to come at them, to enjoy their company, and reap both the pleasure and benefit of their sweet society.

"For although my marshall-keeper was very kind to me, and allowed me the liberty of his house, yet he was not willing I should be seen abroad; the rather perhaps, because he understood I had been pretty well known in that city. Yet once the friendly baker got him to let me step over to his house; and once, and but once, I prevailed with him to let me visit my friends in the castle; but it was with these conditions, that I should not go forth till it was dark; that I would muffle myself up in my cloak; and that I would not stay out late. All which I punctually observed.

"When I came thither, though there were many Friends prisoners, I scarcely knew one of them by face, except Thomas Loe, whom I had once seen at Isaac Penington's. Nor did any of them know me, though they had generally heard that such a young man as I was convinced of the Truth and come among Friends.

"Our salutation to each other was very grave and solemn; nor did we entertain one another with much talk, or with common discourses; but most of the little time I had with them, was spent in a silent retiredness of spirit, waiting upon the Lord. Yet before we parted, we imparted one to another some of the exercises we had gone through; and they seeming willing to understand the ground and manner of my commitment, I gave them a brief account thereof, letting Thomas Loe more particularly know that I had directed a letter to him, which having fallen into the hand of the lord-lieutenant, was so far as I could learn, the immediate cause of my being taken up.

"Having staid with them as long as my limited time would permit, which I thought was but very short, that I might keep touch with my keeper and come home in due time, I took my leave of my friends there, and with mutual embraces parting, returned to my, in some sense more easy, but in others less easy prison, where after this I staid not long before I was brought back to my father's house.

"For after my father was come home, who, as I observed before, was from home when I was taken, he applied himself to those justices that had committed me, and not having disobliged them when he was in office, easily obtained to have me sent home; which between him and them was thus contrived.

"There was about this time a general muster and training of the militia forces at Oxford; whither, on that occasion, came the lord-lieutenant and the deputy-lieutenants of the county, of which number they who committed me were two.

"When they had been a while together, and the marshall with them, he stept suddenly in, and in haste told me I must get ready quickly to go out of town, and that a soldier would come by and by to go with me. This said, he hastened to them again, not giving me any intimation how I was to go, or whither.

"I needed not much time to get ready in; but I was uneasy in thinking what the Friends of the town would think of this my sudden and private removal; and I feared lest any report should be raised that I had purchased my liberty by an unfaithful compliance. Wherefore, I was in care how to speak with some Friend about it: and that friendly baker, whose wife was a Friend, living on the other side of the street at a little distance, I went out at a back door, intending to step over the way to their house, and return immediately.

"It so fell out, that some of the lieutenants, of whom Esquire Clark, who committed me, was one, were standing in a balcony at a great inn or tavern, just over the place where I was to go by; and he spying me, called out to the soldiers who stood thick below in the street, to stop me. They, being generally gentlemen's servants, and many of them knowing me, civilly forbore to lay hold on me, but calling modestly after me, said, 'Stay sir, stay; pray come back.' I heard, but was not willing to hear, therefore rather mended my pace, that I might have got within the door. But he calling earnestly after me, and charging them to stop me, some of them were fain to run, and laying hold on me before I could open the door, brought me back to my place again.

"Being thus disappointed, I took a pen and ink and wrote a few lines, which I sealed up, and gave to the apprentice in the shop, who had carried himself handsomely to me, and desired him to deliver it to that Friend who was their neighbour; which he promised to do.

"By the time I had done this, came the soldier that was appointed to conduct me out of town. I knew the man, for he lived within a mile of me, being through poverty reduced to keep an ale-house; but he had lived in better fashion, having kept an inn at Thame, and by that means knew how to behave himself civilly and did so to me.

"He told me he was ordered to wait on me to Whately, and to tarry there at such an inn till Esquire Clark came thither, who would then take me home with him in his coach. Accordingly to Whately we walked, which is from Oxford some four or five miles, and long we had not been there, before Clark and a great company of rude men came in.

"He alighted and staid a while to eat and drink, though he came but from Oxford, and invited me to eat with him; but I, though I had need enough, refused it, for indeed their conversation was a burden to my life, and made me often think of and pity good Lot.

"He seemed at that time to be in a sort of mixt temper, between pleasantness and sourness. He would sometimes joke, which was natural to him, and cast out a jesting flirt at me; but he would rail maliciously against the Quakers. 'If,' said he to me, 'the king would authorize me to do it,

would not leave a Quaker alive in England, except you. I would make no more,' added he, to set my pistol to their ears, and shoot them hrough the head, than I would to kill a dog.' I old him I was sorry he had so ill an opinion of the Quakers, but I was glad he had no cause for it, and hoped he would be of a better mind.

"I had in my hand a little walking stick with head on it, which he commended, and took out f my hand to look on it, but I saw his intention as to search whether it had a tuck in it, for he ied to draw the head; but when he found it was ast he returned it to me.

"He told me I should ride with him to his ouse in his coach, which was nothing pleasant to e; for I had rather have gone on foot, as bad as ne ways were, that I might have been out of his ompany. Wherefore I took no notice of any indness in the offer, but only answered, I was at is disposal, not mine own.

"When we were ready to go, the marshall came o me and told me, if I pleased I should ride his orse, and he would go in the coach with Mr. lark. I was glad of the offer, and only told him e should take out his pistols then, for I would ot ride with them. He took them out and laid hem in the coach by him, and away we went.

"It was a very fine beast that I was set on, by uch the best in the company. But though she as very tall, yet the ways being very foul, I found needful, as soon as I was out of town to alight nd take up the stirrups. Meanwhile, they driving n, I was so far behind, that being at length missed y the company, a soldier was sent back to look fter me.

"As soon as I had fitted my stirrups and was emounted, I gave the rein to my mare, which beng courageous and nimble, and impatient of delay, ade great speed to recover the company. And a narrow passage, the soldier, who was my barer that had fetched me from home, and I, met pon so brisk a gallop, that we had enough to do n either side to take up our horses and avoid a rush.

"When we were come to Weston, where Esquire lark lived, he took the marshall and some others ith him into the parlour; but I was left in the all to be exposed a second time for the family to aze on.

"At length himself came out to me, leading in is hand a beloved daughter of his, a young woman f about eighteen years of age, who wanted nothing o have made her comely, but gravity. An airy iece she was; and very merry she made herself t me.

"When they had made themselves as much port with me as they would, the marshall ook his leave of them, and mounting me on a orse of Clark's, had me home to my father's that ight.

(To be continued.)

For "The Friend."

Friends' Books.

The dissemination and perusal of the approved writings of Friends, has of latter time been attracting a large share of attention, and among many, not of our religious Society, there is an increasing desire to become acquainted with them. Few persons who have not looked carefully at the subject, are aware how much the efforts of even one Friend who is zealous in the cause, may effect. A few years ago, a Friend in England published six thousand copies of George Fox's Journal; a very large portion of which he sold himself to persons not members, while passing about among the towns of England in his vocation of mercantile traveller. After the books became a little known among the serious public, his arrival in the towns was looked for with interest, and his books were quickly bought up. An edition of 20,000 copies of Barclay's Apology was recently printed and rapidly sold at a low price by Friends in England: and one who is deeply interested in the work, states in a recent letter, that 12,000 copies of No Cross No Crown, have recently been printed by the committee of the Meeting for Sufferings in London, and that he has sold from time to time, 8,600 of that work, many of them to students in different colleges; to the teachers of schools, not Friends, and to various persons of high and low degree in life. He has also lately sold 23,300 copies of William Penn's Reflections and Maxims, and remarks that an edition of 25,000 copies has just been issued by one publisher, and nearly 10,000 copies of Clarkson's Life of William Penn by another; nearly all of which have already been put in circulation. In order to facilitate the dissemination of these various works, many Friends have subscribed considerable sums to buy the books, and they then sell them out at a reduced price, especially among the poor.

I mention these facts, in order to encourage our Friends here to diligence in this good work; and to show how much may be accomplished by the persevering efforts of a single individual who is earnest in this good cause. Our Book Store furnishes the writings of the Society at so low a rate, that a small sum of money will go far in procuring valuable works, and there seems to be every inducement for Friends everywhere to exert themselves in a cause which is calculated to be productive of such valuable benefits, not only to our own members, but to those of other denominations.

I have no doubt that a person who would make it his business to offer the books for sale to such as are not Friends, could dispose of a large number. Many persons would buy if the volume was placed before them, who otherwise might never hear of it. If in country places the stores were furnished with some on sale, and efforts used to dispose of them to the customers, much good might be done.

For "The Friend."

"Why should not my countenance be sad, when the city, the place of my father's sepulchres lieth waste, and the gates thereof are consumed with fire?" When the prophet, in reply to the king's query, gave utterance to this touching language, there can be no doubt but his feelings were those of extreme mournfulness; and many there are in this day, who participate in a measure thereof, when they behold the present state of our society, and contrast it with the period when we were first called to be a people.

But mournful as are the signs of the times, mournful as are the desolations in our Israel, causing the burden-bearers to be weighed down with "sorrow of heart," while so few "come up to the help of the Lord; to the help of the Lord against the mighty," and mournful as it is, to see the breaches in our walls growing wider and wider; yet it is no time for those who have enlisted under Zion's King to give back in the "day of trouble, and of treading down" for "the work is the Lord's, and if He prosper who can let it?" Press on then, ye valiant soldiers in the Lamb's army, and be not cast down below hope, because of the thinness of your ranks; for if those who "prefer Jerusalem above their chief joy," will but individually fill up their places in the church with faithfulness, eyeing none other, but our Holy Head and High Priest, not being careful of the opinions of those around them, only so far as they are in accordance with the voice of the true Shepherd, and unflinchingly bear their testimony to the truth as it is in Jesus," testifying by their daily walk to the purity of the principles promulgated by our early Friends; then, indeed, may we hope that our society will yet shine in her original beauty, not doubting but that "He who led Joseph like a flock anciently," will again gather to the standard, and by the few faithful ones, comparable though they be "to one of a family, and two of a tribe," cause His glory to shine forth to the converting of many who are now scattered upon the dark and barren mountains.

The Lord will have a "peculiar people," and if those who now call themselves by the name of Christ, are not faithful to his teachings, He will, by his eternal power, raise up of the stones of the street, children unto Abraham to the rejection of those who, but for their disobedience or unfaithfulness, might have been "heirs with Him in his kingdom."

The present is not a time for any "to dwell at ease in Zion, for while we are in a lukewarm state indifferent to her present welfare, what right have we even to hope, that Jerusalem will become the praise of the whole earth. Let us then be found at our respective posts, ready at the Master's bidding to do his will, lest the language which was addressed to the church of Laodicea, be spoken unto us. "I would thou wert cold or hot, so then because thou art lukewarm, and neither cold nor hot I will spue thee out of my mouth."

Fourth month 12, 1855.

General Diffusion of Gold.—Since the discovery of gold in California and Australia, has turned the attention of people in the direction of the noble metal, its presence has been discovered in many localities where people little dreamed of its existence. Dr. Percy, of the museum of practical geology, London, has been, during the past year, devoting himself to an examination of lead, lead ores, and lead compounds, with the object of discovering the presence in all these of gold. Universally, gold has been discovered in every specimen hitherto examined by Dr. Percy. In fact, he states that hitherto he has been unable to meet with lead, or compounds of lead, altogether free from gold. His experiments have been attended with the result of extracting gold from all these bodies in a visible form; therefore its existence is not a matter of chemical hypothesis. Perhaps the most curious circumstance in connection with Dr. Percy's discovery is this: even soluble lead compounds are auriferous, though by what solvent the gold is held in solution it would be impossible to say. Finally, Dr. Percy hazards the speculation, that hereafter gold may possibly be discovered as an universal constituent of sea water.

For "The Friend."

As the statement in "The Friend" of 7th inst., that "the New Postage law, which went into operation on 1st instant, requires the prepayment of postage of *all letters*," is not strictly correct, I furnish the following more explicit information received from a reliable source. The United States postage on letters weighing less than half an ounce, is three cents each, for less than 3000 miles, and ten cents beyond that distance, to be prepaid.

To Canada, ten cents, and Great Britain and Ireland, twenty-four cents including postages to the places of delivery—may be prepaid or not at the option of the one who forwards the letters.

W.

Permanent and unbroken rest is not to be expected on the road, but at the end of the journey of life.

Selected.

BE KIND.

Be kind, for kindness speaks
A language quite her own,
The charms she hath, the good she seeks,
To all mankind are known.
The rudest savage feels her sway,
She rules the most refin'd,
And seems in pleading tone to say,
"Whoe'er thou art, *be kind.*"

Be kind. If love should dwell
Wherever man is found,
It should in beauty most excel
Where Christians most abound.
Reciprocated kindness there,
With every grace combin'd,
Should set the world example fair,
And teach it to *be kind.*

Be kind. The gentle rain,
The bright and glorious sun,
And every source whence good we gain,
Are kept by God from none.
But "both the evil and the just,"
By Goodness undefin'd,
Alike are blest. Then, if ye trust
In God, ye should *be kind.*

Be kind to ev'ry *friend*,
This Friendship's self demands;
Be kind to *foes* who sore offend,
For this your Lord commands.
Let not the Christian cause, through you,
Be weakened or malign'd;
In all ye say, in all ye do,
Be courteous—*be kind.*

Be kind to erring ones;
The best of men aver
That he who most pollution shuns
Feels most for those who err.
There is no human will so strong
That kindness cannot bind;
Justice must punish while wrong,
Yet justice can *be kind.*

Be kind. If ye are *rich*,
Ye need, indeed, take care;
For God hath given wealth, of which
The *poor* should have a share.
Ye may be *bountiful*, but yet
To Charity be blind;
Ye may *give freely*, but forget
Ye also should *be kind.*

Be kind. If ye are *poor*,
Ye know how kindness smooths
The roughest fortunes ye endure,
And how it sorrow soothes;
Ye know ye may receive relief,
Yet *sympathy* not find;
Then learn to sympathize with grief—
The poorest can be kind.

Be kind. If ye are *old*,
Love may not light your eye;
The strongest *passion* may grow cold,
But *virtue* cannot die.
There is respect from youth to you,
By God and men assign'd;
Let your deportment claim it too:
Ye aged ones, *be kind.*

Be kind. If ye are *young*
And free, as yet, from cares,
Remember ye must walk among
Unnumbered ills and snares;
"The small sweet courtesies of life"
For mortals were design'd,
To nurture peace—to banish strife;
Employ them, and *be kind.*

Be kind. Why should you not?
If constant friendship cheers
And makes more bearable your lot
In this our "vale of tears."
Oh! think how different your fate
Had you neglected pin'd;
If kindness shown to you be great,
Oh! should you not *be kind?*

Be kind. Why should you not?
If faithful friends are few,
And if you seem to be forgot
By those you once deem'd true,
Should you not sympathize with those
To cold neglect consign'd?
Can you not feel for other's woes?
Oh! should you not *be kind?*

Be kind. Forget—forgive
The wrongs which ye receive;
Oh! strive in love with *all* to live,
This world ye soon must leave.
Then cultivate a gen'rous mind,—
Live peaceably with all mankind,—
And those, at death ye leave behind,
Will bless your mem'ry, and—*be kind.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 254.)

GRIFFITH OWEN.

Griffith Owen was emphatically an industrious man. Beside the labour his many religious appointments necessarily brought on him, his fulfilling his duty as a minister of Christ in going when and where his Master called him to preach his everlasting gospel, and the cumber of a large business in his very responsible profession, he was in public life much of his time seeking, in seasons of political excitement, to discharge his duty as a citizen, impressed with the obligation all honest men lay under of doing justice to the Proprietary, whilst supporting the liberty of the colonists.

He was elected to the Assembly four times, and served in the Provincial Council, from 1690 to 1693, and again, from the commencement of 1700 to the time of his death. This last office was no sinecure, as the Council met during the sitting of the Assembly almost daily, and frequently twice in one day. At other times, however, there was often a month or two together when the Council held no meeting, and the sessions of the Assembly were not often protracted, although generally composed of men zealous for their rights, and jealously watchful lest some enactment should be made in any manner compromising civil or religious liberty.

Griffith Owen enjoyed the confidence of William Penn, and, in 1701, was appointed by him, in conjunction with Edward Shippen, Thomas Story, and James Logan, commissioners of property. Their commission "Impowering them or any three of them to grant lots and lands, and to make titles." The duties of this appointment must have involved the expenditure of much time. Our design in sketching the life of Griffith Owen, is not to trace him particularly as a statesman, and therefore we shall not attempt to follow him therein.

A trader, by the name of Le Tore and some with him, having been slain by the Indians, and his goods seized, there had been a mutual suspicion engendered thereby between the whites and Indians. One party fearing a repetition of such acts of violence, the other expecting retaliatory movements for vengeance. Demands had previously been made of the Indians for the perpetrators of the murder, but nothing had been done, except that after a long period they had reported that all connected with it, were dead but one, who had absconded. The Indians were very uneasy until some public settlement in respect to the murder, should be made, and to effect it, took the following method. At a meeting of the Council, held Third mo. 28, 1711, Peter Bezalion attended and acquainted the Board, "that the Queen and some of the chiefs of the Conestoga Indians, desired him to tell the Governor, that they would be glad to see him at Conestoga, to renew the league formerly made between them and the Proprietary, and that he would bring along with him some of the old Counsellors, viz., Edward Shippen, Samuel Carpenter, Griffith Owen, and Caleb Pusey. The Indians desired some end may be made with the Shawanon Indians about the death of Le Tore." He added that the reason for wishing the interview to take place at this time, was, there were some of the chiefs of the Five Nations at Conestoga.

On the 18th of the Fourth month, the Lieutenant-Governor, Charles Gookin, with four of his Counsellors, of whom Griffith Owen and Caleb Pusey were two, met the Indians at Conestoga. The interview was mutually satisfactory. Gookin made his presents, and informed the Indians of the intention of Governor Penn to make a settlement on some of the head waters of the Potomac, and requested the Indians to treat the settlers with the same friendship, with which they had heretofore treated the colonists of Pennsylvania. He also desired their friendship on behalf of a body of Palatines settled near Piquea. The Indians, in reply, said that being at war with the Tuscaroras and other Indians, they did not think it would be safe for any Christians to be on the Potomac, it being between them and those at war with them; as to Palatines they thought them safely seated. These Palatines appear to have been a portion of many thousands of these people, who fleeing from their own country, took refuge in England, and were assisted by Friends there, who, when they came to Pennsylvania, earnestly recommended them to the charity of their brethren here.

In respect to the uneasiness of the Indians concerning "the lives of those men, our young people unadvisedly slew," and for which they expressed a willingness if it were possible by presents to atone for; the Governor told them that although by the laws of England, whosoever killed a man must share the same fate, yet considering the circumstances previous to the murder, the length of time that had elapsed since it took place, the fact that all engaged in it were dead, except one who had, as the Indians said, "gone to Mississippi," he would forbear all further inquiry on this subject, but he added, "withal caution you that if any such thing hereafter falls out, you may be assured I shall as well know how to do justice as I have now shown you mercy." The conference ended in peace, it having been as a renewal of the ancient league of amity between the sons of Onas and their red brethren.

In Philadelphia Yearly Meeting, previous to the year 1711, whoever believed themselves under a religious concern to preach in the assemblies of the people, were members of the Meetings of Ministers, unless their ministry was so burdensome, as to occasion a minute to be made, advising them to cease offering their gifts in public. But the faithful and discerning watchmen in the church of Christ, being brought under deep exercise in finding some undertaking to preach in the Lord's name in the assemblies of his people, who evidently were speaking of their own cogitations, or of the wild phantasies of Ranterism, rather than the openings of the Holy Spirit in a fresh anointing for service, were anxious to find a remedy for the evil, which the easy admittance of unqualified persons into the Meeting of Ministers occasioned. In the General Meeting of Ministers, the following minute was made, on the 2d of the Fourth month, 1711.

"Friends in this meeting are under a godly care and concern that all that do appear in these meetings, and would be esteemed members of them, should procure a certificate from the Monthly Meeting of business to the Meeting of Ministering Friends in the county they live in. There to be recommended to our Yearly Meeting for business,

nd to the Yearly Meeting of Ministers for their dvice and approbation."

This method of guarding the Meeting of Minis- ers from improper members, was soon superseded, ut we find at the Yearly Meeting in 1712, the eport from Shrewsbury Quarter states, "two oung men have appeared recently in the ministry, Valter Harbert and Thomas Phillips whom, we ope, will do well."

At the Yearly Meeting held at Burlington, Seventh mo. 20th to 23d, 1713, Griffith Owen and saac Norris were appointed to prepare the epistle o London. The introductory portion of the epis- le seems worthy of insertion as a testimonial to he goodness and mercy of the Lord towards his hurch and people.

"Our sincere love in the precious and un- hangeable Truth is unto you, and in the simpli- ity and innocency of it, we dearly salute you, umbly acknowledging the great mercy and fa- our of our heavenly Father, in revealing it, bring- ng us thereunto, and enabling us to walk therein o this day. We hope, through his help and as- istance, which we are sensible we have daily need f, that no insinuation or subtle device of the ene- ny shall ever be able to draw us from our stead- astness in it. As it hath been our immoveable Rock and foundation to this day, and the unity nd fellowship that is in it, have been precious to s, and we have made strong thereby to withstand nd overcome the many trials and besetments of ur great enemy; so we hope it will remain to the nd of our days. Being sensible that it is the elight of all the faithful to hear of the prosperity f Truth, and the welfare of their brethren every- here, we are desirous to let you understand that hrough the great mercy and favour of God, we ave had a very precious, large, and heavenly neeting; overshadowed with his tendering love, ower, and presence. So that the rain and dew of eaven descended in a plentiful manner, and Friends in a general way were tendered and over- ome by it, and brought to the valley of humility, here we hope it will be long upon our branches, causing us to bring forth savoury and acceptable fruits to our God, who was pleased to cast the ords of his love, and the unity of his Spirit about s. We hope and pray earnestly it may never be roken by any work or power of the enemy. This ath been to us a season, not to be forgotten, but o be kept as an humble memorial, and recorded mongst the great mercies and favours of God."

Again feeling drawn, to visit Friends in Long sland, Rhode Island, and New England, Griffith Owen obtained a certificate from his Monthly Meeting, in the Twelfth month, 1716, and from he Meeting of Ministers, held First mo. 16, 1717, of their unity with him and his prospect. His friend nd former companion in a like journey, John alkeld accompanied him. The service occupied hem until early in the Fifth month. In the Sixth month he was appointed a representative rom the Quarterly Meeting of Ministers to the Yearly Meeting of Ministers, and from the Quar- erly Meeting of business to the Yearly Meeting of business. We do not find any trace of his abours after the middle of the Sixth month. The ollowing minute of the Yearly Meeting of Minis- ers closes our account of this pious, devoted, laborious man.

Seventh mo. 11, 1717. "Our dear and well esteemed friend, Griffith Owen, being deceased, who was clerk of this meeting, the meeting makes choice of Thomas Chalkley in his stead."

(To be continued.)

Never employ thyself to discern the faults of others, but be careful to mind and count thy own.

[As the act repealing tavern licenses is of general interest, and makes an important step in a good cause, we give its several sections a place in our columns.]

An Act to Restrain the Sale of Intoxicating Liquors.—Section 1. Be it enacted &c., That from and after the first day of October next, it shall be unlawful to keep or maintain any house, room or place where vinous, spirituous, malt, or brewed liquors, or any admixture thereof are sold and drank except as hereinafter provided; and all laws or parts of laws inconsistent with the provisions of this act, be and the same are hereby repealed.

Section 2. That if any person or persons within this commonwealth shall keep for sale, and sell, or in connexion with any other business or profitable employment give, receiving therefor any price, profit or advantage, by any measure whatever, and at the same time voluntarily afford a place, or any other convenience or inducement by which the same may be used as a beverage, any vinous, spirituous, malt or brewed liquor, or any admixture thereof, he, she or they, or any one aiding, abetting, or assisting therein, shall be deemed guilty of a misdemeanor, and upon conviction, shall be sentenced to pay a fine not exceeding fifty dollars, and undergo an imprisonment not exceeding one month, and for a second or any subsequent offence shall pay a fine not exceeding one hundred dollars, and undergo an imprisonment not exceeding three months.

Section 3. That if any two or more persons conspire, or act together, by which one may sell, and the other provide a place or other convenience for drinking, with intent to evade the provisions of this act, each one so offending, upon conviction, shall be punished as provided in the second section of this act.

Section 4. That it shall be unlawful for any person to sell or keep for sale any vinous, spirituous, malt or brewed liquors, or any admixtures thereof, in cases not hereinbefore prohibited, in a less quantity than one quart, nor without license granted by the Court of Quarter Sessions of the proper county, on petition presented for that purpose, to be advertised according to the first section of the act of the twenty-ninth of March, one thousand eight hundred and forty-one, supplementary to the various acts relating to tavern licenses; but no such license shall be granted to other than citizens of the United States, of temperate habits and good repute for honesty: *Provided*, That no certificate shall be required or published as mentioned in the act herein referred to: *Provided*, That no license for the sale of liquors as aforesaid, shall be granted to the keeper of any hotel, inn, tavern, restaurant, eating-house, oyster-house or cellar, theatre or other places of entertainment, amusement, or refreshment.

Section 5. That the said court, by their rules, shall fix a time at which applications for said licenses shall be heard, at which time all persons making objections shall be heard.

Section 6. That it shall not be lawful for the clerk of said court to issue any license as aforesaid, until the applicant shall have filed the bond hereinafter required, and the certificate of the City Receiver, or County Treasurer, that the license fee has been paid to him.

Section 7. That the appraisers of licenses under this act shall be appointed as provided by existing laws, except in the city of Philadelphia, where, on the passage of this act, and thereafter at the beginning of every year, three reputable and temperate persons shall be appointed by the Court of Quarter Sessions to appraise dealers in spirituous, vinous, malt or brewed liquors aforesaid, and of distillers and brewers, and to do and perform all duties now enjoined by law not inconsistent herewith; and said appraisers shall be citizens of the United States, in no manner connected with, or interested in the liquor business, and shall be compensated as now provided by law.

Section 8. That no license shall be granted without the payment to the Receiver of Taxes of the city of Philadelphia, or to the Treasurer of the other counties of the State, for the use of the Commonwealth, three times the amount now fixed by law, to be paid by venders of spirituous, vinous, or malt liquors, or brewers, and distillers: Provided, That no license shall be granted for a less sum than thirty dollars.

Section 9. That the bond required to be taken of all persons who shall receive a license to sell spirituous, vinous, malt or brewed liquors, or any admixtures thereof, shall be in one thousand dollars, conditioned for the faithful observance of all the laws of this Commonwealth relating to the business of vending such liquors, with two sufficient sureties, and warrant of attorney to confess judgment: which bond shall be approved by one of the Judges of the Court of Quarter Sessions of the peace of the proper county, and to be filed in said court; and whenever a judgment for any forfeiture or fine shall have been recovered against the principal therein, it shall be lawful for the district attorney of the proper county, to enter judgment against the obligors of the said bond, and proceed to collect the same of the said principal or sureties.

Section 10. That every person licensed to sell spirituous, vinous, or malt liquors as aforesaid, shall frame his license under glass, and place the same so that it may at all times be conspicuous in his chief place of making sales; and no license shall authorize sales by any person who shall neglect this requirement, nor shall any license authorize the sale of any spirituous, vinous, or malt liquors on Sunday.

Section 11. That any sale made of any spirituous, vinous, or malt liquor contrary to this act, shall be taken to be a misdemeanor, and, upon conviction of the offence in the Court of Quarter Sessions of the proper county, shall be punished in the manner prescribed in the second section of this act.

Section 12. That the provisions of this act, as to appraisement and license, shall not extend to importers who shall vend or dispose of said liquors in the original cases or packages as imported, nor to duly commissioned auctioneers selling at public vendue or outcry, nor to brewers or distillers selling in quantities not less than five gallons, nor shall anything herein contained, prohibit the sale by druggists of any admixtures of intoxicating liquors as medicines.

Section 13. That it shall be the duty of every constable of every town, borough, township or ward within this commonwealth, at every term of the Court of Quarter Sessions, of each respective county, to make return on oath or affirmation whether, within his knowledge, there is any place within his bailiwick kept and maintained in violation of this act, and it shall be the especial duty of the Judges of the said Courts to see that this return is faithfully made, and if any person shall make known to such constable the name or names of any one who shall have violated this act, with the names of witnesses who can prove the fact, it shall be his duty to make return thereof, on oath or affirmation to the Court, and upon his wilful failure so to do, he shall be deemed guilty of a misdemeanor, and, upon indictment and conviction, shall be sentenced to imprisonment in the jail of the county for a period not less than one or more than three months, and pay a fine not exceeding fifty dollars.

Section 14. That this act shall not interfere with any persons holding a license heretofore granted, until the time for which the same was granted shall have expired, nor shall any license which may be granted before the first day of July next authorize the sale of said liquors or admixture thereof after the first day of October next, contrary to the provisions of this act.

For "The Friend."

The following extract from the Epistle of the Yearly Meeting of Women Friends, held in London in 1827, to the Yearly Meeting of Women Friends in Philadelphia, I think, contains the savor of life, and feel like offering it for publication in "The Friend."

Sarah L. Grubb writes of that time, "This morning the women's meeting-house has been well filled, without much crowding; and I think there is some cause to hope that the great Legislator, to whom many of us look, even as the eye of the servant to his master, has not turned away from us as a people, but is still disposed to do us good. It is indeed by a surrender of our all to the Lord, that some of us can be prepared to attend this annual solemnity with any degree of courage, such as we ought to feel, if soldiers of Jesus Christ. Great is the exercise of my poor mind, as in former times at Yearly Meeting; yet when I can see things going on well, I am repaid for all. It seems to me that the women's meeting has increased in weight. We seem, at times, permitted to dwell a little under a sense of that want of spirituality which prevails in individuals, in too general a way, and consequently in our lesser meetings scattered over the counties; but if I am favoured with anything of true discerning, the Great Master is pleased to bless the united exercise of those who are engaged in a secret travail after the resurrection of the ancient and everlasting life of truth; so that this well springs up again and again, to the watering of the flock. Oh! blessed be Jehovah!

"May we in the present day look to the 'Great Master,' to bless 'the united exercise of those who are engaged in a secret travail after the resurrection of the *ancient* and everlasting life of truth,' and to strengthen 'that hope, which has pointed to the dawning of a brighter day;' and though 'the wormwood and the gall may be humblingly partaken of,' may none 'relax in their vigilance, but be strengthened and supported,' remembering that 'our Redeemer is strong; the Lord of Hosts is his name.'"

"Beloved Friends,—During the reading of your valuable communication, many minds have been introduced into deep sympathy with the tribulated travellers among you; those who feel that they have no help but in God: and whilst enabled to mourn with those who mourn, the steadfastness of these in faith and love hath refreshed our spirits, evincing the continued fulfillment of the ancient promise, 'I will also leave, in the midst of thee, an afflicted and poor people, and they shall trust in the name of the Lord.' And we thankfully believe that, although the enemy may still, at times, be permitted to come in as a flood, yet, if this trust be faithfully maintained, he who hath counted you worthy to suffer, for his name's sake will continue to 'lift up a standard against him.' O! then may you be strengthened and encouraged to a patient continuance in suffering; and whilst bitterness, comparable to the wormwood and the gall, may be humblingly partaken of, recall to mind that hope, which has pointed to the dawning of a brighter day; for we believe it is the design of Him, who is ever near to his dependent children, that the watchers upon your walls should not relax in their vigilance, but be strengthened and supported, remembering that 'our Redeemer is strong! the Lord of Hosts is his name.' Thus, beloved sisters, will you be prepared to experience, that those who are resigned to suffer with the oppressed seed of the kingdom, will also be permitted eventually to rejoice, having the consoling evidence that they know Him, in whom they have believed, and can in sincerity adopt the language of a disciple formerly,—'Lord, unto whom shall we go? Thou hast the words of eternal life.'

"For our endeared young Friends, we believe it right again to express our affectionate interest and solicitude; and we would entreat you of this class, who have been sensible of heavenly visitation, to bow submissively to the yoke of Christ; and so to abide under the refining operations of his grace, as that you may bear a share of the burden, which rests so heavily upon the faithful in this day. And though many discouragements may surround you, and those things, (which may be compared to the earth and the heaven,) be shaken, yet as you seek to dwell deep in spirit, you will be enabled to discover, and flee unto, the immutable Rock, Jesus Christ, the same yesterday, to-day, and forever."

It is not the part of a *faithful* friend to fish out that which were better concealed; many times by too far urging, we may wring blood. How many have *screwed* out secrets, that would have given thousands to have returned them unknown.

Irresolution loosens all the joints; like an ague it shakes not this limb or that, but all the body is at once in a fit.

THE FRIEND.

FOURTH MONTH 28, 1855.

PHILADELPHIA YEARLY MEETING.

The Yearly Meeting convened at the usual place at 10 o'clock, A. M., on the 16th instant. All the representatives but three were present. There were present, two Friends in the station of ministers, from Indiana, and one from North Carolina, for whom certificates were read.

The epistles from London, Dublin, and New York, having been read, the Clerk informed the meeting there were two epistles on the table, each purporting to come from Ohio Yearly Meeting, and it would be necessary for it to decide which should be read. After a short time of silence, a very general expression in favour of reading the epistle signed by Benjamin Hoyle, took place. There were several, numbering, as we are informed, between twenty-six and thirty, who opposed the reading of that epistle; only one, however, expressing the desire to have the one signed by Jonathan Binns read, and five expressing the belief that the meeting for which J. B. acted as clerk, was the true Yearly Meeting of Ohio. The main objection urged by the greater part of those who opposed the reading of the epistle signed by B. Hoyle, was, that a decision in favour of the meeting for which he acted, would cut Philadelphia Yearly Meeting off from the great body of the Society, and therefore the whole subject ought to be postponed, and the meeting defer coming to any conclusion on it. Some of those who objected to the reading of this epistle, stated their belief, that the meeting of which B. Hoyle was clerk, was the legitimate Yearly Meeting, but they were in favour of a postponement. Three times the judgment of the meeting was clearly manifested, that the epistle signed by B. H. should be read, and each time the clerk rose to read it, when, as he began, he was interrupted, and he patiently waited until all had the opportunity of relieving their minds. It was a trying circumstance that all the members could not see alike on this important subject, but the dissent from the judgment of the great body of the meeting was by comparatively few, and there appeared no probability of delay producing any good effect, as the circumstances of the separation in Ohio could not be changed by time, and it was incumbent on the meeting, under right authority, to come to a decision for itself, without reference to the action of other co-ordinate bodies, to acknowledge the true Yearly Meeting of Ohio, and so far show its sympathy with it, in its peculiar trials, and to express its disapprobation of the course pursued by those who separated from it. The clerk having stated it to be the judgment of the meeting to have the epistle signed by B. Hoyle read at that time, after a sitting of near five hours, it was read, and the representatives being desired to convene and consider of a Friend to serve as clerk, and another to assist him, the meeting adjourned.

Upon the opening of the afternoon sitting, a Friend, on behalf of the representatives, reported that they had met, and after taking into consideration the requests made in the morning by the clerk and assistant clerk, to be released from longer service, *they had united* in believing it would be right to continue William Evans in the former, and Samuel Hilles in the latter station, which being united with by the meeting, they were accordingly appointed.

The meeting being informed there were two epistles, each purporting to come from Baltimore Yearly Meeting, one of which, coming from a small number, contained a minute, suggesting the consideration of their being united to Philadelphia Yearly Meeting, the question arose which should be read. Considerable contrariety of sentiment was manifested, some expressing the conviction that, as Baltimore Yearly Meeting had acknowledged unity with those who had separated from Ohio, it was identified with them, and its epistle should be in like manner as theirs rejected, especially as some of its members had left it on that account; while others were of the judgment that the course pursued by Baltimore did not invalidate its character as a Yearly Meeting; that the separation of a part of the members from a Yearly Meeting ought not to be encouraged, and therefore the epistle ought to be read. The latter course was finally adopted, the epistle being read, and after reading that from North Carolina, (none having come to hand from Indiana,) the meeting adjourned.

Third-day morning, the 17th. The printed general epistle from London was read. The subject of preparing epistles to other Yearly Meetings was brought before the meeting, and some Friends expressed the belief, that under the trying circumstances in which the Society was at present involved, it would be right not to address those Yearly Meetings that had come to a different conclusion relative to the separation in Ohio, from that of this Yearly Meeting. The meeting, however, settled in the conclusion, to address as usual the Yearly Meetings of London, Dublin, New York and Ohio; also, *if way should open for it, those* of Baltimore, North Carolina, and Indiana; the latter epistles, if prepared, to contain an affectionate remonstrance with those meetings respectively, for the course pursued by them in relation to the separation in Ohio. A committee to carry out this decision was then appointed. The state of the Yearly Meeting, as exhibited by the answers to the queries, was proceeded with; the first query, and the replies thereto, were read and considered, after which the meeting adjourned.

After reading the opening minute in the afternoon, the meeting again entered on deliberate consideration of the remaining queries and answers, which being gone through with, and a minute made expressive of the feeling produced thereby, the meeting then adjourned.

Fourth-day morning, the 18th. The minutes of the Meeting for Sufferings, setting forth the labours and concern of that body during the past year, were read, and much satisfaction was expressed with the evidence thus afforded of its care to be found in a faithful performance of the duties devolving on it. It was encouraged steadily to watch for and improve every suitable opportunity for spreading a knowledge of our doctrines and testimonies, and for advancing the cause of truth and justice.

The report of the Book Committee of the Meeting for Sufferings, was highly interesting and satisfactory to the meeting, and an earnest desire was manifested that Friends should be more active in spreading the writings approved by the Society, among those of other religious professions, as well as to encourage their being read by our own members. The substance of the report was directed to be printed, with the extracts, to go down to the subordinate meetings.

A committee, to examine and settle the treasurer's account, and report what sum should be raised for the use of the meeting during the next year, was appointed; the meeting then adjourned.

The meeting convened at the hour adjourned to. A detailed and highly interesting report of the transactions during the past year of the committee having charge of the boarding-school at West-town, and exhibiting the present state of that seminary, was read, calling forth an expression of lively interest in the welfare of the institution, and of satisfaction with the care and labours of the committee, of its officers, and of the teachers; who were encouraged to continue their efforts to carry out the concern of the Yearly Meeting, that this school should secure to the members the means of conferring a liberal and religiously guarded education on their children. The committee having proposed a new appointment, it was, on consideration, concluded to continue the Friends under the appointment, for a longer time. The whole report will be published in a future number of "The Friend."]

The report of the committee charged with the oversight of the Indian natives on the Alleghany, who have so long received the care and assistance of Philadelphia Yearly Meeting, was read. It gave an encouraging account of the boarding-school established at Tunessassa, for the children of the Indians, and manifested that the care of the committee to fulfil the duties devolved on them, continued unabated. The committee was encouraged to persevere in their labours. It appears very desirable to obtain the services of a Friend to assist in the management of the farm, &c., and a minute was made, encouraging any one who may feel a religious obligation to engage in this work of true benevolence, to bring the matter before the committee for its judgment, as soon as possible. [The report will be hereafter published.]

The committee charged with rendering advice and assistance to Friends of the Quarterly Meeting of Shrewsbury and Rahway, produced a report, from which it appeared needful to continue the committee, which was accordingly done. Then adjourned to 4 o'clock to-morrow afternoon.

Fifth-day afternoon, the 19th. The reports from the Quarterly Meetings, on the occasional or habitual use of ardent spirits as a drink, were read. One quarter reported itself entirely clear; in the other nine, there were seventy-five cases of members who had more or less indulged in this dangerous practice in the course of the past year, ten of whom had given it to others in their employ. From what was elicited in the course of the discussion, it appeared that the apparent increase in the number reported, was attributable to the more searching inquiry made among the members, and cases being brought forward where the article had been used but once or twice in the time specified.

It appeared that the Monthly Meetings had generally bestowed labour in the cases claiming their care respectively. Much concern was felt and expressed that Friends should be more fully aroused to the necessity of completely banishing the use of ardent spirits as a drink from amongst them, and the subordinate meetings were recommended to bestow further affectionate labour on such of their members as, in disregard of the concern of the Yearly Meeting so often expressed, shall continue to give countenance to the practice, whether by occasional or more frequent participation in it; reports to be sent up as heretofore of the labour bestowed, and the number of delinquents.

From the reports received from the respective Quarterly Meetings, it appears there are 1,382 children of a suitable age to go to school within their limits, who, within the past year, have been disposed of as follows:—At select schools, 133; at schools taught by members, but not select, 439; at Haverford School, 2*; at West-town, 238; in family schools, 187; at schools not taught by members, 51; At district schools, 291. Twenty-one have been temporarily absent, and twenty appear not to have been at school during the year.

The great importance of Friends providing for the guarded and liberal education of their children, was pressed upon the meeting, and the members encouraged to place them in schools under the care of qualified teachers, members of our religious Society, and to guard them, as far as may be in their power, from the corrupting conversation and habits which so abound in many of the District and other mixed seminaries. Reports on this subject were directed to be forwarded by the Quarters next year.

The committee on the treasurer's account made report, then adjourned.

Sixth-day morning, the 20th. Essays of epistles to London, Dublin, New York, Ohio, North Carolina, and Indiana, being produced from the committee, they were read, adopted, and directed to be signed and transmitted to the meetings to which they were respectively addressed. The committee reported that they were not united in preparing an epistle to Baltimore Yearly Meeting at this time.

A few Friends, who had on Second-day objected to the reception of the epistle signed by B. Hoyle, now objected to forwarding that prepared for Ohio Yearly Meeting; and two or three expressed their dissent from the purport of part of those epistles which were addressed to North Carolina and Indiana.

As the meeting was drawing to a quiet close, a Friend, who had repeatedly expressed his opposition to the course pursued by it in respect to Ohio, proposed that those who united with him in sentiment should stop at the rise of the meeting, and sit down in silence to feel together. His friends, however, did not unite with him in the adoption of such a measure, and at their urgent solicitation, he withdrew his proposition.

* We are informed the number at Haverford is seventeen, fifteen being reported with those who attend schools taught by members, but not select.

After which, a solemn quiet spread over the assembly, and under a humbling sense of the unmerited goodness of the blessed Head of the Church, in still extending his preserving power over us, and with sincere desires that He might yet bring us to be a more thoroughly united people, the meeting adjourned to meet again at the usual time next year.

SUMMARY OF EVENTS.

EUROPE.—The steamship Nashville chartered by the Collins Company, in place of the Pacific, arrived at N. York on the 22d inst., bringing dates from Liverpool and London to the 7th inst.

The Peace Conference.—The Vienna Conference had adjourned until the 9th, to await the Russian ultimatum, and the arrival of the French and Turkish Ministers of Foreign Affairs at Vienna. The consideration of the third point would be the first subject before the Conference. Public opinion was divided as to what would be the final result, but the prospect of peace was thought to be decreasing. Ali Pacha had arrived at Vienna, and would take part in the future discussions.

The War.—The Russians, as well as the Allies, are strengthening their positions in the Crimea, preparatory to the opening of the spring campaign. The former had been largely reinforced. Omar Pasha had desired assistance from the Allies, which could not be granted, and the Turks are consequently only expected to hold their position at Eupatoria.

Since the last advices, there had been a series of fierce sorties and assaults between the Russians and French, for possession of the rifle ambuscades in front of the French. These rifle pits which have led to such a sacrifice of life are placed in front, and to the right and left of the tower, and about 600 yards from the allied works. The importance of this position to both besiegers and besieged, is considered very great, and the French have repeatedly driven the Russians from it, but had found it impossible either to hold or destroy the entrenchments.

On the 23d ult., the Russians made a formidable sortie, which, according to their account, was successful, their troops having destroyed the works executed by the French in the previous few days. It was attended with fearful loss of life; according to the French account, their loss was 600, and that of the Russians, 2000 killed and wounded. Prince Menschikoff, it was reported, had died on his way to Moscow.

PRUSSIA.—A despatch from Berlin, dated the 6th, states that the Russian party is predominant there, and that Prussia will most likely throw herself into the arms of the Czar, in case of an unfavourable result of the Conference.

ENGLAND.—The British Parliament was to reassemble on the 16th inst. A portion of the Baltic fleet sailed on the afternoon of the 4th. The Russians have established two fortified camps of 60,000 men each, for the defence of the Baltic provinces, and have blocked up all the ports by sunken vessels.

The British Board of Trade returns for the month, ending Third mo. 5, show, compared with the corresponding month of last year, the unprecedented decrease of nearly £2,500,000 sterling, furnishing strong evidence of the rapid contraction of business, throughout the country.

The returns of the last quarter's revenue show a net increase of £4,384,308, and on the year of £6,312,624. The bulk of this apparent increase arises from the doubled income tax.

London.—The money market was easier; the Bank of England had reduced its rates to 4½ per cent. The bullion in the Bank continued to increase. Consols were quoted at 92⅝ and 92¾.

Liverpool.—There has been an active speculative demand for cotton, and prices have slightly advanced, say from 1-8 to 1-16*d*. The stock in port consisted of 615,000 bales, of which 387,500 were American. Breadstuffs and provisions generally were without change.

Iron.—Welsh rails are quoted at £6 7*s*. 6*d*. Scotch Pig Iron, 58*s*.

RUSSIA.—Count Nesselrode is expected to attend the Conference when the discussions are resumed. Previous to the adjournment of the Vienna Conference, the Russian Plenipotentiaries refused to admit, that in accepting the third point, they have acknowledged the principle of the diminution of the Russian power in the Black Sea.

SPAIN.—It is announced by telegraph, that the Spanish Government has demanded the recall of the British Ambassador at Madrid, whom they accuse of interference in religious matters.

SARDINIA.—The bill to suppress the numerous monastic institutions of the country passed the House of Deputies at Turin, on the 4th, by the strong vote of 116 to 36, and was taken up the next day in the Senate against an earnest opposition, by a vote of 63 to 27, which indicates that it will speedily become a law.

MEXICO.—There is no improvement in the condition of this distracted country. Governor Maximo Ortiz while on his march from Tehuacan to Tehuantepec, fell into an ambuscade, and his whole force of six hundred men were nearly annihilated.

The accounts from the South are favourable to the cause of the revolutionists. Alvarez is supreme in Guerrera.

UNITED STATES. — *Expedition to the Plains.* — A number of the troops intended for this movement against the Indians, have already left St. Louis for Fort Leavenworth. Five thousand barrels of flour at $12 per bbl. had been purchased at St. Louis, for the expedition. Thomas H. Benton, in a letter, dated the 15th inst., states that there is no Indian war on the Upper Missouri and North Platte; that he has received ample proof to sustain this assertion, and that the increase of the army was made for another purpose.

Lake Erie.—The Buffalo, (N. Y.,) papers say that the ice extends in an unbroken mass for more than one hundred miles up the lake. The prospect was very unfavourable for an early opening of the navigation.

Wheat Crop in the West.—We continue to have the best accounts of the coming wheat crop. From Iowa, Illinois, Wisconsin, Indiana and Michigan, all reports are cheering—the wheat fields never looked better.

The Drought in the West.—The Camden (Ark.) Herald gives a sad picture of the long continued and desolating drought in that section, which has never been equalled, at least in the memory of the "oldest inhabitant."

Scarcity in Michigan.—Hay and fodder are unprecedentedly scarce in some parts of Michigan, and stock is actually perishing for want of food.

Immense Emigration.—The western papers notice an immense amount of travel on the lakes, railroads, and indeed all the great thoroughfares.

The Arkansas River, will, it is said, be no more fit for navigation. The banks have fallen in to such an extent as to widen the bed of the river immeasurably, requiring a larger volume of water than usually comes down in ordinary rises, to furnish its thirsty bars, and to fill up the bed. The only dependence now is the railroad.

Things in Kansas.—A letter from Kickapoo City, Kansas territory, under date of Third month 28th, 1855, says the streets are being rapidly graded, the labourers receive $1.50 per diem, and that the following are the usual prices of provisions:—Pork, 6 cents per pound; beef, 7 cents; venison, 9 cents; mutton, 7 cents; chickens, $2 per dozen; turkeys, 75 cents per pair; geese, 25 cents each; eggs, 12½ cents per dozen; flour, $4.50 per one hundred pounds; wood, $2 per cord, delivered. Competent brickmakers are particularly wanted.

Sault St. Marie Canal.—J. W. Brooks, Superintendent of this Canal, says that vessels will be passed through into Lake Superior, some time in the Fifth month.

Utah.—The mail from Salt Lake reached Independence, Mo., on the 19th inst. Brigham Young continued the acting Governor of the Territory. The Indians on the plains are reported to be peaceably disposed. They have returned the stock formerly stolen by them, and are anxious to make amends for the past.

Philadelphia.—The coal trade of the Schuylkill continues to be prosecuted with great energy and success. The profits of the Reading Railroad Company for the Third month, are stated at $195,123 78. The gross receipts for the month were $360,384 33.

The coinage at the mint last month amounted to $889,266. Its business has been lessened by the establishment of the U. S. Assay office at New York. Mortality last week, 203, of which 55 were from diseases of the lungs and bronchi.

Milwaukee.—This town which is only twenty years old, has a population of 40,000. The manufactures last year amounted in value to $4,600,000. The imports were $11,000,000; the exports, $7,709,000. The pork packed last year, amounted in value to $313,000.

Chicago.—A serious riot occurred in this city on the 21st, growing out of the Maine Law License question. Force was employed to suppress it, and in the conflict one man was killed, and five or six wounded.

New York.—During last week a large number of foreigners arrived at this port, and it is said that many emigrant ships from Liverpool, Bremen, Hamburg, Havre and other ports, may be soon expected.

Mayor Wood has addressed a circular to all American Consuls, in Europe, inviting them to co-operate with him in preventing foreign paupers coming to this port. The Mayor asks them to forward him the earliest intelligence of all such shipments, in order that he may take such steps as the case may demand.

The excitement in reference to the new Liquor Law, has risen to a perfect panic among the venders of the article. It is stated that fully two thousand shops, where liquor is now sold, are offered for rent. The counsel to the corporation has, however, given his written opinion that the penalties of the new law cannot be enforced against the sale of imported liquors, whether in original packages or not. The exports of specie for the week, amounted to $1,657,959.

Miscellaneous.—Guano.—The total quantity of guano imported into Great Britain, in the year 1854, amounted to 235,111 tons, of which 221,837 tons came from Peru.

Pauper Emigration.—The Mayor of New York has received a letter from the U. S. Minister to Switzerland, enclosing a circular by the Swiss Federal Council, condemning the sending of Swiss paupers to the U. States, and prohibiting it in the future.

Potatoes.—In Nova Scotia, there is a large surplus of potatoes, and the high prices in our cities is causing their free exportation. The receipts at Boston have been large, and a number of vessels with potatoes are on the way to the same port.

Vessel Sunk by a Whale.—English papers, just received, state that the British schooner Waterloo, Capt. Jones, while on her passage from an English port to Scheidam, Holland, was struck by a whale and sunk in a few minutes, the crew with much difficulty escaping in the long boat. This disaster occurred in the North Sea, about forty miles east of Lowestoffe, in Norfolk, England.

The Earthquake at Broussa.—A late English paper contains some further particulars of the earthquake at Broussa, Turkey. Among the buildings destroyed was a Greek building, used as a Mosque, which was 1200 years old. Another mosque of great beauty, which was 600 years old, was irreparably injured. After the earthquake, a fire raged for six hours, destroying many houses. The earthquake extended all through the province, completely destroying a number of villages, and killing a great many of their inhabitants.

A Curious Fact.—In the United States, there were, in 1850, 2555 persons over 100 years of age; in France, there were only 102, though their population was nearly 36,000,000.

The New York Church Tenure Law.—The bill in relation to church property, passed by the New York Legislature, and which is now a law, declares void all future conveyance to priests, bishops, and other ecclesiastics, in their official character, or as corporations sole.

Remarkable Exemption from Mortality.—It is stated as a singular fact, that not a single death has occurred in Orange county, Florida, for the last twelve months. The population is about four hundred.

Steamboat Explosion.—On the 20th, the propeller Oregon exploded her boiler on Detroit river, near Detroit. Ten men were killed, and six others injured. The boat was greatly shattered by the explosion, and sunk in a short time.

Riot in Missouri.—On the 21st, the office of the "Luminary," a newspaper published at Parkville, Platte county, which was charged with Free Soilism, was attacked by a mob of about 200 persons, who destroyed the type and fixtures of the office, and threw the press into the Missouri river. The absence of the editor saved him from being tarred and feathered.

RECEIPTS.

Received from Wm. C. Wilson, O., $4, vols. 27 and 28; from Willis R. Smith, O., $2, to 27, vol. 28; from Wm. Picket, O., $2, to 32, vol. 29; from David Ball, O., $2, to 32, vol. 29; from Wm. Hancock, Pa., $2, vol. 28; Twelfth mo., 1854, from Wm. Hill, Me., Phebe Meader, and Wm. Wilber, $2 each, vol. 28.

HAVERFORD SCHOOL ASSOCIATION.

The stated annual meeting of the Haverford School Association, will be held at the committee-room, Arch street meeting-house, on Second-day, Fifth month, 14th, 1855, at 4 o'clock, P. M.

CHARLES ELLIS, Secretary.

WEST-TOWN BOARDING-SCHOOL.

Assistant Teachers are wanted in the Boys' department of this Institution. Application may be made to either of the undersigned.

HENRY COPE, } Philad.
SAML. BETTLE, JR., }
SAML. HILLES, Wilmington, Del.

WESTGROVE BOARDING-SCHOOL FOR GIRLS,

(Located at old Westgrove meeting-house, Chester county

This School will be opened on the 7th of Fifth mont next, and continue in session twenty weeks. It is de signed to furnish an opportunity to young women fc acquiring economically a competent English educatior Attention will be given to the preservation of health the general cultivation and discipline of mind, and concern exercised to inculcate principles and habits i accordance with the views of the Society of Friends.

For circulars containing other necessary information apply to THOMAS CONARD, Principal.
Westgrove P. O., Chester Co., Pa.

Second mo., 1855.

WEST-TOWN BOARDING-SCHOOL.

The summer session of the School will commence o Second-day, the 7th of Fifth month next. The pupil will be conveyed by railroad to West Chester, wher conveyances will be in waiting to take them to th School, on the arrival of the morning and afternoo cars, on Second-day, the 7th, and Third-day, the 8t of Fifth month. The children will get their baggag the day after their arrival. The cars leave the depo south side of Market street, above Eighteenth, (formerl Schuylkill Fifth street,) at 7½ o'clock, A. M., and o'clock, P. M. The agent of the school will be at th railroad depot on Second and Third-day afternoons and will furnish pupils with tickets, and accompan them to West Chester. Those who go by the *mornin* train will be furnished with tickets by a person in at tendance. To those who procure tickets as directed the fare from Philadelphia to the School, including bag gage, will be one dollar, which will be charged to the scholar at the School. All baggage should be distinctly marked West-town, and with the name of the owner and should be sent directly to the railroad depot. Ap plications for admission must be made to Joseph Snow don, Superintendent at the School, or Joseph Scatter good, Treasurer, No. 84 Arch street, Philadelphia.

The West-town office is at Friends' Bookstore, No. 84 Arch street, where all small packages for the pupils left before 12 o'clock on Seventh-days, will be forwarded. *All letters* for the pupils and others at the School, should be sent by *mail*, directed to *West-town*Boarding-School West Chester P. O., Chester Co., Pa.* Postage should be *pre-paid*, and packages should be distinctly marked and put up in a *secure manner*, so that their contents will not be liable to be lost by handling. The cars will leave West Chester during the *summer session*, for the School on Second, Fourth, and Seventh-days, on the arrival of the *afternoon* cars from the city, and from the School to West Chester on the same days, to meet the afternoon cars to Philadelphia. The fare for each passenger to and from West Chester *by the stage*, will be 25 cents When special conveyances at other times are provided at the School, an extra charge will be made.

West-town, Third mo., 1855.

DIED, at her residence, near Coatesville, Pa., on the 10th of Twelfth month last, REBECCA W. LUKENS, in the 62d year of her age; a member of Fallowfield meeting. As the disease advanced, she was brought under great conflict of spirit; her daughter inquired of her at one time, if she would like to have a religious friend to converse with; she replied, "I have a work to do that none can do for me." After this, she was much engaged in supplication, and in having the Scriptures read to her, until near the close of the second week, when her hope of Divine mercy and regard, seemed almost ready to end in despondence, which was a dark season to her, and deeply felt by those who tenderly loved her. But as the darkest hour sometimes precedes the dawn of morning, so it was with her tribulated spirit; her Saviour drew near and dispelled the clouds with which she was surrounded, and granted her the evidence of hope in his mercy and forgiveness; when with a countenance beaming with thankfulness, she exclaimed, "I think I see a ray of light." This greatly consoled her, and the next day with rejoicing and praise she said, "I brought my sins, not in handfulls, but in one load, and cast them at my Saviour's feet, and He has borne for me what I could not bear for myself." She now became so tranquil that her physician though her recovery possible; but on the morning of her death after being prepared for sleep, she suddenly changed and her spirit passed away, we may hope, to the mansions of everlasting rest.

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

Sketches from History.

(Continued from page 259.)

George Fox, who was ever on the watch to warn, to guard, and to confirm his fellow believers, felt deeply the sore trial to which they were now subjected, and while labouring assiduously at London to make manifest the innocence of Friends, of the charges maliciously preferred against them, and to exhibit in true colours the abominable usage to which they were subjected; he yearned towards them in that love, which the true disciples of Christ alone feel and know, and as the first fury of the storm abated, he was drawn to salute and encourage them as the chosen of the Lord. He says, "In the deep sense I had of the grevious sufferings Friends underwent, and of their innocency towards God and man, I was moved to send the following epistle to them as a word of consolation, and to put them upon sending up their sufferings.

"My dear Friends,—In the immortal Seed of God, which will plead its own innocency, who are inheritors of an everlasting kingdom which is incorruptible, and of a world and riches that fade not away, peace and mercy be multiplied amongst you in all your sufferings; whose backs were not unready, but your hair and cheeks prepared; who never feared sufferings, as knowing it is your portion in the world, from the foundation of which the Lamb was slain; who reigns in his glory which he had with his Father before the world began. He is your rock in all floods and waves, upon which you can stand safe, with a cheerful countenance, beholding the Lord God of the whole earth on your side. So, in the Seed of God, which was before the unrighteous world in which the sufferings are, live and feed, wherein the bread of life is felt, and no cause of complaint of hunger or cold.

"Friends, your sufferings all that are or have been of late in prison, I would have you send up an account of, and how things are amongst you, that it may be delivered to the king and his council; for things are pretty well here after the storm."

Nor was George Fox alone in his concern for the preservation and stability of his fellow professors. The ministers in the society at that day, were a body of extraordinary men and women, many of whom being endowed with great natural powers of mind, had been sanctified by the baptism of the Holy Ghost, and prepared for the reception of eminent gifts, bestowed by Him who had called and chosen them for the work and suffering of the day. Practical believers in the one true faith, they were knit together, and to their fellow-members in the unity of the Spirit, and made more dear one unto another by the fellowship of suffering. In this time of trial, many of them were imprisoned, and several were moved to address their suffering brethren, and exhort them to patient faithfulness. Conspicuous among that illustrious band stood E. Burrough, of Westmoreland. Convinced of the truth, as it is in Jesus, by George Fox, while he was yet a mere boy, he yielded at once to the requirings of his Divine Master, and though turned out of his father's house, and rejected by his relations and former acquaintance; he gave up all, and meekly accepted "reviling, slandering, buffeting and caning, watching and fasting, imprisonments, and great jeopardy of life, as his portion with the people of God, rather than enjoy the pleasures of sin for a season, having an eye to the recompense of reward. And that reward was not long in coming, for, in the year 1662, two years after the insurrection of the Fifth Monarchy-men, having been cast into prison in London, already crowded with Friends, after a confinement of eight months, he was seized with a prevailing distemper, and laid down his life for the testimony of Jesus; being enabled to say a short time before his death, after having put up a petition for his enemies, "though this body of clay must turn to dust, yet I have a testimony that I have served God in my generation; and that Spirit which hath lived and acted, and ruled in me, shall yet break forth in thousands." Near the close of the year in which the insurrection took place, he addressed his fellow-labourers in the ministry of the gospel, and we take from his epistle the following short extracts, as exhibiting the depth of the trial through which the society was then passing, its innocence, and the blessed assurance granted to its persecuted and despised members, that the Lord did and would uphold them; as also the faith, that through their sufferings and labour, his kingdom should be more fully established and spread in the earth.

"It is true the gates of hell at this time seem to be open against us, and we are a people like to be swallowed up of our enemies, and floods of wickedness seem to overflow, and the waves of the great sea seem to be void of mercy, and the hope of our adversaries is to extinguish us from being a people, and to destroy us from the face of the earth; and the hands of our persecutors are highly exalted at this day, as though all that we have done for the Lord, by our labours and travels should now be made of none effect.

"Well, dear brethren, though it be thus, yet our God can deliver us, and confound our adversaries; and we can appeal unto our God, and can spread our cause before him: and he knows that our sufferings and our afflictions are altogether unjust, and unequal, and unrighteous, and that our persecutors do afflict us out of their envy, and without any just cause administered unto them by us; our God knows it, angels and saints know it, that we are at this day a persecuted people, for religion's sake; and this our present affliction is not any just punishment, either from the justice of God, or the justice of men.

"And I know not anything that remains upon our part at this day, but that we commit ourselves into the hand of the Lord, living in the Seed of God, wherein our election is sure, before the world was and forever: and let us remember one another, and pray one for another; and let us stir up all the children of our Father to faithfulness and patience, while we have time; I say, let us walk to the glory of the Lord, keeping faith and a good conscience to our last end. Our testimony shall never die, nor our memories ever perish when we have ceased to be; and though we suffer now the loss of life, and all we have, yet the effects thereof will be glorious in ages to come, and our present sufferings will hasten the glory of God's work throughout the world: receive this as my salutation to you all."

We have mentioned that accounts of the imprisonment and other suffering inflicted on Friends in the different parts of the country, were transmitted to London, in order to furnish Friends there, with facts to be used in the efforts making to obtain relief. United as one large family of brothers and sisters, when one member suffered, the others suffered with it, and they were not satisfied until all proper means had been used, to obtain relief for the oppressed.

A remarkable evidence of this brotherly love and sympathy, springing from a sense of one another's innocence and integrity, had been given a short time before the increased persecution, arising from the insurrection of the Fifth monarchy-men. Many Friends had been kept long in jail, and there appeared to be no prospect of release, when the following paper was presented to Parliament.

"Friends,—Who are called a Parliament of these nations: we in love to our brethren that lie in prisons, and houses of correction and dungeons, and many in fetters and irons, and have been cruelly beat by the cruel jailors, and many have been persecuted to death, and have died in prison, and many lie sick and weak in prison and on straw. So, we in love to our brethren do offer up our bodies and selves to you, for to put us, as lambs, into the same dungeons and houses of correction, and their straw and nasty holes and prisons, and do stand ready, a sacrifice to go into their places, in love to our brethren, that they may go forth, and that they may not die in prison, as many of the brethren have already died. For we are willing to lay down our lives for our brethren, and to take the sufferings upon us that you would inflict upon them. If our brethren suffer, we cannot but feel it; and Christ saith, *it is He that suffereth, and was not visited.* This is our love towards God and Christ, and our brethren, that we owe to them, and to our enemies, being lovers of all your souls, and of your eternal good. . . And if you will receive our bodies, which we freely tender to you for our friends that are now in prison, for speaking the truth in several places,—for not paying tythes,—for meeting together in the fear of God, —for not swearing,—for wearing their hats,—for being accounted as vagrants,—for visiting Friends, —and for things of a like nature. . . We whose names are hereunto subscribed, (being a sufficient number to answer for the present sufferers,) are waiting in Westminster Hall for an answer from you to our tender, and to manifest our love to our

friends, and to stop the wrath and judgment from coming upon our enemies."

This was signed by one hundred and sixty-four Friends.

From the impulse of the same sympathy and affection, Margaret Fell either came up to London for the purpose, or being there, resolved to wait upon the king, and represent to him the cruel and destructive outrages which many of his innocent and peaceable subjects were undergoing, and to solicit his interference on their behalf. She was a woman of no common character. Having bought the truth at a cost of much that the world deems of great value, she had steadily maintained her integrity and standing in it, and was always ready and willing to devote both time and means, for the defence and relief of her suffering fellow-believers. She knew her place in the church, and kept it, and the church appears to have esteemed her as a mother in Israel. With the accurate information of the cruelties inflicted on Friends in all parts of the nation, obtained as we have before stated, she waited on King Charles, and endeavoured to impress on his mind the injustice of subjecting a peaceable inoffensive people, who had nothing justly laid to their charge, except worshipping God in the way they believed acceptable to him; to punishments which would have been severe, for being connected with the crime charged upon the insurrectionists, and which were intended to destroy the innocent sufferers. Her first visit appears to have made little impression, but in her second interview, having shown the king and council the accounts received of several thousands then lying in jail, and the illegal manner in which they had been arrested and committed, she prevailed on them to issue a proclamation "forbidding soldiers to search any house, without a constable."

Not disheartened by the evident unwillingness of the court to obey the dictates of justice and humanity, after the execution of several of the unhappy insurgents; and their dying testimony of the innocence of the Quakers, M. Fell waited on the king and council a third time, and once more interceded for her imprisoned brethren and sisters. The king at last, overcome by the accumulated evidence that Friends were in nowise implicated in the plots of the Fifth Monarchy-men, issued an order, "that the Quakers be set at liberty without paying fees." Thus ended the persecution, got up and urged on by the enemies of Truth, under the silly pretext of Friends being connected with the memorable insurrection of 1660.

Thirst in the Arctic Regions.—The use of snow when persons are thirsty, does not by any means allay the insatiable desire for water; on the contrary, it appears to be increased in proportion to the quantity used, and the frequency with which it is put into the mouth. For example, a person walking along feels intensely thirsty, and he looks to the snow with coveting eyes; but his sense and firm resolutions are not to be overcome so easily, and he withdraws the open hand that was to grasp the delicious morsel and convey it into his parching mouth. He has several miles of a journey to accomplish, and his thirst is every moment increasing; he is perspiring profusely, and feels quite hot and oppressed. At length his good resolutions stagger, and he partakes of the smallest particle, which produces a most exhilarating effect; in less than ten minutes he tastes again and again, always increasing the quantity; and in half an hour he has a gun-stick of condensed snow, which he masticates with avidity, and replaces with assiduity the moment that it has melted away. But his thirst is not allayed in the slightest degree; he is as hot as ever, and still perspires; his mouth is in flames, and he is driven to the necessity of quenching them with snow, which adds fuel to the fire. The melting snow ceases to please the palate, and it feels like red-hot coals, which, like a fire-eater, he shifts about his tongue, and swallows without the addition of saliva. He is in despair; but habit has taken the place of his reasoning faculties, and he moves on with languid steps, lamenting the severe fate which forces him to persist in a practice which in an unguarded moment he allowed to begin. I believe the true cause of such intense thirst is the extreme dryness of the air when the temperature is low.—*Sutherland's Journal.*

Extracted for "The Friend."

Reflections on the Leadings of Truth and Error.

"Christianity, as defined by its holy Author, is divine love evinced by an unfeigned love to each other; and *every* deviation from this exalted principle, however specious the pretext or zealously maintained, *is* mere delusion, as its fruits everywhere manifest,

"Were love, in these, the world's last doting years,
As frequent as the want of it appears,
Each heart would quit its prison in the breast,
And flow in free communion with the rest.

"What can be more absurd, than to believe that the Spirit of Christ leads his followers into anything inconsistent with his example and precepts; that is, actions into which he could not consistently have led his twelve disciples, when he was personally on earth. 'No one loses his virtue against his will.'

"Grace leads the right way; if you choose the wrong,
Take it and perish; but restrain your tongue;
Charge not, with light sufficient, and left free,
Your wilful suicide on God's decree.

"No religion can be true that has not the well being of mankind equally for its object. Religious creeds, which in the smallest degree connive at malevolence, counteract the spirit of the gospel, which breathes nothing on earth, but 'peace and good-will to men.' Religion and enmity are incompatible. Nothing injurious can be truly religious. If he that is without bowels, is not a man; *how*, then, can he be a Christian?

"O, 'tis a godlike privilege to save,
And he that scorns it, is himself a slave.
'Beauty for ashes' is a gift indeed,
And slaves, by Truth enlarged, *are* doubly freed.

"Did we believe a final reckoning and judgment, or did we think *enough* of what we do believe, we should allow more love in religion than we do; since religion itself is nothing else, but love to God and man. 'He that lives in love, lives in God,' says the beloved disciple. Love *is* above all; and when it prevails in us all, we shall all be lovely, and in love with God, and one with another.

"No works shall find acceptance in that day,
When all disguises shall be rent away,
That square not with the Scripture plan,
Nor spring from love to God, or love to man.

"To sympathize with others, under those infirmities we have been helped to overcome in ourselves, is not only a duty we owe to each other, but a debt of gratitude due to our common Benefactor. Whatever pretexts men assume for an unkind and injudicious treatment to others on account of religious opinions, they are certainly wrong themselves. Christianity admits of *no* such thing—its spirit is not compulsive and intolerant, but persuasive and forbearing. 'No one can wilfully injure another without hurting himself,' so true is the Scripture doctrine, that 'with what judgment we judge, we shall be judged, and with what measure we mete, it shall be measured to us again.' Those who do not spare others, have no just claim to indulgence themselves, and when they fall, seldom excite much compassion. It is *not* likely that any one, while in a disposition to injure another, can sincerely believe himself an object of Divine mercy. To implore forgiveness in an unforgiving spirit, is a violation of the Divine command, and consequently forbids the hope of the blessing. To remit a wrong, leaves the offender in debt. Forgive, and thou shalt be forgiven.

"We are apt to value ourselves more on exposing the faults of *others* than on correcting *our own*; and self-conceit is mostly blind to the merits of *others*, as well as to *its own* defects. The voice of wisdom is seldom listened to by a self-confident mind. Justice is the *first* of all moral virtues; it eyes not persons, but the cross. It is one sign of a humble mind, if, when offences occur, they incline us rather to fear we have administered the occasion, than to indulge ourselves in harsh reflections on the offenders. A real seeker after truth disguises nothing; he is, therefore, not offended at a detection of error, even in himself; because he knows that if truth be gained, he shall partake of the benefit. Kiss the rod that corrects the errors. Tenacity is more a sign of error than truth. True humility is not apt either to give or take offence. They best can bear reproof, who merit praise, but self-confidence is apt to contemn or disregard those humbling attentions to the warning voice of wisdom, by which alone we are preserved from evil.

"That which characterizes the true church, is unity. Being governed by *one Head*, and the *same Spirit*, its members are everywhere preserved in consistency with His precepts, and consequently in harmony with each other, and 'peace with all men.' The effect of attention to the grace and good spirit of God on the heart and mind, is to illuminate the understanding, and to destroy those evil propensities of corrupt nature, from which all contrariety, discord, and persecutions originate: it is, therefore, the *only* way to unity and peace."

Cat Hospital at Aleppo.—Among the remarkable things at Aleppo is the hospital for cats. This was founded long ago by a rich, cat-loving Mussulman, and is one of the best endowed institutions in the city. An old mosque is appropriated to the purpose, under the charge of several directors; and here sick cats are nursed, homeless cats find shelter, and decrepit cats gratefully purr away their declining years. The whole category embraces several hundreds, and it is quite a sight to behold the court, the corridors and terraces of the mosque swarming with them. Here, one with a bruised limb, is receiving a cataplasm; there a cataleptic patient is tenderly cared for; and so on, through the long concatenation of feline diseases. Aleppo, moreover, rejoices in a greater number of cats than even Jerusalem. At a rough guess, I should thus state the population of the city:—Turks and Arabs, 70,000; Christians of all denomonations, 15,000; Jews, 10,000; Dogs, 12,000; Cats, 8,000.

Happy is the mind whose dependence is not upon the fluctuating joys of this world, who can contemplate all with the eye of a passenger that is seeking rest in another.

Test of Friendship.—One of the surest evidences of friendship that an individual can display to another, is telling him gently of a fault. If any other can exceed it, it is listening to such a disclosure with gratitude, and amending the error.

For "The Friend."

Christian Simplicity.

A proper training under conscientious religious parents and friends, is of inestimable value to young people. Sooner or later we may hope the fruit will appear, according to the testimony of the Scriptures: "Train up a child in the way he should go, and when he is old, he will not depart from it." Should children, who have had the best opportunities prove rebellious to the dictates of the Holy Spirit in their hearts, and by their evil ways, appear to despise the counsel and the prayers of religious faithful parents or friends, these will be clear in the Divine sight, and a great weight will fall upon the ungrateful transgressor. However discouraging their prospects at times may be, those who have charge of youth, should not relax in their efforts to induce them to obey the will of their heavenly Father. "In the morning sow thy seed, and in the evening withhold not thine hand; for thou knowest not whether shall prosper, either this or that, or whether they shall both be alike good." Remember that example is the loudest preaching. A humble reverent walking with God, accompanied with judicious restraints over the child, will often make deep impression, and the Holy Spirit will enforce the precepts and the course of life of such caretakers, and visit the child with compunction for departing from it. Good advice will effect little, where parents do not live up to their own principles. Thomas Chalkley says, "I was descended of honest religious parents, who were very careful of me, and brought me up in the fear of the Lord, and oftentimes counselled me to sobriety, and reproved me for wantonness. That light spirit which is incident to youth, they were careful to nip in the bud, so that I have cause to bless God, through Christ, on the behalf of my tender parents."

"When between eight and ten years of age, my father and mother sent me near two miles to school, in the suburbs of London. I went mostly by myself, and many were the exercises I went through, by beatings and stonings along the streets, being distinguished by the badge of plainness, which my parents put upon me, of what profession I was; divers telling me, 'It was no more sin to kill me than it was to kill a dog.'" This was about the year 1685; and people were incited to cruelty against Friends, in order to arrest if possible the spread of vital Christianity, as it appeared among them in a life of self-denial and holiness. Now Satan is striving to bring into contempt their gospel testimonies to a simple humble walk, under the cross of Christ, against the pride of life, and the vain fashions of the world. Even, on the part of some who profess to hold to the principles of the society, our plain way of living, speaking and dressing, appear to be held in light esteem. Young people may be driven off from the straight and narrow way, which leads to life eternal, and be lost to the cause of their Saviour by the defection of older ones. The more need there is for true practical Quakers to maintain a strict watch against this spirit of deception, and labour to guard their children against its baneful influence.

The good effects of a pious discipline showed itself at an early period. "About this time the Lord began to work strongly in my mind by his grace, insomuch that I could not forbear reproving those lads, who would take the name of the Lord God in their mouths in vain, reminding them of the third commandment: 'Thou shalt not take the name of the Lord thy God in vain, for the Lord will not hold him guiltless that taketh his name in vain;' and of Christ's saying, 'every idle word, that men shall speak, they shall give an account thereof, in the day of judgment;' for which I was mocked and derided by some, and others would sometimes refrain from such bad words, when I reproved them. One time I was amongst some men, one of whom I had reproved, and he told the rest of it, and turned to me and said, that I was no Christian, asking me when I had said the Lord's prayer; I asked him if he said it. He said, yes. I then asked him how he could call God, father, and be so wicked as to swear, and take God's name in vain, which I had heard him often do. I told him what Christ said to the Jews, 'Ye are of your father the devil, because his works ye will do; and those who did the devil's works could not truly call God, father, according to Christ's doctrine.' So being convicted in their consciences that what I had said was true, they were all silent, and wondered that I being so young, should speak in such a manner; in which I had great peace; and henceforth these men let me alone.

"When I read the Holy Scriptures, I desired that God would open them to my understanding, which he did to my edification many times. I also begged earnestly of the Lord, that he would be pleased to be with me, and make me like to those his children and servants, of whom I read in the Holy Scriptures, who faithfully served him all their days. And when I read of the crucifixion of our blessed Lord and Saviour Jesus Christ, it would break my soul into tenderness. I thought it was enough to awaken and humble any soul that was well meaning, and had any sense of the power, love, and grace of Christ. Thus I went on for several years, feeling that peace which passeth understanding, which many times accompanied my poor and needy soul. Being advanced to about fourteen years of age, I used to shun the cross of speaking in the plain language, which I always read in the Holy Scripture, to those I conversed with, except my father and mother, who would not allow me to speak otherwise. I was convicted in my conscience that it was not right to play the hypocrite after that manner; and on a certain time I had occasion to speak with an officer, a great man in our neighbourhood, and my heart moved within me, for fear I should shun the cross of Christ; for it was Christ's language to all, as we may read in the New Testament. And the Scriptures, from Genesis to the Revelations, speak *thee* and *thou* to a single person in a general way. So I took up the cross, and said *thee* to him, and he was much affronted, and said 'Thee! what dost thou thee me for?' I soberly asked him if he did not say *thee* to his Maker in his prayers; and whether he was too good, or too great, to be spoken to in the same language in which he addressed the Almighty? To which he made no reply, but seemed to fall from his passion into admiration, as one smitten in himself. He bore me respect ever after, and I greatly rejoiced that I was preserved faithful. Though it may look a little thing to some, yet I found it good, as the Scripture saith, not to despise the day of small things."

Happy would it have been for many of our young people since that day, had none despised, and turned their backs upon the clear requisitions of the Spirit of Truth, and the righteous concern and example of consistent Friends, even in what a vain world esteems little things; but which if kept to steadfastly, are as stepping stones in the way to life, and contribute to the growth and strength of the faithful follower of Christ, in the work of regeneration. Those simple duties have not only the authority of the Holy Scriptures, and right and sound reason, but in the Divine administration, are often a means to humble and subdue the pride and the strong will of fallen man, tend to bring him into the state of a little child, and prepare him to be taught in the mysteries of salvation, and to learn that without Christ he can do nothing; but as he gives all up into his hands, he can do all things through Christ, who strengtheneth him.

Greenland Fishing Boats.—The only thing in which the Greenlanders manifest much skill is in the structure and management of their boats, the kayak, or boat for one man, and the oomiak, or woman's boat, both formed of a light frame-work of wood, covered with seal-skin.

The latter is usually about twenty-four feet long, and five or six feet wide, though some are built nearly a half longer. The covering consists of sixteen or twenty seal-skins, saturated with blubber, and thoroughly dried. Neither nails nor spikes are used in their construction, the whole being fastened together by the sinews of the seal, and their entire strength consists in their elasticity. They are flat-bottomed, and only fitted for a calm sea, as a stiff breeze or heavy swell is sure to capsize them. The ice is also apt to cut the skin by which they are covered, when the natives repair the damage by stuffing the hole with blubber, or draw them upon the shore, and sew a patch on the place; which is soon accomplished, as two persons can easily carry one of them. They are rowed by four or five women; and, with a full cargo on board, can accomplish thirty miles or more in a day; though on long voyages, one cannot reckon on more than twenty or twenty-four on an average, as every fifth day the boat has to be taken out of the sea, to allow the skin, now saturated with water, to dry.

The former—the kayak, or man's boat—is from twelve to fifteen feet long, about eighteen inches wide, formed of wood and whalebone, covered above and below with skins, and seldom weighs over twenty or thirty pounds. In the middle is an opening surrounded by a hoop, in which the Esquimaux slips; and drawing his seal-skin cloak tight around it, renders the whole impervious to water. There is only one oar, six feet long, with a thin blade at each end, fenced with whalebone, In this frail bark he fears no storm, floating like a sea-bird on the top of the billows, or emerging from beneath the white waves that dash over his head. Even when upset, he rights himself by a stroke of his oar under the water; but if this is lost or broken, he is certain to perish. Few Europeans ever learn to row the kayak, and many even of the natives can never attain sufficient skill to regain their equilibrium when overturned.—*Edinburgh Cabinet Library.*

For "The Friend."

The following extracts on the subject of the ministry taken from the writings of that deeply baptized minister of the gospel, John Griffith, I here forward for insertion if there should appear no objection, believing the revival of them will be useful in some meetings even, if upon examination it should be found they have, or a part of them, been published heretofore. W. Z.

"For though I preach the gospel, I have nothing to glory of; for a necessity is laid upon me, yea, woe is unto me if I preach not the gospel."

It is of the utmost consequence, towards promoting truth and righteousness upon the earth, that the ministry be preserved according to its original institution, viz., under the immediate direction of the eternal Word of God, speaking as the oracles of God. It is properly God speaking by his instruments to the children of men; such things, as he, the Searcher of hearts, knows they stand in need of; at the same time opening the hearts of them to whom it belongs, to receive the doctrine.

Nothing but the unparalleled love and power of Christ, can bring forth and support such a ministry. Man should be so far from proceeding upon corrupt motives, for outward gain or advantage in this important work, that even the good will to mankind flowing from the love of God shed abroad in the heart in which strong desires may arise to do good, and much beautiful gospel doctrine also may open very suitable, as the party may think, for the help and edification of his or her fellow mortals, yet all this is not sufficient to proceed upon without the call and real gift in this awful undertaking; it being no more at best than the natural consequence of the operation of that pure love in the saint's minds, even in such as never had a call to the ministry: yet to some these blessed operations, influences, and openings, may be given in order to prepare them for that work, which they should wait patiently under until the full time comes: this will be clearly seen as the eye is single. But there is great cause to believe some have launched out upon this foundation only, in the beginning of their public appearances, whereby they have in a sorrowful manner brought darkness upon themselves, and sometimes on others; having proved only ministers of the letter, though perhaps pretending much to have the impulses of the spirit. These have been instruments of much anxiety and distress to the true church, who can savour nothing with delight, but that which comes from the power of the word of life. It may be difficult to bring true judgment over such, in the present low state of things; especially, when there has been a fair outside, and nothing to blame in their morals. But it sometimes hath fallen out; that there has been something permitted to manifest the unsoundness of such, and thereby to relieve the painful sufferers under the blasting wind of such ministry.

Inconsiderate, weak persons, have intruded themselves into this great work, who, not duly waiting for judgment to try the spirits, and what presents to their minds, have been beguiled by transformations, to go out in a false heat, and for want of the holy dread and fear upon their hearts, they have catched hold of the gospel liberty again restored, (which must be preserved open lest the Holy Spirit be quenched,) viz., that all who are called to the work of the ministry, whether male or female, may prophesy or preach one by one that all may be edified. It has been a painful suffering case to living members in some places, when they have seen, that both the matter and manner of some could have no other tendency than to expose themselves, and burden the religious society, who suffered such to assume an office for which they were no ways qualified. Certainly the church hath power to order and regulate her own members, and doubtless she may wholly refuse and reject a ministry, which upon trial she has in truth no unity with; and even substantial members in their private capacity, who have stood their ground well, and have large experience of the Lord's dealings, whether ministers or others ought, in reason and the nature of things, to have great weight with such who have not yet made full proof of their ministry, nor given satisfaction to their friends in general, though they may to themselves, and perhaps a few others of little judgment. Neither ought any to go abroad to exercise their ministry, until they know there is a general satisfaction at home therewith; not even to adjacent meetings. Some such have been very positive and resolute, hard to be convinced of their mistakes, and censorious upon those of deeper experience, but evincing much of that sign of depravity set forth by Isa. iii. 5, "the child shall behave himself proudly against the ancient, and the base against the honourable."

Good order and decency is to be preserved in the church of God, especially among the leading members, as way marks to all; the reason and nature of the thing demands a proper regard and preference to age, gifts, growth, and experience, which will be always strictly observed and paid by those of right spirits. When it is otherwise, it is a sure token of a false birth, and that pernicious self is not slain: where that predominates, it cannot fail of mixing with their religious services. That the hearers have a right to judge, appears from 1 Cor. xiv. 29, "Let the prophets speak two or three, and let the other judge." Therefore, it is very presuming for any to take upon them the sole right of speaking and judging, too, or to impose that upon an auditory or church, which they are not edified with, nor believe to proceed from the right spring; for the word preached doth not profit, unless it be mixed with faith in those that hear it.

Rescue of a Captive Indian Girl.—The St. Paul Pioneer gives an account of the capture and inhuman treatment of a young Chippewa girl, by Sioux, into whose possession she fell, and her rescue from a horrible death by a white man. Last summer a hunting party of Chippewas encountered a band of Sioux, who were out upon the war path. The former were defeated, and all except three who made their escape, and this young girl, were massacred. The maiden endeavoured also to make her escape, and jumping into a canoe, put out upon Otter Tail lake. The pursuers followed and overtook her, when she threw herself into the water, and endeavoured, by diving and hiding in a cluster of weeds, to elude them. The chief threw his tomahawk and wounded her badly in the side, and afterwards stunned her by a stroke upon the head with a paddle. The "brave" resolved to retain her as his wife, and brought her to his wigwam, where he had already two wives. Their jealousy was aroused, and the young Chippewa girl was constantly maltreated, the squaws literally putting coals of fire upon her head and cutting her with knives. She resolved to commit suicide to end her trouble. But this idea was not liked by her savage retainers, they resolved to enjoy one of their ancient rites by burning the captive at the stake. This fact becoming known to Joseph Campbell, the Sioux interpreter, he determined to effect her rescue, and going to the village, found and carried off the girl, who was subsequently placed in the charge of the commanding officer at Fort Ridgely, and after her wounds were healed, conveyed to Fort Snelling, and thence home to her band.

Nothing New under the Sun.—In connection with Pompeii, a glass has been discovered about the size of a crown piece, with a convexity, which leads one to suppose it to be a magnifying lens. Now, it has been said that the ancients were not aware of this power, and the invention is given to Galileo by some, to a Dutchman in 1621 by others, while the compound microscope is attributed to one Fontana, in the seventeenth century. But without a magnifying glass, how did the Greeks and Romans work those fine gems which the human eye is unable to read without the assistance of a glass? There is one in the Naples Royal collection, for example, the legend of which it is impossible to make out, unless by applying a magnifying power. The remarkable fact is, that the glass in question was found with a stone ready cut and polished for engraving thereon, which stone is now also to be seen in the Museum of Naples. It would appear, therefore, that a worker of gems used this instrument.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 261.)

JEDIDIAH ALLEN.

This Friend was one of the first settlers of Shrewsbury, and appears to have been an acceptable minister of the gospel amongst them, at least as early as 1685, when we find him a representative to the Yearly Meeting in Philadelphia, and one of those appointed to write the epistle to London. In 1687 he was not at the Yearly Meeting, but it was reported on behalf of the meeting at Shrewsbury, that "Friends of East Jersey were generally sick."

At the time of the next Yearly Meeting, Seventh mo., 1688, we are informed that "George Keith, Samuel Jennings, and Jedidiah Allen having lately visited New England, Rhode Island, &c. gave account of the great readiness and openness they found in many people to receive Truth's testimony,—especially several professors in New England. The blessing and presence of the Lord was with them in their travels to their great encouragement, comfort and reward. Therefore, they recommend to travelling Friends, as they find the Lord to incline them to it, to visit these parts believing and knowing it to be a seasonable time."

Jedidiah Allen was not influenced by the party spirit, which George Keith's sophistries and false statements had raised, and which threatened for a time to destroy entirely the meetings in East Jersey. He signed the testimony against George Keith issued by the Yearly Meeting, held at Burlington, in the year 1692, as also the epistle prepared at the same time to Friends in London, in explanation and justification of their proceedings against that contentious backslider from the spirituality of the gospel of life, light and salvation.

Jedidiah was generally a representative to the Yearly Meeting, but of his religious labours we have small account. We know that he visited the meetings in New England, in 1699, for Thomas Story under date of Fifth mo. 10th of that year, says "On second-day we went to Lynn, where, hearing of a meeting appointed by our friend, Jedidiah Allen, about two miles thence, we went to it." In the early part of 1703, he, with a valuable ministering friend named John Adams, had extensive service along the sea coast of Jersey, particularly about Egg-Harbour and Cape May. It was a time of great religious revival throughout the hereto fore loose and unsettled population, thinly scattered over those districts, where there was little law, and less moral and religious principle to restrain wrong-doers. Among those who had been aroused to a sense of their lost and undone condition through the blessed awakening influence of the Holy Spirit, attending the ministry of the Friends who visited them, Jedidiah reported "that several grew in the Truth." Meetings for worship were now held, where it had been the custom on the first day of the week for the inhabitants to meet together "to sport and game, and spend their time in vanity." They afterwards bore this testimony, "We were very wicked and ungodly," "until the Quakers came among us."

In the Yearly Meeting of 1703, Jedidiah was one of those appointed to prepare something on discipline for the use of the subordinate meetings and Friends generally. After this we find nothing worthy of note concerning him, except the report of his Quarterly Meeting to the Yearly Meeting, giving account of his death. This event took place in the winter, near the close of 1711.

GEORGE GRAY.

Of the time of the birth, convincement of the

ruth, and entrance into the ministry of this friend we have no account. Our first information concerning him is in the year 1665, when we find him in the Island of Barbadoes, suffering for his testimony against war. He appears to have kept a variety store, and was withal a barber by profession. On the 25th of the Tenth month, in the before-mentioned year, the outward tokens of his calling, consisting of a pole and basin, were taken away by the soldiers. On the 11th of the Fourth month, 1666, for not appearing in arms, he was arrested by the marshal of the regiment, and kept a prisoner for ten days. On the 1st day of the Eighth month, the same year he had goods seized from his store, for money demanded, for the fortifications of the Island.

In 1667, for not paying church dues, and in 1668, for not working on the fortifications, and for not bearing arms, he had twenty-eight pair of shoes taken from his shop. Walkup Dangerfield, the marshal to a regiment of foot soldiers, made in 1668 and 1669, distraints upon George. This man continued his cruel oppressions on Friends in Barbadoes, until the year 1672, when he sailed for England to look after some property, which had fallen to him there. On his voyage, he indulged much in strong drink. On one occasion having uttered many blasphemous speeches whilst under the influence of the liquor, he was found soon afterwards dead in his cabin.

From 1672 to 1692, George Gray suffered much in his estate from the distraints made on him, for not appearing in arms, not working at the fortifications, not sending his servants to the troop, not paying the claims of the priest, and for keeping his shop open on the day called Christmas. In the year 1675, he was confined in person for giving the court and some of the justices copies of a few papers written by his friends.

John Thurborne, a captain in a regiment stationed at Barbadoes, through debauchery and excess, spent a considerable estate. Sickness then came upon him, and being oppressed with want, as well as disease, he applied for relief to some of the people called Quakers, who freely ministered to his need. His health after a time being restored, he became marshal in the regiment where he had been a captain, and commenced a career of persecution and oppression against the people to whom he had lately been humbly applying for aid. This course he carried on from 1686 to 1689. He scoffingly called the "Quakers" his "milch cows," alluding to the numerous distraints he made on them, and often said that "Gregory Gray was one of his best cows, and gave a brave mess of milk every exercising day."

It is stated that on one occasion he took from a poor Friend, a fat hog, worth two or three times the amount of his demand, although there was in sight a smaller one. In ten weeks he came again and took away a heifer and two hogs, "for an alarum." Notwithstanding the quantity of goods he thus seized and converted to his own use, he did not prosper in worldly things, and being soon taken with a painful disease which admitted no cure, he lay in great misery, cursing his body, until death closed his wicked career on earth. He left no property to pay his debts.

One of the persecutors, under whom George Gray and his friends in Barbadoes suffered, was Alexander Ruddock, a colonel of a regiment of foot. He was a judge, and one of the council. This Scotchman was very bitter against the Quakers. He caused a Friend to be rated 400 lbs. of sugar toward the maintainance of the priest, who was his own son-in-law, when but 10 lbs. was due, and had a cow seized to satisfy the demand, worth £10 sterling. It appearing to the magistrate, that the Friend had paid all the taxes laid on him, but this for the priest, they would have had the cow restored, but Ruddock vindicated his course. To revenge himself on the Friend, for complaining of the wrong done him, he had him appointed constable, and then fined him for not answering to perform the office. For this fine he granted a warrant of distress, under which a negro woman was seized, who was sold for £26, all of which they kept. The colonel rejoiced in his acts of oppression, and even seemed to glory in them, and when the Friend pointed out how he had suffered at his hand, he said, "it should be so every year of his continuing in that office." This he said in the presence of his daughter, the priest's wife, but he did not live to see that year to its end. His cruelty towards the Quakers descended to very little things. On one occasion, observing one of them purchase some fresh meat, he came up, and taking possession of it, forced the butcher to break his contract, saying, "the Quakers shall not eat fresh meat." At another time he compelled a Friend to take back some meat he had purchased of the butcher, declaring as before "the Quakers shall not eat fresh meat."

Having been sitting in council with the other magistrates, he tarried, after they had left, although it was then late, on purpose to carry with him a copy of an order then adopted to break up the meetings of the Quakers. This he determined rigorously to execute within his precinct. But though man in his wickedness and presumption may will and devise iniquity, God can overrule in his own good pleasure his evil intentions, or put a stop by one stroke to his life and wicked devices. Going towards his own residence with his order, he stopt to see one of the judges, and whilst there was taken unwell. This hurried him home, where, on arriving, he called for some cream of tartar, on which arsenic was brought him through mistake. He took it, and in misery unutterable, ended his days. Notwithstanding his cruelty, his injustice, so openly practised and even boasted of, yet the hired priest in a funeral sermon spoke of him as one who had fought the good fight, and kept the faith, saying, "He had attained to the prudence of a judge, the dignity of a colonel, and the honour of a councillor; he had served his king faithfully, and died a saint." Such a character given to such a man, shows the unblushing effrontery of the hireling, who could dare in the presence of those who knew the actions of the deceased to call him a saint. Beside his cruelty to the Quakers, he had publicly advocated putting negroes to death, not it would appear for any convicted crime, but as "an example of terror." He said, "What is it for Barbadoes to put twenty or thirty negroes to death yearly for example's sake."

George Gray married on the Island, and after his wife was deceased, he thought it right, in the prosecution of his religious service, to remove to Pennsylvania. He brought a certificate from a Quarterly Meeting, held First mo. 24, 1692, at the house of Richard Sutten, Barbadoes, which was received at the meeting in Philadelphia. The certificate states that he was "an ancient inhabitant of the Island," that he was a widower, and "had been faithful in supporting sufferings for his testimony." He was married, soon after his arrival in Pennsylvania, to Mary Beardsley, the daughter of Alexander and Margaret Beardsley, two valuable Friends, who in 1683 removed from Worcester, in England, to Philadelphia.

He participated in the exercises brought upon sound Friends by the contentious course of George Keith; and after about two years' labour of love in the gospel of Christ, he received a returning certificate to Barbadoes. I cannot find, however, that he remained there with his wife more than a few months, as pretty early in 1695, we trace him engaged in religious services in Philadelphia, which for the next seventeen years was his residence.

(To be continued.)

Selected.

THE BLIND BOY.

It was a blessed summer day,
The flowers bloomed, the air was mild,
The little birds poured forth their lay,
And everything in nature smiled.

In pleasant thought I wandered on,
Beneath the deep wood's ample shade,
'Till suddenly I came upon
Two children who had thither strayed.

Just at an aged birch-tree's foot,
A little boy and girl reclined,
His hands in hers she kindly put,
And then I saw the boy was blind.

The children knew not I was near,
A tree concealed me from their view,
But all they said I well could hear,
And I could see all they might do.

"Dear Mary," said the poor blind boy,
"That little bird sings very long;
Say, *do you* see him in his joy,
And is he pretty as his song?"

"Yes, Edward, yes," replied the maid,
"I see the bird on yonder tree."
The poor boy sighed, and gently said,
"Sister, I wish that I could see!

"The flowers, you say, are very fair,
And bright green leaves are on the trees,
And pretty birds are singing there—
How beautiful for one who sees!

"Yet I the fragrant flowers can smell,
And I can feel the green leaf's shade,
And I can hear the notes that swell
From those dear birds that God has made.

"So, sister, God to me is kind,
Though sight, alas! *He* has not given;
But tell me, are there any blind
Among the children up in heaven?"

"No, dearest Edward, *there* all see—
By why ask me a thing so odd?"
"Oh, Mary, *He's so good to me,*
I thought I'd like to look at God!"

Ere long, disease his hand had laid
On that dear boy, so meek and mild;—
His widowed mother wept and prayed,
That God would spare her sightless child.

He felt her warm tears on his face,
And said, "O, never weep for me,
I'm going to a bright—bright place,
Where Mary says *I God shall see.*

"And you'll be there, dear Mary, too;
But, mother, when you get up there,
Tell Edward, mother, that 'tis you—
You 'know' I never saw you here!"

He spoke no more but sweetly smiled
Until the final blow was given—
When God took up the poor blind child,
And opened first his eyes in heaven!

Four Good Habits.—There were four good habits a wise and good man earnestly recommended in his counsel, and also by his own example, and which he considered essentially necessary for management of temporal concerns. These are Punctuality, Accuracy, Steadiness and Dispatch. Without the first of these, time is wasted; without the second, mistakes the most hurtful to our own credit and interest, and that of others, may be committed; without the third, nothing can be well done; and without the fourth, opportunities of great advantage are lost which it is impossible to recall.

The Birds of Spring.

By Washington Irving.

My quiet residence in the country, aloof from fashion, politics, and the money market, leaves me rather at a loss for occupation, and drives me occasionally to the study of nature, and other low pursuits. Having few neighbours, also, on whom to keep a watch and exercise my habits of observation, I am fain to amuse myself with prying into the domestic concerns and peculiaritics of the animals around me; and, during the present season, have derived considerable entertainment from certain sociable little birds, almost the only visiters we have during this early part of the year.

Those who have passed the winter in the country, are sensible to the delightful influences that accompany the earliest indications of spring; and of these, none are more delightful than the first notes of the birds. There is one modest little sad-coloured bird, much resembling a wren, which came about the house just on the skirts of winter, when not a blade of grass was to be seen, and when a few prematurely warm days had given a flattering foretaste of soft weather. He sang early in the dawning, long before sunrise, and late in the evening, just before the closing in of night, his matin and his vesper hymns. It is true, he sang occasionally throughout the day; but at these still hours, his song was more remarked. He sat on a leafless tree, just before the window, and warbled forth his notes, few and simple, but singularly sweet, with something of a plaintive tone, that heightened their effect.

The first morning that he was heard, was a joyous one among the young folks of my household. The long, death-like sleep of winter was at an end; nature was once more awakening; they now promised themselves the immediate appearance of buds and blossoms. I was reminded of the tempest-tossed crew of Columbus, when, after their long dubious voyage, the field-birds came singing round the ship, though still far at sea, rejoicing them with the belief of the immediate proximity of land. A sharp return of winter almost silenced my little songster, and dashed the hiliarity of the household; yet still he poured forth, now and then, a few plaintive notes, between the frosty pipings of the breeze, like gleams of sunshine between wintry clouds.

I have consulted my book of ornithology in vain, to find out the name of this kindly little bird, who certainly deserves honour and favour far beyond his modest pretensions. He comes like the lowly violet, the most unpretending, but welcomest of flowers, breathing the sweet promise of the early year.

Another of our feathered visitors who follow close upon the steps of winter, is the Pe-wit, or Pewee, or Phœbe-bird; for he is called by each of these names, from a fancied resemblance to the sound of his monotonous note. He is a sociable little being, and seeks the habitation of man. A pair of them have built beneath my porch, and have reared several broods there, for two years past, their nest never being disturbed. They arrive early in the spring, just when the crocus and the snow-drop begin to peep forth. Their first chirp spreads gladness through the house. "The Phœbe birds have come!" is heard on all sides; they are welcomed back like members of the family; and speculations are made upon where they have been, and what countries they have seen, during their long absence. Their arrival is the more cheering, as it is pronounced by the old weather-wise people of the country, the sure sign that the severe frosts are at an end, and that the gardener may resume his labours with confidence.

About this time too, arrives the blue-bird, so poetically yet truly described by Wilson. His appearance gladdens the whole landscape. You hear his soft warble in every field. He sociably approaches your habitation, and takes up his residence in your vicinity.

The happiest bird of our spring, however, and one that rivals the European lark in my estimation, is the boblincon, or boblink, as he is commonly called. He arrives at that choice portion of our year, which, in this latitude, answers to the description of the month of May, so often given by the poets. With us, it begins about the middle of May, and lasts until nearly the middle of June. Earlier than this, winter is apt to return on its traces, and to blight the opening beauties of the year; and later than this, begin the parching, and panting, and dissolving heats of summer. But in this genial interval, nature is in all her freshness and fragrance: "the rains are over and gone, the flowers appear upon the earth, the time of the singing of birds is come, and the voice of the turtle is heard in the land." The trees are now in their fullest foliage and brightest verdure; the woods are gay with the clustered flowers of the laurel; the air is perfumed by the sweet-brier and the wild rose; the meadows are enamelled with clover-blossoms; while the young apple, the peach, and the plumb, begin to swell, and the cherry to glow, among the green leaves.

This is the chosen season of revelry of the Boblink. He comes amidst the pomp and fragrance of the season; his life seems all sensibility and enjoyment, all song and sunshine. He is to be found in the soft bosoms of the freshest and sweetest meadows; and is most in song when the clover is in blossom. He perches on the topmost twig of a tree, or on some long flaunting weed, and as he rises and sinks with the breeze, pours forth a succession of rich tinkling notes; crowding one upon another, like the outpouring melody of the skylark, and possessing the same rapturous character. Sometimes he pitches from the summit of a tree, begins his song as soon as he gets upon the wing, and flutters tremulously down to the earth, as if overcome with ecstacy at his own music. Sometimes he is in pursuit of his paramour: always in full song, as if he would win her by his melody; and always with the same appearance of intoxication and delight.

Of all the birds of our groves and meadows, the Boblink was the envy of my boyhood. He crossed my path in the sweetest weather, and the sweetest season of the year, when all nature called to the fields, and the rural feeling throbbed in every bosom; but when I, luckless urchin! was doomed to be mewed up, during the livelong day, in that purgatory of boyhood, a schoolroom, it seemed as if the little varlet mocked at me, as he flew by in full song, and sought to taunt me with his happier lot. O, how I envied him! No lessons, no task, no hateful school; nothing but holiday, frolic, green fields, and fine weather. Had I then been more versed in poetry, I might have addressed him in the words of Logan to the cuckoo:

> Sweet bird! thy bower is ever green,
> Thy sky is ever clear;
> Thou hast no sorrow in thy note,
> No winter in thy year.
>
> O! could I fly, I'd fly with thee;
> We'd make, on joyful wing,
> Our annual visit round the globe,
> Companions of the spring!

Further observation and experience have given me a different idea of this little feathered voluptuary, which I will venture to impart, for the benefit of my school-boy readers, who may regard him with the same unqualified envy and admiration which I once indulged. I have shown him on as I saw him first, in what I may call the poetic part of his career, when he in a manner devote himself to elegant pursuits and enjoyments, an was a bird of music, and song, and taste, and sen sibility, and refinement. While this lasted he w sacred from injury; the very school-boy would n fling a stone at him, and the merest rustic woul pause to listen to his strain. But mark the diffe ence. As the year advances, as the clover blossom disappear, and the spring fades into summer, h gradually gives up his elegant tastes and habits doffs his poetical suit of black, resumes a russe dusty garb, and sinks to the gross enjoyments c common vulgar birds. His notes no longer vibrat on the ear; he is stuffing himself with the seed of the tall weeds, on which he lately swung an chanted so melodiously. He has become a *bo vivant*, a "gourmand;" with him now there i nothing like the "joys of the table." In a littl while he grows tired of plain homely fare, and i off on a gastronomical tour in quest of foreign lux uries. We next hear of him with myriads of hi kind, banqueting among the reeds of the Delaware, and grown corpulent with good feeding. He ha changed his name in travelling. Boblincon n more—he is the *Reed-bird* now, the much-sough for titbit of Pennsylvania epicures; the rival i unlucky fame of the Ortolan! Wherever he goes pop! pop! pop! every rusty firelock in the countr is blazing away. He sees his companions fallin by thousands around him.

Does he take warning, and reform? Alas, no he! Incorrigible epicure! Again he wings hi flight. The rice swamps of the south invite him He gorges himself among them almost to bursting he can scarcely fly for corpulency. He has once more changed his name, and is now the famous *Rice-bird* of the Carolinas.

Last stage of his career: behold him spitte with dozens of his corpulent companions, an served up, a vaunted dish, on the table of som Southern gastronome.

Such is the story of the Boblink; once spiritual musical, admired, the joy of the meadows, and th favourite bird of spring; finally, a gross little sen sualist, who expiates his sensuality in the larder His story contains a moral, worthy the attention o all little birds and little boys; warning them t keep to those refined and intellectual pursuits which raise him to so high a pitch of popularit during the early part of his career; but to eschew al tendency to that gross and dissipated indulgence which brought this mistaken little bird to an un timely end.

Selected.

Epistle of George Fox.

"All Friends everywhere, that are alive to God through Jesus Christ, and are living members o Christ, the holy Head; be still and stand still i the Lord's camp of holiness and righteousness and therein see the salvation of God, and you eternal life, rest, and peace. In it you may fee and see the Lord's power is over all; and how th Lord is at work in his power, ruling the nation with his rod of iron, and breaking (in the nations the old leaky vessels and cisterns to pieces, lik the potter's vessels that will not hold his livin water of life, who are erred from the Spirit. Bu blessed be the Lord God of heaven and earth, who by his eternal arm and power, hath settled all hi people upon the living, holy rock and foundatio that stands sure, whom he hath drawn by his Spi rit to his Son, and gathered into the name of Jesu Christ, his only begotten Son, full of grace an truth; who hath all power in heaven and earth given to him. Whose name is above every nam

der the whole heaven, and all his living mem-rs know, there is no salvation given by any her name under the whole heaven, but by the me of Jesus; and he, their salvation, and their ving Head, is felt in the midst of them in his ght, life, spirit, grace, and truth, and his word patience, wisdom and power; who is his people's ophet, that God hath raised up in his new tes-ment and covenant to open to them; and their ving Shepherd that hath purchased, redeemed, d bought them with his precious blood. Christ, e living One, feeds his living sheep in his living stures of life, and his living sheep know their ving Shepherd's voice, with his living bread and ater, and follow him; and will not follow any of he world's hirelings, nor thieves, nor robbers, or climbers, that are without Christ, the door. ikewise Christ's living children know Christ, the ishop of their souls, to oversee them with his eavenly and spiritual eye, that they may be pre-erved in his fold of life, and go no more forth. lso they know Christ, their holy Priest, that by he grace of God tasted death for them, and for very man, and is a propitiation for their sins; and ot for their's only, but for the sins of the whole orld; and by the one offering up of himself, he ath perfected forever them that are sanctified. uch an high priest becomes Christ's sheep in his ew covenant and testament, who is holy, harm-ss, and separate from sinners, and is made higher han the heavens; who is not made a priest after he order of Aaron with his tithes, offerings, &c., ut he makes an end of all those things, having bolished them, and is made an high priest after he power of an endless life, who ever liveth to ake intercession for his people; and is able to ave to the uttermost, all that come to God hrough him. He is the one holy Mediator be-wixt God and man, who sanctifies his people, his hurch, that he is head of, and presents them to God without spot, or wrinkle, or blemish, or any uch thing; and makes them an holy, royal priest-ood, to offer up spiritual, holy sacrifices, accept-ble to God by Jesus Christ, who is King of all ings, and Lord of all lords, in the earth. So an oly, heavenly king, who hath all power in hea-en and earth given to him; and rules in all the earts of his sheep and lambs, by his holy, divine, precious faith, that is held in all the pure consci-nces of his people; which holy faith, Christ, the oly One, is the Author and Finisher of. By this oly faith all the just live, in which holy, divine, precious faith all the just and holy ones have nity; and by it quench all the fiery darts of Satan; and have access to the pure God, in which hey please him. Christ, who is set on the right and of the throne of the Majesty in the heavens, n his new testament and new covenant, is the inister of the sanctuary, and true tabernacle, hich the Lord hath pitched, and not man. herefore, all the lambs and sheep of Christ must eed this holy minister in their temple and sanc-uary, who ministers spiritual, holy, and heavenly hings to them in their sanctuary and tabernacle. or all the tabernacles and sanctuaries, that are uilt or pitched by man, men make ministers for hem; and such ministers are of men, and by men, ith their worldly sanctuaries and tabernacles of nen's pitching, by men's hands.

"And now, dear friends and brethren, every-here that are of the flock of Christ, Christ, our assover is sacrificed for us. Therefore, let us all eep this heavenly feast of our passover in his new estament and covenant, not with old leaven, nei-her of malice nor wickedness: but let all that e purged out, with the sour, old, leavened bread, hat all may become a new being, and so keep this eavenly feast of Christ, our heavenly Passover, with the unleavened bread of sincerity and truth. Amen. G. F."

Fifth month 1, 1690.

Directions for Aiding Persons to Escape from Premises on Fire.

1. Be careful to acquaint yourselves with the best means of exit from the house, both at top and bottom.

2. On the first alarm, reflect before you act. If in bed at the time, wrap yourself up in a blanket or bedside carpet; open no more doors or windows than are absolutely necessary, and shut every door after you.

3. There is always from eight to twelve inches of pure air close to the ground; if you cannot, therefore, walk upright through the smoke, drop on your hands and knees and thus progress. A wetted silk handkerchief, or a piece of flannel, or a worsted stocking drawn over the face, permits breathing, and to a great extent excludes the smoke.

4. If you can neither make your way upward or downwards, get into a front room; if there is a family, see that they are all collected here, and keep the door closed as much as possible, for remember, that smoke always follows a draught, and fire rushes after the smoke.

5. On no account throw yourself, or allow others to throw themselves from the window. If no assistance is at hand, and you are in extremity, tie the sheets together, and having fastened one end to some heavy piece of furniture, let down the women and children one by one, by tying the end of the line of sheets round the waist, and lowering them through the window that is over the door, rather than through one that is over an area. You can easily let yourself down when the helpless are saved.

6. If a woman's clothes should catch fire, let her instantly roll herself over and over on the ground; if a man be present, let him throw her down and do the like, and then wrap her in a rug, coat, or the first woolen thing that is at hand.

7. Bystanders, the instant they see a fire, should run for the fire-escape, or to the police station, if that is nearer, where a "jumping sheet" is always to be found.

The Manufacture of Telescope Glasses.—The manufacture of telescope glasses is one of the most intricate and nice undertakings in mechanism. The risk of securing good glasses even after months of labour, is very great, and consequently gives great value to a perfect one.

The manufacturers first take about 300 lbs. of flint glass and fuse it by a very hot fire. While in a liquid state in the furnace, the vessel containing it is walled completely up and suffered to cool very slowly—some glass occupying two months in the process. When perfectly cool the mass is fractured by a process which is retained a secret among manufacturers. The fragments being of various sizes, are of different power of reflection, and are worked into glasses proportioned to their powers. In working them into form, the edges are first ground so that they can be looked through in every direction, in order that it may be ascertained if they contain any imperfections, such as cracks, specks of dirt, or bubbles of air.

In case anything of this kind is discovered, they are cut into smaller size, but if perfect, then they are ground into size and form to suit the design of the manufacturer. When this labour is completed, they are annealed or heated almost to fusing in order to give them a perfect polish and shape, and also to free them from brittleness. The process is slow and tedious, and requires great skill to make them perfect. An object glass which was found in the streets of Munich, when cleaned up and annealed, was sold for $3000, and was only six inches in diameter.

The glass which is being manufactured for the Observatory at Ann Arbor, is to be seven inches in diameter, and the whole telescope will cost only about twice the above named sum, so that it will be seen that nearly as much value is placed upon the small object glass as upon the whole complicated machinery of the telescope.

The Idler.—The idle man is an annoyance—a nuisance. He is of no benefit to anybody. He is an intruder in the busy thoroughfare of every day life. He stands in our path, and we push him contemptuously aside! He is of no advantage to anybody. He annoys busy men. He makes them unhappy. He is a unit in society. He may have an income to support him in idleness, or he may "sponge" on his good natured friends. But in either case he is despised. Young men, do something in this busy, bustling, wide-awake world! Move about for the benefit of mankind, if not for yourself. Do not be idle. God's law is, that by the sweat of our brow we shall earn our bread. That law is a good one, and the bread we earn is sweet. Do not be idle. Minutes are too precious to be squandered thoughtlessly. Every man and every woman, however exalted or however humble, can do good in this short life if so inclined; therefore do not be idle.—*Fireside Journal.*

THE FRIEND.

FIFTH MONTH 5, 1855.

We would be obliged if our friends, who make extracts for the columns of "The Friend," would note from whence they are taken, and always designate where anything is omitted in a paragraph, or where extracts from two original separate paragraphs are brought together to form one. It has sometimes given us much trouble to look out the original, and correct these deficiencies, and we are not always able to do it.

We wish again to impress on those who prepare obituary notices for "The Friend," the propriety of making them brief. We are desirous on all occasions to show due deference to the feelings of those who have lost a relative or friend by death, but we have not space in our columns to spare for the lengthened out effusions often sent to us, which appear intended to soothe the sensitive feelings of the mourners, rather than to convey instruction to the general reader. In curtailing such notices, as we have often to do, we intend no disrespect, and hope we give no offence. The subject is now alluded to, because, of late, there has been a more than ordinary proportion of such notices received.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 14th. The steamship North Carolina, from Philadelphia, for Liverpool, came in collision with the ship Robert, off Holy Head. The steamer sunk in ten minutes after the collision. No lives were lost. The ship was damaged, and compelled to put back to Liverpool. The ship Nonpareil arrived at Liverpool on the 11th, in 14 days, from Philadelphia.

The Vienna Conference.—The ninth Conference of the Ambassadors assembled at Vienna, was held on the 8th inst., and lasted but one hour, the Russian Plenipotentiaries not having received their instructions. The French and Turkish Ministers were present, but the meeting was without result.

The Crimea.—The advices from Sebastopol are to the

8th ult. The position of both armies remained without change, and night skirmishes on a small scale continued. The weather was fine and dry. The allies had reinforced the army under Omar Pacha at Eupatoria, with 5000 men, and he now occupied two villages near Eupatoria, and an enlarged circle of fortifications. Ten thousand Egyptians had sailed for Eupatoria. The French reinforcements, and those from Sardinia, were expected to land there shortly. It is stated that the allies are about to fortify and hold their already strong position at Kamiesh, with 20,000 men, supported by the fleet. General Canrobert's despatch estimates the loss of the Russians in the attack, on the night of the 22d, to be 700 killed and 1500 wounded, and the loss of the French, 200 killed and 400 wounded. The Russians deny the truth of the report of Prince Menschikoff's death, but admit that he is wounded. An armistice of three hours was granted to bury the dead.

The Baltic.—The advanced squadron of the Baltic fleet reached Elsinore, on the 1st of Fourth mo. The navigation of the Baltic would continue dangerous for a week or two longer, on account of the heavy floating ice. A Russian army of 120,000 men was being concentrated in the Baltic Provinces.

GREAT BRITAIN.—The Government advertises for a new loan, but the amount and terms of it are unknown. The sum is supposed to be fifteen millions sterling. Almost immediately after the announcement, the funds fell to 91½. Great preparations were being made for the visit of Napoleon and Eugenie, of France, to England. They were expected to reach London on the 16th, and return on the 21st ult. The propriety of raising the siege of Sebastopol is freely and favourably talked of. The Liverpool market for cotton and flour had undergone little or no change in the week.

FRANCE.—The 24th edition was to open on the 1st of Fifth mo. The Paris Moniteur contained a remarkable official document respecting the conduct of the war. It caused much excitement, and is considered as an apology for soon raising the siege of Sebastopol.

SPAIN.—The recall of Lord Howden, the British Minister, is still urged. All was quiet at Madrid. The Government has effected a loan of forty millions of reals.

GERMANY.—Great discontent prevails in Hanover against the King's attempt to restore the privileges of the nobility.

ITALY.—The Russian Count Potochi was visiting all the Italian States, except Sardinia. He is said to have obtained assurances of neutrality from Tuscany and Naples.

RUSSIA.—The cholera has reappeared at St. Petersburg. On the 29th of Third mo., there were 200 deaths.

CEYLON.—A private letter from Ceylon mentions the death from cholera of Daniel Poor, a missionary. The cholera was raging with much fatality at Ceylon.

CUBA.—A decree has been published for raising sixteen new companies of black soldiers, one hundred and twenty-five each, in addition to those already under arms. An English ship lately arrived at Havana, from China, with 400 Chinese, many of whom were condemned as pirates. The cargo was readily taken up and distributed among the planters. Many more ships were expected under a contract to bring 7000 to 8000 Chinese labourers. The sugar market was firm with an upward tendency. It was believed that the crop was short, and the planters had increased their demands, but the quotations were unaltered. Commodore McCauley had arrived out, but on the 23d ult., had not entered upon his duties as commander of the U. S. squadron.

UNITED STATES.—The Patent office has furnished seeds, and directed experiments to be made at Mount Airy, Md., with more than one hundred varieties of beans and pulse, with the view of determining their qualities, productiveness and adaptation to the climate, the results of which are to be given in a future report. The seeds were selected from samples procured from South America, China, Japan, various parts of Europe, and the United States. Those kinds which prove successful, and are not already to be found in abundance in this country, will be multiplied from year to year, for the purpose of procuring the seed for public distribution.

Trade with the British Provinces, is springing up very rapidly in the Eastern States since the restrictions imposed upon free trade with the U. States, have been removed. A large commerce in the products of the forests, mines, and agriculture of Nova Scotia, &c., is anticipated.

Native Wine.—It is supposed that the grape crop of the west the present season will be sufficient to make 600,000 gallons of Catawba wine.

Treaties with the Argentine Confederation.—Two treaties have been ratified between the United States and the Argentine Confederation, official proclamation of which has just been made. The first provides for the free navigation of the rivers Parana and Uruguay to the merchant vessels of all nations. The second is a treaty of commerce with the usual provisions.

The Gross Receipts into the U. S. Treasury, for the quarter ending the 31st ult., were $14,766,000, and the expenditures $15,572,000.

Boston.—On the 27th, a fire broke out on Battery wharf, which soon communicated to the adjoining wharves and vessels in their vicinity. A great quantity of cotton and other merchandise was destroyed. The ship Chancellor with a valuable cargo, was burnt to the water's edge, and considerable damage was sustained by other shipping and their cargoes. The total loss is estimated at not less than $600,000.

California, dates to Third mo. 31, have been received by the steamship George Law, which brought 372 passengers and $772,000 in gold. Fremont's Mariposa land claim had been confirmed by the Supreme Court. The miners generally were said to be doing well. The excitement with regard to the Kern river mines, had subsided, and many of the adventurers had returned disappointed. On the whole, it appears probable the supply of gold is diminishing, but there is steadily rising into importance a greater and more lasting source of wealth—the extended cultivation of the soil, with large and increasing crops. The weather was fine with the prospect of an abundant harvest. A prohibitory liquor law had passed the assembly, but its provisions are not very stringent. An anti-gambling law has passed the Senate. The prices of goods generally at San Francisco, were falling, and the demand limited. Flour, $14; hams, 21½ c.; new butter, 43½ c.; lard in kegs, 13 c.

New York.—During the year 1854, the 262 public schools in this city were attended by an average of 51,567 pupils, whose schooling cost $776,373; being an average of more than fifteen dollars for each child instructed.

The Kinney Expedition was nearly ready to sail from N. York a few days since, with 600 armed men to form, as was alleged, a peaceable settlement in Central America, when Col. Kinney was arrested by the U. S. Marshal, on the charge of being engaged in fitting out a military expedition against the Republic of Nicaragua. He was held to bail in the sum of ten thousand dollars.

Philadelphia.—The receipts of coal from the Schuylkill region last week, reached nearly 90,000 tons, the largest yet known. The Railroad brought over 55,000 tons, and the Canal, over 34,000. Mortality for the week, 194.

Miscellaneous.—Camels for the United States.—The utility of camels in the western prairies has been a subject of discussion for a number of years. It is now about to be tested, for Major Wayne intends to go out in the Supply, destined for the Mediterranean, to purchase some of these animals; Congress having authorized them to be purchased for military purposes.

Nickel, in Lancaster Co.—The Gap Nickel mines, in Lancaster county, Pa., are, it is stated, now worked successfully, and the mineral taken out in large quantities. The supply is supposed to be inexhaustible.

Zante Currants.—The inhabitants of Zante are again in a state of destitution, in consequence of the failure of the currant crop, on which, most unwisely, they rely almost exclusively.

The *Cincinnati Paid Fire Department* cost the city, during the year ending Fourth mo. 1st, 1855, the sum of $90,576 17. The department embraces 16 companies, 380 members, 493 pipemen, drivers, watchmen, and officers, 28 engines, (including the two steam-engines,) 34 hose carriages, and 29,863 feet of hose.

Coolies for Cuba.—There is a project on foot for the introduction of coolies from China into Cuba, as plantation labourers, to supply the place of negroes, the importation of whom from Africa is to be prohibited, if possible. A vessel is now fitting out at N. York, for China, under a contract for 1250 emigrants. They are to be landed at Panama, cross the Isthmus upon the railroad, and be reshipped at Aspinwall, for Cuba.

Burning Fluids.—In Detroit, Michigan, an ordinance has been passed, prohibiting the use of camphine, and burning fluids, spirit gas, or any similar substance by whatever name known, to take effect in ninety days.

African Exploration.—Dr. Barth, the African traveller, who was reported last summer to have died, appears by a recent letter from the British consul at Tripoli, to be still living.

Lumber.—A great number of rafts have passed down the Susquehanna this spring. The Sunbury American says, that lumber is more abundant than it was last season, and the prices are lower.

Pauperism in Great Britain.—The total number of persons receiving parish relief on the first of this year, w in England 839,146; in Scotland 78,929, and in Ir land 86,819. In 1849, the numbers were in Englar 935,419, and in Ireland 620,747. In the latter countr the paupers have been decreasing in a large ratio a nually since 1849.

WEST-TOWN BOARDING-SCHOOL.

The summer session of the School will commence o Second-day, the 7th of Fifth month next. The pupi will be conveyed by railroad to West Chester, when conveyances will be in waiting to take them to t School, on the arrival of the morning and afternoo cars, on Second-day, the 7th, and Third-day, the 8t of Fifth month. The children will get their baggag the day after their arrival. The cars leave the depo south side of Market street, above Eighteenth, (former Schuylkill Fifth street,) at 7½ o'clock, A. M., and o'clock, P. M. The agent of the school will be at t railroad depot on Second and Third-day afternoon and will furnish pupils with tickets, and accompan them to West Chester. Those who go by the *morni* train will be furnished with tickets by a person in a tendance. To those who procure tickets as directe the fare from Philadelphia to the School, including bag gage, will be one dollar, which will be charged to th scholar at the School. All baggage should be distinctl marked West-town, and with the name of the owne and should be sent directly to the railroad depot. Ap plications for admission must be made to Joseph Snow don, Superintendent of the School, or Joseph Scatte good, Treasurer, No. 84 Arch street, Philadelphia.

The West-town office is at Friends' Bookstore, N 84 Arch street, where all small packages for the pupi left before 12 o'clock on Seventh-days, will be forwarde *All letters* for the pupils and others at the School, shoul be sent by *mail,* directed to *West-town Boarding-Schoo West Chester P. O., Chester Co., Pa.* Postage should b *pre-paid,* and packages should be distinctly marked an put up in a *secure manner,* so that their contents will n be liable to be lost by handling. The stage will leav West Chester during the *summer session,* for the Schoo on Second, Fourth, and Seventh-days, on the arrival o the *afternoon* cars from the city, and from the School t West Chester on the same days, to meet the afternoo cars to Philadelphia. The fare for each passenger i and from West Chester *by the stage,* will be 25 cent When special conveyances at other times are provide at the School, an extra charge will be made.

West-town, Third mo., 1855.

HAVERFORD SCHOOL ASSOCIATION.

The stated annual meeting of the Haverford Scho Association, will be held at the committee-room, Arc street meeting-house, on Second-day, Fifth month, 14t 1855, at 4 o'clock, P. M.

CHARLES ELLIS, Secretary.

WEST-TOWN BOARDING-SCHOOL.

Assistant Teachers are wanted in the Boys' depar ment of this Institution. Application may be made either of the undersigned.

HENRY COPE, } Philad.
SAML. BETTLE, JR., }
SAML. HILLES, Wilmington, Del.

MARRIED, on Fourth-day, the 25th of Fourth month 1855, at Friends' Meeting-house, Oblong, Dutchess Co N. York, WILLIAM P. HAVILAND, to ELIZABETH D. HOA all of Oblong Monthly Meeting.

DIED, on the 15th of Second month last, MARY COR ARD; a member of Radnor Monthly Meeting of Friend aged 59 years.

——, at his residence, in East Goshen, Chester Co Pa., on the 10th ult., JAIRUS HUTCHINSON, aged 87 year a member of Goshen Monthly Meeting.

——, at his residence, Mine Hill, Morris Co., N. J., o the 25th of Fourth month, 1855, JOHN SAMMIS, in th 34th year of his age; a member of Rahway and Plain field Monthly Meeting. Although he suffered muc during his sickness, yet there was a clear prospec granted him of happiness in the world to come. On on occasion, taking his father by the hand, he said, "I have one comfort, I have got a Saviour," and at oth times, he uttered short but consoling sentences. Short before his death, after the power of speech began to fa he exclaimed "blessed Jesus, come."

VOL. XXVIII. SEVENTH-DAY, FIFTH MONTH 12, 1855. NO. 35.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From "The Leisure Hour."

Why does not England grow all her own Cotton?

A momentous question this, and well worth the most serious consideration and closest inquiry. If there is any one branch of British skilled labour which, *par excellence*, finds a market for its products over nearly every portion of the habitable globe, it is the cotton fabrics of Manchester. From Iceland to the Austral-land, from South America to Madagascar, they are in constant and steadily increasing demand. All civilized peoples are our customers for them, and all savage tribes barter their barbarian wealth for the coveted prints from the looms of Lancashire. The South Sea Islander would *taboo* anything rather than them; the Canadian Indian proudly presents them to his greasy squaw; the dusky Hindoo loves their gaudy colours; the sable African wraps them around him, and struts about with the pride and complacency of a peacock. It is calculated that at least three millions of British people earn their bread from day to day solely by cotton as an element of industry, and yet we are at this moment almost entirely dependent on the slave states of America for our supply of the raw material, and its consumption is increasing yearly at a prodigious rate. Is England sincere in her loudly-reiterated denunciations of slavery? Does she really wish to see it extinguished in America? Yet more, does she wish to raise her own cotton—every pound of it—of equal or superior quality to the American, in her own colonies? That she *can* do this if she will we shall endeavour to show; but first we will very briefly glance at the present history of cotton manufactures.

During the first five years of the eighteenth century "the average consumption of cotton wool," says Bazley, the president of the Manchester Chamber of Commerce, "was little more than one million pounds weight per annum; and during this period the workpeople employed would not exceed, of all ages and classes, more than 25,000; but at the *close* of that century the consumption had increased to 52,000,000 of pounds, and the workers, in every department of the trade, to upwards of 125,000: a most important and varied industry having thus arisen. Some specimens of cotton are now before us, and among them will be found a sample of as good and fine cotton as probably has ever been grown in any country; but which owes its origin to no tropical climate, *having been produced within the walls of a Manchester spinning-factory!*" The first small importation of cotton from the United States occurred so late as 1787, within the memory of many individuals. In the same year we received from the West Indies six millions pounds weight, and fourteen millions pounds from French, Spanish, Dutch, and Portuguese colonies, and from Turkey and the Levant, making twenty millions pounds in all. It will give some idea of the marvellous increase of the trade since then, to state that in 1851 the consumption in the United Kingdom was above 760 millions of pounds weight; and this consumption is yearly increasing at such a rate as causes anxious inquiries to be made as to where the future supplies are to come from. As an example and proof of the prosperity of the cotton manufactories, and their natural extension, we quote the following from a recent report of Leonard Horner, factory inspector:—"That the profits of factories continue on the average of years, to be attractively remunerative, the following facts of the investment of fresh capital in them abundantly prove. In the year ending 31st of October, 1852, no less than eighty-one new factories have been built or set to work, having begun to be built in the preceding year, in my district, with an aggregate power of 2240 horses. Of these, seventy-three, with 2064 horse-power, are cotton-mills. In addition to these, in thirty-one long-established cotton-mills, the proprietors of which are men of thorough knowledge and long experience in the trade, additional engine-power has been set up to the extent of 1477 horses. The 3717 horse-power will give employment to probably no less than 14,000 additional hands. To give an idea of the magnitude of some of these new concerns, I may mention that one of the cotton-mills is 410 feet long, 76 wide, has six stories, a power of 150 horses, and will run 126,000 spindles." We mentioned that in 1851 our consumption of cotton wool was 760 millions of pounds; and it may be interesting here to subjoin from an eminent authority what the supplies were in the same year. Of foreign supplies we received from the United States 1,393,700 bags; from Brazil 108,700 ditto; from Egypt 67,400 ditto; making a total of 1,569,800 bags. Of colonial, from the East Indies, 328,800 bags; from the West Indies 4900 ditto; the grand total thus being 1,903,500 bags. Bazley remarks on this subject: "Of these supplies, not less than sixteen millions sterling were paid for foreign cottons. The quantity consumed of colonial was only one-fifth, or 20 per cent. of the foreign; but only two millions were paid for the latter; these two millions having no relative proportion to the value of the former, as the colonial, for one-fifth in quantity, yielded only one-eighth, or 12½ per cent. of the sum paid for foreign; the value of the whole having been eighteen millions sterling. Shall not such a supply of raw cotton be deemed limited and confined? Would not such a trade as cotton affords to this country be on a safer basis if this material could be obtained from a hundred sources rather than from only one important field of cultivation?" Verily!

The cotton-tree will flourish in every tropical clime, and in many climes not exactly tropical. The West Indian Islands could produce it quite as abundantly, and of as good quality, as the southern states of America; but owing to culpable indifference on the part of both planters and the home government, the cultivation of cotton there has retrograded from year to year. In Africa, at Port Natal, cotton has been produced of first rate quality, and it is said that its culture might be promoted to a very great extent. In Australia, many competent authorities affirm that cotton can be grown sufficient to supply all the demands of the British manufacturers; but we apprehend that for many years to come it would be impossible to compete with other cotton-growing countries, on account of the immense cost of labour in that colony. Still, the day may come, and probably will come, when what is at present a theory will be a magnificent fact. But, above all other places, let us learn to look to our mighty East Indian colonies for the main supply. Here is no theory nor guess-work in the case. For at least three thousand years the cotton-plant has flourished in its native Indian soil; and although its quality is somewhat inferior to that of the American cotton, yet it probably only requires cultivation to render it equal. Recent imports are of a quality quite good enough for all general purposes, and to this effect we have the distinguished testimony of Dr. Royle, the botanist to the East India Company, who says that there are "sufficient proofs that India is capable, in many parts, of producing good and serviceable cotton, and at a rate sufficiently cheap to contend even against the large returns of American farming." The cost of production must always be taken into consideration, and the cost of Hindoo labour would probably not amount to one-fourth of that of American slave-labour. Mehemet Ali commenced the cultivation of cotton in Egypt in 1821, and from that time forward Egypt has steadily increased her annual production. We read awhile ago in the papers, that a young Englishman had been sent out to Egypt to superintend the packing and cleaning of the Pasha's cotton, and the secretary of the Manchester Chamber of Commerce has already received twenty small bags as a sample of the improved method, and the cotton they contain is pronounced of very fine quality—not finer, however, than our own West Indian colonies could produce in unlimited abundance. Again, to say nothing of Natal, we have many settlements and possessions on the coast of Africa, where we are assured that the soil and climate are so peculiarly adapted for the growth of cotton that it could be obtained as good in quality and as plentiful as from the American plantations. Why not employ the negroes on their own native ground? Show them that it is more profitable than kidnapping their fellow blacks, and they will not long hesitate which calling to prefer. When we consider that Great Britain possesses far more soil particularly adapted for the growth of cotton than all the rest of the world together, well may we quote with feelings of amazement the startling assertion and comments of Bazley, who tells us that it is a fact that "a piece of ground, of only the extent of our English county of York, would, if of suitable soil, and in a genial climate, yield more cotton than the existing extensive consumption of Great Britain requires! Yorkshire contains about four millions of statute acres; and as the best soils of the United States yield more than one bag of cotton per acre, the production of that

extent of land would be four millions of bags per annum; hence an ample margin has been left in this estimate of productive capability, as the present yearly consumption of the United Kingdom is below two millions of bags. Do not the British colonies contain a multitude of patches of most excellent but uncultivated ground of the size of Yorkshire, all adapted to the growth of good cotton? and why cannot the parent race of the Anglo-Saxon achieve in colonial industry those triumphs of energy and labour which honour them at home in their manufactories, or in the cultivation of their native land, and which their descendants display in the United States?

The Great Exhibition of 1851 abundantly demonstrated that not only the continental countries of Europe, but also the northern States of America, are becoming most formidable rivals in the art of cotton manufactures. England no longer can boast exclusive skill in this great branch of human industry. The improvements in our machinery, and the matured skill of our factory operatives, are closely emulated by jealous and energetic rivals. At present, however, we compel them, by our enormous capital and sleepless enterprise, to keep in our rear; but it is evident that the distance, so to speak, between them and us is yearly lessening. Stationary we cannot remain. The hour when improvements in our machinery, and the quality and cost of production ceases to tend towards perfection and economy combined, will ring the first knell of the downfall of British manufacturing supremacy. Unremitting invention and progress alone can maintain us in our existing rank of world-manufacturers; and certainly it seems the height of folly to permit ourselves (when it is in our power to obviate the necessity) to be dependent on our most active and powerful rivals for the raw material itself. The Americans are keenly alive to this anomalous and suicidal position of ours, and their planters believe and know that we "Britishers" cannot manage any way without their crops of cotton, and they from time to time make us pay smartly for our own wilful foolishness in keeping ourselves in such a "fix." We never have much more than a couple of months' supply of cotton on hand, and frequently much less. Occasionally a failure of the crop necessarily puts us in jeopardy, and about as frequently it happens that the shrewd speculators make a bold and partially successful attempt to injure or ruin our manufacturers by a monopoly of the produce of the plantations. In one instance, according to Mr. Frederick Warren, of Manchester, a monopoly of this sort compelled us to pay an extra price, which amounted to between £4,000,000 and £5,000,000 in a single year!

Extracted for "The Friend."

True and False Zeal.

"Many things must concur, before we can be allowed to determine whether zeal be really a virtue or a vice. It may be disputed whether fire be a good or an evil. The man who feels himself cheered by its *kindly* warmth, is assured that it is a benefit; but he whose house it has just burned down, will give another verdict.

"If the injustice, the intolerance, and persecution, with which a misguided zeal has so often afflicted the church of Christ, in its more early periods, be lamented as a deplorable evil, yet let us admire the over-ruling wisdom of Providence, which, educing good from evil, made the very calamities, which false zeal occasioned, the instruments of producing that true and lively zeal, to which we owe many of the blessed privileges which we now enjoy. This effect, though a clear vindication of that Divine goodness which *suffers* evil, is *no* apology for him, who perpetrates it.

"It is curious to observe the contrary operations of true and false zeal, which, though apparently only different modifications of the same quality, are, when brought into contact, repugnant, and even destructive to each other. There is no attribute of the human mind where the different effects of the same principle have such a total opposition, for is it not obvious that the same principle, under opposite direction, which actuates the tyrant in dragging the martyr to the stake, enables the martyr to embrace it? As a striking proof that the necessity for caution [in the exercise of this principle] is *not* imaginary, it has been observed that the Holy Scriptures record more instances of a bad zeal, than of a good one. This furnishes the most authoritative argument for regulating this *impetuous* principle, and for governing it by all those restrictions, which a feeling so calculated for good, and so capable of evil demands.

"True zeal will *first* exercise itself in earnest desires, in increasing ardour to obtain higher degrees of illumination in *our own* minds; in fervent prayer that this growing light may operate to the improvement of our *practice*, that the influences of Divine grace may become more outwardly perceptible by the increasing correctness of our habits; that every holy affection may be followed by its correspondent act, whether of obedience or resignation, of doing or suffering. True *christian* zeal will always be known by its distinguishing and *inseparable* properties. It will be as discrete as it is fervent. It will be warm, indeed, not from temperament, but principle. It will be humble, or it will *not* be christian zeal. It will restrain its impetuosity, that it may the more effectually promote its object. It will be temperate, softening what is strong in the act, by gentleness in the manner. It will be *tolerating*, willing to grant what it would itself desire. It will be *forbearing*, in the hope that the offence it censures may be an occasional failing, and not a habit of the mind. It will be *candid*, making a tender allowance for those imperfections, which beings, *fallible themselves*, ought to expect from human infirmity. It will be *reasonable*, employing fair argument and affectionate remonstrance, instead of irritating by the adoption of violence, or mortifying by the assumption of superiority.

"If there be any quality which demands a clearer sight, a tighter rein, a stricter watchfulness than another, zeal *is* that quality. The heart where it is wanting, has no elevation—where it is not guarded, has no security. The *prudence* with which it is exercised, *is* the surest evidence of its integrity; for if intemperate, it not only raises enemies to ourselves, but to God. It augments the natural enmity to religion, instead of increasing its friends. But, if tempered by charity, if blended with benevolence, if sweetened by kindnesss, if evinced to be honest by its influences on our own conduct, and gentle by its effect on our manners, it may lead our irreligious acquaintance to inquire more closely in what consists the distinction between them and us. We will already by this mildness have won their affections; our next step may be to gain over their judgment. They may be led to examine what solid grounds of difference subsist between us and them; what substantial reason we have for not going their lengths; what sound argument they can offer for not going ours," and thus might the object of our religious association and intercourse be gained, to the honour of Truth, and the peace of our own minds; whereas it will ever be frustrated by the exercise of self-will which leads to the forsaking of true charity, which is the bond of christian perfection, being the end of the law, the fruit of faith and the power of the gospel, without which the apostle declared he was nothing, though possessed of all other qualifications and graces.

The Introduction of Tea, Coffee, and Chocolate.

(Concluded from page 246.)

While the honor of introducing tea may be disputed between the English and the Dutch, that o coffee remains between the English and the Frenc Yet an Italian intended to have occupied the plac of honor; that admirable traveller, Pietro dell Valle, writing from Constantinople, 1615, to Roman, his fellow-countryman, informing hin that he should teach Europe in what manner th Turks took what he calls "*Cahué*," or as the wor is written in an Arabic and English pamphlet printed at Oxford, 1659, on "the nature of th drink *Kauhi* or coffee." As this celebrated tra veller lived in 1652, it may excite surprise that th first cup of coffee was not drank at Rome: this re mains for the discovery of some member of th "Arcadian Society." Our own Purchas, at th time that Valle wrote, was also "a Pilgrim," an well knew what was "*Coffa*," which they "dran as hot as they can endure it; it is as black a soot, and tastes not much unlike it; good they sa for digestion and mirth."

It appears, by Le Grand's "Vie privée des Fran çois," that the celebrated Thevenot, in 1658, gav coffee after dinner; but it was considered as th whim of a traveller; neither the thing itself, no its appearance, was inviting: it was probably attril uted by the gay to the humor of a vain philosoph cal traveller. But ten years afterwards a Turkis ambassador at Paris made the beverage high fashionable. The elegance of the equipage recon mended it to the eye, and charmed the women the brilliant porcelain cups, in which it was poure the napkins fringed with gold, and the Turkis slaves on their knees presenting it to the ladie seated on the ground on cushions, turned the hea of the Parisian dames. This elegant introductio made the exotic beverage a subject of conversatic and in 1672, an Armenian at Paris, at the fair-tim opened a coffee-house. But the custom still pr vailed to sell beer and wine, and to smoke and m with indifferent company in their first imperfe coffee-houses. A Florentine, one Procope, cel brated in his day as the arbiter of taste in this d partment, instructed by the error of the Armenia invented a superior establishment and introduc ices: he embellished his apartment, and those wh had avoided the offensive coffee-houses, repaired Procope's, where literary men, artists, and wits r sorted, to inhale the fresh and fragrant stea Le Grande says, that this establishment holds distinguished place in the literary history the times. It was at the coffee-house of Du La rent that Saurin, La Motte, Danchet, Boindi Rousseau, &c., met: but the mild steams of t aromatic berry could not mollify the acerbity of many rivals, and the witty malignity of Rousse gave birth to those famous couplets on all t coffee-drinkers, which occasioned his misfortun and his banishment.

Such is the history of the first use of coffee a its houses in Paris. We, however, had the u before even the time of Thevenot; for an Engli Turkish merchant brought a Greek servant in 165 who, knowing how to roast and make it, opened house to sell it publicly. I have also discover his hand-bill, in which he sets forth,

"The vertue of the coffee drink, first publiqu made and sold in England, by Pasqua Rosee, St. Michael's Alley, Cornhill, at the sign of l own head."

For about twenty years after the introduction f coffee in this kingdom, we find a continued se- ies of invectives against its adoption, both in med- inal and domestic views. The use of coffee, in- eed, seems to have excited more notice, and to ave had a greater influence on the manners of the eople, than that of tea. It seems at first to have een more universally used, as it still is on the ontinent; and its use is connected with a resort or the idle and the curious: the history of coffee- ouses is often that of the manners, the morals, nd the politics of a people. Even in its native ountry the government discovered that extraordi- ary fact, and the use of the Arabian berry was nore than once forbidden where it grows; for Ellis, in his "History of Coffee," 1774, refers to n Arabian MS. in the King of France's library, vhich shows that coffee-houses in Asia were some- imes suppressed. The same fate happened on its ntroduction into England. . . . .

The frequenting of coffee-houses is a custom vhich has declined within our recollection, since nstitutions of a higher character, and society itself, as so much improved within late years. These vere, however, the common assemblies of all classes f society. The mercantile man, the man of letters, nd the man of fashion, had their appropriate coffee- ouses. The Tatler dates from either to convey a haracter of his subject. In the reign of Charles I., 1675, a proclamation for some time shut them ll up, having become the rendezvous of the poli- icians of that day. Roger North has given, in his Examen, a full account of this bold stroke: it was ot done without some apparent respect to the British Constitution, the court affecting not to act gainst law, for the judges were summoned to a onsultation, when, it seems, the five who met did ot agree in opinion. But a decision was contrived, hat "the retailing of coffee and tea might be an nnocent trade; but as it was said to nourish sedi- ion, spread lies, and scandalize great men, it might lso be a common nuisance." A general discon- ent in consequence, as North acknowledges, took lace, and emboldened the merchants and retailers f coffee and tea to petition; and permission was oon granted to open the houses to a certain period, nder a severe admonition that the masters should revent all scandalous papers, books, and libels rom being read in them, and hinder every person rom spreading scandalous reports against the gov- rnment. It must be confessed, all this must have requently puzzled the coffee-house master to de- ide what was scandalous, what book was fit to be icensed to be read, and what political intelligence ight be allowed to be communicated. The object f the government was, probably, to intimidate, ather than to persecute at that moment.

Chocolate the Spaniards brought from Mexico, here it was denominated *Chocolatti;* it was a oarse mixture of ground cocoa and Indian corn, ith rocou; but the Spaniards, liking its nourish- ent, improved it into a richer compound, with ugar, vanilla, and other aromatics. . . .

We had chocolate-houses in London long after offee-houses; they seemed to have associated some- hing more elegant and refined in their new term when the other had become common. Roger North hus inveighs against them: "The use of coffee- ouses seems much improved by a new invention, alled chocolate-houses, for the benefit of rooks and ullies of quality, where gaming is added to all the est, and the summons of W ——— seldom fails; s if the devil had erected a new university, and hose were the colleges of its professors, as well as is schools of discipline." Roger North, a high ory, and attorney-general to James II., observed, owever, that these rendezvous were often not ntirely composed of those "factious gentry he so much dreaded;" for he says, "This way of passing time might have been stopped at first, before people had possessed themselves of some convenience from them of meeting for short dispatches, and passing evenings with small expenses." And old Aubrey, the small Boswell of his day, attributes his general acquaintance to "the modern advantage of coffee- houses in this great city, before which men knew not how to be acquainted, but with their own re- lations and societies:" a curious statement, which proves the moral connexion with society of all sed- entary recreations, which induce the herding spirit.

For "The Friend."

Regardless of Consequences.

The propriety of the sentiment that a man is not to regard consequences, in the prosecution of what he conceives to be his religious duty, depends upon the ground on which his belief rests, and what those consequences may be. Where they affect himself only, without invading the peace and the rights of another, or prejudicing the cause of religion, he may act conformably with what he believes to be his duty. John Woolman differed from his friends, in wearing a hat and cloth clothes, made of the natural colour of the material. It subjected him to the remarks of some who carried themselves shy of him, but we suppose it did not disturb the harmony of society; and he was left to bear the consequences of his singularity, explaining occasionally to his friends the motives which led him to take the course he did. We do not find that he insisted on his friends adopting his scruples, or condemned them for not following his example; and while he believed it to be a divine requiring, in no way involving the principles, or the character of the Society, it might be his duty to comply, without looking at consequences. John Griffith, when a young convert, fully believing in the obligation to follow the leadings of the Holy Spirit, proved the possibility of being deceived in his apprehensions of duty, when he thought it required of him to do with as little food and sleep, as would sustain nature. The enemy, tak- ing advantage of the ardency of his mind to walk in the way of self-denial, insinuated that the work of sanctification would be more effectually accomplished, by pursuing this rigidly abstemious course, and even adduced Scripture, and passages from other works, to enforce his false suggestions. John Griffith says, "I then *really believed it was the voice of Christ* in my mind, commanding these things, and therefore endeavoured to be faithful therein, till my natural strength abated, and I found my body grew much weaker thereby." From this delusion he was happily relieved, by the wise counsel of an experienced friend, which no doubt taught him the salutary lesson, to "count the cost" of apprehended requirings; and that under an ardent concern to do his duty, Satan might mislead him, if he was not kept in humility, upon the watch, jealous of himself, and waiting on the Lord to receive from him sufficient evidence whether it was his duty.

This does not by any means imply, that there is any uncertainty in the voice of Christ, when it is really uttered in the soul, or that evil conse- quences can follow obedience to the divine will; but it proves that zealous, self-confident people may mistake the wily transformer, for the Shep- herd they should follow, and that there is safety in entertaining a humble, modest opinion of them- selves, and proper charity for those who cannot run into everything they think is very clear to them. The most devoted and experienced dis- ciples of Christ, have ever found, that he does not require them to act under uncertainty, without looking at consequences. Whatever they may feel of the fire, the whirlwind or the earthquake, those who are preserved upon the sure foundation, must wait to hear the still small voice, and to act under its calming influence, in the faith of which Christ is the author, and which he gives to them in his own time. Even then, "He that be- lieveth shall not make haste" When our Lord preached to the people the necessity of forsaking all, taking up the daily cross and following him, if they would be his disciples, he inculcated the doctrine of deliberation and calm reflection, that they might count the cost. "For which of you, says he, intending to build a tower, *sitteth not down first* and *counteth the cost*, whether he have sufficient to finish it; lest, haply, after he hath laid the foundation, and is not able to finish it, all that behold it begin to mock him, saying, this man began to build, and was not able to finish." If we are to count the cost of obedience, when the Master gives a command, that we may be made sensible of our insufficiency, and the need we have to apply to and rely upon him, for wis- dom and strength to carry us through, how neces- sary is it to pause and wait for clearness of vision, when it may be doubtful whether it is his com- mand, before we plunge ourselves, and perhaps others, into serious difficulties.

Some persons have set up for reformers of the doctrines, and the established order of our religious Society, who seemed to think they saw things in a clearer light than our early Friends, and that it was their province to instruct more perfectly their partly enlightened brethren, the *consequences* of which have been inconceivably deleterious to many who once belonged to it. When Joseph Whitall told Elias Hicks he would produce one of the greatest schisms that had occurred among Friends, if he persisted in preaching the false doc- trine, "that Christ was no more than a man," contrary to the Scriptures and the faith of the Society, Elias allowed it would produce a schism, but that it would *soon be over*, for he be- lieved *his doctrines must and would prevail*. Very few persons made higher pretensions to the guid- ance of the divine light than Elias Hicks, while his sentiments and actions proved he was under the greatest deception; and few men were more positive of being right, or more regardless of con- sequences than he was, in his destructive career in carrying out his plans through the Society. He had no right to broach or propagate opinions, while a member, which the Society always held in ab- horrence, or to break in upon its peace and excel- lent church government, spreading division and distraction among the members. Had he concealed his sentiments in his own mind, the fatal conse- quences would have attached to himself; but to involve the Society in a most disastrous schism, was a violation of the peace and the rights of others, and an act of irreparable injustice to the members.

As they differed in opinion so widely, Joseph Whitall proposed to him to have a few solid Friends, ministers and elders convened, that a discussion might be had, but he would not consent thereto, saying, that "he was *so confirmed* in *his* sentiments, that he should persevere therein, *let the consequences be what they might.*" His opinions were unsound, and he was greatly deceived in the idea that the consequences of the schism would be of short duration. Had he taken the advice of solid Friends, and listened to them with the dis- position to be corrected of his errors, what an amount of fearful suffering, endangering, for aught we know, the salvation of souls, would have been spared the Society at large, and many deluded individuals, who were swept off with the torrent

of the separation. The downfall of many, who had been favoured with preservation in their beginning, while they kept little and low in heart, with a single eye to their divine Master, but who left the watch-tower, affords strong admonition to guard against an independent, positive spirit, that professes great clearness and certainty of vision, and being fearless of consequences, in doing things, of which discerning and judicious advisers may entertain serious doubts. "There is a way that seemeth right unto a man, but the end thereof are the ways of death."

Celebrated English Oaks.—An English publication gives the following account of the most celebrated oaks in England: The oldest oak in England is supposed to be the Parliament Oak, (from the tradition of Edward I. holding a parliament under its branches,) in Climpstone Park, belonging to the Duke of Portland, the park being also the most ancient on the island; it was a park before the Conquest, and was seized as such by the conqueror. The tree is supposed to be 1,500 years old. The tallest oak in England was believed to be the property of the same nobleman; it was called the "Duke's walking-stick," was higher than Westminster Abbey, and stood till of late years. The largest oak in this country is called Calthrop Oak, Yorkshire; it measures 78 feet in circumference where the trunk meets the ground. The Three Shire Oak, at Worksop, is so called from its covering part of the counties of York, Nottingham, and Derby. It had the greatest expanse of any recorded in this island, dropping over 767 square yards. The most productive oak was that of Gelonos, in Monmouthshire, felled in 1810. Its bark brought £200, and its timber £670. In the mansion of Tredegar Park, Monmouthshire, there is said to be a room 42 feet broad, and 227 feet long, the floor and wainscots of which were the production of a single oak tree grown on the estate.

Snow the Poor Man's Manure.—For indefinite ages, snow has been regarded as imparting increased fruitfulness to the soil. Many intelligent men have doubted the correctness of this popular notion; but since Baron Liebig discovered ammonia in recently fallen snow, the difficulty is fully explained. Direct and numerous experiments have shown that ammonia is by far the most powerful element in common stable manure. Guano is worth $50 a ton, and fifty times more than a like weight of barn-yard manure, mainly because it contains fifty times as much ammonia. The decay of plants all over the continent discharges into the atmosphere a vast amount of the elements of crops, which are brought back to the earth again in rains and snows, and constitute the natural food of growing plants. Snow being much colder than rain, naturally condenses more ammonia than water; and this is doubtless the reason why a given weight of snow yields more of the volatile alkali than rain water.—*Rochester American.*

Where it should be—when a gentleman who had been accustomed to give away some thousands, was supposed to be at the point of death, his presumptive heir inquired where his fortune was to be found. To whom he replied, "in the possession of the indigent, where it should be."

It is among the evidences of the divine origin of the Holy Scriptures, that Christians grow more and more fond of them, as they arrive nearer to heaven.

For "The Friend."

Will the Editors of the Friend give a place in its columns to the following extract, from the Journal of John Churchman.

"The next day being asked how he was, he said nearly as follows; "I have slept sweetly and seem much refreshed, and though I feel myself very weak in body, I am full of Divine consolation, having never before had such prospects of heavenly things. It seems even as though my soul was united in chorus with glorified saints and angels, both sleeping and waking. I now believe I shall recover, and that this sickness did not happen to me altogether on my own account. My only way to recover is to be industrious and diligent in what I believe is required of me; I have many messages to deliver, both in public and privately to Friends, who I see have missed their way, and have in a great measure deprived themselves of the beauty wherewith an humble abiding in the truth would have dignified them; and to some of my elder brethren, for whom I feel an uncommon nearness of affection, their lives never appeared to be more near to me, and I dare not conceal counsel from them, whether they will hear or forbear. I thought last night, I had a clear prospect of the situations of many within the verge of our quarterly meeting; it seemed as though the inward states of particulars were opened to me in full view; the pure life in the brightness of religion, never appeared to be more precious. An uncommon earnestness attends my mind, for the recovery of the rebellious, hypocritical, and backsliding professors of all ranks amongst us. If I get to our quarterly meeting, which I believe I shall, and can have time allowed me when there, I have tidings, important tidings, as from a dying man, to many. I have seen the mystery of the prophet lying three days and three nights in the belly of the fish. A wicked and adulterous generation are now, as formerly, seeking for a sign to things spoken closely, but no sign shall be given them, save the sign of the prophet Jonah. Our Saviour's sufferings for mankind, and afterwards descending into the bowels of the earth, prefigured that his followers must, after his pattern, descend into spiritual baptism; that they may rise again, freed from the dregs of nature and from the corruptions of the creaturely passions, before they can be qualified to see and suitably to administer to the states of others. I have likewise seen the mystery of Ezekiel's sufferings, and bearing the sins of the house of Israel for the space of three hundred and ninety days, which being accomplished, he was commanded to turn on the other side, and to bear the sins of Judah forty days, for the corruptions of that princely tribe who should have been as way-marks to others. My state has been for several years past, my deep baptisms and painful sittings in our meetings, like bearing the rod of the wicked; in which dispensation I have been sometimes ready to conclude with Elijah, that the altars were thrown down and the Lord's prophets slain, and I, a mean, worthless servant, left alone, and that my life was sought also. I have now seen the use of those dispensations to me, with the use of my late sickness, whereby I am reduced to great weakness of body; that I might be as a sign to this generation, and as with the mouth of a dying man, utter tidings without fear of giving offence; tidings which I have heretofore concealed, through a timorous disposition.

"I have seen at this season that the Lord hath preserved a living number in Israel, who have not bowed the knee to Baal, or the god of this world. I have also seen the condition of many who have worshipped strange gods; and the corruption even of some who have assumed the station of ministers in our Society, how they are deceived so far as to believe a lie; have seen lying visions, and have caused the weak to stumble. They have been speaking peace to the people in the Lord's name when it was only a flash, or divination of their own brain, which has tended to corruption and putrefaction in the churches. I have seen that many little ones have laid groaning as under the burden and oppression of these things, whose day of redemption draweth near, when they shall be made by the Almighty, as bright stars in the firmament of his power; and those who are corrupt and settled on their lees, shall be punished. In this dispensation I have abundantly witnessed the incomes of that peace and love which pass all understanding; neither my tongue nor capacity is able to set forth the bowels of compassion which I livingly feel to flow towards the whole bulk of mankind and especially to my brethren in profession. It seems as though no affliction would be too great to endure for their sakes, if it might be a means to have some of them, whose situation I have now been led to behold as particulars, restored to their former greenness and spiritual health, from whence they have fallen, and dimness has overtaken them. And though my outward man seems almost wasted, my spirit is strong in the Lord, and in the inexpressible strength of affection, I have found my spirit led from place to place over the country, to visit the souls in prison: Yea, I have beheld the dawning of that precious morning, wherein corruption shall be swept away from the church, and righteousness and truth begin to flourish greatly. The day seems to me to be at hand; and what if I say, I have a degree of faith that some of the children now born may live to see it. Through innocent boldness, my face seems to be as brass, and in the openings of the vision of life, I think I could utter gospel truths, and discover the mystery of iniquity, which I have seen, without fearing any mortal. I may be raised to live a while longer, though to die now, would be a welcome release to me. Yea, I could not desire to live, but for the longings of soul, and pantings which I feel towards the precious seed in many, whom I have now been led in spirit to visit. I have beheld their situation to be as lumps, taken out from the bowels of their mother, the earth, though much hidden from the view of mortals; and are tempering and fashioning by the Divine Potter, in different shapes, for divers uses; and I have seen that the Potter's power is sufficient to pick out, and take away every little pebble of nature. Many I have beheld in this situation, set by, as it were, out of sight to dry, until all the dampness and natural moisture is removed from them, not being yet fitted to undergo the operation of burning; but when properly prepared and thoroughly dried, many will be brought to the fire, burned and glazed, so that they may retain the liquor or wine of the kingdom, with a sweet taste, without any degree of taint or nauseous smell."

(To be continued.)

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 269.)

GEORGE GRAY.

George Gray appears to have been an honest, simple-hearted man, much beloved for his work' sake in the gift of gospel ministry committed to him, and much used in religious society. His education was probably more limited than that of some of his contemporaries, and the range of his intellect was without doubt narrower, and yet he appears to have occupied quite an extensive field of usefulness.

In settling differences—in dealing with offend-

—s—in looking after the necessities of the poor —in labouring, as his Master called him, in the ministry of the gospel—in looking after the comforts of his beloved wife and a flock of young children growing around him, he appears to have been industriously employed. The Friends, in that day, were anxious to clear their hands of any participation in things they deemed wrong, and we find George Gray labouring in 1696 with a member of the meeting in Philadelphia, who had sold and was selling jewsharps. This, which the offender no doubt considered a trifling violation of their testimony against musical instruments, was so brought home to him, that he promised to sell no more.

In that time there were no overseers in the church, but concerned Friends felt constrained to labour with those through whose evil conduct and conversation the truth suffered reproach, and to bring the matter to the Monthly Meeting for its action in the case. In the first appointment of Friends to a general oversight of the church, such as overseers now exercise, it is not uncommon to find ministers of the gospel made use of. At a Monthly Meeting in Philadelphia, held Second month 29, 1698, we find by minute it was thought needful, "that some Friends be appointed to look into the disorders of all that make profession of Truth, who live within the limits of our meeting, and also to speak to those that neglect their duty in coming to Monthly and Weekly Meetings, and to those that are profuse in their housing and clothing, according to the modes and fashions." To perform this arduous duty, four Friends were appointed, of whom William Southeby and George Gray were approved ministers.

In the Fourth month, George Gray informed Friends of his Monthly Meeting of a prospect he had of a visit to Barbadoes, "in some short time." No certificate being applied for, it was left. In the Fifth month, Griffith Owen was desired to prepare a certificate for their ancient Friend, but probably owing to the time of his departure being uncertain, it was not issued until the Seventh month. In the meantime, a dreadful pestilence broke out in Philadelphia. Late in the Sixth month, and early in the Seventh month, (old style, equivalent to the Eighth and Ninth months in the new,) many, very many Friends, as well as multitudes of their fellow-citizens, were cut off from their earthly existence some with a few days, others with only a few hours' sickness. Death entered the family circle of George Gray. His wife and his wife's mother were among the valuable Friends, for whom the church, as well as their families and intimate friends, were called to mourn.

Sad must have been the feeling of our afflicted friend, when leaving his motherless children to the care of their relatives in Philadelphia, he, in dedication of heart to the pointings of duty, went to labour in gospel love among the Friends of his younger years. He appears to have been absent from Philadelphia, more than half a year, in this service.

In the Eleventh month Monthly Meeting, 1700, some Friends expressed a fear that the children of Friends had too much liberty granted them to wander about on the evenings of the First day of the week. On considering the matter, it was concluded that three or four meetings should be held in the houses of Friends in different parts of the city, on the evenings of that day, and George Gray with others were appointed to select suitable places. Such meetings were held for a time, but being found inconvenient, were discontinued.

Friends in Philadelphia having reprinted "Gospel Family Order, being a short discourse concerning the ordering of Families, both of Whites, Blacks, and Indians. By George Fox."* George Gray was appointed by the Preparative Meeting in the Third month, 1701, to send a number of copies to Friends of Barbadoes.

A concern having arisen in the Preparative Meeting in the Fifth month, 1701, that something should be done to discourage such tailors as made profession with Friends from "making such fashionable clothing as tends to the corruption of youth, and the breaking the good order of Truth," the subject was opened in the next Monthly Meeting. After solidly considering the matter, the meeting appointed a large committee, "and as many more as are willing to meet together the next Sixth-day, at the second hour in the afternoon, at this place, and in the meantime George Gray and Pentecoast Teague are desired to give notice to all tailors belonging to this meeting to meet the said Friends, according to time and place, to have some conference with them about the aforesaid matter." The women also appointed a committee to meet at the said time with the men.

The meeting was held on the 1st of the Sixth month, according to appointment, and owing to the fact that the minute made at the close of the conference, was placed on a paper which for other reasons it was desirable to preserve, it is still in existence. It runs thus.

"A considerable number of Friends, both men and women, were met together according to the appointment of the last Monthly Meeting to have some conference with the tailors about making fashionable clothing. Several precious testimonies were borne to the ancient Truth, and the power of God was over the meeting. The advice of Friends was to the tailors, both men and women, that they should be very careful for the time to come, how they did make or encourage any body in the wearing of any such clothing as the testimony of Truth is against. For the most part they seemed to be very condescending,—but it being the first time of meeting on this subject, they hoped to take the matter into further consideration, in order to keep the truth clear of such reflections as hath been thrown upon it on that account. Upon which the meeting concluded."

The result was satisfactory, although the meeting did not thereby preserve all its members in the simplicity and plainness the truth called for. The Society had performed its duty,—the feelings of many conscientious tailors had been awakened to the responsibility of their position, and without doubt good had been effected.

But few ministering Friends in Philadelphia left the society with George Keith, and although some of the fathers and mothers in the Truth soon afterwards were removed by death, yet a considerable increase in numbers took place before the close of that century. Some approved ministers removed to Philadelphia from other places; others were raised up to preach the gospel of life and salvation whilst residing there. It is probable among so many ministers, that it seldom happened that a meeting was held throughout in silence, and some of the valuable Friends began to fear lest a fervent inward travail of spirit, and the worship which is performed in solemn secret aspirations unto God, and reverential waiting before him, was too much lost sight of. Under a concern on this account, the matter was brought before the Monthly Meeting on the Sixth month, 1698, and a proposition was made that a meeting should be held during the week, for solemn *silent* waiting, to be called a "retired meeting." In such a meeting, if held, all vocal ministry was to be discouraged. Not that any positive prohibition was to be carried into effect, but ministers, knowing the cause of the establishment of the meeting, were expected to bear in silence the exercises which came upon them as much as possible. In the Monthly Meeting, held the 30th day of the Seventh month, 1698, both men and women Friends united in believing that such a meeting was needed, and might be attended with benefit. It was, therefore, agreed to establish it, and it was concluded to hold it "every Third-day," "to begin at the second hour in the afternoon."

William Ellis, who was then on a religious visit to Friends on this continent, being at the time of the establishment of the meeting in Philadelphia, united with the concern, and his counsel and encouragement were doubtless of weight with the Monthly Meeting. He had, it would appear, some experience in "Weekly Meetings" of this kind. Writing from this country, early in this year, he says, "The strength that I have often gained in these retired meetings, I do find stands in me steadily in this my travel. Oh! my heart is warmed within me, when I remember those good seasons, and how the Lord filled the hearts of the faithful, that they could not forbear to meet together, that they might *purely enjoy the presence of God;* and I have made some observations, that those who have been indifferent in that work, I have not seen grow to the stature of a strong man in Christ Jesus, who is Lord of our assemblies."

The "retired meeting" on Third-day was thought to be of essential service. But as the rightly anointed ministers after labouring for the fulfilment of their duty, by inward travail of spirit, under Divine authority, were as it were, sometimes compelled to give vocal utterance briefly to their exercises, so less experienced ones, not having learned so well to bear spiritual burdens for others in secret, taking encouragement therefrom, also began to open their mouths therein. The distinctive character of this meeting was in great danger of being lost, when in 1702, the Preparative Meeting in Philadelphia took up the matter. It appointed John Kinsey, George Gray, and Ralph Jackson, three ministering Friends to open the matter in the Meeting of Ministers, and "to advise or caution Friends concerned," that Friends in Philadelphia desired the "Third-day retired Meeting may be kept according to the first institution thereof." The Friends named performed their duty, and the Meeting of Ministers after noting that there was "some exercise on the minds of Friends, because the Third-day Meeting in Philadelphia, which being appointed for a retired meeting, is sometimes too much exercised under unnecessary testimonies," expresses its unity with the concern.

This meeting for silent waiting on Third-day afternoon, continued to be held until a regular Third-day morning Meeting was established. It was discontinued by minute of the Monthly Meeting, held Second mo. 27, 1716.

(To be continued.)

Butter Making.—A valuable improvement in the process of working butter has been effected by Ezekiel Gore, of Vermont, consisting in the employment of an endless revolving sack or bag for containing and confining the butter, and conveying it to and between two fluted or working-rollers, and through the water in the tub or box as fast as the rollers operate upon it. The butter is placed in the sack and the tub filled with water; the fluted rollers are caused to revolve, and set the sack in motion. The sack and butter are thus caused to pass between the fluted rollers under the salt hopper, and then through the water, until thoroughly worked, cleansed, and seasoned.

THE CORAL GROVE.

Deep in the wave is a coral grove,
Where the purple mullet and gold-fish rove;
Where the sea-flower spreads its leaves of blue,
That never are wet with falling dew,
But in bright and changeful beauty shine,
Far down in the green and glassy brine.
The floor is of sand, like the mountain drift,
And the pearl-shells spangle the flinty snow,
From coral rocks the sea plants lift.
Their boughs, where the tides and billows flow;
The water is calm and still below,
For the winds and waves are absent there,
And the sands are bright as the stars that glow
In the motionless fields of upper air:
There, with its waving blade of green,
The sea-flag streams through the silent water,
And the crimson leaf of the dulse is seen
To blush, like a banner bathed in slaughter:
There, with a light and easy motion,
The fan-coral sweeps through the clear, deep sea,
And the yellow and scarlet tufts of ocean
Are bending like corn in the upland lea:
And life, in rare and beautiful forms,
Is sporting amid those bowers of stone,
And is safe, when the wrathful spirit of storms
Has made the top of the wave his own:
And when the ship from his fury flies,
Where the myriad voices of ocean roar,
There, far below, in the peaceful sea,
The purple mullet and gold-fish rove,
Where the waters murmur tranquility,
Through the bending twigs of the coral grove.

Selected.

"The cup which my Father has given me, shall I not drink it?" "By the sorrow and the joy alike, we are training for the skies."

Do ye not know, do ye not feel,
How much of earthly taint,
Lingers around the human heart,
And makes the spirit faint?

How many a foolish, wrong desire,
Doth lead the mind astray,
In the wide search for happiness,
Far from the "narrow way."

And even when the light of joy,
Is beaming in the heart,
How few are guided by its rays
To choose the "better part."

No! we forget, when all around
Is smooth, and bright, and fair,
The Being who bestows the good,
And makes us all His care.

Aye! oftentimes forget, until
He, who is wise, and just,
Sends down his messengers of grief,
To prove our hope and trust.

Then not for us—oh! not for us—
To say what should be given,
By Him who knows how much we need,
To turn our thoughts to heaven.

The Sheep of Australia.

In 1786, the House of Commons declared in favour of making New Holland a reeeptacle for convicts; in 1787, the first expedition departed and landed in Botany Bay, the 20th of January, 1788. On close inspection the locality was found entirely unsuitable, and the colony pitched their tents in the magnificent harbour of Port Jackson. The flag of England was raised, and the government of New South Wales proclaimed. The inhabitants then numbered 1020; 565 male and 192 female convicts, 233 seamen, marines, and officers, and 30 other women and children. Such, sixty-seven years ago, were the insignificant beginnings of a group of states, which now hold a million of inhabitants, and carry on a greater trade with the mother country than any other country of the world. Reinforcements followed, speedily and regularly. Under the penal regulations of 1790, which are still in force, and by which the term of punishment is either seven or fourteen years, or the life of the culprit, the annual shipments were about one thousand till 1813, two thousand from 1813 to 1830, three thousand five hundred from 1830 to 1840, and from that year to the present, about four thousand; so that about a hundred thousand criminals, in the aggregate, have been conveyed to this vast natural penitentiary.

The constitution of the new country was necessarily adapted to the character of the population, and never, in occidental Europe, was such an array of powers vested in the hands of a single man, as in those of the governor of New South Wales. Of his own mere motion, he could inflict five hundred lashes. All magazines and stores, titles of honor, offices, the trade and industry of the country, were at his entire disposal. The right of the soil was subject to his good pleasure, as far as the foot of the European penetrated. He alone commanded the labour of the country, granted monopolies, fixed the prices of the provisions, of labour, or articles of trade. There was neither law nor public opinion to restrain him. Nevertheless, even in a population so habituated to robbery, murder, execution, mismanagement, mutiny and rebellion, in a population so depraved that for twenty years rum took the place of coin as the medium of exchange, even here a chosen few were gradually found who were too debased for New South Wales, in exact proportion as Botany Bay itself was too debased for England. This forlorn hope of infamy was expatriated, in 1803, to Van Dieman's Land, there to found an *intensified* Botany Bay, the first outlier of the sprig of European life transferred to the South Sea. In 1823, this settlement rose to the dignity of another colony.

It will always remain a matter of doubt whether any other community than one of desperadoes, would have survived the difficulties interposed by nature to human existence on these shores. A narrow strip of coast was hemmed in by the almost inaccessible chain of the "Blue Mountains." Twenty years after the building of Sydney, it was impossible to penetrate twenty miles inland. In 1810, however, under Governor McQuary, a new era opens. In 1813, the summit of the mountains was scaled; and the year 1814 witnessed the completion of a road, which, in respect to the disproportion of the means at command to the ends accomplished, is said to bear comparison with the greatest achievements of road building. This avenue opened to immigration the immense undulating meadows of Bathurst, which give rise to a chain of rivers flowing westward into the flats of the interior; for in Australia, such is the formation of the country, that rivers empty not into the sea, but into the land. This conquest of territory was the more important, as the grazing industry of the country had already become far too extensive for the narrow belt of coast land. In 1793, a few sheep had been saved from a wreck at Sidney. They fell into the hands of a hard working colonist, McArthur, who nursed the little tribe with astonishing success. The entire attention of the people was soon directed to these animals, and they spread throughout the country with inconceivable rapidity. In 1810, New South Wales had 26,000 sheep; eleven years after the crossing of the Blue Mountains, in 1824, they had increased to 170,000; in 1848 they numbered 536,000, and in 1854 the Australian colonies together contained sixteen millions! Sir George Grey gives it as the result of his personal observations, that a well-managed flock of sheep in Australia must double itself in two years.

The effect of this new order of things on the community of convicts, may be imagined. Shepherds were greatly needed; none but convicts were to be had. So the convicts were sent to the interior in shoals; a strange modern Arcadia arose in which Chloris and Phyllis, wandering over the ungoverned meads, scoffed at the wisdom of the English Solons who had sent them for punishment to this Paradise, where the mere watching of the beast which, according to the Spanish proverb, "turns to gold, with its feet, the ground on which it treads," promised them speedy comfort, and even wealth. A people of criminals thus became a people of shepherds. This made it necessary to alter the despotic features of the constitution; an executive council was introduced in 1822; courts of law and juries were formally instituted.—*Bulletin.*

From G. Fox's Journal.

"Soon after this the Yearly Meeting began at York; which because of the largeness of that county, and for the conveniency of Friends in the northern parts, had for some years been held there. And inasmuch as there had been some hurt done in that place, by some that were gone out of the unity of Friends, it was upon me to write a few lines to that meeting, to exhort them to keep in the pure, heavenly love, which brings into, and keeps in the true unity, which was thus:

"Dear Friends and Brethren in Christ Jesus, whom the Lord, by his eternal arm and power hath preserved to this day, all walk in the power and spirit of God, that is over all, in love and unity; for love overcomes, builds up, and unites all the members of Christ to him, the Head. Love keeps out of all strife, and is of God. Love, or charity, never fails, but keeps the mind above all outward things, and strife about outward things. It overcomes evil, and casts out all false fears. It is of God, and unites all the hearts of his people together in the heavenly joy, concord and unity. The God of love preserve you all, and establish you in Christ Jesus, your life and salvation, in whom ye have all peace with God. So walk in him, that ye may be ordered in his peaceable, heavenly wisdom, to the glory of God, and the comfort one of another. Amen. G. F."

London, Third mo. 27, 1689.

General Aspect of the Jews in Palestine.

We remarked, as other travellers have done, the almost total absence in Palestine of any manifestations of that love of music, and of that mirthfulness and joy, for which the Israelites in ancient times were particularly distinguished; for Judea was truly the land of song; its sacred melodies must ever stand unrivalled, and the music of the Temple was more glorious, elaborate, and costly, than was ever provided by any heathen forms of worship. But the harp, the tabret, the loud trumpet, and cymbal, have disappeared from the land; the only sound of music occasionally heard being that of an Arab shepherd playing on a pipe of reeds. The prophecies have been fulfilled which declared, "I will cause to cease the voice of mirth from Judah and Jerusalem." "Al joy is darkened, the mirth of the land is gone and all the merry-hearted do sigh, the mirth of tabrets ceaseth, the mirth of those that rejoice endeth, the joy of the harp ceaseth." (Isaiah xxiv. 7, 8, 11.) The general aspect of the unhappy Jew is that of a settled, habitual, and intense sorrow. "They eat their bread with carefulness, and drink their water with astonishment," (Ezekiel xii. 19;) and, though the soil be most favourable to the growth of the vine, they scarcely ever indulge in the use of wine, verifying thus the propheey, "They shall not drink wine

th a song" (Isaiah xxiv. 9.) It was predicted Moses, that, in consequence of their disobe- ence, they should live as slaves, wherever they re scattered.—"The Lord shall give them a mbling heart, and failing of eyes, and sorrow mind" (Deuteronomy xxviii. 65.) They may uly be said to have drunk "the cup of the wine the fierceness of his wrath" to the very dregs; r they have always been objects of deep hatred d contempt to their Moslem rulers, who have ten cruelly oppressed them, and they have found the native Christians still more bitter enemies an the Turks.—*London Jewish Intel.*

xtract from Proposition X. Concerning the Ministry.

BY ROBERT BARCLAY.

For it is by this inward and immediate opera- on of the Spirit, which Christ hath promised to ad his children with into all truth, and to teach hem all things, that Christians are to be led in l steps, as well last as first, which relate to od's glory and their own salvation, as we have eretofore sufficiently proved, and need not now epeat it. And truly this device of Satan, where- y he has got people to put the immediate guid- gs and leadings of God's spirit, as an extraor- inary thing afar off, which their forefathers had, ut which they now are neither to wait for or xpect, is a great cause of the growing apostacy pon the many gathered churches, and is one reat reason why a dry, dead, barren, lifeless, piritless ministry, which leaves the people in he same death, doth so much abound, and is o much overspreading even the Protestant na- ions, that their preaching and worships, as well s their whole conversation, is not to be discerned rom Popish by any fresh living zeal, or lively ower of the Spirit accompany it, but merely by he difference of some notions and opinions.

Largest Library in the World.—The largest brary in the world is believed to be the *Biblio- heque Nationale*, in the Rue Richelieu, Paris, con- aining 1,400,000 volumes, mostly in handsome inding, of coloured leather, enriched with gilt, nd placed in solid walls, from floor to ceiling, ith a front net-work for protection, as high as the and can reach from a standing position upon the oor.

Cheerful Views.—Try to take cheerful views of ivine things. Dwell on your mercies. Look at he bright as well as the dark side. Do not cherish loomy thoughts. Melancholy is no friend to de- otion. It greatly hinders the usefulness of many. t falls upon a contented life like a drop of ink on hite paper, which is not the less a stain because t carries no meaning with it. Let your soul rove hrough the truths of Scripture as the happy herds hrough the green pastures.

Singular Article of Trade.—We see it stated n our exchanges, that in October and November ast, no less than 900 barrels of snails were exported rom Switzerland for foreign consumption. Snails re esteemed quite good eating in Paris and Vienna, o which cities this large quantity was probably ent.

Let the time of temptation be the time of ilence. Words react upon feelings; and if Satan, n the time of our trials, can induce us to utter a nasty or unadvised word, he will add, by so doing, o the power of his previous assaults, and increase he probability of his getting the victory.

"The noblest part of a friend," says old Fel- tham, "is an *honest* boldness, in the notifying of errors. He that tells me of my fault, *aiming at my good*, I *must* think him wise and faithful; wise in spying that which I see not; faithful in a plain admonishment, not tainted with flattery."

Fruits of War—Although the Russian com- merce with foreign countries is by no means exten- sive, and exposure to the cruisers of the allied fleets during the present war has been particularly avoid- ed, yet the British have captured no less than ninety-two Russian prize vessels.

Set bounds to your zeal by discretion. Zeal often lessens charity, and, when untempered, does more harm than good.

THE FRIEND.

FIFTH MONTH 12, 1855.

The import of the intelligence from Europe re- ceived by the last two steamers, is calculated to bring feelings of sorrow, and forebodings of widely extended commotion and distress into the mind of every one, who properly estimates the dreadful realities of war, and has even a slight acquaint- ance with the hostile interests and feelings that exist beneath the deceitful surface of European society, awaiting an opportunity to enforce their respective claims. Never was there a more strik- ing illustration of the apostle's description of the origin of war, than the contest that is now being carried on between England and France of the one part, and Russia of the other. Covetousness and the lust of power induced the latter Govern- ment, under pretence of certain privileges being unconfirmed, to claim from the Turk concessions altogether incompatible with justice and equity; jealousy and pride betrayed the other parties into an adverse interference; hasty or unguarded ex- pressions awakened other evil passions on both sides, and without either having received or given a material cause of quarrel to the other, solely at the instigation of "the lusts that war in our mem- bers," they rushed into a deadly conflict that has already cost the lives of hundreds of thousands of their unaggrieved subjects.

The folly in which the war originated, is so palpable, and the results of the absurd contention so heart-sickening, that a general expectation has been entertained, of terms of peace being speedily adjusted and agreed on by the men who composed the Conference at Vienna; but that expectation is now blighted, and there is great reason to fear, that as Austria more openly manifests a willing- ness to side with Russia, the seat of war will be changed, and its carnage and demoralization be spread over other and more densely peopled coun- tries. Should France and England, disappointed in their anticipated success, adopt the policy of lighting the flame of revolution and revolt in Hun- gary and Italy, it is impossible to foresee when and where the awful struggle will be brought to a close.

The Scriptures declare the wisdom that is from beneath to be earthly, sensual, devilish; and we can hardly imagine a more glowing specimen of its ripened fruit, than for the men who control the affairs of these great nations, while confessing that the causes of offence, whether real or imaginary, can be removed, and the terms of peace settled, only by a friendly conference of their respective plenipotentiaries, under the plea of guarding the national honour, or protecting the national inte- rest, to be doing all in their power to stir up in their countrymen those passions which delight in bloodshed and robbery, and to array them in the battle field, to see which can the more effectually serve the author of evil and grand enemy of man, by effecting the greatest amount of misery and death. The resources of the governments are being exhausted, hundreds of thousands of the most hardy and efficient of their subjects, are being cut off on the bloody field, or in the more fatal hospi- tals; suffering and dismay are being introduced into thousands of families that look to them for pro- tection and relief, and all of these are to con- tinue until human endurance is worn out by the complicated horrors of war, when at last they must resort to a conference, and negotiate for terms on which each will be content to rest from ruining themselves, and injuring their neighbours. Truly "the wages of sin is death," in more senses than one.

It can hardly be otherwise than that the shock produced by collision between the most powerful nations of Europe, will be felt more or less, throughout the whole world; affecting the interest of all, and complicating the tangled web of nation- al politics; and there is reason to fear that the want of sterling principle in the rulers of this country, and their desire to rob Spain of Cuba, may expose it to being drawn into the contest, and finally introduce us into contention and suffering at home. Should such a chastisement be permit- ted to come upon us, it will be no more than our crying national sins have provoked, and nothing but the unmerited mercy of the Almighty Dis- poser of events will spare us from this or some similar infliction. Would that all those who are professing to believe in the benign precepts of the gospel of peace and salvation, as held by Friends, were willing to seek for and make use of that strength and wisdom which the Prince of Peace is willing to bestow liberally on all who ask him aright, that so those lusts which originate and keep alive the contentions among them, might be subdued and cast out, and we, as a united people, once more hold up a convincing testimony to those around us, of the love and good will which are inseparable from the religion of Christ.

Our brethren in Great Britain must necessarily be subjected to many trials, and if they maintain faithfully the testimony ever borne by the Society against all military demands or contributions, will have to suffer loss in many ways. They have strong claims upon our sympathy, and we ear- nestly desire they may be strengthened to act with firmness and consistency, not giving heed to the sophistry that on a recent occasion has been put forth, to justify some in membership, who consented to supply a certain fabric of wool for the soldiers in the Crimea; because it was deemed particularly adapted to their comfort, and could not be procured elsewhere.

The signs of the times, both at home and abroad, are portentious; and all who are sincerely desirous for their own preservation in the truth, and for the promotion of the Redeemer's kingdom, have need to look closely to their individual standing, striving to be kept humble, blameless and harmless, "the sons of God without rebuke in the midst of a crooked and perverse nation," that so whatever overturnings may be permitted to come upon us, they may have a certain abiding place, "delivered from the noise of archers in the places of drawing water." There is comfort in believing that how- ever dark and discouraging all things may appear, truth is gradually, but certainly, gaining upon error; the little stone cut out of the mountain *without hands*, is still increasing, and must finally, in the ordering of Divine Providence, fill the whole earth.

SUMMARY OF EVENTS.

EUROPE.—News from England by the steamship Atlantic, to the 21st ult. *The Peace Conference.*—The latest accounts from Vienna represent the negotiations as having terminated, without any good result. Russia declines acceding to the demand of England and France, that there shall be a limitation imposed upon her power in the Black Sea, but proposes that the Sea should be closed to all fleets, excepting those of Russia and Turkey, those powers to maintain armaments of equal strength upon its waters. Austria, it is stated, refused to second the allies in their "humiliating demands" on the Czar. All hopes of an early termination of this foolish and wicked war, are at an end.

The War.—The latest news from the Crimea is contained in a despatch from Gen. Canrobert, under date of the 17th ult. The English and French batteries opened their fire on Sebastopol on the 9th, and the bombardment had continued with little intermission. The allies claim to have inflicted serious injury on the defences of the town, but this is denied by the Russians. Prince Gortschakoff states the loss of the Russians on the 9th and 10th, at 833 men, killed and wounded. On the 15th, he reported, "The bombardment of the city has continued without interruption since April 9th. Damages are repaired during the night. Sebastopol is to-day in almost the same state of defence, as on the 9th. The loss sustained by the garrison, considering the tremendous fire of the enemy, is but small."

Another report says, that the loss of life on both sides has been very great. During the night of the 13th, the Russians were dislodged from a strongly fortified position, which remained in the hands of the French. The possession of this position enables the allies to fortify the summits of the ravines, which is thought to be of importance.

AUSTRIA.—There is said to be no probability of Austria engaging in hostilities with Russia at present; the utmost to be expected from her by the allies, is the maintenance of a strict neutrality. *The Austrians in the Principalities.*—A serious quarrel had arisen between the Austrian troops quartered at Krajova, and the town's people, growing out of the outrageous conduct of an Austrian officer. After a fierce fight, the Austrians were driven out of the town. Official statements return 247 killed on both sides.

GREAT BRITAIN.—Parliament met on the 16th. On the 20th, the Chancellor of the Exchequer submitted his financial statement. The expenditures for the year are estimated at £86,339,000, about half of which is required for military and naval purposes. The total revenue is stated at £63,339,000, leaving a deficiency of £23,000,000, which it is proposed to meet by additional taxation on sugar, tea, coffee, rum, British spirits, stamps, and incomes. The new loan of £16,000,000 has all been taken by the Rothschilds, at 3 per cent. an additional consideration in the shape of an annuity for thirty years, to be paid by the British Government. *The Visit of Napoleon and Eugenie.*—On the 16th, the Emperor and Empress of France arrived at Dover. They were the guests of the British Sovereign five days; they were treated with the greatest possible respect and attention during their visit, by both court and people, and returned to France amidst the enthusiastic acclamations of the multitude.

London Money Market.—Consols had fallen to 89¾.

Liverpool.—Cotton was steady, and prices unchanged. Philadelphia and Baltimore flour, new, 39*s.* to 41*s.* Ohio, 42*s.*

UNITED STATES.—The U. S. Treasurer's statement shows the amount in the Treasury subject to draft, was $20,263,387, on the 23d ult.

Horticultural Novelty.—The Agricultural branch of the Patent Office has taken steps to procure seeds of the Bunya-bunya, a tree of the fir genus, which grows in Australia, and bears a cone, nearly two feet in diameter, filled with seed of the size of an olive, and of flavour more rich and delicate than that of the pine apple.

Cuttings of the Prune.—There have recently been imported from France, the cuttings of several varieties of the prune, which have been distributed by the Department at Washington, in Maine, New Hampshire, Vermont, Northern New York, Michigan, Wisconsin, Minnesota, and several points on the Alleghany Mountains, to be engrafted on the common plum tree.

Florida.—At the latest dates from Fort Myers, two military expeditions were about entering the Indian country, with orders to explore it thoroughly, and ascertain the exact location of all the Indian villages. Most of the natives had retired to the Big Cypress. The Indians continued peaceable; they have been forbidden to traffic with the whites.

California.—The steamship Star of the West brought $302,591 in gold, and San Francisco dates to 9th ult. There were heavy complaints of the scarcity of coin, creating much difficulty in all branches of trade.

Utah.—Advices from Utah to Third mo. 1, state that Col. Steptoe's appointment as Governor, had caused great discontent, and petitions were in circulation, praying for the re-appointment of Brigham Young.

Lake Navigation.—The propeller Forest City arrived at Milwaukie on the 3d inst., being the first boat from the Lower Lakes. The first vessels left Buffalo for Cleveland on the same day, the ice having been driven up Lake Erie, sufficiently to induce the attempt to get through.

Indiana.—The Louisville Courier gathers from the Indiana papers that the wheat crop throughout that State generally promises to be, this year, unusually heavy.

Emigrants from Ohio, for Kansas, Nebraska, Iowa and Illinois, are passing through St. Louis in crowds. About 500 arrived there last week, and it is expected that the number during the season will reach 15,000 souls.

Kansas.—The recent election in this Territory did not represent truly the sentiments of the residents and actual settlers in relation to the great question of freedom or slavery. Gov. Reeder in a speech delivered by him at Easton, Pa., fully confirms the worst reports of fraud and outrage on the part of the supporters of slavery. He said that the conduct of the people of the border counties of the North Missouri, had astounded and amazed him by their reckless disregard of all laws, compacts and constitutions; that the territory of Kansas, at the late election, had been invaded by a regularly organized body of armed men, who took possession of the ballot boxes, and made a Legislature to suit the purposes of the pro-slavery party. Kansas was subdued and conquered by armed men from Missouri, but her citizens would not give up the contest for their freedom and independence from foreign control or interference.

New York.—On the 1st inst., the principal Broadway hotels raised the price of board from $2.50 to $3 per day, on account of the high price of provisions and a prospective curtailment of profits, when their bar-rooms shall be closed by the Prohibitory Law. All licenses expired on the 1st inst., and there is no power to renew them, nor has the mayor any power to prevent the sale of intoxicating drinks on the first day of the week. The State Law does not take effect until Seventh month 4; there will consequently be a period of two months, in which there will be no restraint upon the sale of these pernicious beverages. The steamship Pacific which sailed on the 2d inst., took out $1,313,000 in specie. A. C. Dodge, U. S. Minister to Spain, was one of the passengers.

Mexico.—Various petty conflicts have occurred since the first of the year, between the U. S. Dragoons and parties of the Indians of the Territory, resulting mostly in loss to the latter. In a recent affair, "In all eleven Indians were killed, two men and a woman and child taken prisoners, and fifty horses captured." Some of the Apaches have sent in a deputation asking for peace, and other tribes were said to be peaceably disposed.

The Genesee Valley, N. Y.—In this fine wheat district, the young crop is promising; a large increase of land has been planted. Stock has been wintered well, and a large business in the dairy department is anticipated the coming season.

Philadelphia.—A company has been chartered by the Legislature, the object of which is to convert League Island, and the vicinity of the mouth of the Schuylkill, into a depot for coal and produce, that may in time rival Port Richmond. The coinage at the mint last month, amounted to $628,889, of which $165,000 was in silver. Mortality last week, 219.

Miscellaneous.—An Extensive Farmer.—Michael L. Sullivan, an Illinois farmer, it is said, plants 10,000 acres of land in corn. He was formerly one of the largest farmers in the State of Ohio for many years, and, according to a contemporary, he could ride in a direct course fifteen miles through his own corn fields.

Dying Cattle.—In Missouri, Illinois and Kentucky, it is stated, cattle, sheep, and hogs have been dying, during the past four weeks, by hundreds, from sheer starvation and diseases produced by scanty food, and the severe and protracted cold of the past winter.

A Great Haul of Fish.—The Norfolk (Va.) Beacon says, that 150,000 herring and shad were taken on the 24th ult., in Albemarle Sound, Va. The weight was so great that four hauls with a small seine had to be made before the large seine could be hauled ashore.

The Shipping of the World.—The Maritime Population.—The London News has an elaborate article on the Shipping of the World, which shows that the floating tonnage of the civilized world, excluding only China and the East, consists of 136,000 vessels, of 15,500,000 tons. The number of seamen it sets down at 800,0 and including the Eastern and other States, of the m ritime population of which we have no accounts, th must be at the least a million of persons engaged at s and generally on the ocean.

Another Asteroid.—Le Verier, in a communication Lieut. Maury, dated Paris, April 7, announces the d covery of another Asteroid, the thirty-fourth of t system of small planets between Mars and Jupiter.

The North-Western Part of Missouri, is rapidly filli up with settlers. The land officer's receipts for land that quarter, are unprecedented.

Numbering Ships.—After the 1st inst., every Briti ship is to have a distinct number assigned to it, which the vessel may be known and recognized irrespe tive of name or other description. A number once a proprietd will never be applied to any other Briti ship.

Roman Catholicism in China.—By the latest offici estimates, it is said, there are 326 places of worshi under 84 European and 135 native Priests, with 315,0 native professing Christians.

Very Extensive Inundations, have recently taken pla in the vicinity of the Vistula, and caused immense d mage in the provinces of Posen and of Western Prussi

Eggs from France.—Some produce dealers in Ne York have now for sale eggs, which they have ir ported from France.

HAVERFORD SCHOOL ASSOCIATION.

The stated annual meeting of the Haverford Scho Association, will be held at the committee-room, Arc street meeting-house, on Second-day, Fifth month, 14t 1855, at 4 o'clock, P. M.

CHARLES ELLIS, Secretary.

WEST-TOWN BOARDING-SCHOOL.

Assistant Teachers are wanted in the Boys' depar ment of this Institution. Application may be made either of the undersigned.

HENRY COPE, } Philad.
SAML. BETTLE, JR., }
SAML. HILLES, Wilmington, Del.

MARRIED, on the 2d inst., at Friends' Meeting-hous Twelfth street, Philadelphia, WILLIAM H. NICHOLSON, Haddonfield, N. J., to SARAH, daughter of John A Whitall, of this city.

DIED, on the 16th of Twelfth mo., 1854, at Wilming ton, Del., MARY FOTHERGILL, aged 23 years; a membe of Wilmington Monthly Meeting.

——, at her residence in the city of New York, on th 23d of Fourth mo., SARAH C. HAWKHURST, widow of th late Nathaniel Hawxhurst, in the 81st year of her ag a minister in the religious Society of Friends. Fro her youth she had been devoted to the promotio of truth and righteousness, and the welfare of sufferin humanity, irrespective of color, country or cree Distrustful of herself, yet firm in adhering to what sh believed to be her duty, she desired to follow peac with all men, and with remarkable simplicity of charac ter, filled up her appointed sphere of labour, diligent i business, fervent in spirit, serving the Lord. She de voted much time and personal service to the variot charitable institutions in New York, in which she fe a lively interest; but her chief object was the circula tion and promoting the reading of the Holy Scripture and religious tracts. She was ever watching for suita ble opportunities to distribute them, and probably ci culated hundreds of thousands of pages during her lif It may truly be said of her that she loved mercy, di justly, and walked humbly with her God, and he friends have the consoling assurance that, through re deeming mercy, she has entered into the joy of he Lord.

——, on the evening of the 23d ult., ANNA MAR wife of Caleb Taylor, of London Grove, Chester Co., Pa in the 29th year of her age. Previous to the alarmin symptoms of disease appearing, she expressed to he husband her full conviction, that she would not recove from this sickness, and hard as it naturally was t break the endearing ties of earth, all had been mad easy for her—that her concern was not for herself, bu for the dear ones she would leave behind, and her ea nest prayer was, that they might so live that when tim should be to them no more, they might be prepared t join her in the mansions of eternal happiness.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, FIFTH MONTH 19, 1855. NO. 36.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From "The Leisure Hour."

Bread from Afar.

We breakfasted this morning from a home-baked loaf, manufactured with flour from foreign wheat—wheat grown, as our friend the factor informed us, in Podolia, a district of Russian Poland. As bread has of late become a very interesting subject to a large section of our readers, and is likely, from various causes, to claim their attention for some time to come, it may amuse them to trace very briefly the history and the travels of the aforesaid loaf, ere it arrived at our breakfast-table. Let us, then, transport ourselves in imagination to one of the vast undulating tracts of Russo-Poland, lying some hundreds of miles north-west of the Black Sea, and look around us.

We are in an immense plain, stretching far beyond the limits of vision, the soil of which possesses astonishing aptitude for the growth of grain of all kinds. The land is a stranger to manure, which is never used for the purpose of fertilizing it—the only restorative process consisting of the rest which it receives every third year, during which it lies fallow. It is cultivated by serfs, who have no pecuniary interest in the crop, no inalienable property beyond the tools they work with, and no wages either in money or rations; but who have each three acres of land upon which to support themselves, and three days in each week allowed for its cultivation. They dwell in wretched huts, where large families, consisting sometimes of three generations, are crowded in the only room, in which, during the winter nights, all sleep huddled together for warmth around the stove. Groups of these huts constitute the villages, which at irregular intervals dot the illimitable plain. Each village may contain the serfs belonging to a single estate, and they are the property of its owner as much as is the land they live on. The owner, however, they never see: he lives far away—in Moscow, in St. Petersburg, or in Novgorod, as the case may be—and leases his land, with the serfs upon it, to a middleman, whose sole object in life it is to get as great a profit from the produce as he possibly can. The land is left without drainage as well as without manure—not a penny being ever spent in either of these processes; but as the surface is covered with a series of natural dykes and ditches, the want of drainage is not much felt by these primitive husbandmen.

The return for the labour and skill of the cultivator is not of course so great, upon such a system as the above, as with English farmers who are obliged to make the most of their land: it is reckoned a good crop if seven bushels of grain are reaped for one bushel sown. The land only bears wheat (which the serfs never eat) once in three years—a crop of oats or rye following the wheat—and the third year nothing. The agricultural labours are divided between the serfs and the bullocks, and without the services of the latter nothing could be done. The crop is rarely known to fail; and it is from these interminable plains that the capacious granaries of Odessa are principally supplied.

But Odessa is perhaps several hundred miles off; and to the mind of the modern Englishman it would seem a hopeless task to carry grain thither through a country which has no railways, roads, or canals. Let us see how it is accomplished. Suppose the harvest over early in the summer, and the corn lazily threshed out and measured into sacks. Now comes the business of transport. Upon a carriage of the rudest construction, entirely made of wood, often nothing more than the trunk of a tree (the lateral branches hewn into axle-trees) mounted on four lumbering wheels, eight of these sacks, containing something less than four English quarters, are deposited. This is the corn-wagon; to it a couple of oxen are yoked, and then it is given in charge to a driver, a serf, who, for a very moderate consideration, undertakes to deliver the grain at the granary in Odessa. The driver, clad in sheep-skins, and wearing a mass of unkempt beard, and being armed with a ponderous thong, mounts in front; he carries a big pot of mal-odorous grease, dangling between his legs, of which grease he is compelled to make continual use to save his clumsy machine from taking fire in four places at once. There is no road, but there is a broad track, which has been travelled for generations by such equipages in thousands. They set forth in bands, and when one, as continually happens, sticks fast in rut, quag, or slough, the cattle of his neighbour are at hand to help him out. Ten English miles is a good day's journey; and for many days, perhaps weeks, the grass at the wayside supplies the food of the oxen. But, unhappily, there lies between the cultivated land and the coast a broad belt of arid desert soil, called the Steppe, which produces nothing to support life of any sort. To cross this, even in the narrowest part, occupies several days, and fodder must be carried to keep the bullocks in good working order, as the ground is rough, and there are hills to be surmounted. This is the difficult and dangerous part of the expedition, and when violent rains convert the sand and earth of the Steppe into mud, it becomes impossible to traverse it in time, and numbers of the oxen perish from hunger.

During the months of exportation, lasting from the close of summer till towards the end of autumn, these corn-wagons come pouring into Odessa at the rate of many hundreds a day. To prevent confusion, they are compelled to follow a prescribed route through the city—entering by one road and passing out at another, dropping their burdens at the granaries of their consignees as they proceed. The granaries at Odessa are massive and gorgeous erections, rivalling in vastness and architectural magnificence the club-houses at the west end of London.

From Odessa, the wheat which supplied our breakfast crossed the Black Sea in a British ship, passed through the sea of Marmora, skirted the hundred isles of the Archipelago, and traversed the whole length of the Mediterrancan to Gibraltar, and thence home to London, after a prosperous voyage. It was ground by steam-mills on the banks of the Thames, was sold by sample in Mark-lane, and delivered to order. Betty baked it yesterday in a square tin mould, and it consummated its eventful career this morning at half-past eight, in company with a rasher of bacon from Wiltshire, which was born in Ireland—an infusion of congou from Canton, sweetened with sugar from Jamaica, and cooled to the swallowing point with milk from a cow with horns warranted to have no connexion with her of the iron tail.

Here we had finished with our account of the breakfast-bread; but our housekeeper has just assured us that, together with the new flour from Odessa, which formed the major part of the morning's loaf, was a little left from the last American barrel, which of course could not be wasted; so that we have been devouring, at the same moment of time, the produce of the east of Europe and the far west of America. There is no reason, however, that we should cross the Atlantic, even in imagination, to speculate on the agriculture and commerce of the back settlements; the reader can do that for himself, if he choose, without our assistance.

For "The Friend."

The Difficulties in Society.

The primary cause of the trouble and sorrow in which we, as a people, are involved, is too evident to admit of a question in any unbiassed mind, and the secondary causes are equally evident. In the first place, there has been an undeniable effort to introduce religious views inconsistent with the doctrines, which have ever been held by sound Friends, from the rise of the society to the present day; and in the second place, there has been the exercise of a zeal, on the part of some in opposing the introduction and spread of these views, and a determination in others to resist the testimony of Truth against them, which has led into disorder and disunity, to the trampling under foot in some places of that wholesome discipline, which Truth has prescribed for our government and support. Thus party spirit has been begotten, and blinded the eyes of many, turning their attention from the centre of all true hope, wisdom, and power, to a creaturely dependence on mere human strength, which has introduced perplexity and confusion.

It was never designed by the Head of the church, that the unsanctified wisdom and will of man should be the means of promulgating the truths of the gospel, or assume the direction of the disciplinary affairs of the church, and it is sorrowful at any time to behold a reliance on them as the weapons of our warfare and defence in any cause, however good, for confusion is the never failing result; as was exemplified in our late Yearly Meeting, where its harmonious proceeding was interrupted by the exercise of party heat, and zeal.

There were many denials of the existence of party feeling, in relation to points at issue before the meeting, but unmistakable evidence was af-

forded of prejudice and party zeal, even in those who claimed exemption from their influence. "It is highly probable that many who declaim against the prevalence of a party spirit and its mischievous consequences, are more tinctured with it themselves than they are willing to acknowledge, or perhaps to believe." Says William Penn, "He that espouses parties, can hardly divorce himself from their fate; and more fall with their party, than rise with it. A neuter only has room to be a peace-maker; for being of neither side, he has the means of mediating a reconciliation of both. Where it is lawful, it is best to be neutral.* Partiality corrupts our judgment of persons and things, of ourselves and others, and too common it is, for some people not to know their own maxims and principles in the mouths of other men, when they give occasion to use them. It contributes more than anything to factions and feuds, and is a prodigal passion that seldom returns till it is hungerbit, and disappointment brings it within bounds."

But, notwithstanding all that has been permitted to come upon us, have we not occasion for thankfulness in the evidence which was afforded during our late annual assembly, that the Lord was pleased at times to be near us, manifesting his presence amongst us, by unmistakable tokens of his goodness and mercy towards us as a people, as well as by a sense of his regard and power, vouchsafed unto his humble and devoted servants, who are preferring Jerusalem to their chief joy.

Oh, it was his doings, and it is marvellous in our eyes, that we were enabled to arrive at a settlement, amidst the contending elements, which manifested themselves amongst us; and it is cause of humble thankfulness that we, as a religious body, have been strengthened to stand upon the ground of truth, in support of our religious testimonies. How comforting and confirming has been the evidence, that notwithstanding all our shortcomings and backslidings, we are not yet a forsaken people, but the same Divine hand of power by which we were raised up in the beginning, is still extended for our preservation and help, so that no divination or enchantment of the enemy has been able entirely to prevail against us. Now, in view of what has been done for us, by the great Head of the church, let us, as with the heart of one man, unite in offering up to him the acceptable sacrifice of thanksgiving and praise, bearing in mind our entire dependence upon him.

* William Penn says, *where principles are concerned*, a neutral is either a hypocrite or a coward.—*Ed.*

The Slide of Alpnach.

The following interesting account of a remarkable work of art was originally published in Gilbert's "Annalen" in 1819; and a translation appeared in "Brewster's Journal."

For many centuries, the rugged flanks and the deep gorges of Mount Pilatus were covered with impenetrable forests. Lofty precipices encircled them on all sides. Even the daring hunters were scarcely able to reach them; and the inhabitants of the valley had never conceived the idea of disturbing them with the axe. These immense forests were therefore permitted to grow and to perish, without being of the least utility to man, till a foreigner, conducted into their wild recesses in the pursuit of the chamois, was struck with wonder at the sight, and directed the attention of several Swiss gentlemen to the extent and superiority of the timber. The most intelligent and skilful individuals, however, considered it quite impracticable to avail themselves of such inaccessible stores. It was not till November, 1816, that M. Rupp, and three Swiss gentlemen, entertaining more sanguine hopes, drew up a plan of a slide, founded on trigonometrical measurements. Having purchased a certain extent of the forests from the commune of Alpnach, for 6000 crowns, they began the construction of the slide, and completed it in the spring of 1818.

The Slide of Alpnach is formed entirely of about 25,000 large pine trees, deprived of their bark, and united together in a very ingenious manner, without the aid of iron. It occupied about 160 workmen during eighteen months, and cost nearly 100,000 francs, or £4,250. It is about three leagues, or 44,000 English feet long, and terminates in the Lake of Lucerne. It has the form of a trough, about six feet broad, and from three to six feet deep. Its bottom is formed of three trees, the middle one of which has a groove cut out in the direction of its length, for receiving small rills of water, which are conducted into it from various places, for the purpose of diminishing the friction. The whole of the slide is sustained by about 2,000 supports; and in many places it is attached, in a very ingenious manner, to the rugged precipices of granite.

The direction of the slide is sometimes straight, and sometimes zig-zag, with an inclination of from 10° to 18°. It is often carried along the sides of hills and the flanks of precipitous rocks, and sometimes passes over their summits. Occasionally it goes under ground, and at other times it is conducted over the deep gorges by scaffoldings 120 feet in height.

The boldness which characterizes this work, the sagacity displayed in all its arrangements, and the skill of the engineer, have excited the wonder of every person who has seen it. Before any step could be taken in its erection, it was necessary to cut several thousand trees to obtain a passage through the impenetrable thickets; and, as the workmen advanced, men were posted at certain distances, to point out the road for their return, and to discover, in the gorges, the places where the piles of wood had been established. M. Rupp was himself obliged, more than once, to be suspended by cords, in order to descend precipices many hundred feet high; and in the first months of the undertaking he was attacked with a violent fever, which deprived him of the power of superintending his workmen. Nothing, however, could diminish his invincible perseverance. He was carried every day to the mountain in a barrow, to direct the labours of the workmen, which was absolutely necessary, as he had scarcely two good carpenters among them all; the rest having been hired by accident, without any of the knowledge which such an undertaking required. M. Rupp had also to contend against the prejudices of the peasantry. He was supposed to have communion with the devil. He was charged with heresy, and every obstacle was thrown in the way of an enterprise which they regarded as absurd and impracticable. All these difficulties, however, were surmounted, and he had at last the satisfaction of observing the trees descend from the mountain with the rapidity of lightning. The larger pines, which were about a hundred feet long, and ten inches thick at their smaller extremity, ran through the space of *three leagues*, or nearly *nine miles, in two minutes and a half*, and during their descent they appeared to be only a few feet in length. The arrangements for this part of the operation were extremely simple. From the lower end of the slide to the upper end, where the trees were introduced, workmen were posted at regular distances, and as soon as everything was ready, the workman at the lower end of the slide cried out to the one above him, "*Lachez*," (Let go.) The cry was repeated from one to another, and reached th top of the slide in *three minutes*. The workma at the top of the slide then cried out to the or below him, "*Il vient*," (It comes,) and the tr was immediately launched down the slide, precede by the cry, which was repeated from post to pos As soon as the tree had reached the bottom, an plunged into the lake, the cry of "*Lachez*" was r peated as before, and a new tree was launched i a similar manner. By these means a tree descende every five or six minutes, provided no accider happened to the slide, which sometimes took plac but which was instantly repaired when it did.

In order to show the enormous force which th trees acquired from the great velocity of the descent, M. Rupp made arrangements for causin some of the trees to spring from the slide. The penetrated, by their thickest extremities, no le than from eighteen to twenty-four feet into th earth; and one of the trees having by accider struck against the other, it instantly cleft it throug its whole length, as if it had been struck by ligh ning.

After the trees had descended the slide, the were collected into rafts upon the lake, and co ducted to Lucerne. From thence they descende the Reuss, then the Aar to near Brugg, afterwar to Waldshut by the Rhine, then to Basle, and the sea, when it was necessary.

In order that none of the small wood might l lost, M. Rupp established in the forest large m nufactories of charcoal. He erected magazin for preserving it when manufactured, and h made arrangements for the construction of barre for the purpose of carrying it to the market. I winter, when the slide was covered with snow, th barrels were made to descend on a kind of sledg The wood which was not fit for being carboniz was heaped up and burnt, and the ashes packe up and carried away during the winter.

A few days before the author of the precedi account visited the slide, an inspector of the nav had come for the purpose of examining the qu lity of the timber. He declared that he had nev seen any timber that was so strong, so fine, a of such a size; and he concluded an advantageo bargain for one thousand trees.

The Slide no longer exists.—*Ed.*

For "The Friend."

I am led into a renewed desire for the suppo of those testimonies of Truth, which we, as a pe ple, are called to maintain. I am well satisfi that these testimonies have their foundation righteousness. The gospel teaches us to have r fellowship wlth the unfruitful works of darknes but rather reprove them. This injunction c only be obeyed, as we maintain, both by examp and precept, that simplicity of attire, langua and behaviour, which so adorned our worthy pr decessors, and marked them as self-denying fo lowers of a meek and crucified Redeemer. The moderation was known unto all men. The love the world, and the things of the world, gave pla in them to the love of God.

I do, indeed, greatly desire that we might mo and more imitate them, being willing to obey th Witness for Truth in our hearts, remembering, f our encouragement and our warning, the declar tion of Christ, "He that confesseth me befo men, him also will I confess before my Father a the holy angels; but he that denieth me befo men, him also will I deny before my Father a the holy angels." Be content with such thin as ye have, seek no more of temporal possessio than you can acquire and enjoy with the appr bation of the Lord. "For what is a man profite if he gain the whole world, and lose his own sou

r what would a man give in exchange for his oul."

Oh! that our light might so shine before men, hat others seeing our good works, would glorify ur Father who is in heaven; then, indeed, would e be as a city set on a hill, which could not be id. Make clean the inside of the cup and the latter, and the outside will be cleansed also. If he heart is right before God, there will not be mong us so many sorrowful departures from an- ient Quakerism. The tree is known by its fruit.

Ohio, Fourth mo., 1855.

Utility of Ups and Downs.—One of the most wonderful laws of Political Economy is that by which the rich and the poor continually keep changing places in a state of society where everything is left free. Few consider either the causes, or the important results of this arrangement on the world at large. By industry, intelligence and good morals, a man soon rises from poverty to wealth and social standing, just as certain as the heated stratum of water at the bottom of a tea-kettle rises to the top. And just as the water, when thus at the greatest distance from the fire, cools and sinks, so wealth too often begets habits of expenditure and ease; families soon come to a point where they consume more than they produce; and then, by degrees, have to give place to others, more fresh and warm, from the regions of industry. Of course, this subsidence into comparative poverty is painful to the individual, but is all a part of that great law of circulation which belongs as truly to the moral as to the physical world.

The obstruction of this law brings down upon society stagnation and decay, but its natural operation produces gradual elevation of all classes of society, and a progressive civilization, geniality, and warmth, benefiting each in turn. Every farmer knows the advantages of the rotation of crops, and nature herself has arranged for the migration of seeds, providing even for the downy thistle, in the corner of the fence, an apparatus by which its seeds may fly upon the wings of the wind, and emigrate in quest of a fresh soil.

The same great law of circulation belongs to the intellectual and social world quite as certainly as to the physical. He who has ordered even the flight of the thistle seeds, has also arranged that riches shall make to themselves wings and fly away—that men of strong bone and sinew shall reap gold the fastest in California, and that men of manly, independent, bold, clear minds, and fresh unsophisticated hearts, shall be continually replacing in society the wastes produced by luxury, effeminacy and idleness. This is a great natural law.

Riches give leisure, and leisure expansion and delicacy to all the finer instincts and feelings of our nature. They give opportunity for abstract investigations and curious inventions. While a man is struggling for daily bread he will not push out mathematical discoveries, or measure the distance of the stars. But men of leisure seldom *apply* the abstract knowledge they acquire to purposes of utility as well as the industrious classes, and the rough sailor best appropriates the most abstract knowledge of astronomy to daily use in navigating the Atlantic. Thus necessity teaches men to apply knowledge to purposes of practical usefulness, acquired in times of ease and wealth. A family rises to wealth through industry and intelligence, their minds expand, their views enlarge; then poverty comes, and they turn all their knowledge to useful purposes. Or they emigrate to the far West, and carry with them their habits, tastes and thoughts, which, combined with the energy acquired through hardship, raised them to a much higher level than before. Refinement and education are taken with them into every walk of life they enter, and thus the whole are elevated.

In the early settlement of this country, men of learning and refinement were thrown, comparatively poor, on a new country. They had been accustomed to the expensive colleges of Europe—they formed cheap ones for their children here. All knowledge, all comforts, all refinements are in this way popularized, cheapened and brought within the compass of the masses in this country as in no other—education, newspapers, books, lectures, railroads, telegraphs. Thus refinement is imparted to the classes that have most strength of character, while the men of strength re-invigorate with new life and health the drawing-rooms of the refined.

In Europe, every artificial arrangement is made to check this natural circulation of society. By entails and laws of primogeniture, an hereditary aristocracy is supported at the *top* of society, and not allowed to fall to its natural level, nor can merit rise. Hence it is that, while the aristocracy all over Europe gives every symptom of stagnation and decay from an extreme and effeminate refinement, the poorer classes are proportionally degraded and brutalized, so as to be very far in point of intelligence, below any class of freemen in this country. In England, they attempt to heat society with the warmth of civilization downwards from the aristocracy, instead of upwards from the industrious classes, which is as if you should put a fire on the top of the boiler, instead of underneath. Dr. Franklin started the true American and common sense policy, and by simply letting the industrious and hardworking man be well paid, educated and virtuous, he saw that all the rest might be left to the working out of natural laws. He put the fire *underneath*, to make the water boil.

Thus also will the vast multitudes of foreigners that land on our shores, naturally and of themselves best become Americanized; not by persecution or forcing them into separate clans and classes, which will only produce riots, as in Cincinnati, and retard the great work of civilization, but by the natural operation of this great principle, the elevation of the working classes.—*Ledger.*

For "The Friend."

The position of the members composing a large meeting, particularly those who are viewed in the light of leaders, counsellors, or watchmen, not a little reminds me of a large team of horses. These when harnessed together, each one in his proper place, and all of them obedient to him who has the command or charge over them, move on in comely order. But who has not witnessed the disorder and confusion occasioned by an ungovernable leader, or by the stubborn and unyielding disposition of one, on whom the two-fold responsibility rests, of at times pulling and at times holding back. How apparent, even to a superficial observer, is the necessity of each member keeping his proper place, thereby equally dividing the labour, promoting the efficiency of the whole, and the credit of the master.

Is not the foregoing emblematic in some sort, of a meeting in which are ministers, elders, overseers, and other concerned members? Should all of these be found in the occupancy of their several gifts, co-working one with another in the ability and measure received, how comely will be the order, how equally the burden will be distributed amongst them; but the work may be retarded through some one's unfaithfulness, and thus cause an increase of burden to rest on the faithful. I have desired that we all should be kept lowly, humble, and teachable, divested of everything in which the creature could exult. It is not enough that we be found literally sound in the faith. It will not do for us to conclude that because we are the same in profession with the people whom the Lord did raise up and own in the days of George Fox, that we have nothing to fear. Like them we must deny ourselves, take up our daily cross, and follow him. These were the terms of discipleship in the days of our predecessors, and they remain unchangeably the same in our day. Many have sought an easier way; they have been willing to do good, but the good has been of their own devising; they have been willing to make an offering unto God, but not the sacrifice that he has called for at their hands. Now, although the leaders of the people may be pulling in different directions, and the query may sometimes arise in the hearts of some of the little ones, who are desirous above everything else, to be found in their proper allotment, "Who shall show us any good?" I would say, be not over much discouraged. "The foundation of God standeth sure, having this seal, the Lord knoweth them that are his," and if we are indeed his, these shaking and sifting times will not be permitted to move us off the sure foundation, or pluck us out of our heavenly Father's hand.

Ohio, Fourth mo. 29, 1855.

The Horrors of War—A Fearful Tragedy.—The London Times lays before its readers the particulars of a horrible affair, which recently occurred near the Dutch settlement of Transvaal, at the Cape of Good Hope, and which can only be paralleled in atrocity among the achievements of modern times by the exploit of Marshal St. Arnaud in Algiers, when he smoked and burned to death thousands of his barbarian opponents who had sought refuge in a deep and spacious cave:—

In the case at the Cape of Good Hope, the Caffre Indians had murdered, in the Tenth mo. last, under circumstances of great barbarity, ten or twelve men and women of the Dutch settlement. Immediately, General Pretorious raised an army of five hundred men, and, accompanied by Commander General Potgietter, proceeded on an expedition to revenge the blood of the victims. After an absence of several weeks, they reached some remarkable subterranean caverns, half a mile in length, and from three to five hundred feet in width, where the Caffres had entrenched themselves. Upon his arrival at this spot, General Pretorious attempted to blast the rocks above the caverns, and thus crush the savages beneath the ruins. The peculiar character of the stone, however, rendered this scheme impracticable, and he then stationed his men around the mouths of the caves, and built up walls in front of them. After a few days, many of the women and children were driven by hunger and thirst from their hiding places, and were allowed to escape; but every man who came forth was shot dead by their rifles. On the 17th of Eleventh month, at the close of a siege of three weeks, the besiegers, seeing no signs of life, entered the caverns, and the silence within, together with the horrible odour arising from the bodies of the dead, told how effectually their object had been accomplished. More than nine hundred Caffres had been shot down at the mouths of the caverns, and a much greater number had perished by slow degrees, suffering all the horrors of starvation in the gloomy recesses within.—*Late Paper.*

Lessons of self-denial, wisely and kindly, enforced, though the heart be pained for the time, are sources of future satisfaction.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

GEORGE GRAY.

(Continued from page 279.)

The traces of the labour of our friend, George Gray, continue very abundant, but as they principally relate to Monthly Meeting appointments and visits to neighbouring meetings, they need claim no particular mention. In the year 1706, he married a valuable ministering Friend, Naomi Berry, of whose life we have already given account. In 1709, the year after her decease, he visited New England, taking with him a certificate addressed "to Friends of East Jersey, Long Island, Rhode Island and there away." It testifies concerning him that he is "a man of a good conversation," "having been many years concerned in public testimony," and after desiring that he may be accepted and received by the brethren, it concludes thus:—"So desiring his welfare and the presence of God to attend him, with our tender salutation of love in the holy Truth of our blessed Lord Jesus Christ, which hath united his people, and gathered them into his own eternal spirit, so that his church is become one the whole world over, praying the increase thereof, we conclude."

He was now grown very aged, and on several occasions we find him requesting the Monthly Meeting to assist him in regulating his affairs, he being executor of the will of his mother-in-law, Margaret Beardsley, the provisions of which, his children being still under age, could not yet be carried out. In the year 1712, he removed to a plantation belonging to him in right of his wife, Mary Beardsley, near Germantown, and took a certificate to Abington Monthly Meeting. His friends bear an affectionate testimony to their "ancient friend," as "a man of a humble innocent life and conversation becoming the Truth." He returned to Philadelphia in a year or two, and in 1715, at his request, he representing himself as through age unfit for business, two Friends were appointed to assist him in what was needful, who probably took the whole charge of his temporal concerns. Although very infirm and drawing nigh to the gates of death, he was not released from a spiritual travail for the good of others. In 1716, feeling drawn to visit Friends in Barbadoes, he requested a certificate thereto. It is evident, that he did not expect to return from this visit, for he took a certificate of removal. The final parting with his children, even though, at his great age, he could not expect long to endure the earthly separation, must have been no little trial.

Of his labours in Barbadoes, for which place he sailed near the middle of 1716, we have no account. His death took place about the first of the year 1718, whilst Thomas Chalkley was in that island. Thomas says, in his journal, "While I was here, our ancient friend, George Gray, died. I was at his funeral, at which there were many people."

Not endowed with brilliant qualities, but an honest industrious labourer in his Lord's service, his course for more than half a century through which we can trace it, seems to testify he was "doing what he could."

ELLIS PUGH.

This Friend, who is often called Ellis Ap Pugh, in the early records of this province, was born at Dolgelly in Merionethshire, Wales, in the Sixth month, 1656. His parents were religious characters, but his father dying before his birth, and his mother a few days after, he was left to grow up without the guarding care and oversight, which piously concerned parents can extend over their offspring. But the God of his father and his mother did not forsake him. When running in the heedless haste of youth, in the paths of folly, he was visited in mercy, by the Lord's awakening judgments, which caused him earnestly to ponder his ways, and to consider the things which belong to the soul's everlasting peace. The restraining influence of these judgments rested upon him, and in the eighteenth year of his age, he was more eminently visited by the Holy Spirit, which awakened in him a living concern, that he might serve the Lord his Creator, more faithfully and diligently than he had ever done. One of the means employed by the Lord Jesus, that blessed Shepherd of the sheep, in gathering this lamb, into his fold, was a testimony borne by his servant, John Ap John, that eminent labourer in his gospel.

Having submitted to the call of the Saviour, and being zealously concerned to obey him, he grew in religious experience. God, who has promised to be a "father to the fatherless," was with him, and as he grew in obedience, opened still further the mysteries of his will, until in or about the year 1680 he gave him a part in the ministry of the gospel. He had not much human learning, neither was he accounted one of the wise, according to the wisdom of this world, yet, through faithfulness to his gift, he was made in the Lord's hand an instrument of good to many. Divers were reached through his ministry, and were turned through submission to the Holy Spirit, from the paths of vanity, into the path of life.

In the year 1686, having believed it would be right for him to remove to Pennsylvania with his family, he prepared therefor, and a number of his acquaintance and neighbours made ready to accompany him. Whilst waiting until the ship should be ready to sail, great trouble and exercise of mind fell upon him, insomuch that through the effect thereof, he was sick for some days. In this season of conflict the Lord made it manifest to him, that trouble and exercise should attend them in the voyage. He also showed him, that there was a further service for him in Wales, and that he must return thither at a future time.

They sailed, and on their passage met with many storms. After battling with tempests and contrary winds all winter, they reached the island of Barbadoes in the First month, 1687. Here they remained several months, being joyfully and lovingly received, and hospitably entertained by their brethren in religious communion with them. During the ensuing summer, they reached Pennsylvania.

He first settled west of the Schuylkill, near Haverford, where he was a faithful and zealous labourer of the gospel, preaching fervently in his native tongue. In the year 1698, a considerable number of people being mostly relations or near neighbours in Merionethshire, Wales, came over to Pennsylvania with Hugh Roberts, who was returning from a religious visit to their native country. But few of these new settlers were members of the Society of Friends. Their descendants say, "they arrived at Philadelphia, on the 7th day of the Fifth month, where they met with kind reception not only from relations and old acquaintances, that were in the country before, but from strangers, though they understood not their language. It appeared to them, as we have often heard them say, that in these early times, christian love in a great degree presided amongst most, though of different speech and profession." A tract of land, amounting to 10,000 acres, was purchased by the new comers during the year, on the east side of the Schuylkill, about twenty miles from Philadelphia, and in 1699 they began to mak improvements thereon. A priest, by the name Evans, residing in Philadelphia, thought that as br few of the settlers were Quakers, there might be a opening there for him. He came several times t offer his preaching for sale, but although not ye thoroughly convinced of the doctrines of truth they doubtless had been instructed that unde the gospel dispensation, all ministry was to b without money and without price, and so he quickl found that there was no market there for the pro duct of his tongue. The people, however, ofte met together in silence at the houses of Joh Hugh and John Humphreys, where at times mir istering Friends were drawn to set with them Among others, Ellis Pugh, although his residenc was at a distance, and he had the Schuylkill t ford, was often with them. Narrating the visit of ministers to these new comers, Friends of Gwyn nedd say, "Particularly that faithful servant an minister of Christ, Ellis Pugh, who in these earl times was instrumental to the convincing and es tablishing of many in the blessed Truth. Fre quent were his visits, and his labour of love inces sant, though he then lived at a distance fro them."

Ellis Pugh had been one of the second set o purchasers of the land about Plymouth, but a what time he went to Gwynnedd or Plymouth w know not, but his mind was so with the new set tlers, that he felt it right to remove there. The say of him, "In process of time he came to liv within the verge of this Monthly Meeting, an laboured faithfully amongst them to his dyin day; and many have had cause to be thankful fo so great a blessing conferred on them."

At Philadelphia Quarterly Meeting, held Tenth month 4th, 1699, Rowland Ellis, on behalf o Haverford Monthly Meeting, reported that severa Welch people, Friends and others, lately settle on the east side of Schuylkill, in this county, abou twenty miles off, have had for *some time* a First day's Meeting and a Third-day Weekly Meeting by consent of Haverford Monthly Meeting. Th information was given for the judgment of th Quarterly Meeting, which approved of the cours pursued. It also approved of a proposition to joi the meeting to Haverford, for the sufficient reaso that the settlers "understood not the Englis tongue." In 1700 a meeting-house was buil there.

Of the nature of the ministry of Ellis Pugh, w have this account from the Gwynnedd Friends "This our Friend was a serviceable instrument i the Lord's hand, to cherish and instruct us, i meekness and tenderness, to obey that which Go made known unto us of his will, and to follow an understand the operation of his Spirit, discoverin to us the snares of the enemy of our souls. Hi pious labours, among others that were fitted for th same service, have been profitable in directing an edifying us in the way of truth; for by the ten derness and influence which came as dew upon ou souls whilst we sat under his ministry, we believe his doctrine was of God."

(To be continued.)

The Trans-Atlantic Submarine Telegrap Company, composed of English and French capi talists, have entered into a contract with the New York, Newfoundland and London Telegraph Com pany, whereby the former are bound to construc and lay down at their own expense and risk, a sub marine cable extending from Ireland to St. Johns Newfoundland, and to have the same complete and in operation, on or before the 22d day of Firs mo. 1858. We have already mentioned that the New York, Newfoundland and London Company

id contracted for a cable to connect Newfound-
nd with Cape Breton or Prince Edward's Island,
om whence lines are already in operation to New
ork. This work will be accomplished in the
urse of the present summer. We have seen a
ecimen of the cable to be made for this Com-
ny, which is to weigh five tons and two hundred
unds to the mile, and presents a much more fin-
hed and compact appearance than the cable now
use between England and the Continent, a short
ction of which has also been exhibited to us.
his English line has already been worked four
ars without alteration or repair, and seems
holly unaffected by time or wear, or chemical
tion. The two Companies, European and Ame-
can, each will own the line by it constructed;
nt their contract obliges them to operate in con-
ection with each other, to the exclusion of all
her lines, for the period of fifty years, which is
e limit of the American Company's charter.—

UNSEEN PURPOSES.

"For our light afflictions are but for a moment, and
ork for us a far more exceeding and eternal weight of
ory."

he world is full of suffering—along the mournful air,
he notes of sad complaining are ringing everywhere,
ove shieldeth not our idols from death's unsparing
darts,
nd the whole wide earth is teeming with crushed and
broken hearts,
et were no clouds of sorrow around our pathway
driven,
his world would be a paradise—we would not dream
of heaven!
he erring heart to purify, is sent the chastening rod,
o discipline the spirit, and draw it nigh to God.

'e are bid to bow in meekness to the loss of those we
love,
nd are pointed to the mercy of a Providence above.
o raise the heart to heaven with a meek and holy
trust,
nd silence its repinings that have bowed it to the dust.
'e may not *see* the purpose why our hearts are pierced
and riven,
et, with a faith undoubting, let us still look up to
heaven!

his life is full of trial, yet we know that One above
ooks ever down upon us with a sympathizing love,
nd pitieth our infirmities, though others may deride,
or the heart hath not a sorrow by which he was not
tried.

h, let us then be patient! be meek, and murmur not,
hough clouds, and gloom, and shadow, surround our
earthly lot;
nd when the heart repineth, think of that Holy One,
ho meekly bore and suffered, to win for us a crown!

'e know that life hath mysteries; for God hath not
designed
o shed his great omniscience on the lowly finite mind;
nd when the soul is ransomed, and the fount of life
unsealed,
he mind shall grasp infinity, and all will be revealed.
hen let us place the anchor of our confidence and
trust
n the might of the Creator, the Omnipotent and Just!
hose will we may not question, nor the hidden motive
tell,
et rest in the assurance that "He doeth all things
well."

MARKS OF A TRUE MINISTER.

"How ready is the man to go,
Whom God hath never sent;
How timorous, diffident and slow,
His chosen instrument.

Lord! if from thee this mark *I* have
Of a true messenger;
By whom thou *wilt*, the people save
And let me always fear."

From "The Leisure Hour."

An Astronomical Year.

The duration of the astronomical year, as now determined with great precision, consists of 365 days, 5 hours, 48 minutes, and 51 seconds. The real length of the year is thus six hours greater than it was according to the estimate of the old astronomers; so that, if we reckoned by their calculation, on every fourth year a day would be lost. Such a circumstance must, in a comparatively short period, produce the most awkward results: a man born in spring would, before gray hairs covered his head, have to celebrate his birthday at the end of winter; harvest would, after the lapse of a few years, have its festival in mid-summer; and the time would come when summer and winter would change names. It became therefore necessary, in all countries where the astronomical year was used, to correct the calendar at intervals, to prevent the increase of an evil for which no provision was made.

Julius Cæsar was probably the first man in authority who attempted a permanent correction of the calendar, assisted by Sosigines, an Egyptian astronomer. Their device was, to add a day, every fourth year, to February, and the principle adopted was so excellent that it has been both retained and extended. This correction of time was ordered to be made in all countries where the Roman authority was acknowledged, and to secure a uniformity of dates, the sixth day before the kalends of March was to be reckoned twice, for which reason, the fourth year, now called leap year, was by the Romans designated bissextile. But this clever contrivance did not perfectly correct the calendar, or cause the civil and astronomical years to remain long in permanent agreement. The addition thus made every fourth year was eleven minutes more than was required for the correction, and although this may seem a trifling error, yet spread over so long a period, it soon became a very marked quantity, and in the course of centuries threatened to interfere with some social and many ecclesiastical arrangements. The Julian year, therefore, though an approximation to the correct measurement of time, possessing thus an element of error, could not permanently remain in use, unless a means of absorbing the miscalculation it perpetuated could be discovered.

The necessities of the Roman church ultimately led to the requisite improvement. The Council of Nice, which assembled in the year 325 A. D., ordered, among other matters, that Easter should be celebrated on the first Sunday after the full moon following the vernal equinox. This was a guide to many other of the church festivals, so that any alteration in it caused a much greater confusion than at first sight appears. Now it was well known that in 325, when the council met, the 21st of March was the time of the vernal equinox; but in the fifteenth century it fell on the twelfth day of that month, a difference sufficiently important to force upon the attention of the pope and the conclave the necessity of correcting the calendar.

This enterprise was meditated many years before it was accomplished; but it would probably have been effected in the pontificate of Sextus IV., instead of Gregory XIII., if the preliminary calculations had not been interrupted by the sudden death of John Muller, the astronomer selected to advise the pontiff, and prepare for the contemplated change. This rare genius, so well known as the founder of the printing-house at Nuremberg, though it is as an astronomer that he is most deserving honour, was summoned from his useful labours to assist the pope in correcting the calendar. He unwillingly obeyed the command, and repaired to Rome, where he had at an early period of life exhibited his great talents, to undertake the task; but the year after his arrival, in the fortieth of his age, he died, or, as some say, was murdered by the sons of an eminent Greek scholar, whom he had mortified by some severe criticisms. Sextus being thus deprived of the assistance of the man best able to accomplish his object, lost the honour of effecting his useful design.

Pope Gregory XIII. was a man of science, and we have little cause to regret that the task of reforming the calendar fell into his hands. To restore the civil year to a correspondence with the astronomical, he ordered that the 5th of October, 1582, should be called the 15th, for at that time ten days had been lost, and the vernal equinox fell on the 11th of March instead of the 21st. To prevent the intrusion of the same errors in the measurement of time in future ages, and to secure the recurrence of the festivals at the same period of the year, he further decreed that "every year whose number is not divisible by four, without a remainder, consists of three hundred and sixty-five days; every year which is so divisible, but is not divisible by one hundred, of three hundred and sixty-six; every year divisible by one hundred, but not by four hundred, of three hundred and sixty-five; and every year divisible by four hundred consists of three hundred and sixty-six. A more perfect correspondence of the civil and astronomical years will probably never be obtained than by the use of the rules enforced in this decree; for after the lapse of four thousand two hundred and thirty-seven years, the error will be less than a day. In their preparation every source of disagreement was duly estimated, and as far as possible corrected. The allowance of an extra day every fourth year is, as already explained, an excess; but this is not allowed to accumulate, for, at the commencement of every century, when it amounts to about three-fourths of a day, a deduction of one day is made. An error of about six hours is thus left as the accumulation of one hundred years, but this is not passed without correction; for every year divisible by four hundred, which ought to be a common year by the ordinary rule, is made to consist of three hundred and sixty-six days.

Little opposition would probably have been made to the introduction of these changes in any European state, so generally was the necessity of a correction admitted, had they not been enforced by the pope, under an authoritative command for the immediate and universal adoption of the reformed calendar. The princes who acknowledged the sway of the bishop of Rome gave an uncomplaining and apparently willing compliance, but in the protestant states the introduction of a very useful and important correction in the measurement of time was long delayed, from a recollection of the source from which it came, and the impudent assumption of a command with which it was announced. At last the Gregorian calendar was universally adopted by the European states, but by protestant communities always with a protest against the interference of the pope, and an entire rejection of his authority. The new style was established in Great Britain by act of Parliament, as might be expected in a country so justly jealous of its civil and religious privileges, in the year 1752.

So long as thou livest in the cross, thou livest in the power, and thy obeying is easy, and all things are possible to thee through it; and as long as thou art *daily* dying to that which is corruptible, thou feelest the more life, and joy, and pleasure in that which is everlasting.

From Chamber's Journal.

Whereabouts is the North?

A week or two ago, we called attention to the many recent disasters at sea, some of which, as it was observed, might be traced less or more to deviations of the compass. It will probably be new to many that the whole doctrine respecting the pointing of the needle is now held as liable to very considerable modification; that, in short, the compass, as usually understood, is very far from being a faithful guide across the ocean; and that those mariners who depend too exclusively on its aid, are likely to lead their ships into extreme danger. But how, it will be asked, can this be, seeing that the needle points to the north? It is not strictly true that the needle points to the north; it points to a spot several degrees aside from the north, and this spot is not always exactly the same. Admitting, however, that the compass, in proper circumstances, does pretty steadily point to one spot in a northerly direction, it still remains true that it is difficult to keep it in these circumstances, and, as the case usually stands, the circumstances produce great and various divergences.

These tendencies of the compass to give a misleading direction are no new thing, but have long been under the attention of mariners. Dampier mentions them; Sturmy's "Mariner's Magazine" for 1684, as may be seen in the Library of the British Museum, has something about them; more than once were they observed during Cook's voyages, and repeatedly since. So often, indeed, that one is surprised those most concerned in explaining or preventing the error should not have taken instant pains to inquire into it. But why should any one trouble himself? It was nobody's business in particular; and so nobody meddled with it. Your genuine "old Salt" snapped his fingers at science; he could take his ship out to sea, and bring her into port again, by rules well known to navigators. Why should he bother himself with that new stuff about compass errors? "Lead, log, and look-out," had served his turn for years past, and should be his trust for the future. Sometimes, however, it happened that neither ship nor captain ever came home again. Who would have thought it! Accidents will happen—that was all; and still the old routine prevailed. Now and then the lesson was repeated in a more impressive form. In 1803, the *Apollo* frigate, and forty of her convoy, went on shore in the night on the coast of Portugal. The war-ship, trusting to her compass, signalled the course to be steered, making no allowance for the disturbing effect of her guns upon the needle. Some of the merchant-captains, remarking the error, steered the course as shown by their own compasses, and escaped the fate of their less observant brethren. And how often did it happen, during the long French war, that the commander in charge of a convoy directed by signal the course to be steered through the night; and that in the morning the merchant ships would be seen dispersed all round the horizon, one or two of the most distant perhaps being carried off by the enemy's cruisers. Who was to blame? Each captain had steered the course prescribed by his own compass; and as no two compasses agreed, the consequence was a general straggling, and a loss of time while the ships beat up into position, like ducklings to their parent.

Such being the risk and difficulty with wooden ships, how much greater when the vessel is built of iron; the liability to error is increased to an alarming extent. Indeed, the most anxious trial that could befall a pilot or sailing master, when iron steamers first came into use, was to have charge of one from Plymouth to London. The vessels would go in any direction but the right; and he was a brave man who could venture to carry on in a fog. It was not at all unusual at sunrise to see the English or French shore right ahead, and the ship running direct for it when she was thought to be making her fair course up channel. The compass was worse than useless; it was treacherous. We have heard some men declare, they could have navigated with less hazard had there been no compass on board at all.

The liability to error is in some cases practically recognized by the captains of steamers plying regularly from port to port. Hull to Rotterdam, for instance; they know that to steer south-south-east, or whatever the course may be, will not take them true to their destination; and, taught by long experience, they take a course a point or two more to the north or south, and fetch their port as accurately as a ferry-boat its landing-place. They have learned, moreover, that to steer precisely the opposite course in returning, will not take them where they wish to go; and here, also, they allow for deviation. The out and home voyages are thus seen to require different expedients. After this, shall we wonder that the wrecks round the British coast alone, taking the year through, amount, as has been said, to a ship and a half per day? In some years, it is more than double this number.

The Admiralty at length took up the subject, and appointed a "Compass Committee;" comprehensive inquiries were made, and the causes of error carefully investigated. These were more easily discoverable than the remedy; but science was brought to bear on the question, and, as we shall see, with beneficial results.

Many remarkable particulars came to light during the progress of the inquiry; and instances of neglect or indifference almost incredible. The rough-and-ready rule, "Keep all iron seven feet from the binnacle," which most mariners were supposed to recognize, was proved to be as little acted on by the navy, as "Early to bed and early to rise," etc., among people on shore. Iron tillers and capstans were not at all uncommon; and the disturbing effect of such a mass of metal, approaching to within two or three feet of the compass, had never been thought of. If the vessel had iron davits for the quarter-boats, the swinging of them inboard would make a difference of four or five points in the direction of the needle. The iron nails with which the binnacle-boxes were put together, would cause a similar error; and more than once the lower part of the box was found to be used as a closet where iron bolts, and other sundries of the same metal, were conveniently stowed away. Surely, wilful stupidity must have been the presiding genius over the makers of binnacles; how else can the use of any other than wood or copper fastenings be explained? In Queen's ships, the binnacles are now made without doors, to prevent the possibility of any idle sailor depositing in them his odds and ends of iron. An iron cistern, carried between decks near the stern, would produce as much disturbing effect on the compass as a solid cube of the same dimensions. The *Courageux* was lost on the rocks off Anholt, owing to the needle having been diverted two points by a stand of arms, placed on the half-deck below the compass. The addition of a large gun to a vessel's battery would make a difference. Compasses, too, were found to disturb each other when placed too near together; and the placing them too near was the common fault of merchant-ships. In vessels of the royal navy, the binnacles, where two compasses are carried, are now never fixed within four and a half feet of each other. When both are so liable to be wrong from causes above mentioned, they should at least be prevented from making one another worse.

Again: the error of a compass is not constan especially in iron ships; it varies with the induc magnetism of the vessel, or with the changes the permanent magnetism. As the ship proce on her voyage, so does the change take place greatest in amount in the highest latitudes, a diminishing towards the equator. It is not t same in corresponding latitudes of the two hem pheres, and it differs according as the course east or west. Nor is it the same in different pa of the same vessel; let a compass be placed ne the stern, another amidships, another near t bow, and a fourth down below, each will tell different tale. The question thus appears to one of insurmountable difficulty—the complicati of error too intricate for unravelment. How do shi ever find their way across the trackless waters?

The answer to this question will be to narrat in few words, the principal means discovered an employed for correcting the multiplied errors s ready enumerated.

(To be concluded.)

For "The Friend."

The Indians.

The annual reports to our Government of t Commissioner of Indian affairs, with the accon panying documents, afford much interesting i formation in relation to the aborigines, with man sorrowful evidences of the unmerited injuries, which they have been, and still are, subjected.

Among the more agreeable items of the la report is a statement, relative to a portion of th Sioux—that wild, and, by reputation, incorrigib race of savages, so thoroughly averse to all th methodical and industrious usages, and self-restrai ing virtues of Christian civilization, as to render the redemption altogether hopeless. Even intelligen men, are sometimes far too hasty in the formatic of opinions, and we have repeatedly had traveller tales of nations, devoid of conscience, of a sen of religious obligation, and even of the notion a deity, which, on closer observation, and a mo intimate acquaintance with the subjects of such re presentations, have been found to be erroneou Among the documents attached to this report, a instances of the same hasty and ill-founded kind judgment. With regard to the Sioux, we have bee so often assured, by those who have seen, and sure ought to know, that they were fierce and incapab of control, as the wild winds of their own prairie that the belief that such was really the fact, h become pretty general: Yet we now have fro the Sioux agency in Minnesota, the followin account of several tribes of that nation, from J Prescott, the farming superintendent.

"There was placed under contract, in the sum mer of 1853, 360 acres of land. Last spring th fields were all fenced with post and rails, whic fence, if it had been in a straight line, would b between 5 and 6 miles in length. The land h been, most of it, cross-ploughed, and part of harrowed. I ran the fields off into square act lots, and allotted to small families one acre eac and to large families 2 and 3 acres each; bu there were not families or Indians enough to plan half the land that was ploughed, the larger half The Indians preferring to roam about and starv The Indians at first objected to the new system farming, wishing to plant in irregular patches a over the fields, and some of them pulled up th stakes that I had stuck for corners, and said the would plant where they pleased. I told them tha I was carrying out the orders of the governor an the agent, when they stopped their opposition, an went to work. Those that planted have laid u for winter use, from 20 to 30 bushels of goo sound corn per family. The corn was planted i

e month of June. Some of the fields would erage 30 bushels to the acre, and some not more an 15 bushels to the acre, the drought having jured some of the crops one half.

"The Indians have planted corn, potatoes, pumpns, squashes, melons, cucumbers, onions, and ans; but the thievish children stole all, except e corn, before the crops were half grown.

"By order of the governor, 160 acres of land ve been broken this summer, making in all 520 es, now in readiness for the lower Sioux. The ils are split, and posts in readiness to fence the st ploughed fields. The land in this country is ell adapted to the raising of corn. All kinds e raised here except southern *Dent.* The redb early *Dent* ripens and brings good crops. The il is a black sandy loam, and all kinds of northrn vegetables come to the greatest perfection; nd the Sioux could raise an abundance of food, they would employ half their time at farming ittle Crow's band, most of them, have planted the agency. Black-dog, Little Six, and the Star, part, have planted at the agency. Four bands ve not made their appearance this summer, and e roving about. One Indian bought with his wn money a one-horse wagon for $75, and a ovel-plough—the first instance of the kind I ve noticed among the Sioux

"The following is a condensed list of the work one since 4th May, 1853—one year and five onths, viz.—520 acres of land broken. 360 es fenced with posts and rails. 25,400 rails ade. 300 acres cross-ploughed and part harrowd. 6060 posts made. 70 acres sowed in turnips nd rutabagas. 12 acres planted in potatoes. 150 ns of hay last fall. 300 tons of hay this sumer."

How much of this was the result of Indian laour does not appear; but it is a great matter get a Sioux to work at all.

Last summer an expedition was sent by the overnment up the Missouri and Yellow Stone to isit the various tribes of Indians inhabiting hose regions. They are mostly in a suffering ondition, game having very much diminished nd agriculture being but little known among hem. "Although," says the report of the agent, for many years buffalo have been tolerably nuerous through the country of the Crees and Assinboines, yet they are rapidly diminishing, and ther nations have but few; besides their range gradually becoming more limited; and the exensive plains between the *Coteau de Prairie* and aschawaine, formerly covered with these animals, re now entirely deserted by both Indians and ame. The Cree and Chippewa tribes, unable to nd game on their own lands, are obliged to hunt n the tributaries of the Missouri. The enormous estruction of buffalo for their hides, meat, &c., by ccidents in crossing rivers on the ice, where thouands sink by becoming embedded in the mud and now, by storms and wolves killing the small alves, must, before many years, end in their enire extinction, or at least render them so scarce s to be inadequate for the subsistence of the nerous tribes of Indians who now live by hunting.

In the winter of 1846, the buffalo disappeared om the country of the Assinaboines; they subisted for a time on elk, deer and wolves. But ey are no deer-hunters; and even if they were, uch game is not found in sufficient numbers to upport them. The snow was deep, the ground rozen to the depth of four feet; consequently oots, herbs and berries, their usual resort in times f great scarcity, were not to be found. After ating up their reserves of dried berries and roots, ey subsisted on the flesh of their dogs and orses; these failing, actual famine came upon them. Many died of disease and hunger; old persons were left to perish, and in several instances they ate their own children.

These Indians have strictly observed the stipulations of the Laramie treaty, and it is gratifying to know that not a single instance of murder, robbery or other depredation has been committed by them, either on the neighboring tribes, parties to the treaty, or on the whites.

On the 18th of the Seventh Month, we commenced our long and perilous trip up the Yellow-Stone. Our boat was 75 feet long, loaded almost to the water's edge with goods. This boat was to be taken a distance of 300 miles, through a most dangerous country, and against a powerful current, by human strength, with the *cordelle*. We encountered many difficulties, and although we overcame them all, the anxiety and almost hourly expectation of having the boat sunk or dashed to pieces on the rocks, was the source of the greatest annoyance, and marred entirely the pleasure of our journey.

The fall of the Yellow-Stone is probably greater than any other river in this country, rolling over a rocky bed, with a current of six miles an hour, filled with sand-bars, islands and other obstructions. But the most serious difficulty we met with was the rapids and ripples, as they are called in this country, where the current seems dammed up with ledges of rock, over which the impetuous current flows with great velocity. Often the men would pull for hours in water up to their waists, with a current against them which would carry them off their feet at the slighest mis-step, making not more than 6 miles in 12 hours.

Of the country bordering on the Yellow-Stone I would say that there can be none more barren in the world; none of it could be made subservient to agriculture, or even grazing purposes. The timber is very scarce and of diminutive growth, occurring only along the streams and bottom prairies, which yield nothing else but wild sage, *Tremontia Vermicularis*, and the annoying prickly pear. The hills produce no vegetation but a few bushes and stunted cedars. The mineral productions possess no economical value. Large beds of lignite are frequent, from 1 to 6 feet thick, intermixed with indurated clay; in which are immense quantities of fossil shells and the most beautiful impression of leaves. In no country is there a finer exhibition of the ancient flora. Chalk occurs in one locality, where, for the distance of 10 miles, shells where found in the greatest abundance and of the most beautiful forms and hues. Vast quantities of petrified wood, called by the traders *petrified forests*, are scattered over the country. The grain is distinct, and on the stumps layers of growth as though just cut. Another thing which excited my wonder was the quantities of pebbles scattered along the rivers; acres are covered with them to the depth of several feet, and the river is paved with them. But the most remarkable feature was the appearance of volcanic action every where presented along the river from the mouth to the source. The distant bluffs present a burnt and reddened appearance, covered with fragments of rock of every size, which appears to have been in a melted or semi-melted state, which in many places gives the appearance of ruins of ancient cities. I find that this is occasioned by the burning out of the lignite beds, some of which are even now on fire. In speaking of the physical features of this country, that remarkable region called by the traders, the "Mauvais Terres," or "bad lands," should not be omitted. It extends from the forks of the Platte westwardly to the Black Hills, covering an area of 90 miles in length, and 50 in width, presenting some of the grandest and most wonderful scenery in the world. Here are to be found scattered over the surface, in great profusion, the petrified bones of extinct species of animals; including fossil terrapins in great numbers, some of them weighing from 1500 to 2000 pounds.

Another Great Tree in California.—At a late meeting of the Boston Natural History Society, Dr. Ayres furnished the following items derived from Dr. Bigelow, of San Francisco, relative to another huge tree in that region. The tree lies on the ground, having fallen many years since, From the base to the point where it is broken off, it is found to be three hundred and ten feet; all beyond this was burned, probably by the Indians, but fragments lie scattered along to the distance of a hundred and fifty feet, and from the size of these fragments, Dr. Bigelow feels confident that the tree must have been five hundred feet high. At the base it is by computation, one hundred and ten feet in circumference, and at the end of the three hundred and ten feet, it is, by measurement, forty feet in circumference. This is almost as much beyond, in size, the great tree which has attracted so much notice as that is beyond trees of common size. Dr. Abbott remarked that Dr. Pickering had seen trees in California remarkable for their slenderness as well as height. He had seen one three hundred and ten feet high, measuring only nine feet in diameter at the base, and at the broken extremity only nine inches.

That Remarkable Phenomenon, the coal mountain in Pennsylvania, which has been on fire since 1837, will probably soon be extinguished, as the fire is approaching a point which can be submerged in water. A mass of coal has been consumed three eighths of a mile long, 60 feet wide, 300 deep, and equal to 1,420,000 tons of coal.

THE FRIEND.

FIFTH MONTH 19, 1855.

The last Congress of the United States passed an act, near the close of its session, providing for the registration of letters containing money or other valuables, at the post-offices where they may be deposited, in order to secure the person sending such letters from loss, in case of miscarriage. For the information of our readers, we take the following from the instructions issued by the Postmaster-General, for carrying into effect the provisions of that act. Much relating to the duties of clerks in the post-offices, is omitted.

Letters alleged to be valuable, posted at one Post-office in the United States, and deliverable at another such office, shall, from and after the first day of July, 1855, be registered at the office of mailing, on the application of the person posting the same, *and the payment of a registration fee of five cents.*

Postmasters are instructed to enter all such letters in a book to be prepared and kept for the purpose, to be called the *Receipt Book*, containing blank receipts with a wide margin for a brief duplicate of each, as in Bank Check books. The Postmaster will enter in this margin the number of the receipt, the date of filing it, the name of the person to whom the letter is addressed, and the place to which it is to be mailed. He will then fill up the receipt to correspond with this marginal entry, separate it from the margin, and deliver it to the person who deposited the letter.

Registered letters will not be entered in the ordinary accounts of mails received and sent, but separate accounts of such letters will be kept at each Post-office.

When a letter has been received, registered, and receipted for, as directed in section 2, the Postmaster will enter its number, the date of mailing, the rate of postage, the name of the person to whom it is addressed, and of the office, (whether of distribution or delivery,)

to which it is to be sent, in his *account of registered letters sent*. He will then mail each such letter or parcel of letters, *in a separate package from his unregistered letters*, and will seal each package, after tying it in the usual manner.

On the receipt at a distributing office of registered letters for distribution, the clerk who opens and distributes the mail, will apply to the Postmaster, or to such one of his assistants as may be authorized to open official letters, addressed to him, for the corresponding letter bill. Having compared the letters with the bill, he will indorse it "correct" if he find it so, or will note the error, if there be one, and will pass it with the letters to the clerk who keeps the account of *registered letters received for distribution*, who will enter its contents in his account and indorse upon it his signature or initials.

When the duplicate letter bill of any registered letter or letters is returned from the office of distribution or delivery to the office where it was originally mailed, that fact shall in each case be noted by a check mark on the margin of the account of *registered letters sent*, opposite the original entry; and if it be *not* duly returned, the failure shall in like manner be noted by a different check mark, and such failure shall in all large offices, be immediately reported by the clerk who keeps *the account of registered letters sent*, to the Postmaster or his principal assistant, and such Postmaster will give immediate notice to the chief clerk of this department of every such failure noted in his office.

If upon the receipt of any duplicate or return letter bill, it be found on examination that a letter originally mailed with it is missing, or that any important error or discrepancy is indorsed on it, the fact will be duly noted on the account of registered letters sent, and immediately reported to the chief clerk of this department, and if the discrepancy implies a robbery of the mail, or if a money letter or package of considerable value is found to be missing, such report *will be made by telegraph, if possible.*

On the delivery of a registered letter at the office of its destination, a receipt therefor will be taken from the person authorized to receive it, and such receipt will be carefully filed and preserved at that office.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to 28th ult.—*The War.*—Up to the 22d ult., the bombardment of Sebastopol had continued, but without important results. The Russian commander, in his despatch of that day, states that after twelve days' bombardment, the fire of the allies had become weak, and caused little damage. The French had taken the Russian ambuscades in front of the Malakoff tower, and added them to the French lines. According to their account, the siege was advancing, and the situation of affairs was considered satisfactory. It would seem that an immense quantity of shot and shells had been showered upon the town and its defences, and some injury inflicted upon them; but the correspondent of the London Times, who is a spectator of the attack, says in his last letter, "we are not one inch nearer the town than we were last October." The loss of life on both sides, though considerable, has not been as great as might be supposed from the magnitude and long duration of the cannonade. Cholera has recommenced its ravages in the French camp.

Failure of Negotiations.—Another meeting of the representatives of the Four Powers was held on the 25th ult., at the request of Prince Gortschakoff, when some further propositions were made by the Russian Plenipotentiaries, and rejected on the part of France, England and Turkey. Lord John Russell had left Vienna on his return to England. The French Minister remained at Vienna for a few days, to discuss matters with the Austrian Government.

RUSSIA.—The cholera continues its ravages at St. Petersburg. A serious overflow of the Neva has caused great distress, and much loss of property along its banks. The Emperor's brothers, Michael and Nicholas, have again set out for the Crimea. Prince Menschikoff is not dead. The St. Petersburg Journal publishes an imperial rescript expressing the Emperor's satisfaction with his conduct, with the hope that he would be soon restored to health.

TURKEY.—The city of Broussa was visited by another earthquake on the 11th of Fourth month, which destroyed most of the stone buildings, and the wooden ones were burned. The Jews' quarter of the city was buried under huge masses of earth and rock. The village of Tikendji, about a league from Broussa, was totally destroyed by the shock. The loss of life was not known.

FRANCE.—It has been officially announced that the Emperor's departure for the Crimea is postponed for a short time. The opening of the French exhibition was postponed until the 10th or 15th inst. The American ship Great Republic had been chartered by the French government for the conveyance of troops. She could carry two thousand men with ease.

ENGLAND.—In Parliament notices were given of a motion for a decimal coinage, and to invite the establishment of a uniform decimal system throughout the world. *The Money Market.*—The rates for money are very easy, mostly arising from the contracting of business. Money on call could be obtained at 2½ to 3 per cent. Best bills, 3¾ and 4. Consols had further declined, closing at 88⅛ to 88⅝. *Liverpool.*—The cotton market was active with an advance of ⅛ to 1-16*d*. Breadstuffs had also advanced. Baltimore and Philadelphia flour was held at 42s. to 42s. 6*d*.

INDIA AND CHINA.—The Overland Mail had been telegraphed. Shanghai dates, Third mo. 9. Bombay, Fourth mo. 3. The Chinese insurgents have evacuated Shanghai. Persia openly avows her adhesion to Russia.

SPAIN.—An important law has been enacted by the Cortes, ordering all the lands and dwellings belonging to the clergy, to religious fraternities, and to pious and sacred works, to be sold and turned into money; breaking up all accumulations of ecclesiastical property, and bringing the church of its immense possessions. The law was earnestly opposed by the Pope as the greater part of the lands, upon which it will operate, belong to the church.

The Pope, in return for the splendid tiara, of the value of about two million reals—recently presented to him by the Queen of Spain, has sent her the *body of St. Felix the Martyr.*

UNITED STATES.—*Kansas.*—Complete returns of the census in Kansas show the whole number of inhabitants 8500—males, 5227; females, 3373. Voters, 2878; natives, 7161; foreigners, 408; slaves, 192. The returns justify the opinion that of the 2878 legal voters in Kansas, at least 2200 voted at the late election, in favour of candidates for the Legislature, opposed to slavery. The vote of the residents was nullified by that of men from Missouri, who entered the Territory, for the purpose of controlling the election.

The Western Lakes.—It has hitherto been asserted that Lake Huron was 860 feet deep; but it has been ascertained by the Coast Survey, that it is only 420 feet. Lake Erie is from 60 to 70 feet deep; Lake Ontario 452 feet, as low as most parts of the Gulf of St. Lawrence. All the Lakes cover an area of 43,040,000 acres.

Consequences of the Drought.—It is stated that the river St. Lawrence is twenty-two inches lower than in the spring of 1854, and two feet lower than in the spring of 1852. The greatest variation in the surface of the St. Lawrence for four years past, has been five feet ten inches. This, however, was caused by violent winds.

Immigration.—In the Fourth month, 10,195 emigrants from Europe arrived at New York. The immigration for the corresponding month last year was 31,148.

Lateness of the Spring.—Early in this month, the snow still lay three feet deep, near Franconia, N. H. On the 7th, considerable snow fell at Detroit. A despatch, dated Quebec, May 7, says, "our port is at last free from the embargo caused by the ice. Three vessels arrived yesterday."

Rain in the South.—After a long protracted drought, copious rains have fallen throughout Georgia, South Carolina and Alabama.

Emigration to Minnesota.—Within the first ten days of navigation this season to the port of St. Paul, Minnesota, the number of emigrants to the territory for permanent residence, was over 8000.

The Sault St. Marie Canal, connecting Lakes Superior and Huron, was completed on the 10th ult., and the waters of Lake Superior admitted into the canal. Vessels may now pass from one lake into the other.

New York.—Owing to the continued dullness of trade, and the high prices of all descriptions of provision, there is still a great deal of suffering among the poorer classes. Thousands of mechanics and labourers are out of employment, and with but little prospect of obtaining work any time soon. Many of them are leaving the city.

Texas.—The complaint of the want of rain is general in this State, and great injury to the crops is anticipated.

State of the Ohio.—At Pittsburg, on the 11th inst., the river was at a stand with six feet water in the channel.

Railroad Disaster.—On the 11th inst., the locomotive of the freight train on the Jeffersonville Railroad exploded near Seymona, Indiana. The engineer and four other men were instantly killed, and the locomotive blown to atoms.

Pennsylvania.—The Legislature adjourned on the 8 inst. Among the most important measures passed this session, are the acts to restrain the sale of i toxicating drinks on the first day of the week, that relation to the sale of liquors generally, and the n law authorizing the sale of the main line of the pub improvements. A number of new bank charters ha been granted, and the capitals of others increased. T state of parties in the Legislature prevented the choi of a U. S. Senator. The whole number of bills pass and signed, was six hundred and eighty-four. A gre portion of these enactments were of a trivial characte such as that "To permit Joseph Longrier to peddle Lebanon Co.;" that "Relative to huckstering in Yo Co.;" "To change the time for the meeting of t Township Auditors in Bradford Co.," &c.

Schuylkill Co., Pa.—The mineral riches of this coun are in the course of rapid development. In 1854 the were 145 collieries worked, of which 76 were above t water level, and 69 below it. Two hundred and eigh steam engines were used in mining. There were in u in the county, 496 miles of railroad. The coal produc last year was about three millions of tons; it is est mated for this year at three and a half millions. T coal area, to which these operations are confine covers only 162 square miles.

Philadelphia.—Mortality last week, 165.

California.—By an arrival at New Orleans from H vana, information has been received that the steamshi Golden Age which left San Francisco on the 17th ul with 750 passengers and $1,300,000 in gold, had be wrecked on the night of the 28th, when about five mile from Panama. The steamer was going at full spee when she struck a sunken rock, and immediately com menced filling. Information of the disaster was conveye to Panama, from which the steamer John L. Stevens wa sent to render assistance, and rescue the passenger These were all safely landed at Panama. It is presume the mails and treasures were also saved. The rain continued in California.

Miscellaneous.—*The cost of war.*—The cost of a year conflict with Russia has been more than $200,000,00 to England alone, and probably not less than $600,000 000 to the four principal powers concerned. The cos to other European nations, Austria, Prussia, &c., putting their military establishments on a war footing has amounted to hundreds of millions more. There is however, a far greater cost which cannot be represente by figures—the *misery, moral deterioration*, and *intens wickedness*, which follow in its train.

Telegraph across the Black Sea.—The telegraphic com munication between London and the Crimea has been completed. The Telegraph is in the hands of the Bri tish Government.

The Thirty-fifth Asteriod.—Yet another Asteriod wa discovered by Dr. Luther at Bilk, in Prussia, on th 19th ult., but 13 days after the 34th was first seen a Paris.

Large Timber.—A "stick" of white oak measurin fifty-one feet eleven inches in length, and squaring forty one by forty inches, was recently sawed up at Wallace burg, C. W.

Cholera, has been very fatal on some of the steam boats on the Mississippi, which are generally over crowded with emigrants.

New Gold Washings.—Missouri papers state that gol has been discovered on a stream, called the Red For of the Arkansas river, at the foot of the Ouachita Mountains. A rush of gold seekers from the frontier of Arkansas and Missouri, was setting towards the place. Some men had returned, it was said, with a considerable quantity of the metal.

Georgia Gold.—Twenty-six hands lately procure from a gold mine in Columbiana Co., in nine working days, $1650 worth of gold, from surface ore.

WEST-TOWN BOARDING-SCHOOL.

Assistant Teachers are wanted in the Boys' depart ment of this Institution. Application may be made t either of the undersigned.

HENRY COPE, } Philad.
SAML. BETTLE, JR., }
SAML. HILLES, Wilmington, Del.

MARRIED, on Fourth-day, the 9th inst., at Friends' Meeting-house in Greenwich, Cumberland Co., N. J. WILLIAM THORP, of Frankford, Pa., to LETITIA M daughter of Benj. Sheppard, of the former place.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

VOL. XXVIII. SEVENTH-DAY, FIFTH MONTH 26, 1855. NO. 37.

PUBLISHED WEEKLY.
Price Two Dollars per annum, payable in advance.
Subscriptions and Payments received by
JOHN RICHARDSON,
AT NO. 50 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

Remarkable Balloon Ascension.

The New Orleans papers mention the safe arrival at Vicksburg, Mississippi, of the aeronaut Godard, after a flight of a few hours from New Orleans; a distance of two hundred miles. The ascension was made on the evening of First day the 30 ult., and the aerial party consisted of Godard, his assistant Manduit, and three passengers, of whom one was the editor of the New Orleans Crescent. The latter has furnished an animated account of the journey, and its incidents, some portions of which we extract. "We five men, the ballast, provisions, wines and other articles in the car, made up a dead weight of about fifteen hundred pounds, to be whirled up to the etherial regions, by the beautiful 'America.' It was astonishing, upon climbing the enclosure, to behold the dense crowds of people outside—Poydras and Barnum streets, seemed to be paved with human faces rather than round stones—not to say flattering, to be so generally looked up to by all classes of society. We felt some nervousness in ascending, but this feeling was soon absorbed by the sense of sublimity, the exaltation, inspired by the unequalled scene." "We will undertake to explain what is the greatest wonder of being up in a balloon. We were much puzzled by it at first, but explained it by recollecting what we have been taught of the atmosphere. It was the difference between looking perpendicularly through the air, and horizontally through it—a difference altogether astonishing. At one mile from the earth, houses looked much smaller than at a horizontal distance of two miles. Horizontally distant, a house may look as large as your hand; yet you will not be able to distinguish it by its minor details from any other house. Perpendicularly, a house may look no larger than a sixpence; yet you will be able to count its windows, chimneys, pillars and other small details, as if you held its daguerreotype in your hand. Horses on the shell road, seemed to us like ants creeping along on a chalk line; yet we were able to distinguish their legs quite as plainly as we could those of an ant on our forefinger. Charity Hospital square looked as if we might grasp it all with one hand; yet we could discern the minutiæ of that establishment, with a clearness and certainty that seemed absolutely miraculous." "The Carrolton and Lake train of cars over which we passed, resembled a snail creeping slowly along, but sending up a noise prodigious for an object so small. Over the Ridge Cemeteries, the barometer indicated an altitude of ten thousand feet; an expansion of the gas, and escape of a quantity down through the neck of the balloon, caused us to descend. Nearing the lake, we came down to two thousand feet. Finding everything favourable for a splendid trip, Godard announced his intention of crossing the lake, and offered to land any of us who might not wish to go further. The party was of course unanimously in favour of the biggest kind of a ride. So out went some ballast and away we sailed. Crossing the lake we hailed fishermen in pigmy smacks; played with echo till he made us hoarse; admired the balloon over our heads, the setting sun and the rising moon; held our breath to listen to the roar of the million, white-crested waves beneath us—wide-sounding and solemn, like a song of eternity; and ate our supper of roast turkey, bread, cake, paté and wine at an elevation of ten thousand feet." "We left Lake Pontchartrain to the west of Pass Manchaa, and crossing the latter, passed to the east of Lake Maurepas, in a northwestwardly direction. We crossed an immense wilderness, intersected by bayous gleaming in the moonlight, and musical with the song of the whippoorwills, owls, katydids and frogs, which we were able to hear plainly at an indefinite height. At length we neared symptoms of civilization. We passed over fires in the woods; at length farms came in sight—dull, grey patches on the sombre green of the rolling panorama; could hear the shouts and excitement of the people, and the dogs barking as though they would bark their heads off. At some distance to the left, a cluster of twinkling lights indicated a town. Descending we could discern handsome mansions embosomed in groves, on the margins of the farms, with the gardens, hedges, roads and fences. In due time, a large cluster of lights to the right indicated another town, and one of considerable size. We had chart and compass, and knew our course; but having no idea of our rate of progression, were unable to hazard a guess at our whereabouts. We descended repeatedly within hailing distance, but our shouts were answered by words which we could not understand, mingled with the baying of the dogs. Between nine and ten o'clock we descended for information, and were told by a man that we were in Jefferson County, Mississippi. This was a great astonishment, none of us believing that we were yet past the State line. The first town we passed to the left, must have been Clinton, Louisiana, and the other to the right, Liberty, Mississippi. Our course had veered round to the north, and Godard made calculations to land at or near Vicksburg. We were now passing over a magnificient cotton country; at one turn of the head we were able to count from twenty to fifty plantations." Having discharged more ballast, they mounted through the clouds to an elevation of sixteen thousand feet. "This is the grand event of the journey. We know we shall never be able to describe it justly. No poetic enthusiast, no opium eating or mesmeric dreamer, could ever conceive of anything half so beautiful, so exquisitely grand, so overpoweringly sublime. The deep blue of the etherial vault, studded with stars and illumined by the moon, twinkling and beaming in their pristine glory, canopied us, and rested all round us, on a horizon of snow-white clouds. Though these clouds were separate, they appeared to us as one undivided mass, their jagged shapes and shady outlines, being plainly marked upon each other. They shut out all view of the earth, and seemed to form a vast basin or bowl beneath us—a valley of vapory snow-banks. The moonlight was so clear, and so strongly reflected by the vapors beneath, that the watches, compass and map of the party were as intelligible almost, as by day; and we, having a newspaper in our pocket, drew it forth, and were enabled to read the smallest print in it with ease, and did read some of it aloud for the gratification of the party. All this time, although we breathed as freely as ever, our blood was humming in our ears, and the cool air, acting upon our cloud-moistened garments, diffused quite a chilliness over us. At one time, Dessommes laid down in the bottom of the basket for warmth. In this grand situation we remained nearly a half hour. At length a fissure opened in the clouds directly beneath us, and all below looked black as death—we could distinguish nothing. When the opening became tolerably wide, we were enabled to see the cotton fields gliding by—little gray spots, not as large as our hand." "Our gallant little captain, now concluding that we ought to be in the neighbourhood of Vicksburg, kept prospecting for the view with his glasses. At last it seemingly appeared. We all hailed it with delight, but upon nearing we found it to be only a chain of cotton fields, of which we could see neither end. Godard then determined to land at the first opportunity, to discover our whereabouts before going further; he was fearful of getting too far from the river. Sloping down to a cotton field, we found it bristling with dead timber, resembling black and white needles standing on end. Several other fields offered a similar impediment, but at last we came to a field destitute of tree or stump, and down we bounded right in the middle of it, at precisely one o'clock, having been on the wing six hours and fifty minutes, and traversed a geographical distance from the city, which we have since ascertained to be one hundred and sixty miles,—an average of twenty three miles an hour. The cotton field in which we landed belongs to Mr. Stephen O. Smith, and is located thirty-five miles from Vicksburg, and fifteen from Port Gibson, in a northeast direction. A negro who saw us land came running to us, crazy with delight, for had seen a balloon before. He told us all we wanted to know, and was sure that his master would let us have carriage and horses to take us to Vicksburg, which he, like a genuine African, told us was only fifteen miles off. The balloon having refused positively to continue its journey with more than two persons, it was necessary that three of us should stay behind. The only one of the party that could speak French and English was Dessommes, and Godard therefore selected him for his companion and interpreter. The balloon, all shrunken in its lower part, mounted slowly and sailed lazily away, just above the tree tops. It looked very tired, and doubtless did not go far. Peter, the negro, seeing that it did not steer directly for Vicksburg, shouted at the top of his voice, "Hillo! Massa! you's gwine too fur to de left!

Say! too fur to de left:" The daring aeronaut finally landed in safety near Vicksburg. Only one of the three men who first landed, was able to procure a conveyance. Our Editor and his friend, being unsuccessful in obtaining either that, or a lodging for the remainder of the night, had no alternative but to set off on foot, wading, silently till day-light through dust ankle deep, concealing roots and stumps, to the great damage of their toes. Their dreary, unsentimental tramp, and subsequent brisk ride in a wagon, of the friendly aid of which they thankfully availed themselves, formed a striking and appropriate set off, to their experiences of the previous six hours.

From the Journal of George Fox.

"To all Friends in Barbadoes, that are convinced of God's truth.

"My desires are, that ye may live and walk in his peaceable truth, and show forth that ye are children of the light, and of the truth, for the heavenly, gentle, and peaceable wisdom is justified of her children. But debate, strife, wilfulness, and laying open one another's nakedness and weakness, is not the practice of heavenly wisdom's children, (but of Ham's,) nor from the Spirit of Christ; neither such as bite and tear one another; that is from a devouring spirit, not from the Spirit of Jesus, which covers that which is uncomely, and can forgive. Now, my Friends, you profess that truth, which is beyond all the world's ways; therefore see that you excel them in the heavenly, gentle wisdom that is easy to be entreated; for the wisdom of the world is not easy to be entreated, and sometimes will not be entreated at all. Pray; see you excel the world in wisdom, in virtue, in kindness, in love that is over hatred, in meekness and humility, in sobriety, civility, and modesty; in temperance and patience, and in all morality and humanity, which will not set anything below men or unmanly. Show forth true Christianity, and that ye are the converted and translated believers in Christ, dwelling in the love of God, that beareth all things, endureth all things, is not puffed up, and envies not. For they that are out of this love of God and christian charity, are nothing, but as a tinkling cymbal, and as sounding brass, and are discontented, murmurers and complainers, full of doubts, questions, and false jealousies. Keep that spirit out of the camp of God; for do you not read in the Scriptures, both of the New and Old Testament, that the end of such was misery. Therefore, in the love of God, build up one another; for love edifies the body of Christ, and he commands his believers to love enemies, and to love one another; by this they are known to be the disciples of Christ. But to live in envy, strife, and hatred, is a mark they are no disciples of Christ. 'For he that loveth not his brother, abides in death; and whosoever hates his brother, is a murderer: and ye know that no murderer hath eternal life abiding in him. But they that love the brethren, are passed from death to life,' 1 John iii. 14, 15. And, 'If a man say, I love God, and hateth his brother, he is a liar: for he that loveth not his brother whom he hath seen, how can he love God whom he hath not seen? And this commandment have we from God, that he who loveth God, lovest his brother also,' chap. iv. 20, 21. Therefore, 'love one another, for love is of God, and hatred is of the devil; and every one that loveth is born of God, and knows God. All are children of God by creation; therefore, in that state they are to love their neighbours as themselves, and to do unto all men as they would have them do unto them. Secondly, God poureth his Spirit upon all flesh, (or all men and women;) all that are led by the Spirit of God, are the sons of God, heirs of God, and joint heirs with Christ; and are in fellowship in the everlasting gospel; and in unity in the Spirit, the bond of peace. They that go out of this unity, out of the bond of peace, and do not keep it, break the King of kings' peace; but they that keep in the unity and fellowship in the Spirit, and walk in the light, have fellowship one with another, and with the Father and the Son. It is not every one that talks of the light, of the word, of righteousness, of Christ, and of God, but he that doeth the will of God. Therefore, my Friends, strive to excel one another in love, in virtue, in good life and conversation, and strive all to be of one mind, heart and judgment in the Spirit of God; for in Christ all are one, and are in peace with him. The Lord God Almighty preserve you in him, your rock and foundation, that is heavenly, and stands sure; that ye may be valiant for the truth upon earth, for the Lord and his glorious name; that ye may all serve him in your generation, and in his new creation in Christ Jesus. Amen.

"And now, that you are come into so much favour with the magistrates, and powers, that they let you serve the office of constable, &c., without swearing or taking any oaths, hereby Christ's doctrine, and command, and his apostles, is set up. Therefore, I desire, that you may double your diligence in your offices, in doing that which is just, and true, and righteous; so that ye may excel and exceed all, that are tied, or bound by oaths to perform their offices; and you can do it upon your yea and nay; so say, and so do, according to Christ's doctrine and command. For Adam and Eve, by disobeying the command of God, fell under condemnation; and they that disobey the command of Christ, in taking oaths and swearing, go into evil, and fall into condemnation, Matt. v., James v. My love in the Lord is to you all.

G. F."

Kingston upon Thames,
the 10th of the Fifth mo., 1689.

Only one Brick on Another.—Edwin was one day looking at a large building which they were putting up, just opposite to his father's house. He watched the workmen from day to day, as they carried up the bricks and mortar, and then placed them in their proper order.

His father said to him, "Edwin, you seem to be very much taken up with the bricklayers; pray, what may you be thinking about? Have you any notion of learning the trade?"

"No," said Edwin, smiling; "but I was just thinking what a little thing a brick is, and yet that great house is built by laying one brick on another."

"Very true, my boy. Never forget it. Just so it is in all great works. All your learning is only one little lesson added to another. If a man could walk all around the world, it would be by putting one foot before the other. Your whole life will be made up of one little moment after another. Drop added to drop makes the ocean.

"Learn from this not to despise little things. Learn also not to be discouraged by great labours. The greatest labour becomes easy, if divided into parts. You could not jump over a mountain, but step by step takes you to the other side. Do not fear, therefore, to attempt great things. Always remember that the whole of that great building is only one brick upon another."

A True Remark.—I hold it to be a fact, says Pascal, that if all persons knew what they said of each other, there would not be four friends in the world. This is manifest from the disputes to which indiscreet reports from one to another give rise.

For "The Friend."

Dependance upon Providence.

"And Elijah, the Tishbite, who was of the inhabitants of Gilead, said unto Ahab, As the Lord God of Israel liveth, before whom I stand, there shall not be dew nor rain these years, but according to my word." The length of time in which the great drought should continue in the land of Israel, is not here stated; but the Apostle James, speaking on the efficiency of the prayer of a righteous man, says, "Elias was a man subject to like passions as we are, and he prayed earnestly that it might not rain; and it rained not on the earth by the space of three years and six months. And he prayed again, and the heavens gave rain, and the earth brought forth her fruit." In the prospect of the vegetation, and the fruits of the earth becoming dried up, and of course great famine, Elijah was sent to hide himself by the brook Cherith, of which he was to drink, and his food, bread and flesh in the morning, and in the evening, was to be brought to him by ravens. When the brook dried up, he was directed to go to Zarephath in Zidon, where the Lord had commanded a widow woman to feed him. But even here the drought had extended so that he was sustained by another miracle. He met the woman at the gate of the city, gathering sticks to bake the last of the meal, whom he requested to bring him a little water to drink, probably finding it scarce in his journey. As she was going for it, he added, "Bring me, I pray thee, a morsel of bread in thine hand." But she replied, "As the Lord thy God liveth, I have not a cake, but a handful of meal in a barrel, and a little oil in a cruse;" and such was her reduced condition, that she told the prophet, "Behold, I am gathering two sticks, that I may go in and dress it for me and my son, that we may eat it, and die." The sadness of such an extremity none can imagine, without being brought in some measure into it. But "Elijah said unto her, Fear not; go and do as thou hast said; but make me thereof a little cake first, and bring it unto me, and after make for thee and thy son. For thus saith the Lord God of Israel, The barrel of meal shall not waste, neither shall the cruse of oil fail, until the day that the Lord sendeth rain upon the earth." This was fulfilled, and she and her house eat of it many days.

When the time was at hand that the Lord would send rain upon the earth, Elijah was commanded to show himself unto Ahab; and when he went, "there was a sore famine in Samaria." Obadiah, the governor of the king's house, had been sent to search for grass at the brooks and fountains of water, to save if possible the horses and mules alive, that all the beasts might not perish. It would appear that great distress prevailed, as Ahab had made inquiry of all the neighbouring nations for the prophet, but could not find him. They must have been sensible that the distress brought on them was not in the mere course of natural events; as the king asked Elijah when they met, "Art thou he that troubleth Israel?" But "he answered, I have not troubled Israel; but thou and thy father's house, in that ye have forsaken the commandments of the Lord, and thou hast followed Baalim." This shows that the Lord's judgments are kindled at times against a sinful people, for their ingratitude, and disregard of his laws, and of his honour.

Drought and the failure of pasture have been partial in this country, and though we are not to conclude that the immediate sufferers are objects of Divine displeasure, yet as the consequences are felt also by others in the reduced supply of provisions, it ought to excite serious reflection in all,

how far a disregard of our duties to Almighty God, and the want of gratitude for his countless blessings, may have drawn down his displeasure, and he may withhold the former and the latter rain, to remind us of our entire dependance upon him, and the obligations we owe to him, as the creatures of his Divine hand.

Accounts from some parts of Ohio represent, that thousands of cattle and sheep have died from disease and the want of food, within the late fall and winter—an event of rare occurrence in that State. In some parts of Pennsylvania, and of the Southern States, the scarcity of water has given rise to serious apprehensions, which with the present high prices of provisions create fears of increasing difficulty for persons of little means to supply themselves and their children with sufficiency of suitable food for a healthy subsistence. A favourable season may remove in degree the suffering of those whose bread is obtained by their daily efforts, but so great change in the supplies of this country should lead us all to examine our habits of living, and whether the honour due to the Preserver of men, for his spiritual and temporal blessings, and a daily walk in his fear, and in his service, have been the clothing of our spirits, evinced by a consistent practice.

The dreadful war in which professing Christians are engaged in Europe, deliberately butchering one another, as though the awful result of rushing thousands into eternity, was a matter of cool indifference, contributes to the general derangement of the happiness, and the comforts of the human family. Not only is a vast amount of articles of food, and clothing, and other property destroyed and wasted, but the business of husbandry, by which the means of subsistence are supplied to multitudes, must be greatly suspended in those countries, where thousands are drafted for the war, and where, in time of peace, a large produce of grain and other articles was brought into the general market, and which added to the general stock, or abstracted from it, must influence the price of food in other parts of Christendom. While these nations are beating "their plough-shares into swords, and their pruning hooks into spears," and and letting loose the spirit of blood-thirsty war and destruction of their fellow-men, those who could not, on any ground, nor from any motive, take the life of a candidate for immortality, should say this state of Christendom closely to heart, sympathize with those who are in deep suffering, and as they may feel ability, put up their prayers to the great arbiter of nations that he may be pleased to restrain the pride and the wrath of men, and bring them to feel as brethren; to sheath the sword, and come to see the horrors of war, and the happiness of the government of the Prince of Peace.

A Singular Phenomenon.—We have never seen in print a notice of the following strange fact, although every steamboat man acquainted with Green River navigation, can verify its truth. Just above the locks, when the river is in a certain stage, very low, for several miles, steamboats shut down their furnace doors and allow no torches to be lighted, for fear of what the deck hands call "setting the river on fire!" Frequently boats using torches or keeping their furnace doors open at this particular place, have found themselves engulphed in blue flames, greatly to the alarm of the passengers, and in several instances setting the steamers on fire. In some instances the passengers have only been prevented by the strenuous exertions of the officers from leaping overboard in their alarm.

The cause of the singular phenomenon is simply this:—

The bottom of the river becomes covered with forest leaves and rubbish to the depth of some inches, or probably several feet. Boats in low water run through this bed of vegetable matter, their wheels stirring it up thoroughly. An inflammable gas is thus permitted to escape, which, on communication with a flame, at once takes fire, and burns with a blue blaze. At such time the boat is stopped and the flame ceases. When out, the boat goes on again, taking the precaution mentioned above. Unless allowed to continue some little time, this burning gas is not apt to communicate its flame to the wood—but it is quite sufficient to seriously alarm those not acquainted with its cause. —*Evansville Journal.*

Extract from the Journal of John Churchman.

(Concluded from page 276.)

On the 12th of the Eleventh month, early in the morning, he spoke to this purpose; "I believe I must endeavour to go to our Quarterly Meeting," which began on the 14th, "although as to bodily strength I am very weak: there my mind is remarkably, sleeping and waking; there I hope to be relieved of some things which seem to remain like a fire in my bones. I dare not forbear, I know it is the way to recover my strength outwardly, and to be eased of that which is a heavy burden inwardly. I see I must go, and believe I shall recruit, and gain strength every day;" which was the case accordingly. He further said, "My mind has for several days been attended with an uncommon sweetness, the like I never knew for so long together, with a succession of soul-melting prospects. I have freedom to relate what I had a sight of this morning before day, as I lay in a sweet slumber;" which was nearly in these words, viz: "I thought I saw Noah's ark floating on the deluge, or flood, with Noah and his family in it; and looking earnestly at it, I beheld the window of the ark, and saw Noah put out the dove; and I beheld her flying to and fro, for some time; but finding no rest for the sole of her foot; I thought she returned, and I saw Noah's hand put forth to take her in again. After some time I thought I beheld her put forth a second time, and a raven with her; the dove fled as before for some time, and then I saw her return with a green olive leaf in her mouth, as a welcome token of the flood's being abated. I thought I saw also the raven fly to and fro, but he did not return; and it came into my mind, this is a ravenous bird, and seeks only for prey to satisfy his own stomach, otherwise he might have returned to the ark with good tidings, or some pleasant token, as well as the dove. After a short space, I thought I beheld the mountain tops, and some of the tree tops, beginning to appear above the waters, and I could perceive the flood abate very fast. As the waters fell away, I saw the trees began to bud and the greenness of new leaves came upon them, and I heard the voice of the turtle and saw many symptoms of a pleasant and happy season approaching, more than I can now relate; and the prospect thereof ravished my soul. I beheld the trees blossoming, the fragrant valleys adorned with grass, herbs and pretty flowers, and the pleasant streams gushing down towards the ocean; indeed, all nature appeared to have a new dress; the birds were hopping on the boughs of the trees, and chirping; each in their own notes, warbled forth the praise of their Creator. And whilst I beheld these things, a saying of the prophet was brought fresh in my memory, and applicable as I thought to the view before me, viz: 'The mountains and the hills shall break forth before you into singing, and all the trees of the field shall clap their hands; instead of the thorn shall come up the fir-tree, and instead of the brier shall come up the myrtle-tree; and it shall be to the Lord for a name, for an everlasting sign that shall not be cut off.'

"When I awoke, the prospect remained clear in my mind, and had a sweet relish, which now continues with me; and the application of the vision seems to me in this manner: The flood which appeared to cover the face of the earth, is the corruption and darkness which is so prevalent over the hearts of mankind; the ark represents a place of safe, though solitary, refuge, wherein the Almighty preserves his humble attentive people, who, like Noah, are aiming at perfection in their generation. The dove sets forth the innocent, harmless, and loving disposition, which attends the followers of the Lamb who are always willing to bring good tidings, when such are to be had: the raven represents a contrary disposition, which reigns in the hearts of the children of disobedience, who chiefly aim at gratifying their own sensual appetites; the waters gradually abating, the trees appearing, and afterwards budding, the voice of the turtle, and the pleasant notes of the birds, all seem clear to me, to presage the approach of that glorious morning, wherein corruption and iniquity shall begin to abate, and be swept away; and then everything shall appear to have a new dress. I am fully confirmed in the belief, that that season will approach, which was foretold by the prophet, wherein the glory of the Lord shall cover the earth, as the waters cover the sea; and in a sense of these things my soul is overcome. I feel the loving kindness of the Lord Almighty, yet waiting for the return of backsliders with unspeakable mercy; and my soul in a sense of it, seems bound more strongly than ever, in the bonds of gospel travail; which travail I hope will increase and spread amongst the faithful, for the enlargement of the church; that the nations may flock unto Sion; which shall become an eternal excellency, even the joy of the whole earth."

He again expressed his having a prospect of the dawn of this blessed morning; and said, "The day-star is risen, which presages the approach of the morning; I have seen it in its lustre, and have a lively sense of that saying being again fulfilled in the new creation, 'The morning stars sang together, and the sons of God shouted for joy.' I have heard their sound intelligibly, and my heart is comforted therein. The potsherds of the earth may clash together for a season, but the Lord in due time will bring about the reformation. The predictions of Archbishop Usher, mentioned in the preface to Sewel's History, have come fresh into my memory, and nearly correspond with the sense I have, that a sharp and trying dispensation is to come upon the professors of Christianity; wherein the honest and upright hearted shall be bid as under the hollow of the Lord's hand; when rents, divisions and commotions shall increase amongst the earthly-minded, and one branch of a family be at strife with another, like the daughter-in-law against the mother-in-law; and happy will it be for those who endeavour to stand ready for the approach of such a dispensation."

A New Potato.—Professor Mapes has received a new California potato, brought thence by C. V. Mundy, of New Brunswick, weighing three pounds seven ounces. Its appearance gives indication of being a good keeper and of excellent quality. The eyes protrude like those of the Bermuda potato. The gentleman who brought it from California remarked at the Farmers' Club, New York, that those potatoes were grown at the rate of 700 bushels to the acre; also, that the mammoth tuber referred to will be planted on the farm of Professor Mapes, who will report on its merits or demerits, as the case may be, hereafter.

From the National Era.

Barclay of Ury.

Among the earliest converts to the doctrines of Friends in Scotland, was Barclay of Ury, a distinguished soldier, who had fought under Gustavus Adolphus, in Germany. As a Quaker, he became the object of persecution and abuse at the hands of the magistrates and the populace. None bore the indignities of the mob, with greater patience and nobleness of soul than this once proud gentleman and soldier. One of his friends, on an occasion of uncommon rudeness, lamented that he should be treated so harshly in his old age, who had been so honoured before. "I find more satisfaction," said Barclay, "as well as honour, in being thus insulted for my religious principles, than when a few years ago it was usual for the magistrates, as I passed the city of Aberdeen, to meet me on the road, and conduct me to a public entertainment in their hall, and then escort me out again, to gain my favour."

Up the streets of Aberdeen,
By the kirk and college green,
Rode the laird of Ury;
Close behind him, close beside,
Foul of mouth and evil-eyed,
Pressed the mob in fury.

Flouted him the drunken churl,
Jeered at him the serving girl,
Prompt to please her master;
And the begging carlin, late
Fed and clothed at Ury's gate,
Cursed him as he passed her.

Yet, with calm and stately mien,
Up the streets of Aberdeen
Came he slowly riding;
And to all he saw and heard
Answering not with bitter word,
Turning not with chiding.

Came a troop with broad swords swinging,
Bits and bridles sharply ringing,
Loose, and free, and froward;
Quoth the foremost, "Ride him down!
Push him! prick him! thro' the town
Drive the Quaker coward!"

But, from out the thick'ning crowd
Cried a sudden voice and loud:
"Barclay! Ho! a Barclay!"
And the old man at his side
Saw a comrade, battle tried,
Scarr'd and sunburnt darkly.

Who with ready weapon bare,
Fronting to the troopers there,
Cried aloud: "God save us!
Call ye coward him who stood
Ankle deep in Lutzin's blood,
With the brave Gustavus?"

"Nay, I do not need thy sword,
Comrade mine," said Ury's lord,
"Put it up, I pray thee:
Passive to His holy will,
Trust I in my Master still,
Even though he slay me.

"Pledges of thy love and faith,
Proved o'er many a field of death,
Not by me are needed."
Marvelled much that henchman, bold,
That his laird, so stout of old,
Now so meekly pleaded.

"Wo's the day" he sadly said,
With a slowly shaking head,
And a look of pity;
"Ury's honest lord reviled,
Mock of knave and sport of child,
In his own good city!

"Speak the word, and, Master mine,
As we charged on Tilly's line,
And his Walloon lancers;
Smiting through their midst, we 'll teach
Civil look and decent speech,
To these boyish prancers!"

"Marvel not, mine ancient friend,
Like beginning like the end."
Quoth the laird of Ury,
"Is the sinful servant more
Than his gracious Lord, who bore
Bonds and stripes in Jewry?

"Give me joy, that in his name
I can bear, with patient frame,
All these vain ones offer:
While for them He suffereth long,
Shall I answer wrong with wrong,
Scoffing with the scoffer?

"Happier I, with loss of all,
Hunted, outlawed, held in thrall,
With few friends to greet me,
Than when reeve and squire were seen,
Riding out from Aberdeen,
With bared heads to meet me.

"When each good wife, o'er and o'er,
Blessed me as I pass'd her door;
And the snooded daughter,
Through her casement glancing down,
Smiled on him who bore renown
From red fields of slaughter.

"Hard to feel the stranger's scoff,
Hard the old friends falling off,
Hard to learn forgiving:
But the Lord his own rewards,
And his love with theirs accords,
Warm, and fresh and living.

"Through this dark and stormy night,
Faith beholds a feeble light,
Up the blackness streaking;
Knowing God's own time is best,
In a patient hope I rest,
For the full day-breaking."

So the laird of Ury said,
Turning slow his horse's head
Towards the Tollbooth prison,
Where, through iron gates, he heard,
Poor disciples of the Word,
Preach of Christ arisen!

Not in vain, confessor old,
Unto us the tale is told
Of thy day of trial;
Every age on him who strays
From its broad and beaten ways
Pours its seven-fold vial.

Happy he whose *inward* ear
Angel comfortings can hear,
O'er the rabble's laughter;
And while Hatred's faggots burn,
Glimpses thro' the smoke discern
Of the good hereafter.

Knowing this, that never yet
Share of Truth was vainly set
In the world's wide fallow;
After hands shall sow the seed,
After hands from bill and mead
Reap the harvests yellow.

Thus, with somewhat of the Seer,
Must the moral pioneer
From the future borrow;
Clothe the waste with dreams of grain,
And, on midnight's sky of rain,
Paint the golden morrow!

J. G. W.

A Hint to the Young.—If you would enjoy a green and happy old age, begin life in the love and service of God. "Remember now thy Creator in the days of thy youth, while the evil days come not, nor the years draw nigh when thou shalt say, I have no pleasure in them." Not only is early piety the surest protection against the temptations of youth, and the best preparation for usefulness in middle life, but it gathers and lays up the most precious solaces for old age. Religion is the one thing needful, to sustain us under all the trials which are incident to every stage of human life. How much more, in the last stage, when all other supports give way. Can you conceive of a more melancholy spectacle than that of an old man, or woman, who having outlived all worldly pleasures and satisfactions, has no "joy and peace in b lieving," no interest or hope in Christ—one wh rather "sighs and groans than lives?" Oh, t think of the earthly tabernacle shattered and falle down, and no "building of God, eternal in th heavens," to receive the immortal spirit! Ho wretched to linger without God and without hop upon the extreme verge of life! How distressin to see an old person going down into the valle and shadow of death, with no rod and no staff t comfort him! But in this glass, dear youth, yo may see yourselves, should you live to be old, an and when half dead, drag what is left of th mortal body down to the grave, without the co solations of religion.—*American Paper.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned membe of the Yearly Meeting of Philadelphia.

ELLIS PUGH.

(Continued from page 284.)

The time drawing near when Ellis Pugh b lieved it would be right for him to pay a religiou visit to his native country, according to the ope ing the Lord had given him nineteen years befor he spread the concern before Friends of Haverfor Monthly Meeting, about the close of 1705. O the 16th of the First month, 1706, the Quarter Meeting of Ministers in Philadelphia united ther with, and on the 30th of the same month, th General Meeting of Ministers. Having certificat of the unity of his friends, he prepared for his d parture for Wales. Samuel Bownas having near finished his gospel labours in this country, ar being about returning homeward, Ellis and agreed to make the voyage in company. El joined him in Philadelphia, in the spring of 170 and after visiting meetings in Chester county, th passed into Maryland. Here they found a se captain, named Daniel Maud, a member of the own religious Society, and felt easy to take passa with him. He would not, however, be ready sail under two months, and so the two frien parted company, Ellis once more returning to co fort his family for a few weeks, and Samuel p ceeding to fulfil some opening for service, in V ginia and Carolina. Samuel says, he found returning to Maryland near the time appointed f the sailing of the ship, "My dear friend, El Pugh, labouring among Friends in Maryland. a little time the ship fell down the bay, where t fleet made up, waiting for convoy, and in a fe weeks the fleet came together, being very larg but many ships had taken so great damage staying so long in the country, that they could n bear the sea, and several foundered, and some p back to unload, and have their ships repaire We had a long passage, and arrived safe, landi at Portsmouth, in the Tenth month, 1706, visit a small meeting at Portsmouth, and took coach f London."

Ellis Pugh laboured in Great Britain, prin pally, it is believed, in Wales, for nearly t years, in the language of his friends, "to t benefit and acceptance of many." On his retur ing his minute to the Quarterly Meeting of Min ters, held Twelfth mo. 5th, 1708, they say, "O friend, Ellis Pugh, gave some account of his t vails in the service of Truth in his native count of Wales, and produced a certificate from t Quarterly and Yearly Meeting of that countr which was much to the comfort and satisfacti of this meeting."

After his return, the Lord, in his infinite w dom, removed three of his children in the flow of their age, all within the short space of o

nth. They were such as had, from their youth- l days, walked orderly, and were accounted by e lovers of the Truth as hopeful. He could not t mourn under the dispensation, but he did not pine, and his mourning was not without hope. rength was given him from above, to bear the als dispensed; and in a public testimony he was abled to declare that "if he could bear his affliction acceptably in the sight of God, it would be marrow to his bones." This, his testimony, was the comfort and edification of the hearers.

His Gwynnedd Friends say of him, after his turn from Wales, "His residence was then arer to us than before, which rendered his life id conversation more conspicuous, and his fellowhip more known to us. He was of a meek and iet spirit, considerate and solid in judgment, of w words, and of inclination to support love and nity amongst all, more especially in the housefold of faith. He was honest and careful in his alling, lest he should give just cause to make ay uneasy. This has induced several to speak the good they received by his chaste conversaon, and his loving and comforting expressions hile he was among them, in their families. His emory will not soon wear out."

"At the time we had notice of the departure, at of this life, of our friend, Griffith Owen, a an worthy of being remembered in the church nd country; whose name is of good savour in the ublic place where he lived, because of his relious behaviour in his calling among the people f every rank,—at that time, [1st of Seventh month, 717,] Ellis was taken sick. This sickness conued about a year and three months, so that he as not well able to follow his calling. In the hean time, his natural life grew weaker, but his andle, to wit, the light of his soul, shined righter." He manifested his love and good will owards the natives of Wales by "a salutation to he Britons," a treatise written by him in his naive language during the time of his long sickness. lis soul, in the expansive energy of gospel love, eached over sea and land, willing to encourage nd instruct such as "were seeking the way to Sion, the New Jerusalem, the city of the Great King, whose walls and bulwarks are salvation."

Many of the professors of Christianity speak nd write concerning her glory, by study and preneditation, seeking through the strength of human learning and wisdom, to show forth the eauty and excellency of the Lamb's wife; but he wrote what he had tasted and felt of the good word f Life, and of the way that leads to the Father.

His friends say, "In the time of his sickness, while he could walk about, yet near his end, he visited us. The last meeting he was weak in body, but fervent in spirit. With a great deal of love and tenderness as of one taking his last leave, he said, that the Lord had granted him his desire f visiting us once more. He put us in mind to keep in love and unity, to keep out from among us, as much as we could, all strife and discord; nd when anything appeared which had a tendency thereunto, that hands should be laid without delay, to end it." And he desired "that none should depend upon his own hand, eye, or balance n judgment."

"He was fitted to counsel others, because his life and conversation was answerable to his testimony, being in his family tender and careful to counsel them to live in the fear of God."

"We looked upon him, and our thoughts concerning him, were, that he was as one who had finished his work, and that the time of his dissolution drew nigh; that he might say in the words f Paul, according to his measure, "I have fought good fight; I have finished my course; I have kept the faith. Henceforth there is laid up for me a crown of Righteousness, which the Lord, the righteous Judge, shall give me at that day; and not to me only, but unto all them also that love his appearance."

Another account states, "His conduct in his family, in his neighbourhood, and in the church, was meek, loving, peaceable, and to edification. His conversation innocent, chaste, coupled with the fear of God,—honourable amongst his friends, and of good report among all people generally. Being patient in his tedious sickness, contented to wait the Lord's time, he slept with his fathers on the 3d day of the Tenth month, 1718, in favour with God, giving him the glory."

WILLIAM SOUTHEBY.

Whilst it is especially desirable that an account of the lives of those whose course has grown brighter and brighter to the end, should be preserved to animate and comfort survivors, it is also somctimes useful by way of caution or warning, to give examples of others, who have, through the prevalence of some weakness,—the falling behind the true guide through lukewarmness, or running before him, in an ill-regulated zeal, been cause of sorrow to the rightly exercised in their day.

In this latter class may be numbered William Southeby, a man, very useful in religious society, and who was far before the generality, even of pious persons in his day, in an appreciation of the evils of slavery, and its total incongruity with the gospel of the Lord Jesus, the Prince of Peace, through whose life of mercy, death of suffering, doctrines and precepts of purity and tenderness, runs a golden thread of love to all the children of men.

William Southeby was educated a Papist,—brought up in all the outwardness of that profession, in which external rites and ceremonies are substituted for the inward work of purification in spirit, without which justification before God cannot be. His residence was on Sassafras river in Maryland, where, under the name of William Southersby, we find him in 1675 entertaining William Edmundson. He had probably been convinced of the Truth through the labours of some of the Friends, who in 1671–72 had visited those parts.

He removed to Pennsylvania early after William Penn became Proprietor of the Province, and in 1684 was elected a member of the Council, in which he served for a long period. He was soon, and very extensively employed in religious society, and it appears that he received and exercised a gift in the ministry of the gospel, although we find no trace of his travelling on religious service.

Throughout his life he often employed his pen, in promoting the best interests of his fellow members, and in unfolding his exercises for the good of others. In 1688 we find him presenting a paper to the Monthly Meeting of Philadelphia, against one Friend going to law with another, when the requisitions of gospel order had not previously been fulfilled. The paper was deemed of sufficient weight by Friends of the Monthly Meeting, to encourage them to send it to the Quarterly Meeting, where it was read and "well approved." In the year 1690, a concern was expressed in the Monthly Meeting, respecting giving ardent spirits at funerals, and William Southeby with others were appointed to stop the practice, as much as might be, amongst Friends. At the same time, various Friends intimated their dislike to the extravagance manifested at wedding dinners, and the excessive "providings" for them, and it was the desire of the meeting, that all such things might be discouraged amongst its members.

(To be continued.)

From Chamber's Journal.

Whereabouts is the North?

(Concluded from page 286.)

Thirty years ago, Barlow, professor of mathematics at Woolwich, recommended the placing of an iron plate on board ship near the compass —the object being to counteract the attraction of the vessel, by the attraction of the plate, and thus keep the needle pretty nearly in its true magnetic direction. This, which was never supposed to be other than an imperfect remedy, was fairly tried and kept in use until, in 1828, Airy, the astronomer-royal, after careful experiment, showed a magnet to be a much more effectual and reliable compensation than the iron plate. The method he proposed, was to place a bar-magnet in conjunction with a sheet of soft iron rolled as a scroll, at such a distance below the compass as would produce a deviation of the needle corresponding to that caused by the ship, and so neutralize one by the other. Afterwards, instead of the scroll, he introduced an iron chain in a box, as being more uniform in its magnetism. In plates, it is often found that one part is weaker or stronger in its magnetism than the rest, by which its action is rendered irregular. Airy showed further, that a ship acts as a permanent magnet on the compasses, and expressed himself confident in his proposed method.

On this point there has been, at times, much discussion: one party contends, that the only safe place for the compass is the top of the mast, far above all metallic influence; another, that as there is in all vessels, generally below the deck, a neutral point where the needle is not disturbed, the compass should be established on that point. Without entering into the merits of these and other questions which have been raised, let us see what are the measures adopted to know whereabout is the north on board vessels of the royal navy.

It was by authority of the Compass Committee that the investigations of Airy and others were made. In 1836, they sent the late Captain Johnson to make trials and experiments on board the iron steamer *Garryowen*, at the mouth of the Shannon, during which it was ascertained that the ordinary place for the compass was an "improper position" on board iron vessels; that the compass of the steamer in question could not be depended on; and that only by raising it to a considerable height above the deck, could it be made to work with anything like accuracy. In concluding his report, the captain suggested that in all cases a record should be kept of the position in which a ship lies with respect to the magnetic meridian while being built, as the permanent magnetism of the hull depends in great measure on that position.

The result of all this and other skilful researches is, that the compass is now treated by the navy as an instrument requiring as delicate handling as a chronometer; it had too long been treated with little more ceremony than the men's beef-barrel. The needles are made of the best clock-spring steel, well-hammered, put together in compound plates or laminæ, and prepared with the greatest care for their important function. The compass-cards, instead of being imperfect rounds, roughly executed by the engraver, are true circles, printed after having been fixed to the mica plate by a chemical preparation not liable to be affected by damp or heat. The bowl in which the card swings is made of copper, as this metal has the property of steadying the needle, of checking its numerous oscillations, without disturbing its directive power. The margin of the bowl is graduated by an engine, and not by hand; and an azimuth circle is fitted to each, so that at any time the

compass can be checked by an astronomical observation, or it may be used for surveying purposes. The pivots on which the needle rests are of metal harder than steel; and a supply of spare ones, the points gilded by the galvanic process, is delivered to each ship. And, lastly, all the compasses and binnacles are made of one size and pattern.

So constructed, the compass becomes a standard: but it is not yet ready for use. It is sent to Woolwich, where a building has been erected and fitted up exclusively for the testing of compasses, and every portion of the instrument is most rigorously examined and compared: nothing is allowed to pass in the least degree doubtful. Then, at each of the royal dockyards, a compass-room is built—all on the same plan—the shelves fixed in the line of the magnetic meridian; and on these the compass-cards are ranged two feet apart, with the opposite poles of the needles towards each other. Should any needle be found to alter, it is not remagnetised, but is at once rejected and replaced by a good one; and a deflecting apparatus is kept for the testing of all needles before use, the particulars of each being entered in a book. A closet is also fitted up on board ship in which the compasses and nothing else are to be stored: it has shelves and cases so contrived, that the instruments can never be put away with the same poles towards each other, and the master keeps the key.

Suppose, now, that a ship has taken in all her guns, shot, shell, and iron of every kind, ready for sea; the compasses are then put on board, and the operation is performed by which the deviations of the standard are ascertained. We see repeatedly in the newspapers, announcements that a vessel has "gone up," or "dropped down," to Greenhithe to have her compasses corrected; and without this, all the means taken to secure exactitude would be ineffectual. A basin is best for the process; but it may be effected in a tide-way at slack-water. The ship is placed so that by means of warps her head can be turned in succession to each of the thirty-two points of the compass; as each is arrived at, she is kept steady for a few minutes, while the bearing of some object a few miles distant on shore is taken with the standard-compass. When all are noted, the standard is carried on shore, and the bearings are again taken out of reach of the attraction of the vessel; and in this way the deviations of the ship's compass on each point are ascertained, the amount of deviation being exactly the difference between the two sets of bearings. All the facts are recorded in a book, and thus the captain knows what allowance he has to make for compass-error, whatever be the course of the vessel. Yet after all this, precautions are necessary: the Admiralty instructions require that no iron shall come within seven feet of the compasses; the standard is to be the only authority on board; and the binnacle-compasses are to be frequently compared with it; observations with the azimuth circle are to be taken repeatedly during a voyage, especially should the ship enter the southern hemisphere, for then the deviation which was to the *east* in the northern, will be to the *west*. In this case, new steering-tables must be prepared, by "swinging" the ship to the thirty-two points, as at first. The needle is to be lifted from the pivot whenever the compass is carried about or the guns are fired, to guard against injury to the delicate suspension: and all the compasses on board are to be compared with one another every day at noon.

In all cases where the standard-compasses have been used, the result is satisfactory. The steamer *Urgent* once ran in a fog from Milford Islands to Liverpool, and hit the Bell Buoy at the mouth of the Mersey "to a fraction," as her commander reported. Captain Vidal surveyed by the new system the Azores in the *Styx* without accident. The master of the royal yacht *Victoria and Albert*, after two years' experience, describes the standard as perfectly trustworthy; and says that, making the "necessary allowance," he could steer a true course on any point of the compass.

Here, then, is demonstration of the possibility of avoiding the fatal errors mentioned at the commencement of the present article; and if good for the navy, it must be good for the merchant-service. If the owners of vessels will but provide themselves with proper standard-compasses, and require that they shall be used as prescribed by the Admiralty, we shall seldom hear of shipwreck from the compass indicating a false course. Iron has of late years been so much introduced into the construction even of wooden vessels, as greatly to increase the liability to error, and explains how it is we hear more of casualty from that cause than in former years, when more wood and less iron was used. A heavy responsibility rests on those who send ships to sea, neglecting the important precautions we have here pointed out. At the same time, it is proper to keep in remembrance, that the best compasses may be temporarily deranged by aurora borealis, or other atmospheric phenomena; and that, consequently, all the common aids in good seamanship need to be resorted to by the commanders of vessels.

God's Hand in the Sea and Air.

The following admirable passage we take from Mr. Maury's late noble work on the Physical Geography of the sea:

"In contemplating the system of terrestrial adaptations, these researches teach one to regard the mountain ranges and the great deserts of the earth as the astronomer does the counterpoises to his telescope—though they be mere dead weights, they are, nevertheless, necessary to make the balance complete, the adjustments of this machine perfect. These counterpoises give ease to the motions, stability to the performance, and accuracy to the workings of the instrument. They are *compensations*.

Whenever I turn to contemplate the works of nature, I am struck with the admirable system of compensation, with the beauty and nicety with which every department is poised by the others; things and principles are meted out in directions the most opposite, but in proportions so exactly balanced and nicely adjusted, that results the most harmonious are produced.

It is by the action of opposite and compensating forces that the earth is kept in its orbit, and the stars are held suspended in the azure vault of heaven; and these forces are so exquisitely adjusted, that, at the end of a thousand years, the earth, the sun, and moon, and every star in the firmament, is found to come to its proper place at the proper moment.

Nay, philosophy teaches us, when the little snow-drop, which in our garden walks we see raising its beautiful head to remind us that spring is at hand, was created, that the whole mass of the earth, from pole to pole, and from circumference to centre, must have been taken into account and weighed, in order that the proper degree of strength might be given to the fibres of even this little plant.

Botanists tell us that the constitution of this plant is such as to require, that at a certain stage of its growth, the stalk should bend, and the flower should bow its head, that an operation may take place which is necessary in order that the herb should produce seed after its kind; and that after this, its vegetable health requires that it should lift its head again and stand erect. Now if the mass of the earth had been greater or less the force of gravity would have been different; in that case the strength of fibre in the snow-drop as it is, would have been too much or too little the plant could not bow or raise its head at the right time, fecundation could not take place, and its family would have become extinct with the first individual that was planted, because its 'seed' would not have been 'in itself,' and therefore it could not reproduce itself.

Now, if we see such perfect adaptation, such exquisite adjustment, in the case of one of the smallest flowers of the field, how much more may we not expect 'compensation' in the atmosphere and the ocean, upon the right adjustment and the due performance of which depends not only the life of the plant, but the well-being of every individual that is found in the entire vegetable and animal kingdoms of the world?

Therefore in considering the general laws which govern the physical agents of the universe, and regulate them in the due performance of their offices, I have felt myself constrained to set out with the assumption, that if the atmosphere had had a greater or less capacity for moisture, or the proportion of land and water had been different—if the earth, air, and water had not been in exact counterpoise—the whole arrangement of the animal and vegetable kingdoms would have varied from their present state. But God chose to make those kingdoms what they are; for this purpose it was necessary in his judgment, to establish the proportions between the land and the water, and the desert, just as they are, and to make the capacity of the air to circulate heat and moisture just what it is, and to have it to do all its work in obedience to law and in subservience to order. If it were not so, why was power given to the winds to lift up and transport moisture, or the power given to the sea by which its waters may become first vapour, and then fruitful showers or gentle dews? If the proportion and properties of land sea and air were not adjusted according to the respective capacities of all to perform the function required by each, why should we be told that he 'measured the waters in the hollow of his hand and comprehended the dust in a measure, and weighed the mountains in scales, and the hills in a balance?' Why did he span the heavens, but that he might mete out the atmosphere in exact proportion to all the rest, and impart to it those properties and powers which it was necessary for it to have, in order that it might perform all those offices and duties for which he designed it?

Harmonious in their action, the air and sea are obedient to law and subject to order in all the movements; when we consult them in the performance of their offices, they teach us lessons concerning the wonders of the deep, the mysteries of the sky, the greatness, and the wisdom, and goodness of the Creator. The investigations into the broad-spreading circle of phenomena connected with the winds of heaven and the waves of the sea are second to none for the good which they do and the lessons which they teach. The astronomer is said to see the hand of God in the sky; but does not the right-minded mariner, who looks also as he ponders over these things, hear his voice in every wave of the sea that 'claps its hands,' and feel his presence in every breeze that blows?"

Harsh Words are like hailstones in summer which, if melted, would fertilize the tender plant they batter down.

Selected.

Faith.

he strongest are not always free from doubt. ry great truth is come at through difficulty and ggle. God will not lift him up who wilfully s himself down; put out thy hand for strength hou wouldst uncover the cistern in a shower, rwise the divine efflux is turned aside. In portion as we live a righteous and simple life, we have faith in righteousness and simplicity. anguish, no matter how bitter, man has but question to ask; not "Whence has this come?" "How shall it be blessed and sanctified?" at ever comes of folded hands? nothing. Have no faith because the fields are not already white. arner who weepest in weakness, man is never alone than in his grief. Rise up then and k those who suffer like thyself; strive to impart solation, thou who needst it, though it be but the pressure of thine hand. Speak true words hou wilt, and find peace for thy need. Promises t faltered on thy tongue shall possess unfalter- ly thy heart.

An Antidote to the Potato-Rot.—Professor Boll- n, of the Russian Agricultural Institute, has lished a pamphlet on the potato-rot, and he ounces to the world that mere drying, if con- ted at a sufficiently high temperature, and con- ued long enough, is a complete antidote to the ease. This result was ascertained by repeated eriments conducted for a series of years. The perature required to produce the desired result not very clearly made out. Bollman's room, which his first potatoes were dried, was heated bout 72 degrees, and much higher. By way experiment, he placed others in the chamber of stove itself, where the thermometer stood at degrees, and more. He also ascertained that vitality of the potato is not affected even if rind is charred. This hint may be useful, and n similar experiments, carefully conducted, the may be established.

The Force of the Niagara River.—The force of dy of water like the Niagara river, at the Falls, shown in a remarkable manner, lately, in attempt by Rœbling, the Civil Engineer, to nd the river. He let fall from a height of two dred and twenty-five feet, a forty pound weight pointed iron. The iron sank for a second of e, then made its appearance again on the sur- e, about one hundred feet down the stream, and pped along like a chip, until it was checked by wire. The velocity of the weight when striking, equal to one hundred and twenty-four feet second, and its momentum five thousand nds. This will give some idea of the force of current.

THE FRIEND.

FIFTH MONTH 26, 1855.

The remarks in The Friend of the 5th instant pecting obituary notices, were grateful to my ings. I have been fearful that the writers of obituary notices of those who have not lived der the power of the Cross of Christ, have not ays gone deep enough to realize the conflicts baptisms the dear sufferer must have undergone vious to experiencing sanctification. The leav- out this essential part may have a tendency to mote procrastination respecting the all-import- work of the soul's salvation whilst in health.

J.

With the sentiments expressed by our correspondent we fully unite, and trust our readers will give them the consideration they merit.

The proper contemplation of death, the termination of our probation, and end of all our schemes and acquisitions, according to the highest authority, is an evidence of wisdom. "O that (my people) were *wise* that they understood this, that they would consider their latter end." That the consideration of the end of life, may be indicative of wisdom, it must prevail in a mind firmly impressed with the belief, that if the soul shall be permitted to enter into the rest beyond the grave, prepared for the people of God, it must necessarily experience the work of sanctification and perfect redemption to be effected ere it leaves its tenement of clay. Together, these bring home the conviction that the great purpose of life is preparation for its close, and under the blessing of the Holy Spirit may stimulate to the improvement of time, and the use of those means which a merciful Creator has bestowed on his fallen, lost creature, for the government of his conduct, and reconciliation unto himself. Thus the serious consideration of our "latter end" tends to rectify the estimate which the mind naturally places on the things of this world, shows the intrinsic worthlessness of its glittering wealth; strips its boasted honors and its deceitful pleasures of their allurements, and teaches that nothing is so important to beings born to die, as that their lives may close with a *well grounded* hope of a happy immortality.

The Holy Scriptures teach us, that the preparation by which death is deprived of its sting, comprehends a radical change from our original and natural condition, a complete regeneration of our spiritual being; a new birth and growth after the first nature has yielded up its life. "Except a man be born again he cannot see the Kingdom of God." "Blessed and holy is he that hath part in the first resurrection: on such the second death hath no power." This change can only be effected by the same almighty creative Power that brought us into existence, and when it takes place, and a godly sorrow worketh repentance to salvation not to be repented of, "being justified by faith," the soul "has peace with God through our Lord Jesus Christ."

The expressions of the dying, though uttered in broken sentences, are more likely to arrest the attention and affect the feelings, than the testimony of the living, however forcibly delivered. The closing scenes of life will therefore be instructive to those who witness them, or to those who give heed to the lessons they inculcate, in proportion as they impress the necessity and the blessedness of experiencing the new birth, and stimulate to fervent labour for its attainment. In contemplating the firm faith, and glorious anticipations of those who can say with the Apostle "I have fought a good fight, I have finished my course, I have kept the faith; henceforth there is laid up for me a crown of righteousness, which the Lord the righteous judge shall give me at that day," the sincere but struggling christian will be cheered on his journey, animated by the evidence of the sufficiency of that grace which brings salvation, and consoled for the trials of the way, by the glorious termination of the race; while even the heart of the worldling, must be hard and insensible indeed, if the secret aspiration does not arise "let me die the death of the righteous, and let my last end be like his;" and in the mercy of Him who seeks to save that which is lost, the lesson may be brought home so as to raise a fervent and effectual inquiry, what shall *I* do to be saved?

No less instructive are the doubts and fears, the mental conflicts, which sometimes are permitted to assail, even in the last hours of existence, those who have long given indubitable evidence of being redeemed from the world, and having their affections fixed on heaven and heavenly things. "Precious in the sight of the Lord is the death of his saints," and in inscrutable wisdom He may sometimes so order the closing scenes of their lives, as to impress on the minds of others the awfulness of passing from time into eternity, the heart-searching character of the work that prepares the soul to stand in the presence of infinite purity, and bring home the solemn consideration "if *the righteous* scarcely be saved, where shall the ungodly and the sinner appear."

Nor is it less to the praise of that grace which comes by Jesus Christ, when its cleansing, transforming power is made manifest on the death-beds of those, who, having rested content in a profession of christianity without living in its power, are met with at the eleventh hour, and amid the inroads and struggles of approaching dissolution in the long suffering of their compassionate Redeemer, are awakened to a sense of their lost condition, and enabled, while abhorring themselves in dust and ashes, to look on Him whom they have pierced, experiencing their sins to be blotted out in his most precious blood, and their souls to be cleansed through the washing of regeneration and the renewing of the Holy Ghost. Such instances are forcible illustrations of the goodness of our Heavenly Father, the efficacy of the means he has provided for sanctification and the unalterable terms on which He bestows salvation; and their tendency we should suppose must be, to soften the heart of survivors, and lead them to a close inspection into the course of their own lives and the manner in which they are improving the talents conferred on them.

In a community where the life of religion is low, where freethinking abounds, or a disposition prevails to substitute a fair moral life, and reliance on what Christ has done for us without us, in place of submitting to his crucifying power in the heart, a fashion may easily obtain of representing nearly all who die and have escaped any open, flagrant violation of the moral law, as passing out of life, with the assurance of entering into the joys of heaven. If we may give credence to the obituary notices published in our daily newspapers, there are few of their subjects, who, in the contemplation of the approach of death, found anything in their way; any cause for doubt; any need for further preparation to enter into the company of the spirits of just men made perfect. It is a consolation to know that not a few who are taken from our midst, have so lived that this may be truly said respecting them, and many more, whose life gave little or no evidence of their being self-denying followers of a crucified Lord, may be washed and made clean, even on a dying bed, and it is not for us to sit in judgment on the final destiny of any; but the terms and means of salvation are the same for all, and when they are submitted to, an indubitable evidence will be afforded of their heart-changing operation — repentance towards God, and faith in our Lord Jesus Christ; and it is but justice to the holy religion in which we profess to believe, and honesty towards the dead and the living, where such cases are publicly noticed at all, to allude, however briefly, to the change effected, before the assurance of rest was granted.

There is a strong disposition in the human mind to turn away from the unalterable standard of the gospel, to estimate ourselves by the uncertain opinions of right and wrong, common among those with whom we mingle, and to seek to assuage the reproofs of conscience, by drawing comparisons between our conduct, and that of those, who we

hear spoken of with approbation, though we believe them to be as bad, if not worse than ourselves. If then the practice obtains of recording in undoubting terms the death of individuals whom the world could justly claim to have lived as its votaries, as taking place with the same calmness and assurance as that of the humble cross-bearing Christian, and no hint is given of the necessary work of sanctification being experienced, should it have really taken place, is it not to be feared many will draw the conclusion, that holiness and purity are not really required; that sin, so natural to the human heart, is not so hateful in the Divine sight, but that it may be indulged in to the last, and finally, in the unbounded placability of the Almighty, be overlooked and forgiven, without heart-felt repentance, and the baptism of the Holy Ghost and fire.

It is a fearful but incontrovertible truth, that where such delusion is determinately cherished and acted on, all sense of its falseness and its awful consequences may be withdrawn. "And for this cause, God shall send them strong delusion, that they should believe a lie." So that the absence of anxiety or doubt on the approach of death may arise from the torpor of the spiritual faculties, entirely the reverse of the calm trust and confidence of the quickened and redeemed soul. "Not by works of righteousness which we have done, but of his mercy he saveth us, *by the washing of regeneration, and the renewing of the Holy Ghost.*"

SUMMARY OF EVENTS.

EUROPE.—News from London and Liverpool to the 6th, by the steamship Baltic.—*The War.*—The telegraph from the Crimea to England being completed, brief accounts from the former, up to the 4th inst., have been received. The position of affairs had undergone but little change. The bombardment of Sebastopol was almost wholly suspended, in consequence of the exhaustion of men and material. It had produced but little apparent effect on the defences of the place. The allies have had some success in their attacks of certain outworks of the Russians; and several war steamers have entered the bay at night, and discharged broadsides into the south side of the town. It is supposed they must have inflicted some damage by their heavy guns. The *Invalide Russe* contains an account of the losses of the Russians by the bombardment of Sebastopol, from the 9th to the 15th of Fourth mo. The number of killed was 11 officers and 587 rank and file, and the wounded, 55 officers and 2572 rank and file. The allies furnish no statement of the loss sustained by them, during the same period. The greater portion of a reinforcement of 50,000 Russians had arrived in the vicinity of Sebastopol. The allies were also constantly receiving fresh supplies of men.

RUSSIA.—The pressure of the war is stated to be severely felt at Petersburg, where every article of consumption is at famine prices. In the Ukraine, the peasantry have been driven to insurrection, in consequence of the exhaustion of their means in providing supplies for the southern army, for whom they have to provide food and transport supplies, without remuneration. The Emperor devoted his whole attention to the preparations for defence in the Baltic, which were on an extensive scale.

FRANCE.—On the 28th, an attempt was made by an Italian, named Pianori, to assassinate the Emperor Napoleon while he was riding, at a slow pace, up the grand avenue of the Champs Elysées. Two pistol shots were discharged at the Emperor, one of which, it is said, passed through his hat. The assassin was instantly seized and secured. The French Emperor manifested great coolness and courage on the occasion. This attempt had increased the popularity of Napoleon, and tended to establish him more firmly in the affections of the French, who are well aware that his death at this time would be followed by a scene of dire anarchy and confusion.

PRUSSIA.—At the latest dates from Berlin, the King was suffering from a severe attack of fever. His illness was considered serious.

GREAT BRITAIN.—Lord John Russell had returned from Vienna, and resumed his seat in Parliament, where he has stated that the substance of the protocols of the late Conference would be submitted to Parliament. The ministry was growing unpopular, and indignation meetings on the conduct of the war were being held in various parts of the country. "Administrative Reform" is the cry everywhere. The weather was rather unfavourable for the growing crops. It was dry but unseasonably cold. On the night of the 3d, there was frost, and ice was formed in exposed situations.

London Money Market.—Money on loan was abundant, and freely offered on government securities at 2 per cent. Consols remained at 88⅜ to 88⅝.

Liverpool Market.—Cotton.—The tenor of the American advices, and the reduction in the bank rate of interest, have kept the market in a state of excitement, and although the demand has been freely supplied, prices generally have advanced a full ⅛*d.* per lb. within the week. The sales for the week, 106,790 bales, of which 90,230 were American. Philadelphia and Baltimore flour was quoted at 42*s.* to 45*s.* without buyers. In Indian corn, a good business had been done at 48*s.* to 49*s.* per 480 lbs. Sales had been made of floating cargoes of Egyptian and Baltic wheat, at somewhat advanced prices.

UNITED STATES.—*Emigration to the West.*—A Wisconsin paper states that the Upper Mississippi is now alive with steamboats conveying crowds of persons to Minnesota, Northern Iowa, and Western Wisconsin. The Galena Gazette says that a thousand persons pass through that town daily, on their way northward. Minnesota absorbs the greater portion of this immigration. Kansas, also, has appeared on the Upper Mississippi river, not only among the steamboats, but also in the river towns; it seems to be gradually spreading along the most travelled routes of the far west.

Drought.—Portions of the south-west are still suffering severely from want of rain. At Little Rock, Arkansas, the people can scarcely obtain the necessaries of life, and the Arkansas river is nearly dried up. Part of the State of Louisiana is in a similar condition.

Crops in Illinois.—A very heavy yield of wheat is expected, and an unusually large extent of ground has been planted with corn.

Wheat in Ohio.—The report is, that from all parts of Ohio, the coming crops, if not injured in filling, will be larger than in any preceding year.

Southern Railroad.—The Memphis and Charleston Railroad, which is two hundred and eighty-six miles in length, is expected to be ready for business throughout the whole route, by next Eleventh mo. The entire cost of the road is estimated at $4,940,263.

Military Bounty Lands.—Up to the 17th inst., 137,200 applications for land warrants had been received. At the rate of 160 acres each, these will require 21,952,000 acres of the public domain.

Utah.—Advices from this territory to Third mo. 31, state that Steptoe has declined filling the office of Governor of Utah, and that the appointment has been offered to Judge Kinney, Chief Justice of the Territory, who, it is believed, will accept it.

New York.—The N. Y. Sun attributes the decline in various branches of industry in that city, to the very high rents, and cost of living generally, rendering necessary high wages, and increasing the cost of production of all manufactured articles. Of late years, luxurious hotels, splendid stores, and palace-like residences have been built in great numbers, and but few dwellings suited to the circumstances of the great mass of the people. There is especially a great want of cheap and comfortable houses for labourers and mechanics. *Dullness of Trade.*—Many packages of dry goods, imported last fall, have recently been re-shipped to Liverpool by the consignees in New York, there being no market for them. *Movement of Specie.*—The Atlantic last week took out $1,894,000 in gold. The receipts from California by the two steamers, were about $1,500,000. The agents of the British Government continue to enlist men for service in the Crimea. The practice is carried on covertly, and the men are shipped to Halifax in small parties. Mortality last week, 457.

Pennsylvania.—The General Appropriation bill includes the following items. Interest on funded debt, $2,000,000. Motive power on Columbia and Portage Railroads, $836,358. Completion of Portage Railroad, $277,730. Relaying south track Columbia Railroad, $230,000. Ordinary repairs of Improvements, $481,461. Collectors, Weighmasters, &c., $106,021. Support of Common Schools, $230,000. Expenses of Legislature, $125,000. The total amount appropriated for all purposes, is $4,600,094.

California.—Dates to Fourth mo. 17th. There had been frequent and heavy rains, and it was supposed that more than an average quantity of rain had fallen the past season. The mountain streams were full, and there were no more complaints of want of water at the mines. The San Francisco market was overstocked with all descriptions of merchandise. During the vious week, seventeen heavily loaded ships had arr from Boston, New York, and Philadelphia. A nu of failures had occurred; some of them among per who have heretofore ranked with the wealthiest in State. A stringent law against gambling had pa the Legislature, which, it was hoped, would effect close all the gambling-houses. A large number of cides are recorded in the papers. The sailing da the steamers have been changed, so that hereafter t will be only two mails from California, in a month. clipper ship was being loaded at San Francisco, *wheat and flour for New York.*

Philadelphia.—Mayor Conrad, in his message to City Councils, states that during the seven mo ending Fourth mo. 30 last, the police force had m 16,772 arrests. Of the persons arrested, 3947 were toxicated; 3224 charged with disorderly conduct; 1 with assault and battery; 262, riot; 613, vagra 970, larceny; violations of the liquor law, 296; kee disorderly houses, 130; arson, 38; burglary, 42; g bling, 87; murder, 13, &c. Mortality last week, 1

Miscellaneous.—Odd Fellows in the U. S.—This o consisted, in 1854, of 3129 lodges, having 199,197 tributing members. The revenue was $1,334,935, the amount paid out for relief to members, $498,52

The Sardinians for the Crimea.—The contract of Sardinian Government to send fifteen thousand me be wasted and destroyed in the Crimea, proves to most unpopular measure. Many of the troops to sent off, refused to go, some of the officers and shooting themselves to avoid this disgraceful destructive service.

The Fall of a Large Tree.—Five children were ki near Empire City, in Oregon, on Third mo. 26th by the falling of a spruce tree, two hundred and feet in height, which was standing at a distance of hundred feet from the house in which the children sleeping. The branches crushed the house, insta killing five of the eight persons it contained.

Wheat and Corn.—The Chicago (Ill.) Democrat that Gibbs and Griffin, of that city, have at presen their warehouse over 400,000 bushels of these valu articles.

Prohibition in Canada.—The Governor General can give his consent to the Prohibitory Liquor bill. instructions are "to reserve for the signification of Queen's pleasure, every bill of an extraordinary or usual nature."

A Man Executed for Negro Stealing.—In Chatt county, N. C., Willis Hester was executed recently stealing a negro. He denied his guilt, alleging that purchased the negro for the sum of eight hundred dollars.

RECEIPTS.

Received from Henry Lupton, O., per C. E., $3, 28; from Pelatiah Hussey, Me., per Wm. Hill, $3, 28; from Moses Child, N. Y., $2, vol. 28; from S Michener, O., $1, to 41, vol. 28.

WEST-TOWN SCHOOL.

The Committee charged with the oversight of Institution, will meet at West-Town on Fourth-day, 6th of next month, at 10 o'clock, A. M.

The Committee on Instruction meet on the preced evening, at 7½ o'clock, and the Visiting Committee semble at the School on Seventh-day afternoon, the of Sixth month. THOMAS KIMBE

Philad., Fifth mo. 26, 1855. Cl

The Annual Meeting of the Institute for Colou Youth, will be held on Third-day, the 29th inst., o'clock, P. M., at the Committee-room, on Arch stree Fifth mo., 1855. M. C. COPE, Sec'y

MARRIED, at Friends' Meeting, in Smyrna, Chena Co., N. Y., the 10th of Fifth month, 1855, DANIEL P HAM, of Westmoreland, Oneida Co., N. Y., to MAR HUNT, of the former place.

DIED, at Muncy, Lycoming county, Pa., on the inst., MARTHA PARKER, relict of the late Henry Par in the 94th year of her age. This dear Friend wa example of christian meekness, was diligent in att ing our religious meetings while strength of body mitted, and for many years filled acceptably the sta of elder in Muncy Monthly Meeting.

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any rt of the United States, for three months, if paid in vance, six and a-half cents.

For "The Friend."

The Indians.

From the superintendent of Indian affairs, at nta Fe, New Mexico, we have a report from ich the following statements are taken.

"I entered upon the discharge of the duties of is office on the 8th day of August, 1853, and on found that my predecessor had made a com- ct with several bands of the Apaches, which used much difficulty; he had engaged to supply em with corn, beef, and salt to the close of 1854, d with a reasonable amount of food for three ars thereafter.

"Finding that this compact had been disap- oved by the government, I caused these Indians be informed thereof, and ceased to supply them th food. This resulted in their resorting to bbery for a subsistence. These depredations have sulted in a loss to our citizens of property to the lue of $50,000 to $100,000, as estimated, and any lives." To stop this, the Indians were at- cked by a military force, and a number of them ere killed. For a time they refrained from far- er depredations, but having obtained reinforce- ents, they again began a system of plunder. ey were then attacked by a party of dragoons, whom, in a severe conflict, 24 were killed and wounded.

The governor then issued a declaration of war; e militia was called out, and succeeded in so stressing the Indians, by killing many of them, at they sued for peace. The superintendent ys, "It is due to these Indians that I should say, at the want of ability on my part to carry into fect the stipulations contained in the compact retofore alluded to, left them in a destitute con- tion; they were reduced to the necessity of either arving or stealing. Had the stipulations of this ntract been faithfully carried out on the part of e United States, I feel confident that no hostili- s would have occurred."

"I have found it difficult, if not impossible," ds the Superintendent, "to make the Indians mprehend how it is that previous to my arrival this country, this compact was being executed our part, and that their rations should be stop- d so soon thereafter."

He then proceeds to notice the other Indians nder his Superintendency. "The Utahs of New exico, are a portion of the tribe of the same me, inhabiting the territory of Utah; they speak e same language, and have frequent intercourse th each other. From the best information, they mber between 5000 and 6000; and they inhabit d claim all that region, embracing the sources of the north-western tributaries of the Arkansas, up to the southern boundary of Utah, and all the northern tributaries of the Rio Grande, within New Mexico north of the 37th parallel of latitude. This country is estimated to cover a space equal to 20,000 square miles, which would give about 5 square miles to each soul. They are highly warlike, and do not cultivate the soil, but depend upon the chase and robbery for a subsistence. They have quite a number of good horses and mules, and frequently, when hard pressed, kill them for food; but they have no other description of stock.

"The various bands of Apaches amount to eight thousand. Each band occupies its own section of territory, and acts separately or in concert with others, as it may deem fit. The Zicarilla Apaches claim a region of indefinite space, west of the Rio Grande, and on the head of the Chama and Puerco rivers. They are supposed to number about 150 warriors, and probably 500 people. They rely upon the chase, and when this fails, resort to depredation. The Mescalero Apaches roam over portions of Texas, Chihuahua and New Mexico, though their residence is about the White Mountains of the latter. The country claimed as peculiarly their own, covers a space of about 15,000 square miles, which affords 20 square miles to each individual, their population being 750. They have committed many depredations during the last and present years, notwithstanding the energetic operations of the military. Although part of their country is the most desirable in New Mexico for agriculture, they cultivate the soil to a very limited extent. Game is comparatively scarce; hence they subsist in great measure by plunder. A brisk trade is carried on in stolen property between them and the Zicarillas. The Gila Apaches derive their name from the river, in the valley of which they mostly reside. The country claimed by them, will probably measure 25,000 square miles, and their population amounts to 3,500 or 4000; which will give 6 to 7 square miles to each Indian. They make forays upon the Mexican provinces of Sonora and Chihuahua. The facility with which these two provinces are robbed, has measurably saved our people from like visitations.

"The Navajoes are another powerful tribe, residing on the tributaries of the San Juan. They probably number 8000 people, and claim an extent of 28000 square miles—a country represented to be one of the finest agricultural regions in New Mexico. With very rude and primitive implements of their own construction, the Navajoes manage to raise an abundance of corn and wheat for their own subsistence. They have numerous herds of horses and sheep, and some horned cattle and mules, and on the whole, live in a degree of comfort and plenty, superior to the other wild Indians of this section of the Union. They manufacture their own clothes, principally from the wool of their sheep, and it is a rare thing to see a Navajo uncomfortably clothed. In the manufacturing of blankets, they are believed to surpass any other Indians on this continent, and these blankets will compare favourably, with any other manufactured by a civilized people. Those made for ordinary use are warm, strong and durable; but occasionally fine ones are made with brilliant and durable colours, handsomely blended, which will readily command from $25, to $50, each. When it is recollected that these articles are manufactured, and their farms cultivated, by the hands of Indians, with implements of their own construction, this people can but challenge our admiration.

"The Pueblos are a very interesting portion of the Indian population of this territory. They hold their lands under special grants, from the governments of Spain and Mexico, many of which are of very ancient date—one that I examined being dated in 1661—and they usually cover one league, or 9 square miles. In no grant that has come under my notice, is the fee-simple conveyed to the Indians. They are merely invested with possession, use and benefit of the land, so long as it may be occupied by them. There are 20 communities of Pueblos scattered over the Territory, and intermixed with the white settlements, and their aggregate population numbers from 8000 to 10,000: some do not number over 100 or 200, whilst others reach 1200 or 1500. Many of these grants cover some of the best land in New Mexico, and some of the occupants are in a flourishing condition, but many appear to be sharing the fate of most other Indians, when brought into contact with the whites. Many of these people are superstitious in the extreme. The Pueblo of Nambe, in March last, executed several of their own people, on the charge of witchcraft. These Indians cultivate the soil, mostly with rude implements of their own construction, and enough produce is raised to sustain themselves in comfort and plenty. They will compare favourably, in agriculture, with the citizens generally of this Territory; and they have horses, mules, cattle, asses, sheep and goats, sufficient for ordinary purposes. They are a sober, industrious and frugal people, a few can read and write in the Castilian language, but the remainder are destitute of education, though most of them speak that language. A school has been established at Laguna, and the advancement of the pupils, affords ample evidence of their capacity to receive instruction; as a general rule, they live in great peace and harmony with their neighbours. Each Pueblo elects annually a governor and other officers, and the people appear to submit quietly to the government of those chosen by themselves to rule over them. These Indians claim descent from the ancient Aztecs. The Pueblo of Taos, is about 3 miles from the town of San Fernandes de Taos, on a small stream which supplies water for irrigation and for other purposes, and the number of inhabitants may be set down at something over 1200. This town contains but two dwelling houses, situated upon opposite sides of the creek. They are built of adobes or sun dried bricks; each covers an area of about 2 acres at the foundation and is 5 stories high, with but one entrance through the external walls, and but one window, and both of these open into the Governor's room. After ascending one story, there is an off-set in the walls, and the size of the house is lessened around its entire circumference about 15 feet, and this is the case at the top of each story. The

top of the house is flat, and the off-sets afford a series of terraces or walls, about 15 feet wide, quite around the building. The entrance is from the top, which is reached by portable ladders. The quarters of each family are within walls of sufficient strength to sustain the weight above, through which there are communicating doors. The only ventilation is through small trap-doors in the roof. The interior is a perfect labyrinth, and quite dark, and swarming with children. The inmates appear to be healthy. Close without are circular pits about 10 feet in depth and diameter, in which the sacred fire is kept burning,—unextinguished they say since the days of Montezuma, and only to be extinguished on his return. The people profess Roman Catholicism: they are loyal and deserving, but buried in ignorance and superstition. The superintendent earnestly recommends the establishment of schools among them, and that they be supplied with agricultural implements."

For "The Friend."

Disagreement in Spiritual Things.

The devotedness of the early Friends was remarkable, not only for their extensive travels, and frequent preaching in fields, and in the different meeting-houses, but also in the amount which some of them wrote, to enlighten other professors on the subject of religion. Edward Burrough was engaged in various labours, but about ten years, yet he travelled, and preached and wrote much in that short period. From one of his essays, called "A discovery of divine Mysteries," we shall furnish a few selections. In the preface, alluding, we may suppose, to the Friends gathered at that time, he says, "The light of the day of God Almighty is arisen upon us in our day, and the shining forth thereof is with great clearness and force, *even as the sun at noon-day;* and many are come to the glorious appearance thereof, and to walk in its light *with great joyfulness;* for as the wise man said, 'The light is sweet, and a pleasant thing it is for the eye to behold the sun.' And so fully has our morning sun now appeared, that the upright in heart may walk and not stumble, and the poor in spirit may run in the path of life, and not fall. For indeed we may say, the night is spent, and the day is come; therefore let us walk in the day, and put on the armour of light, as many as are made the children thereof. Where the light of this sun is arisen, and in whose hearts it shineth, it cannot but give some testimony, *through such a one, of its own glory, virtues, and excellency,* to them that sit in darkness, and in the bondage of corruption, that they also may see the same light and glory, arise in their tabernacles. For it is the property of this spiritual heavenly light, to shine forth out of darkness, and to give light to such as have long sat in darkness, that their souls may live and be refreshed with the light of the living. And for this cause do we labour and spend, and are spent, accounting nothing too dear for us, that the light of truth may shine abroad, and guide the upright in the perfect way, till the elect be gathered into the pasture of eternal life, and the sun so elevated in the firmament of joy and praises, *never to go down;* but the saying fulfilled, "There shall be no night, but the light of the sun shall be as the light of seven days."

This was the great object of their life, and the deep exercises which they passed through; and did all who profess to venerate those men, and to contend for the doctrines they preached, walk in the light, they would have the same fellowship one with another, and show forth the fruits of the same Holy Spirit that governed them, by which the name of the Lord Jesus would be honoured, and others invited into his sheep-fold.

In one of the chapters of the Essay, he addresses the professors, on the diversity of opinions concerning spiritual things, which prevails among them, and gives what he conceives to be the causes. He says, it is "because you want the Spirit of God to guide you, and it is not the rule of your knowledge and judgment; and the wanting the Spirit of God in which is unity among saints, therefore is it you are divided, and diverse, and contrary one to another in these things. It is because ye want the Spirit of God, which only teaches the true knowledge of God, and gives an understanding in all his ways and matters; that teacheth true faith, true doctrine and true worship, and all things about the church, ministry, and religion" "If you all had the Spirit of God that gave forth the Scriptures, and by which Spirit the saints of God were guided in days past, it would lead you into unity, and to be of one mind, one heart and one soul, in all the matters pertaining to God's kingdom. Then you would have unity with God, and one with another in all his ways, and there would have been no division, nor contention among you about spiritual matters; but because you want that, therefore you have strife and division amongst you, even throughout all Christendom. And this is a shame to Christendom, that all should profess Christ Jesus, and faith in him, and salvation by him, and his doctrine and worship, and yet be in strife and division, and in great contentions concerning the same—and this shows that ye are all fallen from the life of Christianity, as it was held in the apostles' days amongst the true Christians; for they were of one heart, mind, soul and spirit, as it is written. They were of one faith, of one worship, of one doctrine, and had one way of church government; and this continued amongst the churches of Christ, till there were some that had erred from the Spirit of God in their own consciences; and then they also erred in faith, in doctrine, and in all things relating to God; and these were the apostate Christians."

Have we kept to the Spirit of God in this day, so as consistently to bear such a testimony to the oneness of faith and fellowship, which it produces among those who are governed by it, and to reprove others for their disagreement in doctrine and practice? Has not the light among us become greatly eclipsed by the love of the world, and the spirit of division and jealousy, produced by attempts to introduce doctrines which we do not own?

Concerning the bad effects of these doctrines in matters of faith and worship, E. Burroughs says, it "has begotten and brought forth very much evil throughout the world; much heart-burning, envy, hard-heartedness, strife and contention between kings and rulers, between nations, cities, neighbours, and between brothers. This division hath bad effects among all these; so that it hath brought forth much war and bloodshed between kings, great persecutions between rulers and their people, and great debate and *strife amongst neighbours and friends;* so that murders and the loss of many lives have been produced upon this quarrel, about difference in matters of faith and religion. Antichrist hath not only divided people in judgment, but hath also provoked people into rage and envy, to the killing and destroying one another; and even that division about spiritual things, *hath been turned into personal enmity,* and brought forth in the end, killing the bodies of thousands, when the original debate hath arisen about church government or points of religion; and this is the woful effect that division of religion hath brought forth in all Christendom."

Here are portrayed some of the sad consequences of men setting forth opinions on points of doctrine which the Holy Spirit never dictated, and by which debates, contentions and divisions have been introduced among peaceable Christians, and the happiness of families, and of the brotherhood, which had before prevailed among them, has been broken up. What a lamentable condition for religious society to be involved in, and how watchful over himself, and scrupulous should every one be of doing anything to produce such a state of things!

"The means and way to be reconciled, he says, and to come out of all division and strife, and to come into peace with God and one with another about faith and church government, is by the Spirit of God. Every one of you in particular must receive the Spirit of Christ, that it may work in every one of your hearts, true faith; and teach every one the true worship of God, and the way of doctrine and true church government. It is the Spirit of Christ in every one, both male and female, that must reconcile and bring into unity with God, and one with another in all spiritual things; for it is that which is the *bond of peace and love among true Christians,* and it is the which reconciles people's hearts into oneness. If you receive the Spirit which gave forth the Scriptures, it will work in you the same faith, and lead you in the same way of worship which the Scriptures speak of, and then you will cease taking up conceits, and making imitations of church government from the letter, but the same Spirit will work in your hearts faith and knowledge in the fulfilling of the Scriptures; and this is true Christianity. There is a great deal of difference between making a conformity in the imitation of a worship and church government, from the Scriptures without the Spirit; and between the Spirit's teaching and leading into the same truth and same worship and church government which the Scripture speak of; the one is of Christ, and is in unity peace and everlasting fellowship; the other is of antichrist, and is in division, strife, and contention."

If it may be said to us, "Physician, heal thyself,"—"first cast the beam out of thine own eye then shalt thou see clearly to cast out the mote out of thy brother's eye," let us be willing to come in all humility to the Spirit of truth in our own hearts, which alone can enlighten every one to see his own condition, raise fervent prayer to have every obstruction to a clear vision removed, and enable us to return to the unity of the Spirit, and confirm the truth of our doctrines, by a christian spirit and practice.

At the conclusion of a general epistle to Friends under the same date of the above, Edward Burrough says, "And last of all I do advise and exhort, that ye have love and unity in the Spirit of the Lord and one with another, that oneness of heart, and soul, and spirit may be amongst us being bound up in the holy covenant of the Father, even willing to do, or to *suffer one for another.* In this spirit of unity, the Lord will bless us, and make us strong and able to go through joyfully all our afflictions. But if any *strife or division* be in the body, *it weakens the whole.* If one member vex another through discord, this is not of the Father, but contrary to Him. This is not for the safety of the body, but bruises and wounds it, and may *more afflict the soul of the righteous,* than all outward enemies; and *strife and contention arising out of our own bowels, may sooner work our overthrow than all the opposition that can come from men.*

"Oh, therefore, as a brother, as a father

any, and as a servant to all, let me entreat and beseech, that ye follow those things that make for peace—that ye love one another as Christ has loved you, and that ye be like-minded in all things, even one, as the Father and the Son are one; and so shall the blessing of the Lord never depart from you. For, dear Friends, the *Lord hath never been wanting unto us*, but *always near at hand to fill us with his riches and treasure;* and are not we vessels of honour? Is not his name in our foreheads? are not we the flock of his fold? Therefore, let us honour him by the works of truth, of love, of mercy, and all the works of righteousness. Let us bring forth fruits unto the Father, thereby *proving that we are true branches in Christ the Vine;* and let us give up to suffer all things patiently for the testimony of his Truth written in our hearts. If we live, *let it be to him only*, and if we die, let it be for him, having the seal of his good Spirit in us, that whether we live or die, we are the Lord's."

Hundreds at this day, we believe, are secretly breathing to the Father of mercies that he will rebuke the destroyer, and not permit him to scatter and lay us waste, but renewedly gather the members of our Society under the banner of the Prince of Peace, to spread and exalt his kingdom by the power and the fruits of His Holy Spirit, and again become one another's joy in the Lord.

Antiquities.

We have now in our possession, for safekeeping, and as a nucleus of a collection of curiosities, some very curious and singular articles made of copper. They were found near the west shore of the river, about a mile above the mouth, at a place where now is a brick-yard, and these were disinterred by those digging in search of good brick-clay. After taking off from the surface of the ground about two feet of sand, the clay was exposed, and the stump of a tree was discovered. Digging still lower about six or eight inches into the clay, and overturning the stump, these articles were brought to light.

First, a copper spear, about fourteen inches in length, and at its base a groove or dovetail is made in which to insert a wooden shaft or handle; two other spears, each about twelve inches in length, and similar to the first. Third, two pieces of copper which had evidently been very nicely forged, but for what purpose they could ever have been applied, is by no means plain, and it is quite difficult to give in writing a clear description of them. As good an idea of their shape, however, can be got by supposing them to be the matrix in which was cast one of the spears. This is not, however, the purpose to which they were applied. It is far more likely they were used as cutting tools, but then there is no means apparent by which the implement can be held—no place to fasten it to a handle. These are about fourteen inches long and two inches wide; upon one end there is the appearance of an attempt to make a cutting edge. They weigh about three pounds each, and are specimens of good workmanship.

The question naturally arises, who made these things? Did the earliest French discoverers make them; or are they the work of a race long ago extinct, the same who first opened these mines?

It seems to us—for we can only indulge in speculation on the subject—that these tools could not have been the work of the Europeans who came here; for they would not have made a tool like the last two, about the use of which we should be ignorant. They are made of copper, a material not nearly so good as iron or steel for cutting purposes, the manufacture of which they were familiar with, and would most likely bring with them.

Our Indians do not, nor have they the skill or implements to work so well any metal, and they all are ignorant of the use of such tools. They have among them traditions of the existence of a race of men to whom they ascribe all the skill necessary to accomplish these workings we find at the mines, and make the tools we now find.

That these tools were the work of those who lived here years ago seems the more likely from the place and position in which they were found, being in the strata of clay lying under the roots of a stump, and about forty feet above the present level of the river and lake. The tree had grown up since these articles had been put there, and the deposit of sand made above the clay to the depth of two feet. To do that, the river and lake must have been forty feet higher than its present level. This, of course, was years ago, before the memory of the present races now inhabiting this country. —*Lake Superior Mining News.*

For "The Friend."

Convictions of Truth.

The greatest blessing bestowed upon a rational, accountable being, is the convicting and preserving power of the Holy Spirit. This is often felt at an early period of life, and when none is privy to it, but the soul to which it is extended. It is an unflattering witness for God, and against evil, however secretly it is committed, or however fair the outside may appear to men. The natural mind is opposed to its dictates and its restraints, because it prefers the indulgence of the carnal appetites to the cross of Christ, which is the strait gate and the narrow way to life, and few there be who go in thereat. Thomas Chalkley says, "One time I was at play at a neighbour's house with the children, and in the midst of my sport, I was reached with strong conviction, insomuch that I could not forbear weeping. The children's mother observing that I wept, said, 'Why do you weep, Tommy?' I told her I could not tell, except it was because I was a naughty boy. 'O,' said she, 'don't believe him, for that's the devil tells you so; for you are the best boy in all our street.' But I knew I was told the truth by conviction, and that she was mistaken: for I plainly understood by clear conviction, and by the Holy Scriptures, which I had been trained up in the reading of, that I was too vain and wanton. I loved music, dancing and playing at cards, and was followed with the judgments of God therefor in the secret of my soul. What I did in those sports and games, I always took care to do out of the sight, and without the knowledge of my tender parents; for I was afraid of their reproofs and corrections, the which I was sure to have, if they had any intelligence of it."

Music and dancing are thought by many to be necessary accomplishments, and there may be some among Friends, who violate their religious profession in encouraging their children to learn and practise them. Friends have always disapproved of both, as it is evident his parents would have reprimanded him, had they known he indulged in either. He had the reproofs of Divine instruction in his own heart, condemning him for clandestinely resorting to these vain and prejudicial amusements, as well as the conscientious disapprobation of religious parents. It was a blessing to have such care-takers, which draws down the favour of heaven upon them for their faithfulness, as well as it is an inexpressible advantage to their children. He gives a further instance of the mercy and watchful care of his heavenly Father in warning him of the sinfulness and danger of card-playing, which might have led him to the gambling-table, and prove his ruin. "Unknown to my parents, I bought a pack of cards to make use of, when I went to my relations in the country; and at the time called Christmas, five miles on my way, I went to a meeting at Wanstead, at which a minister of Christ declared against the evil of gaming, and particularly of cards; and that the time which people pretend to keep holy for Christ's sake, many spend mostly in wickedness, sports and games; even some pretending to be religious; and generally speaking, more sin and evil is committed in this time, than in the like space in all the year; so that the devil is served instead of honouring Christ. From this meeting I went to the house of my relations, where the parson of the next parish lodged that night, who played cards with them sometimes. The time drawing near that we were to go to our games, my uncle called to the doctor, as he called him, to me and to my cousin to come and take a game of cards; at which I had strong convictions upon me not to do it, as being evil. I secretly cried to the Lord to keep me faithful to him; and seeing a Bible in the window, I was glad, took it down and read to myself, greatly rejoicing that I was preserved out of the snare. My uncle called again, Come, doctor, you and I, my wife and daughter will have a game at cards, for I see my cousin is better disposed. Then he looked upon me, and said, he was better disposed also. So their sport for that time was spoiled, and mine in that practice forever; for I never, as I remember, played with them more, but as soon as I came home, offered my untouched pack of cards to the fire. Of this I am certain, the use of them is of evil consequence, and draws away the mind from heaven and heavenly things; for which reason all Christians ought to shun them as engines of Satan; and music and dancing, having generally the same tendency, ought therefore to be refrained from. The sentiments of the Waldenses are worthy the consideration of all Christians—that as many paces or steps as a man or woman takes in a dance, so many paces or steps they take towards hell."

We would hope that none of the members of our religious Society allow themselves to resort to card-playing. When a fondness for gaming of any description is contracted, it would appear to us from the accounts we read of the powerful hold it takes upon gamblers, that deep degradation and inextricable ruin must await them. How fearfully the reverse of that of the true Christian, whose treasure and whose heart are in heaven, must be the desperate and sunk condition of the gambler! What effect the testimony of the minister had upon Thomas Chalkley, he does not directly say; but we may believe it contributed to raise and fasten on his susceptible mind, conviction of the evil of gaming—and it shows the importance of ministers keeping faithfully to the discharge of their religious duty in the exercise of their gifts, not knowing when or where seed may be sown and prosper—and also the advantage of the members steadily attending our religious meetings, that we may be in the way of receiving the good, which the Lord has in store for us.

Cayuga Lake.—The Ithaca Journal says that a phenomenon similar to the one noticed in the waters of the Seneca Lake has been observed in those of the Cayuga. The water suddenly rose about three feet five inches, and remained at that height six or seven minutes, then subsided, and after a brief interval, again rose two feet, and then fell to its original level. It is stated that while rising like a huge wave, the water turned up two old wrecks of boats near the pier, which were completely imbedded in mud. In the reflux an old

boat turned up near the pier, which no one ever remembered having seen. An old fisherman said he had lived beside the Cayuga fifty years, and he never knew it to cut such tantrums before.

For "The Friend."

The following unpretending lines, if deemed suitable for "The Friend," are at the service of the Editor. Now is the season for wild flowers in the richest profusion, and many are the light tripping feet, in pursuit of them over field and wood, or climbing the rugged rock: while of all the wealth of loveliest form and hue which is gathered, none is more beautiful than that graceful gem of crimson and gold, which adorns its hoary front,

THE WILD COLUMBINE.

How daintily thy crimson gems
Hang trembling on thy fragile stems
Child of the rock, bright columbine!
With fairy leaves of emerald green,
No nursling of the wild I ween
Displays more elegance than thine.

Thou mindst me of my childhood's hours,
When rambling 'mid the wild wood bowers;—
Oh, what a joy it was to find
Thy jewels on the rock's dark face,
With pink Azaleas, and sprays
Of snowy dogwood flowers, to bind.

Not on the verdant valley's breast,
The streamlet's brink, soft hillock's crest,
Or nourished in the meadow loam,
Where blooms of every scent and hue
Revel in sunshine and in dew,
Findst thou a blest and bounteous home.

But in thy clift, all bare and rude
Amid the shadowy solitude—
E'en as a youthful cloistered nun,
Or sorrowing exile's beauteous child,
Blooming in native freedom wild,
To cheer with smiles his cavern lone.

Thy clinging roots their crevice hold
Where the wind drifts a little mould,
Of the silvery beach's fallen leaves;
Through whose green crown a quivering ray
Of sunlight, falls on thy flowrets gay,
All that to thee the forest gives.

For these, and the all-blessing dews,
Thou yieldst thy meed of richest hues,
Thy grace of leaves, and stem and flowers.
Emblem of patient faith, thou art,
That springeth in the joyless heart,
And gilds with hope life's darkest hours.

Selected.

THE HOURS.

The hours are viewless angels,
That still go gliding by,
And bear each minute's record up
To Him who sits on high.

And we, who walk among them,
As one by one departs,
See not that they are hovering
Forever round our hearts.

Like summer-bees, that hover
Around the idle flowers,
They gather every act and thought,
Those viewless angel hours.

The poison or the nectar
The heart's deep flower-cups yield,
A sample still they gather swift,
And leave us in the field.

And some flit by on pinions
Of joyous gold and blue,
And some flag on with drooping wings
Of sorrow's darker hue.

But still they steal the record,
And bear it far away;
Their mission-flight by day or night
No magic power can stay.

And as we spend each minute
That God to us hath given,
The deeds are known before His throne,
The tale is told in heaven.

These bee-like hours we see not,
Nor hear their noiseless wings;
We only feel, too oft, when flown,
That they have left their stings.

So, teach me, heavenly Father,
To meet each flying hour,
That as they go, they may not show
My heart a poison flower!

Expedition for the Relief of Dr. Kane.

The third expedition from New York to the Arctic region is now nearly in readiness to sail on its benevolent mission. The two vessels purchased for the purpose have not yet been named, but have been strengthened and otherwise prepared for Northern service. The largest is known as the bark "Eringo," registering 327 tons, and was purchased for $17,000. Her consort is a propeller of 250 tons, which cost $30,000, and will arrive here from Philadelphia in a day or two. The former is now receiving her provisions and stores, and will be complete this week. Both are expected to sail by the 1st proximo, steering direct for the coast of Greenland, and continuing Northward to Smith's Sound.

The original expedition from this city under Dr. Kane, fitted out under the auspices of our generous townsman, Henry Grinnell, Esq., consisted of the "Advance" and "Rescue," sailed on its Northern voyage in the year 1850, and returned the year following, Not despairing of ultimate success, the Advance was again despatched, under the command of Dr. Kane, in 1853, and it is for her relief that the present expedition is fitting out. The "Advance" is the property of H. Grinnell, and her crew and officers, numbering sixteen men, are still under his pay. In the expedition now noticed, the entire expense is borne by the Government.

The protracted absence of Dr. Kane, affords no conclusive evidence of danger or misfortune, but being left entirely alone in his icy solitude, by the return, within the last few months, of the numerous expeditions sent in search of Sir John Franklin, any needed assistance, to be of avail, must be despatched at once. Congress therefore appropriated $150,000 (which will probably exceed the amount required) and authorized the Secretary of the Navy "to despatch a suitable naval or other steamer, and if necessary, a tender, to the Arctic seas, for the purpose of rescuing or affording relief to "the intrepid American navigator." The Congressional resolutions conferring this authority, provide "that such steamer and tender shall be officered and manned by volunteers from the Navy, and others who may declare their willingness to be so engaged."

We yesterday visited the naval station at Brooklyn, and were pleased to learn that the Secretary of the Navy and officers of the yard are disposed to fit out the expedition in the best possible manner, and take a deep interest in its progress and success. The orders are that it shall be amply provided with two years' rations, and which, with the extras, will suffice for a cruise of fully three years. The provisions in preparation consist chiefly of "pemmican," or concentrated meat, besides soups, Borden's patent meat biscuit, lime-juice, (anti-scorbutic,) pickles, &c. The supplies will include something like 20,600 pounds of dried meats and soups, and 15,000 pounds of preserved vegetables. The provisions for officers and sailors will be of the same quality. The "pemmican" is the same article with which the Kane Expedition was provided, and a sample reserved for examination, after being kept for two years in this warm climate, was recently examined and found to be sweet and nutricious as when put up.

The quantity of beef required for this expedition was 4,000 lbs. (rump pieces) which, upon being divested of fatty portions, were cut into thin steaks taken to a malt kiln and thoroughly dried. By this process its weight was reduced to 1,300 lbs. It was then chopped fine by the apparatus employed by sausage makers, kneaded up with 1,000 lbs good lard, with a small addition of sugar and currants. Then being hermetically sealed in tin cans it is in shipping order. The vessel will also take out a large supply of clothing, adapted to a northern climate. Among other things, 500 pair of stockings have been provided. In travelling on foot it is customary to wear three pair at a time and cover the whole with canvas boots. The two vessels will carry 300 tons of anthracite coal, for the use of the propellers and for ordinary consumption. Should more be needed, abundant supplies can be obtained at Disco, on the coast of Greenland where Inglefield, the English navigator, found it to exist in abundance, it being only necessary to dig it out from the shore.

We were shown at the shops at the Navy Yard 70 ice anchors, of different sizes, to be used in anchoring the vessels, or warping up through the lanes of ice. They are little else than angular hooks, to be sunk in holes drilled in the ice. Some weigh as much as 70 or 80 pounds, but the majority are of about 15 pounds weight. In addition, there are ten sledges, four of which are about eleven feet in length, to be drawn by dogs or with ropes. They are sharp at each end, after the pattern adopted by the British Admiralty, and are shod with iron. In excursions over the ice, they will be manned by an officer and six men.

The bark, as fitted for sea, is worthy of examination. Without, the hull is covered with 2½ inch planking, and armed with iron from the bows to the mainchains Forward she is completely sheathed, from the bulwarks to the keel. Within, timbers, knees and kelsons have been introduced, to effectually protect her from collision with icebergs or from lateral pressure. The bows especially, are filled with timbers, and divided off into a water tight compartment. The rudder is so arranged that it can be instantly unshipped, and triced up under the stern. The vessel is also furnished with four pumps, so that every possible precaution seems to have been taken to ensure her safety. The officers quarters are completely lined with cork to absorb moisture, and the seamen are well provided for, in a house on deck: or should they prefer, they have snug quarters below. The bark is a fine new vessel, having made only two trips to Rio, and is a fast sailer.

The number of men going out on this expedition, will be forty-seven, including four officers to each vessel. Contrary to anticipations, not the least difficulty is experienced in procuring men, and of the best quality. Many good seamen are out of employ, from the return of recent government vessels and the inactive state of the shipping business, and the expedition will be supplied with a *personnel* of rare excellence. Only two have been accepted from those who went out on former expeditions, though several have offered. As fast as accepted, they are put on board the receiving ship North Carolina. Only one officer and the physicians remain to be selected though none have as yet been formally appointed.

Lieut. H. J. Hartstene, is to command the expedition.

Lieut. Chas. C. Simms, to command the tender.

One of the surgeons is a younger son of Judge

ane, of Philadelphia, Dr. John K. Kane, who ins in the search for his brother. Lovell was e of the officers in the expedition under Lieut. e Haven.

This truly humane and philanthropic endeavour relieve those who nobly volunteered for the res- e of the lost Sir John Franklin, deserves and ill receive the warm sympathies and best wishes all whose esteem is worth possessing.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

WILLIAM SOUTHEBY.

(Continued from page 293.)

George Keith, after he had run awhile in his ontentious course, was disposed to quarrel with very one who retained their integrity in the ruth, and upheld the spirituality of ancient uakerism. William Southeby affronted him, by estifying that he heard him say, that "the light" as not sufficient to salvation. This perhaps uickened his desire of a quarrel, and he declared hat William denied any general day of judgment, nd the resurrection of the dead, only what every ne witnessed within him here on earth. William, n reply, solemnly stated it as his belief, that the octrine he was charged with holding, was damna- le and atheistical, and declared that he believed he resurrection, according to the Scriptures, and he ancient doctrine of Friends. He acknowledged hat he did not hold it, as he held it when a papist, or then his views were very carnal and outward; e then held, he says, "that the great judgment hould be in an outward valley, called the valley of ehoshaphat, in the land of Israel, and that we hould see with these outward eyes; but I believe ow, it will be more spiritual." Thomas Ellwood, n defending William, says, "this did not please . K., who catching hold of his words, that when papist, he owned it very carnally and outwardly, e would slily suggest from thence, as if his be- ief of it was worse now than when he was a papist. erhaps, indeed, his belief of it, when a papist, night best fit G. K.'s notion of it, who, I have eard, did jump in with the papists, in pitching pon the valley of Jehoshaphat for the place, till a raveller telling him that place was too streight, e took wing into the air."

The tempest awakened by George Keith in the ociety of Friends in Philadelphia, soon subsided, nd the church was busily engaged in endeavour- ng to remove all trace of its devastations. William outheby was much employed in looking after he spiritual and moral welfare of its members as n overseer, and as one appointed to labour for he restoration of offenders. Desirous that the ociety of Friends might clear its hands of sla- ery, and perform its duty towards the negroes in ondage among them, he, in the beginning of 696, laid before the Monthly Meeting a paper on he subject, and a copy of a work of George Fox n Gospel Order, which set forth clearly his iews relative to the treatment of slaves, and the ropriety of giving them their freedom after a ervice of years, and enjoining when they were nade free that they should not be let "go away mpty-handed." The Monthly Meeting, although t made no minute on the subject, directed that he matter should be laid before the Quarterly Meeting, held on the 12th of the Fourth month, hat year, which, after consideration, sent Wil- iam's paper and the little book of George Fox's o the Yearly Meeting. The matter being thus rought before that body, a minute of advice was made against bringing in any more negroes into the country, and to encourage those who held any to bring them to religious meetings, and to restrain them from evil courses. Being also concerned on account of the manner in which trading with the Indians was conducted, William Southeby drew up a paper on the subject which he presented to the Monthly Meeting, in the Fifth month, 1698. On hearing it read, the concern seemed to take hold of the feelings of the Friends assembled. They all knew that wrong was often done to these poor children of the forest in bargaining with them, the traders first making them drunk. Such a practice might not be indulged in by any member of the Society of Friends, but could not Friends do something to warn the Indians against allowing themselves to be enticed into drunkenness, which, disqualifying them for business, made cheating them easy. After consultation, the meeting directed Griffith Owen to request John Stephens, of Radnor, who understood the language of the Delaware Indians, the Lenni Lenape, to visit them, and get them to appoint a place for Friends to have a conference with them. It was proposed that it should be had in one of the Indian towns. What effect this effort to break up the iniquitous system of robbing the Indians produced, we have no means of ascertaining.

Many of the labours of William Southeby, of which we catch a glimpse, are connected with the relief of the poor and suffering. In the Sixth month, 1699, we find him appointed by the Monthly Meeting "to assist sick and weak passengers arrived from Liverpool, with money and conveniences for their present relief." We have said that William Southeby had a clear testimony against slavery, and his desire for the spiritual well being of all the children of his heavenly Father, must have led him to rejoice on hearing William Penn open in the Monthly Meeting, in the First month, 1700, a concern on behalf of negroes and Indians. According to the account preserved, the Governor informed the meeting that a concern had long been on his mind, that Friends ought to be very careful in discharging a good conscience towards the negroes and Indians in all respects, but more especially for the good of their souls. He desired that they might be brought as frequently as might be to the First-day meetings.

The remarks of the Governor seemed to awaken a concern in the meeting, and after a time of consideration respecting what would be best to be done, it was concluded to appoint a meeting for the negroes to be held once a month on the fourth Third-day, at 9 o'clock, in the morning. William Southeby was desired to give public notice at meeting the next First-day, and to request the masters to carry the word home to their families, and to come when possible with their negroes to meeting. As respects the Indians, efforts were directed to be made towards obtaining a meeting with them.

In the Sixth month, 1700, William Southeby laid before the Monthly Meeting a paper against profaneness, which, on being read, was satisfactory to the meeting, which appointed Griffith Owen and Nicholas Waln to make some small alterations in it, to fit it for the press.

The subject of negro slavery pressed upon William's mind, and when, in 1711, the faithful lovers of liberty and justice in Chester sent up to the Yearly Meeting the information, that they were "dissatisfied with Friends buying and encouraging the bringing in of negroes," he was disposed to rejoice, and desired to see some efficient blow given to this iniquitous traffic in all its branches. Friends were not prepared, in the unity, to do more than reiterate the advice of the meeting given in 1696, to discourage the bringing in of more negroes.

In 1712, the subject of slavery was again before the Yearly Meeting, and strenuous efforts were made to induce that body to take measures to discourage importing and holding slaves for life. The meeting was not prepared to take a step which neither London Yearly Meeting nor any other in the world had taken, and yet the concern was so weightily before it, that it seemed right to act in some way in it. It was proposed that as London Yearly Meeting corresponded with all the Yearly Meetings in the world, that if they could get that body to move in the matter, and bring it before the rest, that a harmonious action might be had on the subject. This plan was adopted. It was, however, stiffly opposed by William Southeby and some others, who thought Philadelphia Yearly Meeting ought to do its own duty, and leave other bodies to perform their own. The Yearly Meeting Epistle of this year laid the subject weightily before London Yearly Meeting.

William Southeby appears to have been somewhat soured against Friends by the action of the Yearly Meeting. He so clearly saw the right in the matter himself, that he had not sufficient charity for those whose eyes were as yet only anointed to see men as trees walking. And he doubtlessly very wrongfully judged many, who were earnestly desirous that the Truth should prevail, and the unity and good feeling in the church be preserved. As he did not unite with what the body had done, he undertook to act for himself, and petitioned the Assembly of Pennsylvania to declare all negroes in that province free. This measure arose probably more out of creaturely impatience than any supposed sense of divine leading to such a measure, and it occasioned a prompt resolve of the Legislature, "It is neither just nor convenient to set them at liberty."

When, in 1714, the answer from London Yearly Meeting was received, which manifested that they were not disposed to take any further step, than to say the importing negroes from their own country was not a "commendable nor allowed practice," and to hold up the dangers which might result from the increase of negro slaves. William Southeby seeing that things had fallen out as he had foreseen, wrote a paper on the subject to the Yearly Meeting, which was not put upon the minutes. In this paper, he says, "More and better fruits may reasonably be expected from us than from other places; being so many ministers and other ancient Friends that came out of England, to live here, therefore we ought to be exemplary to other places, and not take liberty to do things, because others do them." He ends thus, "You strive to discourage me for being so plain with you, but seeing it is really and truely for the promotion of Truth and Righteousness in the earth, and having the countenance and unity of some of the best of men in it, I am not much concerned for the frowns or displeasure of any that may oppose it."

William Southeby had hitherto, with all his zeal on this subject, lived in unity with his friends, however many of them were not prepared to go so far as he did in this matter. That unity was now somewhat shaken,—not so much because his views differed from theirs, as because he had not learned the lesson of submission to the judgment of the body, when it did not accord with what he thought right. There were many of the valuable members of the Yearly Meeting, who held with him entirely on the subject of slavery; but they felt that the unity of the church depended on its moving along in this concern as fast, and no faster than the way, through the blessing of

the Most High on the faithfulness of dedicated brethren, was made for it. They were constrained to bear testimony to the Truth, with honest simplicity and meekness, and then acquiesced in the steps taken year by year, although these steps fell far short of what they desired. Thus, these patient, hopeful, consistent pleaders for the cause of humanity and justice, saw the light gradually grow brighter and brighter, and some lingered to see the faithfulness with which they had laboured and waited, rewarded by happy results. But our dear friend, William Southeby, as faithful in his testimony as any of them, grew impatient at the dilitoriness of his companions, undertook to labour in the cause, separate from the action of the body, stirred up unnecessarily unkind feelings, which did not increase his own comfort, nor advance the testimony he wished to promote.

(To be continued.)

[Owing to the accumulation of other matter, the interesting Reports presented to our late Yearly meeting from the committee charged with the care of West-Town Boarding School; and from that having the civilization of the Indians on the Alleghany under its charge, have not before found a place in our columns. We present the former to our readers in this number, and expect to publish the latter in the next succeeding.]

The following Report of the Committee having charge of the Boarding School at West-Town, was read; and the labours and care of the Friends under the appointment, and of those employed in its immediate management, and of the teachers, were satisfactory to the meeting. They were encouraged to prosecute the concern according to the original object, of a religious guarded education, looking for the Divine blessing upon their efforts —viz:

To the Yearly Meeting.—In presenting their usual annual statement of the condition of the Boarding School at West-Town, the Committee entrusted with its management, feel that they have cause to acknowledge, with gratitude to the Preserver of men, the general good health with which the family has been favoured; very few cases of serious disease having occurred during the past year.

The School has been unusually large, averaging during the year ending Tenth month 16th, 1854, 227 pupils, of whom 115 were boys, and 112 girls; and the admissions were 67 boys and 75 girls.

Owing to the large number of applications for admission, and the late period at which many of them were made, the children of some of the members of our own Yearly meeting could not be received; which the Committee regretted. To obviate this in future, it is requested that parents and others intending to send children to West-Town, or to continue them in the School, may enter their names with the Treasurer or Superintendent, at least as early as the 1st of Third month, and 1st of Ninth month, in each year; which will probably ensure their admission, and give time for filling any vacancies which may remain, with pupils from more distant parts, it being desirable that the School should be kept full.

Inconvenience and loss having arisen, from the want of due observance by parents of children living out of the limits of our Yearly meeting, of the rule which requires the quarterly pre-payment of the price of Board and Tuition, and also from the necessity of making advances for their clothing and other expenses, the Committee have agreed that hereafter, the whole price of Board and Tuition of such pupils, for each session, must be paid in advance; and an additional sum of not less than $10 be deposited with the Superintendent, to meet contingent expenses.

Probably at no former period has this valuable Seminary offered greater advantages for obtaining a guarded literary and religious education. The instruction is thorough and accurate, having especial reference to the most useful and practical branches of knowledge; and care is taken that the children shall not slightly pass over their studies, without clearly understanding what they learn. The lectures on Chemistry and Natural Philosophy are valuable and instructive. A powerful and complete Electrical Machine has been added to the Apparatus, and the experiments by which the different subjects are illustrated, are highly interesting to the pupils.

The course of Studies embraces all the branches of a good English education; including Surveying, Astronomy and other branches of Mathematics; and careful instruction in the Latin and Greek Languages is given to such as wish it.

A knowledge of the principles of our religious Society is imparted, by lessons in the Holy Scriptures, and in the approved writings of Friends, adapted to this object; and there is also frequent vocal reading of religious works, calculated to illustrate and enforce them, and to promote piety and virtue.

Where there is so large a number of Scholars, and such variety in their talents and application, the advancement made must also vary. But the examinations held at the close of each session evince, on the part of the students generally, a commendable degree of industry and proficiency, and bear testimony to the assiduity and efficiency of the Teachers.

Meetings for Divine Worship have been regularly held on First and Fifth-days, in which the deportment of the children has been generally satisfactory.

In the course of the past year, several important improvements have been made in and about the School premises. The apparatus for making gas from rosin has been completed, and is found to answer well; and the necessary pipes and fixtures for burning it, have been introduced throughout the School building, the galleries, and the nurseries, &c. The increased amount, and the safety of the light thus obtained, add greatly to the comfort and convenience of the family, as well as tend to promote good order. Its use, thus far, has been very satisfactory, and will not, it is believed, increase the annual cost of lighting the premises.

The irregularity with which the forcing-pump, for throwing up a supply of water, was worked, in consequence of its connexion with the saw and grist mill, occasioned it to be frequently out of order; and the small size of the supply pipe still further diminished, by the rust and the deposit which collected on the inside, rendered it difficult to procure a regular and adequate supply of water. As a new supply pipe was deemed necessary, it was concluded to erect a house and water-wheel, in a position, about four hundred feet nearer to the School-house, where the pump could be worked entirely separate from the mill. This has been done, and about fourteen hundred feet of three inch iron pipe laid, in nearly a straight line to the reservoir. In digging for the foundation of the wheel-house, a copious spring of excellent water was found, from which an abundant supply is now thrown up to the School, with much less difficulty and interruption than upon the former plan. The large iron reservoir has been raised; so that water can now be conveyed from it to parts of the building which before could not be supplied. The ease and rapidity with which water can now be obtained, is a great additional security in case of fire.

For the accommodation of the boys' bath-house a brick building, 64 by 20 feet, has been erected on the site of the former play-shed. It is divided into 20 apartments, each furnished with an iron bathing tub, supplied with hot and cold water, and the whole building is warmed and lighted. The arrangement is complete and commodious, and it is believed will prove valuable in promoting cleanliness and health.

In order to furnish the boys with ample space for recreation during inclement weather, the shed has been extended eastward, so as to cover nearly as much ground as before the bath-house was erected. Various other improvements have been made, contributing essentially to the convenience and welfare of the family; and the cost of the whole has been nearly defrayed by the voluntary contributions of Friends interested in the welfare of the Institution.

A sum of money has also been contributed for fitting up, and increasing the Library. Some progress has been made in purchasing books, and as soon as the new cases are provided, it is intended to have the whole arranged and put in good order.

The disbursements for family expenses have been $11,813 60; for salaries and wages $8267 72; incidental expenses $414 13; and for repairs and improvements $764 22—making a total of $21,259 72. There have been charged for board and tuition $18,186 62; for rents of tenements and saw and grist mills, and profits on merchandise sold $918 23; amounting to $19,104 85; and leaving a deficiency of $2,154 87 on the School account. The income of the fund for general purposes was $960 69; and the net balance to the credit of the farm is $1678 90; which with the appropriation of the Yearly Meeting, gives a credit on the general balance of $1284 72. Beside the above charges, at the time the account was made up, there had been paid on account of the buildings for the accommodation of the daughters and of the family having charge of it, $1185 85; and there is still a considerable balance due on this account.

The present mode of conducting the farm continues to give satisfaction. The fertility of the soil is increasing, the fencing is in an improved condition, the meadow is being drained, and other improvements, calculated to increase its productiveness have been made, the benefits of which the Committee believe will soon be felt. The gross profits of the concern for the year, were $2794 44; out of which $317 06 were expended for guano and plaster; and $798 48, for ditching the meadow, fencing, &c.; leaving a net profit after defraying these expenses, of $1678 90.

One of the old tenant houses being very much out of repair, and the farmer deeming it necessary that additional accommodations should be provided for working-men with families, the Committee after deliberate consideration, has consented to the erection of two small tenements; the cost of which will probably be about $1000. The outlay, and the cost of necessary repairs to the Infirmary, School-house, and other buildings which cannot with propriety be delayed much longer, will require considerable funds, and make the appropriation of the Yearly Meeting still necessary.

It has long been the desire of the Committee that as far as they can conveniently do so, parents and others should avoid visiting at the School on the First-day of the week. Such visits interrupt the quiet and order of the family, and are sometimes burdensome to the Friends who have the care of the farm-house, as well as to their dome

fic; obliging them to provide for the entertainment of visitors, when it seems only reasonable they should have the privilege of quietude and rest from the labours of the week. Such visits being been not unfrequent of latter time, the Committee is induced to call the attention of Friends again to the subject, in the hope that they will kindly co-operate in maintaining the regulation of the Institution in this respect.

Impressed with the importance and responsibility of the trust devolving upon them, in the care and management of this Seminary, it is the concern of the Committee to conduct it with a steady reference to the objects which it was established to promote, and which can only be obtained by a constant recurrence to that religious concern in which the Institution had its origin. We believe that Divine blessing has rested upon it, and made the watchful Christian care exercised over the youth educated there, a lasting benefit to many; and we fervently desire, that by a humble dependence upon the guidance of heavenly wisdom, and patient persevering endeavours, by example and precept, to imbue the youthful mind with Christian principles, and train it to virtuous habits, as well as to store it with useful knowledge, this Institution may continue to prove of permanent advantage to our beloved youth, and claim the favour and regard of Him who only can bless the labours bestowed.

It being the usual time for making a new appointment, the subject is mentioned for the consideration of the Yearly Meeting.

Signed on behalf and by direction of the Committee,

JOSEPH SCATTERGOOD,
Clerk for the time.

For "The Friend."

Useful Calculations.

The following appropriations were made by the last Congress:

Army, fortifications, Military Academy, &c.	$12,571,496
Naval service, ...	15,012,091
Making for war purposes, . .	$27,583,587

A bill was also passed granting 160 acres of land to every person, who had served in any capacity in former wars. At a recent period, 137,200 applications had been entered, and they were still coming in. If we suppose them to amount to 140,000, the warrants to be issued will take 22,400,000 acres, or an extent equal probably to all the farm land, in the State of Pennsylvania. The land thus granted for military services, if valued at $1.25 per acre, would amount to $28,000,000.

Now let our young readers apply their arithmetic in finding out how many bushels of corn, wheat, oats, or potatoes must be raised, at the rates current in their respective localities, in order to meet this vast outlay. How many days' work it would pay for. How many children it would school. How many miles of railroad it would make at a cost of $20,000 a mile, and such other useful applications of the money, as their own reflection may suggest. The revenue of the United States being derived mainly from duties on imports, the people scarcely notice the fact that it really comes out of their own pockets. Nor is it remembered as it should be, that the *productive industry* of those who labour, creates all the nations' wealth. If the vast sums thus wasted and misapplied, were raised by a direct tax on persons and property, the people would more readily understand how much the maintenance of a barbarous and unchristian system costs them.

Friends' School in Tennessee.

The recent action of Friends in Tennessee on the subject of education presenting some features of interest, a short account of it may not be inappropriate for the columns of "The Friend."

It appears from their statement that the Friends who originally settled in Tennessee were mostly of the poorer class, but generally enabled to become proprietors of small portions of land, which at that time was sold at a very low rate. Being shut up by high and rugged mountains on every side, and the rivers having a rapid descent, with no safe navigation, the facilities for communication with other parts were very limited. Nearly all the value of their products was consumed in the transport to a market, while the cost of imported articles was greatly increased.

From these causes, their numbers soon diminished by emigration. A few, however, remained, who believed they were called to a work in that almost isolated region, which was yet to be acomplished, if they were faithful. As the minds of Friends thus became settled, and the feeling gathered strength that the Society would not be lost in Tennessee, their numbers began to increase. Many valuable members were brought in by convincement, and at the present time, Newberry Monthly Meeting held at Friendsville, in Blount county, Tennessee, is nearly, if not quite, twice as large as it was fifteen years ago. There is also an increasing desire on the part of others to become more intimately acquainted with the doctrines of Friends.

These encouraging prospects, together with the sense of the great disadvantages the Society has sustained from the want of schools in which a good and religiously guarded education could be obtained, have led to the present movement.

In the 12th mo. 1854, Newberry Monthly Meeting appointed a committtee to endeavour to raise a school fund. In the following month, report was made that twenty-seven of the members had subscribed the sum of $2650, of which $2000 was recommended to be set aside as a permanent fund, the interest to be used in reducing the price of tuition for the children of Friends, and the remaining $650 to be applied towards the erection of school buildings.

This sum will be entirely inadequate to the erection and fitting up of the proposed buildings, and they appeal to their friends more favourably circumstanced, for aid, having done all or nearly all they were able to do.

Those Friends in and near Philadelphia who may desire to contribute to the fund for building and fitting up the Friendsville Institute and Newberry Female School, may leave their subscriptions with Dr. T. E. Beesly, N. W. corner of 10th and Arch street. Those who desire to send them direct to the Trustees, may address them to the care of David Morgan, Friendsville, Tennessee.

The Art of being Happy.—It is not great wealth nor high station which makes a man happy. Many of the most wretched beings on earth have both. But it is a radiant, sunny spirit, which knows how to bear little trials and to enjoy little comforts, and which thus extracts happiness from every incident of life.

Never employ thyself to discern the faults of others, but be careful to mind, and count thy own.

THE FRIEND.

SIXTH MONTH 2, 1855.

There has certainly been an unusual number of earthquakes, and they have been more destructive within the past year or eighteen months, than for a long time before. Within that period, a large city was nearly destroyed in Persia, another in South America, and recently in Turkey; the city of Broussa has been twice visited, and almost levelled with the ground. There has been of course great destruction of property, and in some instances many lives have been destroyed. By the following extract from a letter, written by an officer of the U. S. steamer Powhattan, and published in the North China Herald, it appears that the subterranean fires have been manifesting their tremendous and fearful energy in Japan.

"The Island of Niphon, in which Simoda is situated, was visited on the 23d of December by a severe earthquake, which was most disastrous in its effects. The city of Ohosaca, one of the largest in the empire, was completely laid waste. Jeddo itself suffered considerably, but has since suffered more seriously from the effects of an extensive conflagration. The town of Simoda, on our arrival, presented a complete scene of desolation and ruin. After the shock of the earthquake, the sea commenced bubbling up, as it were, along the shore, and then receded with great rapidity, and as soon returned with such increased volume as to flood the whole town to the depth of six or seven feet, sweeping away houses, bridges and temples, and piling them up in a mass of ruin.

"Five times during the day did the sea advance and recede in this manner, spreading desolation far and wide. The largest junks in the harbour were driven from one to two miles above high water mark, where we saw them lying high and dry. About 200 of the poor inhabitants lost their lives by the overflow, the remainder saving themselves by fleeing to the mountains, with which the town is surrounded.

"The Russian frigate Diana, having Vice Admiral Pontiatine on board, was lying in the harbour at the time, engaged in finishing up the treaty they had made with the Japanese. Immediately after the shock was felt, the water in the harbour became convulsed to such a degree in eddies and whirlpools, that in the space of thirty minutes, she swung entirely round forty-three times, twisting her chains up into knots; so rapid was the motion that the people on board could not keep their feet, and all were made giddy. When the sea receded, it left the frigate in eight feet water on her side, when her usual draft was over twenty-one feet. On its return, it is stated, the water rose five fathoms above its ordinary level.

"On its again receding, four feet only of water remained, so that saw the stocks of their anchor above the water. The heaving of the bottom of the bay was then so violent that the frigate—although, as I said, in only four feet of water—was moved bodily past her anchor. The officers momentarily expected that the bay would become the outlet of the subterranean fires, and that they would be engulped in it. When the frigate again floated, they saw her keel and rudder, which had been wrenched off, floating alongside, and the ship filling with water. By getting sails under her, they managed to get her afloat, and the next day, things having kept quiet once more, they hauled her into deeper water. Occasional shocks of earthquake still continued to be felt, but none were attended with serious consequences.

"After repairing damages as well as they could, and having rigged a temporary rudder, and the weather becoming fine, they attempted to take the ship round to another bay, where she would be less exposed, and they could complete repairs (Simoda being badly adapted for such a purpose;) but when within seven miles of their harbour a gale sprung up—the hundred Japanese boats that were towing them abandoned them, (not, however, till they had got out all the officers and crew,) and shortly after the gallant ship sunk in deep water, the officers and men saving only the clothes they stood in. Notwithstanding all their misfortunes, and the dangers through which they had passed, they only lost one man, and he was accidentally killed by being jammed by one of the guns which had gone adrift."

SUMMARY OF EVENTS.

EUROPE.—News from England to Fifth mo. 12th.

The War.—No events of importance had occurred before Sebastopol during the week, and affairs continued much in the same position. The French Minister, Drouyn de l'Huys, had resigned, from an unwillingness to protract the war, and Count Walewski, the Ambas-

sador of France to London, had been appointed his successor. The English press admit that no assistance can be expected from Austria in the prosecution of the war, and but little from the rest of Europe. General Mannora had arrived in the Crimea, with 4000 Sardinian troops.

FRANCE.—A new loan of seven hundred millions of francs is under consideration by the Council of State. The police have discovered a plot, having its ramifications throughout Europe, to promote an insurrection, and hence the execution of Pianori has been postponed, with a view to trace his connection therewith. On the day the attempt was made, it was freely stated in various cities in Italy, Spain, and Germany, that Louis Napoleon was dead, and Paris in a state of insurrection.

RUSSIA.—The advices from Russia confirm the report of an insurrection in the Ukraine. It is also stated, that Poland is very restless. An American frigate built ship, it is said, recently arrived at a Russian port in the Baltic, with 50,000 rifles and 5000 revolvers, in addition to her reported cargo of 800 bales of cotton.

GREAT BRITAIN.—The bill for removing newspaper stamps has passed. The Roebuck Committee was still in session. The movement tending to administrative reform, was gaining ground. The Palmerston ministry was becoming unpopular. All the documents with regard to the Vienna Conference, had been laid before Parliament. The emigrant ship John, from Plymouth, Eng., for Quebec, has been wrecked, and a number of lives lost. Lord Palmerston has evaded answering the question, whether the Peace Conferences are finally broken off. *Liverpool Market.*—Breadstuffs were unchanged and dull of sale. Cotton had advanced ¼d.; the sales of the week amounted to 103,500 bales.

AUSTRIA.—The grain growing district on the bank of the river Theiss, covering 1200 square miles, has been inundated in consequence of a rise in the river. It was supposed the crops would be destroyed. It is said that Austria is on the point of declaring her complete neutrality, as well as that of the whole of Germany.

ITALY.—Mount Vesuvius was in an active state of eruption.

VENEZUELA AND NEW GRANADA.—At the latest dates, political affairs in these republics were as usual, much troubled, and a dispute between them respecting a boundary line, was about resulting in open war. The Venezuelan Congress had authorized President Monagas, if necessary, to raise an army of fifty thousand men, and four millions of dollars, for the threatened war.

CHINA.—The latest intelligence is unfavourable to the insurgent cause. The rebels have been driven from Canton. By a combined movement of the imperial troops and the people, Canton and the forts in its neighbourhood have been freed from the presence of the insurgents, and the blockade broken up. The imperialists made a shocking use of their triumph. The place of execution is stated to be a vast carnage field, in which hundreds were daily put to death, in order to strike terror into the minds of the population. At Shanghai, also, the success of the imperialists in recapturing the city had been followed by frightful atrocities, in revenge for opposing the imperial rule. Not content with putting their prisoners to death, the Mandarins had caused many of the wretched beings to be previously subjected to the most cruel tortures.

UNITED STATES.—The excessive revenue has encouraged lavish expenditures of the public funds; witness the following appropriations, made during the last session of Congress. The expenditures are classed as follows:—

Civil, diplomatic and miscellaneous,	$17,265,929
Army, fortifications, military academy, &c.,	12,571,496
Indian department, naval, revolutionary and other pensions,	4,453,539
Naval service,	15,012,091
Post-office department,	10,946,844
Ocean steam mail service,	3,574,458
Texas debt,	7,750,000
	$71,574,357

This vast sum of $71,574,357 is only the amount of specified appropriations. The contingent objects of expenditure of which the sums were unascertained, and could not be specified, may swell the total of the expenses of the year to perhaps *seventy-five millions* of dollars.

State of Trade.—The sales of general merchandise this spring in all the Atlantic cities, have been much below the usual amount. The lessened business is attributed in part to the shortened credit given to purchasers.

Massachusetts.—The Legislature of this State, which adjourned last week, was composed in great measure of men of extreme views, and some of their proceedings were of an extraordinary character. The *Personal Liberty Bill*, passed near the close of the session over the Governor's veto, clashes directly with the Fugitive Slave Law, and is calculated to bring on a hostile collision between the U. States and the authorities of the State. The Governor informed the Legislature in his veto message, that the Attorney General and all the Judges of the Supreme Court considered the Personal Liberty bill unconstitutional.

Nebraska.—At latest dates, the tide of emigration was beginning to pour into the Territory. Omaha City and other towns were rapidly growing into importance.

Philadelphia.—The supply of water for the entire city is furnished, viz.

	Gallons.
The Fairmount Works, with nine wheels and pumps, capable of raising per day,	13,801,184
Schuylkill Works, four steam engines,	10,196,236
Delaware Works, two steam engines,	4,026,240
West Philad. Works, two steam engines,	1,780,272
Together,	29,903,932

The capacity for storage in the Fairmount, Delaware, and Schuylkill reservoirs, equals 66,362,180 gallons. In the distribution of the water, 242 and 3-16 miles of iron pipe are laid, and there are 2025 fire plugs. The expense of raising a million of gallons at the Fairmount Works, is stated to be $1.50; at the Schuylkill Works, $13.36; and at the Delaware Works, $18.16. Mortality last week, 199.

California, dates to Fifth mo. 1, have been received by the George Law, which arrived at New York on the 24th inst., with the $1,400,000 in gold and 817 passengers. An act to levy a capitation tax of $50 on every Chinaman arriving in the State, has passed the Legislature. Trade at San Francisco had improved in the amount of goods sold, but prices continued very low. Large exports of flour and grain were being made for Australia, and the clipper ship Charmer was taking in a cargo of California wheat, purchased at 75 cents per bushel, for New York. The Steamer Golden Age, the wreck of which was reported by the last arrival, had been got off, and towed to Tobago, where she was beached. A bill had passed the Assembly, prohibiting the Chinese from holding or working claims in the mines.

New Orleans.—The times are said to be very hard in New Orleans this season. Beside participating in the general depression of trade, communication with a large extent of country has been cut off by the low state of the rivers, so that goods packed months ago, still remain in store, and vast quantities of cotton are kept back from the same cause. Real estate has rapidly depreciated in value, under heavy taxation, the consequence of municipal extravagance.

Texas.—The extraordinary drought in this State, is at an end. Copious showers have fallen in every section, reviving the hopes of agriculturists.

Mormon Immigration.—The ship Curling, from Liverpool, arrived at New York last week, with 578 Mormons, and the ship Chimborazo landed 408 of the same people at Philadelphia,—all bound for Salt Lake City.

Miscellaneous.—The Slave Trade and Liberia:—The influence and action of the Liberian Republic upon the slave trade has been decided, extensive and effectual. Not a slave mart or baracoon now exists from the Bight of Benin to the Equator, to Cape Palmas—a distance of six hundred miles. From this part of the West Coast, before these settlements were made, eighty thousand Africans were annually taken for slaves.

An Ancient Fruit Tree.—The "old Stuyvesant pear tree," in Fourth avenue, near Thirtieth street, New York, although 213 years old, is now in full bloom, covered thickly with buds and blossoms.

Broom Corn.—This plant is a native of India, and was introduced into this country by Dr. Benjamin Franklin, who found a seed in an imported whisk, and planted it; and from this small beginning arose this valuable product of industry.

True Generosity.—The Marietta (Ohio) Advocate says that many farmers in that section have refused to sell their corn to speculators at $1.40, and have chosen to divide it among their poorer neighbours at *one dollar* per bushel.

An Enormous Cargo.—The ship Ellen Austin lately cleared at Savannah, Geo., for Liverpool, with 2,397,817 pounds of cotton on board, valued at $223,279.

Tornado in Illinois.—On the 23d ult., a terrible tornado passed over Jefferson and Cork counties, Ill., and other places to the north and west, causing immense damage. A house, about a mile from the Illinois and Wisconsin Railroad, was taken completely up by the wind, and scattered in different directions. Nine persons were in the building, four of whom were instantly killed, and the others are supposed to be fatally injured.

Chinese in New York.—Within a few years past, m Chinese have settled in New York, so that they n number from 1000 to 1500 persons, only two of wh are women.

WEST-TOWN SCHOOL.

The Committee charged with the oversight of t Institution, will meet at West-Town on Fourth-day, t 6th of next month, at 10 o'clock, A. M.

The Committee on Instruction meet on the preced evening, at 7½ o'clock, and the Visiting Committee semble at the School on Seventh-day afternoon, the of Sixth month. THOMAS KIMBER, Philad., Fifth mo. 26, 1855. Cle

There will be a conveyance at West Chester, on t arrival of the cars, on the morning and afternoon Third-day, the 5th of the Sixth month, for the accom modation of the members of the Committee, who m go that way. The cars will leave the depot on t south side of Market street, above Eighteenth street, half past 7 o'clock, A. M., and 5 o'clock, P. M.

DIED, on the 31st of Seventh month, 1854, at his r sidence in New Hartford, Oneida Co., N. Y., NATH BISHOP; a member and elder of New Hartford Month Meeting, aged 80 years and 6 months. The sudden r moval of this dear Friend causeth the query to aris from whence shall we look for one to fill the vacancy.

——, on the 22d of Third month last, at the same plac Lucy, widow of the above, and member of the sam meeting, aged 81 years and 8 months.

——, on the 23d of Fourth month, 1855, in Wes moreland, ELIZABETH N., wife of Nathan L. Hakes, (an daughter of Joshua Naramore,) in the 24th year of h age; a member of New Hartford Monthly Meeting.- While disease was making inroads upon the tabernac of this dear Friend, just preparing for usefulness, it we observed that the reading of the Holy Scriptures an other religious books increased with her spiritu strength, and a composed frame of mind was picture on her countenance. The last advice to her friends wa often to retire for Divine meditation. This, with man other expressions which fell from her lips, gives th consoling evidence that her end was peace.

——, on the 23d of Fourth month, 1855, at his resi dence in New Hartford, FERRIS KELLOGG; a membe and elder of New Hartford Monthly Meeting, in the 66t year of his age. This highly esteemed Friend manif fested a true christian spirit in affording relief to th needy. Many can truly say, he has been as a fathe unto them. He was for many years an overseer, an is much missed by a large circle of relative and friend

——, on the 16th of Fifth month, 1855, in London Britain Township, Chester Co., Pa., HANNAH, wife o Isaac Philips, and daughter of the late Benjamin an Ann Maule, in the 68th year of her age; a member o Radnor Monthly Meeting. This dear Friend, from he youth, was religiously inclined, and very exemplary She manifested much concern to be favoured with pa tience to "wait all the days of her appointed time," an was enabled to adopt the language, "Not *my will*, bu *thine*, oh! Lord, be done." A few days before th solemn close, being in much distress of body, she said "Oh! if I had now to suffer the pangs of a guilty con science, how dreadful would my situation be." Though the enemy was permitted to disturb, yet she experience consoling relief, often saying, her mind was very quie and comfortable, feeling nothing in her way. Thus sh calmly ended her pilgrimage. In relation to home du ties, the language will apply to her—"She looketh *well* to the ways of her household, and eateth *not* the brea of idleness."—Prov. xxxi. 27.

——, at Mount Laurel, N. J., Fifth month 19th, 1855 JANE, wife of Job Garwood, in the 51st year of her age a member of Evesham Monthly Meeting of Friends. Sh was enabled to bear up under much bodily afflictio for several years, (except short intervals of apparen health,) with becoming resignation. She felt the ne cessity of witnessing that complete redemption, whic is alone to be obtained through the merits of a crucifie Redeemer; and was enabled, in the hour of extremity to kiss the rod of affliction, and resign her soul to he Maker, having a full assurance of being admitted int the mansions of never-ending felicity; affording anothe manifestation of the Lord's everlasting love and mercy and a sure evidence that he has not forsaken hi people.

VOL. XXVIII. SEVENTH-DAY, SIXTH MONTH 9, 1855. NO. 39.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

The Indians.

From Gov. Stevens, of Washington Territory, we have a narrative, which occupies nearly seventy pages, of a tour of exploration performed by him, from the head of navigation of the Mississippi river to the Pacific Ocean, in the course of which he visited or had intercourse with sixty-six different tribes of Indians. The first of whom he speaks were Assinaboines, who range west of the Sioux, through the valley of the Yellow Stone. An express company was despatched, on 25th of Seventh month, to open intercourse and procure supplies. That night they reached a camp of one hundred and fifty lodges, containing some twelve hundred persons. The Indians received them with great hospitality, and built them a lodge in the centre of the camp. On the 27th, the Governor came up and encamped. The Indians rode out to meet and welcome him. One in advance gave the signal of welcome, by uplifting his right hand, the back turned out, and by shaking hands with each member of the party. The chiefs in command were Mue Thunder and Little Thunder. The approach of the visitors was loudly noticed by the dogs, of which these Indians keep great numbers for draught. They had also a good supply of horses, many of which were of good quality and condition. The Assinaboines nevertheless appeared from their scanty and worn clothing to be very poor.

The lodge erected for the reception of the strangers, was fifty feet in diameter. The chiefs, braves, warriors and men were found assembled within it. Opposite to the entrance was a long seat for the white men, made of skins, which were afterwards presented to the Governor. An old man, one of the dignitaries of the tribe, prepared the pipe of reception, which is only smoked on great occasions. The stem was decked with ribbons and feathers of various colours, fantastically arranged; some sweet-grass plaited was then set on fire, and the smoke of the pipe was perfumed, which seemed to be regarded as a sort of incense. The brave then shook hands with each of the guests; after which the pipe was handed to him. When this was over, a bowl of water was handed round by a second Indian, which ceremony was also preceded by the making of hands. The party was then regaled with a soup made of buffalo and *typsina*, or turnip, which was very rich and greasy.

The ceremony of reception being concluded, one of the chiefs, an old and venerable man, advanced to the Governor, and shook him by the hand. He did the same to each one of the party. His whole appearance and manner were highly prepossessing, and marked with much dignity. He poured forth a tale of sorrow with great fluency.

"My Father, you see us now in our real condition; we are poor; we have but few blankets and little clothing. The Great Father of life, who made us and gave us these lands to live upon, made also the buffalo; his meat is our food; with his skin we clothe ourselves; he is our only means of food, fuel and raiment. But I fear we shall soon be deprived of the buffalo, and then starvation and cold will diminish our numbers, and we shall all be swept away. My Father, I hear that a great road is to be made through our lands. We do not know what the object of this is—we cannot understand it; but I think it will drive away the buffalo. We are pleased to see our white brethren—we are glad to give them the hand of friendship; but we know that when they come, our game goes away."

The reply of the Governor was courteous, and full of the most agreeable assurances, and elicited the frequent ejaculation of "Hou! Hou!" the customary token of approbation. He closed some further observations, by an invitation to them to come to his camp for some presents from the President, of which he was the bearer. At the distribution the Indians formed three sides of a hollow square, and the whites a fourth. At each corner was posted a brave or chief. These men never received a gift. It is considered a degradation for them to accept anything, but what their own prowess or superior qualities of manhood may acquire for them. "Their hearts," they say, "are so good and strong that they scorn to take a gift," and they boast of their self-denial and power of resisting temptations of luxury. The duty of making the distribution was assigned to two old men. During the ceremony the Indians sat in perfect silence, and not a murmur escaped one of them in regard to the disposition of the gifts.

Gov. Stevens gives us next some account of the Red River Hunters—a mongrel people—partly half-breeds, some Indians, discharged servants of the Hudson's Bay and Fur Companies, Canadians, Scotch, English, Irish, and representatives from every nation of Europe. They speak a jargon of the languages of all, Chippewa, Sioux and French patois prevailing.

The first troop encountered by the Governor, consisted of about 1300 men, women and children, some 1200 animals and 824 carts. Their camp presented a striking spectacle. They form an enclosure with the carts placed hub to hub, impassable for man or horse, within which they pitch their lodges, which, in this case, were 104 in number; each, in general, occupied by two families or ten persons. Skins were spread over the carts, and underneath many found lodging. During the day, the animals pasture at large, and at dark they are driven within the enclosure or *corral*. Thirty-six sentinels watch throughout the night. This party is under the direction of Gov. Wilkie—a man of pleasing appearance and manners, sixty-odd years of age. They reside on the Pembina river, and in the Pembina Mountain. Whilst at home, they cultivate their farms, and raise wheat (25 bushels per acre), corn, potatoes and barley. They are reputed to be industrious, frugal and virtuous, and are mostly of the Romish persuasion. Their priests travel with them, and even in the field they strictly adhere to their devotions, and never march or hunt on the First-day of the week. Their municipal government is parochial. The presiding officer in each parish is styled *captain*. On departing for their hunts, these captains select one of their number for *governor*, who takes charge of the party, regulates its movements, arbitrates all differences between members, and takes command in case of difficulty with Indians. At the close of the first fortnight of summer, they start for the buffalo, taking their families with them. At the close of summer, they return home. This is their first hunt, to procure pemmican, dried meat, tongues, &c. At this time, skins are useless for robes, and they dress them for lodge-skins, moccasins, &c. In the Tenth month, the period of the second annual hunt, the meat is better, and the skins in good order. Of the meat, they reserve sufficient for a year's supply, and dispose of about half the remainder to the Hudson's Bay Co.; the other half finds its way to St. Paul's, where it is traded for goods at the rate of 15 cents per lb. for pemmican and dried meat. The summer skins are mostly retained by them, but the robes are a staple of trade. These people, whose settlements commenced some twenty-five years ago, now number some four thousand in the vicinity of Pembina Mountain. The men, in general, are much finer-looking than the women, and on the latter depend all the drudgery and camp duties, such as pitching tents, attending to animals, cooking, &c. Many children are born during their expeditions, and they consider that those born upon our soil, possess the heritage of American citizens. With but little care, our government could obtain the whole of these people as American citizens. Their virtue, industry and frugality, and their adaptation to a frontier life, make them, in the opinion of Gov. Stevens, eminently deserving the attention of our government.

The Blackfeet were next visited. They consist of four tribes—Bloods, Blackfeet, Piegans and Gros Ventres, and number from 9000 to 14,000, the estimates differing. They reside or hunt south of 50th parallel, from the Rocky Mountains to the 106th meridian, west of that meridian to Milk river, and throughout the region included between that river, the Missouri, the Judith and the Rocky Mountains. Fearing the temper of these Indians, the Governor took with him Culbertson, of the American Fur Company, who had married a Blackfoot. He informs the Government that the wife, "who had fully adopted the manners, costume, and deportment of the whites, and who, by her refinement, presents the most striking illustration of the high civilization which these tribes of the interior are capable of attaining, rendered the highest service to the expedition." Both she and her husband were anxious as to the reception of the party by the Blackfeet. She said, "My people are a good people, but they are jealous and vindictive. I am afraid that they and the whites will not understand each other; but if I go, I may be able to explain things to them, and soothe them if they should be irritated. I know there is great danger; but, my husband, where you go, will I

go, and where you die, will I die." Accordingly she accompanied the expedition. Gov. Stevens had difficulty in procuring a kind and friendly deportment from the members of his party towards the Indians, so that the risk of conflict was great. On one occasion, he observed a young man grumbling, because he was ordered to prepare a meal for an Indian. He said to him, "Do you not remember that these Indians, a few days ago, brought game into our camp, of which we all partook? Do you not remember that when we have visited their encampments, they have made feasts for us, and spread before us the best that they could provide? Are you willing that we should be outdone in hospitality by these wild Indians?" The young man acknowledged the force of this reasoning, and promised more courteous demeanor towards them.

For "The Friend."

"One thing have I desired of the Lord, that will I seek after; that I may dwell in the house of the Lord all the days of my life, to behold the beauty of the Lord, and to inquire in his temple. For in the time of trouble he shall hide me in his pavilion; in the secret of his tabernacle shall he hide me; he shall set me up upon a rock."

"Oh how great is thy goodness, which thou hast laid up for them that fear thee; which thou hast wrought for them that trust in thee before the sons of men! Thou shalt hide them in the secret of thy presence from the pride of man; thou shalt keep them secretly in a pavilion from the strife of tongues."

"Thou wilt keep him in perfect peace, whose mind is stayed on thee, because he trusteth in thee."

How desirable it is in times of commotion and trial to have a place to flee to; to know our heavenly Parent to hide us, yea, to keep us secretly in his pavilion from the strife of tongues. Let it then be our earnest endeavour to be found among the number of those to whom these precious promises are made. It is to those who fear Him, and *trust in Him before the sons of men*, who feel and are not ashamed to acknowledge that of themselves they can do no good thing, and that their hope and confidence is in Him alone, who has all power in Heaven and on earth.

Perhaps there never was a period when the members of our Religious Society had more need to turn inward and "be still," than in the present day. Many are the voices now abroad, and perplexing indeed are they to the young and inexperienced. But let these remember that the "still small voice," still continues its teachings, and those who follow its leadings and no other, will be led safely along. They may have to pass through many seasons of stripping, and endure many trials from within and from without, yet there will be a secret, sustaining power, experienced by these, which will preserve through all, accompanied at times by a portion of that peace which passeth all understanding.

Is there not reason to doubt, whether so much writing upon the subjects which now agitate our religious Society, is fraught with good to those engaged in it. Does it not sometimes engender feelings of strife and bitterness towards individuals, —feelings which should not find place in the heart of the Christian. Is there not also a danger of a life in such discussions being created thereby, while that precious life, which is hid with Christ in God, may be injured, and the all-important work of regeneration neglected. These remarks have no personal allusions, the writer being ignorant as to the authors of the various productions which have been sent abroad of latter time, but as one pamphlet after another has met the eye, these fears have again and again arisen. While it may be right at times to expose error and defend the truth, are there not also periods when it is safest to leave all to the great Head of the Church? When Sennacherib came up against Israel, and, through his servant Rabshakeh, uttered many hard things against Hezekiah and the people of Israel, we are told "The people held their peace, and answered him not a word; for the king's commandment was, saying, answer him not." But what *did* the king do? He committed his cause unto the Lord, and prayed unto Him for deliverance, and He did not fail to hear his petition and to grant his request. Let our confidence then be placed in the same Almighty arm, then shall we experience Him in seasons of trouble to hide us, as in the secret of his tabernacle, and even to set us as upon a rock, even that rock, against which storms have beat in vain.

From "The Leisure Hour."

Is the Toad Venomous?

Toads and frogs belong to a class of animals denominated the amphibiæ, from the fact of the animals composing it possessing the power of living on land or in water; and they were formerly classed with serpents and crocodiles—simply as reptiles. They differ from frogs by having no teeth in either jaw nor on the palate, in having shorter hind feet, and being covered over with dark suspicious-looking warts. Many are the conflicting opinions upon the question which we have placed at the head of this article. That the toad *spits* out, as is popularly supposed, a venomous saliva is, to say the least of it, highly doubtful. The pustules of the skin, however, contain a semi-fluid matter which has generally been allowed to be irritating. Dr. Jeremiah Kirby, for instance, says that, "when provoked, toads emit from their warty skin a frothy fluid, which was formerly supposed to be venomous, but which is merely sufficiently irritating to affect the delicate skin of some animals on which it falls. It is chiefly the ugly form and lurid appearance of these animals which has cast on them the reproach of being venomous—a reproach which is now ascertained to be unjust. Indeed, the flesh of several kinds of toads affords as wholesome nutriment as that of frogs, and they are eaten with impunity by snakes and several large birds." And again he adds:—"The irritating nature of the fluid emitted by toads, when frightened or disturbed, appears from the circumstance that dogs on seizing them are affected with a slight swelling of the mouth, accompanied by an increased secretion of saliva."

Much as I would like to clear up the character of my old friend, I am bound, in justice to him and to public safety, to admit that he is not the completely harmless creature kind-hearted naturalists represent him. Undoubtedly I would pity the man or woman who would faint at the sight of one, or even at its touch, but I would caution foolhardy young gentlemen from everything like bravado exploits with him. It is certainly safe to lay one on the hand provided it bears no wound; but let the angered creature inject a little of the matter from its rough skin into the slightest scratch or abrasion, and MM. Gratiolet and S. Cloeg will speak for the result.

"Popular tradition," says an English journal, recording the results of the experiments of these gentlemen, "has from time immemorial attached a poisonous influence to the toad, but enlightened opinion presumed that the idea was an ignorant prejudice. All doubt, however, as to the poisonous nature of the contents of the skin pustules has been set at rest by the recent experiments of t French philosophers, MM. Gratiolet and S. Clo who, by inoculating various animals with the taneous poison of toads and salamanders, h demonstrated that the substance in question endowed with well-marked and exceedingly d gerous qualities. The first experiment of th gentlemen was performed on a little African t toise, which was inoculated with some of the to poison in one of its hinder feet; paralysis of t limb supervened, and still existed at the expirat of eight months, thus demonstrating the possi lity of local poisoning by the agent. In order determine whether the poisonous material spoi by keeping, two gentlemen procured about twen nine grains of the poison on the 25th of Ap 1851, and having placed it aside until the 16th March, 1852, they inoculated a goldfinch with little of this material. The bird almost imm diately died. Subsequently, the investigators s ceeded in eliminating the poisonous principle fr the inert matters with which it is associated in skin pustules, and they found that when thus rified, its effects were much more intense th before. Like most of the known very stro organic poisons, the active principle of the t venom is alkaline in its character, almost inso ble in water, slightly soluble in ether, and v soluble in alcohol. MM. Gratiolet and S. Clo are at this time occupied in collecting a la amount of the toad venom, and will shortly ma known the result of their further investigatio which are calculated, in the opinion of the inv tigators, to throw considerable light upon t nature and action of the poisons of hydrophob of serpents, of contagious diseases, and anim poisons generally." No doubt can, therefore, n be reasonably harboured of the toad's poisono propensities, though it is hard to suppress an voluntary smile at the sanguine hopes of the e perimenters. The toad is evidently, howev quite harmless if let alone, so that there is no p for its wholesale destruction, as if it were a col capella. All that is necessary, is to avoid inca tiously handling it.

Repulsive and unintelligent as the appearan of our subject undoubtedly is, he is not witho strong instincts, whose workings would seem to very nearly akin to the feats of reason. An ami ing instance of this kind is related in the "N turalist," for November of last year, by Willis Whytehead, of Risley, in Suffolk. A toad had planted comfortably in a radish bed, where slu were, of course, in plenty, to satisfy his appetit he was frequently disturbed by members of t family and others, who removed him to other pa of the garden; but he as certainly returned to h own post, even through the barrier of a gard net, the meshes of which were but half the size his body. That he actually did get through th difficulty was proved by observation; nicely illu trating how toads and men can overcome almo impossibilities by reducing the body. In order test the extent of the toad's attachment to h chosen situation, Whytehead had it removed to field some distance from the garden; but we w let him relate the incident in his own languag "The garden, which was large, was entirely wall round, excepting a small gate leading into anoth garden: this garden was also walled round, b there was a single hole under the outer door lea ing into a field. Behind the inner garden w was a shrubbery, and into this we took the to little expecting to see it again. To our surpri however, it was seated next day beneath the n To reach this place, it must have gone throu the fence of the shrubbery into a field, th through another fence into a second field, n

rough the hole under the outer garden, and, stly, through the gate into the inner garden."

Public attention has from time to time been lled to marvellous accounts of toads found in the arts of trees, and inclosed in solid rocks, where ey were supposed to have existed in a dormant ate for centuries. Such marvels, however, are y no means so well authenticated as scientific ob rvers would wish, and therefore are to be re ived with very great caution. Dr. Buckland erformed experiments in order to determine the ngth of time which the toad would subsist with t air or food, and found that death invariably ccurred within twelve months, but that with an ccasional supply of atmospheric air, life continued r a period of two years. The remarks of that ifted geologist on the subject are so much to the urpose, that we shall conclude this sketch with em. "The evidence," says he, "is never per ot to show that the reptiles were inclosed in a lid rock; no examination is ever made until the nimal is first discovered by the breaking of the ass in which it was contained; and then it is too te to ascertain, without carefully replacing every agment, (and in no case that I have seen re orted, has this ever been done,) whether or not ere was any hole or cavity by which the animal ay have entered the place from which it was ex racted. Without previous examination, it is al ost impossible to prove that there was no such ommunication. In the case of rocks near the rface of the earth, and in stone quarries, reptiles id ready admission to holes and fissures." And gain, he adds: "An individual which, when oung, may have entered a cavity by some very arrow aperture, would find abundance of food by tching insects, which, like itself, seek shelter ithin such cavities, and may soon have increased o much in bulk as to render it impossible to get it again through the narrow aperture at which it ntered. A small hole of this kind is very likely o be overlooked by common workmen, who are ne only people whose operations on wood and one disclose cavities in the interior of such sub ances."

Selected for "The Friend."

EARTHLY THINGS.

Earthly things, when we have them, we are not ire of them; like birds they hop up and down, ow on this hedge, and anon upon that; none can ll them his own: rich to-day, and poor to-mor ow; in health when we lie down, and arrested ith pangs of death before midnight: joyful pa nts, one while solacing ourselves with the hopes f our budding posterity, and may be, ere long, nocks one of Job's messengers at our door to tell s they are all dead: now in honour, but who nows whether we shall not live to see that burial n scorn and reproach? The Scripture compares ne multitude of people to waters; the great ones f this world sit upon these waters; as the ship oats upon the waves, so do their honours upon ne breath and favour of the multitude; and how ng is he like to sit that is carried upon a wave? ne while they are mounted up to heaven, (as avid speaks of the ship,) and then down again ey fall into the deep. Unhappy man he that ath no surer portion than what this variable orld will offer him! The time of mourning for ne departure of all earthly enjoyments, is at hand; e shall see them, as Eglon's servants did their rd, fallen down dead before us, and weep, be ause they are not. What folly then is it to andle this world in our affections, (whose joy, ke the child's laughter on the mother's knee, is re to end in a cry at last,) and neglect heaven nd heavenly things, which endure forever? I remember Dives stirring up his pillow, and composing himself to rest, how he was called up with the tidings of death before he was warm in his bed of ease, and laid with sorrow on another, which God had made for him in flames, from whence we hear him roaring in the anguish of his conscience. O, soul! couldst thou but get an interest in the heavenly things we are speaking of, these would not thus slip from under thee; heaven is a kingdom that cannot be shaken; Christ an abiding portion, his graces and comforts sure waters that fail not, but spring up into eternal life.

Earthly things are empty and unsatisfying. We may have too much, but never enough of them; they oft breed loathing, but never content; and indeed how should they, being so disproportionate to the vast desires of these immortal spirits that dwell in our bosoms? A spirit hath not flesh and bones, neither can it be fed with such; and what hath the world, but a few bones covered over with fleshly delights to give it? The less is blessed of the greater, not the greater of the less. These things, therefore, being so far inferior to the nature of man, he must look higher if he will be blessed, even to God himself, who is the Father of Spirits. God intended these things for our use, not enjoyment. We lose what they have, by expecting to find what they have not: none find less sweetness, and more dissatisfaction in these things, than those who strive most to please themselves with them. The cream of the creature floats atop; and he that is not content to fleet it, but thinks by drinking a deeper draught to find yet more, goes further to speed worse, being sure by the disappointment he shall meet, to pierce himself through with many sorrows.

But all these fears might happily be escaped, if thou wouldst turn thy back on the creature, and face about for heaven; labour to get Christ, and through him hopes of heaven, and thou takest the right road to content; thou shalt see it before thee, and enjoy the prospect of it as thou goest, yea, find that every step thou drawest nearer and nearer to it.

Earthly things are like some trash, which do not only not nourish, but take away the appetite from that which would: heaven and heavenly things are not relished by a soul vitiated with these. Manna, though for deliciousness called angel's food, was yet but light bread to an Egyptian palate. But these spiritual things depend not on thy opinion, O man! whoever thou art, (as earthly things in a great measure do,) that the value of them should rise or fall as the world's exchange doth, and as vain man is pleased to rate them: think gold dirt, and it is so, for all the royal stamp on it; count the swelling titles of worldly honour, (that proud dust so brags in,) vanity, and they are such; but have base thoughts of Christ, and he is not the worse: slight heaven as much as you will, it will be heaven still; and when thou comest so far to thy wits with the prodigal, as to know which is best fare, husks or bread; where's best living, among hogs in the field, or in thy father's house; then thou wilt know how to judge of these heavenly things better: till then go and make the best market thou canst of the world, but look not to find this pearl of price, true satisfaction to thy soul, in any of the creature shops; and were it not better to take it when thou mayst have it, than after thou hast wearied thyself in vain in following the creature, to come back with shame, and may be miss of it here also, because thou wouldst not have it when it was offered?

GURNALL.

Keep far from a false matter; and the innocent and righteous slay thou not.

Spare the Birds.

One of our daily papers, in connection with some remarks, condemnatory of the cruel and unmanly practice of wantonly shooting the smaller birds, which is so shamefully common in the vicinity of all our towns and villages, says: "In Japan the birds are regarded as sacred, and never under any pretence are they permitted to be destroyed. During the stay of the expedition at Japan, a number of officers started on a gunning excursion. No sooner did the people observe the cruel slaughtering of their favourites, than a number of them waited upon the Commodore, and remonstrated against the conduct of the officers. There was no more bird shooting in Japan by American officers after that; and when the treaty between the two countries was concluded, one express condition of it was, that the birds should always be protected. What a commentary upon the inhuman practice of our shooting gentry, who are as eager in the pursuit of a tomtit as of an eagle, and indiscriminately shoot everything in the form of a bird, which has the misfortune to come within reach of their murderous weapons.

"On the top of the tombstones in Japan, a small cavity or trough is chiselled, which the priests every morning fill with fresh water for the use of the birds. Enlightened America should imitate those beautiful customs of the barbarous Japanese, if not by providing fresh water for the feathered warblers, at least by protecting them from the worthless louts, who so ruthlessly destroy them."

The importance of protecting the birds, viewed merely as a question of utility, has been so fully demonstrated that it is needless to say a word more upon the subject. Unhappily, the savage instincts of those who find amusement in their destruction, are as little controlled by prudential considerations, as they are by the finer feelings of humanity.

Persecution for reading the Bible.—D'Aubigné tells an affecting history of persecution for reading the Bible:—"There lived at Coventry a little band of serious Christians—four shoe-makers, a glover, a hosier, and a widow named Smith—who gave their children a pious education. The Franciscans were annoyed, that laymen, and even a woman should dare meddle with religious instruction. On Ash-Wednesday, 1519, Simon Morton, the Bishop's gunner, apprehended them all, men, women, and children. On the following Friday, the parents were taken to the Abbey of Mackstock, about six miles from Coventry, and the children to the Grayfriar's Convent. 'Let us see what heresies you have been taught?' said Friar Stafford to the intimidated little ones. The poor children confessed they had been taught in English the Lord's Prayer, the Apostles' Creed, and the Ten Commandments. On hearing this, Stafford told them angrily, 'I forbid you, unless you wish to be burnt, as your parents will be, to have any thing to do with the Pater, the Credo, or the Ten Commandments in English.' Five weeks after this, the men were condemned to be burnt alive; but the judges had compassion on the widow, because of her young family, for she was their only support, and they let her go. It was night; Morton offered to see Dame Smith home. She took his arm, and they threaded the dark and narrow streets of Coventry. 'Eh, eh!' said the apparitor, on a sudden, 'What have we here?' He heard, in fact, the noise of paper rubbing against something. 'What have you got there?' he continued, dropping her arm, and putting his hand up her sleeve, from which he drew out a parchment. Approaching a

window, whence issued the faint rays of a lamp, he examined the mysterious scroll, and found it to contain the Lord's Prayer, the Apostles' Creed, and the Ten Commandments in English. 'O, O, sirrah,' said he, 'come along. As good now as another time.' Then seizing the poor widow by the arm, he dragged her before the Bishop. Sentence of death was immediately pronounced on her; and on the 4th of April, Dame Smith, Robert Holchetts Archer and Hawkins, Thomas Bond Wrysham and Langsdale, were burnt alive at Coventry, in the little park, for the crime of teaching their children the Lord's Prayer, the Apostles' Creed, and the Ten Commandments of God."

Report of the Indian Committee.

To the Yearly Meeting.—The committee appointed to promote the gradual civilization and improvement of the Indian natives, report:—

That the Boarding-school established for the Indian children at Tunessassah has been kept up, and continues to give satisfaction. There have been as many as seventeen boarders, whose general deportment and progress in learning have been encouraging. Some of them render assistance in the business of the family, and are also employed in sewing, knitting, &c.; and they all seem to be as happy and as readily controlled as the children of whites are, when separated from their parents.

A portion of the Holy Scriptures is read to them daily, and meetings for Divine Worship are held on First and Fifth days; on which occasions the conduct of the pupils is orderly and becoming. One of the Committee, who spent several weeks at the Settlement during the past winter and spring, remarks in a letter: "I have been comforted and encouraged in believing, that our small, silent meetings have been owned by the Great Head of the Church, and that the countenances of the little children, at times, give evidence that they are favoured to feel something of it."

The school has averaged about 22 pupils, and sometimes as large a number as 28 or 30 has attended; but the day-scholars are, as usual, very irregular in coming. When it is considered that none of the children, on entering the school are familiar with the English language, and many of them scarcely understand it at all—while the teacher is equally unacquainted with the Indian tongue—it will be perceived that the difficulties to be surmounted in teaching them are not light. Notwithstanding these, however, considerable progress has been made in their studies; and under the tuition of a competent teacher, they seem as susceptible of learning as any other children. Eleven of the scholars read in the New Testament, and two in the first class Reader, two read in the Spelling-book, and the others are learning to spell. Twelve of them write, and have made different degrees of progress in Arithmetic. The order observed by the children in the family is commendable. They are assembled in the Collecting-room a short time previous to meals, and, on liberty being given, walk one by one to the table and take their seats quietly—sitting in silence until all are helped, when they partake of their food with but little conversation. In the evening they are brought together in the Collecting-room, and say a short lesson; after which, a portion of the Holy Scriptures is read, and they then retire for the night in the same quiet and orderly manner. A Committee who visited them last autumn, say in their report: "It was gratifying to us to witness the lively interest which most of the children evinced in the pursuit of knowledge, and some of them have made considerable advancement, and apply themselves with diligence to their lessons. The order and quiet observed by them in the School, and their cheerful submission to the regulations adopted for the government of the family, were causes of much satisfaction to us."

From the opportunity afforded for judging of the effects of the Boarding-school, we are of the judgment, that if it can be properly supported, under suitable care-takers and teachers, it promises to be of more permanent benefit to the Native children, than any other plan which has been tried. It is chiefly upon the youthful mind that we can hope to make a profitable and lasting impression; and this is much more likely to be accomplished when the children are withdrawn from the improper and hurtful influences to which they are exposed among their own people. Many of the Indians seem to appreciate the advantages their children enjoy under the care of Friends, and are anxious to have them placed at the school; so that, if we had the means and sufficient help, the number of pupils might be much increased.

During the past year the Indians have not done much at clearing and fencing new land. Generally, they have raised an adequate supply of provisions for their families; but the unhappy divisions existing among them respecting their form of government have had a paralysing effect, as respects their agricultural and domestic improvement.

The Committee are desirous of engaging the services of a man Friend, to assist in the management of the farm and other concerns, and will be glad to receive early application from any one who may feel drawn to engage in this work of benevolence.

Our friend, John Wood, feeling himself released from the concern, he was succeeded, in the Tenth month last, by our friends Samuel and Rachel Whitson, who now have charge of the establishment at Tunessassah.

We are aware that the work of civilization has advanced slowly; but it must be remembered, that a long course of years is required to change habits and customs which have existed for ages, which have become deeply rooted, and to which the Indians are strongly attached. When we consider this, and the peculiar hardships and discouragements which the natives have had to encounter from the whites, we think the melioration already effected in their condition and manners, is quite as great as could reasonably have been anticipated. Contrasting their situation now, with what it was half a century ago, the improvement in comfort, in domestic economy, and in the arts of civilized life, is striking and encouraging. Many of the greatest difficulties have been in good measure overcome, and we think there is cause to persevere in the endeavour to promote the welfare of this interesting people, and to prosecute with energy the work of benevolence in which our forefathers felt themselves religiously drawn to engage, in order to discharge a debt of gratitude, which they believed due from the whites to these untutored, but hospitable children of the forest.

From an examination of the accounts of our Treasurer it appears, that he had in his hands, on the 19th ult., $285.84 in cash, and securities amounting to $12,938.00.

Signed on behalf and by direction of the Committee.

THOMAS EVANS, *Clerk.*

For "The Friend."

Tropical Scenery on the Amazon.

Wallace, a recent traveller in South America, gives us the following highly instructive and well-stated estimate of tropical vegetation. He says:

"There is grandeur and solemnity in the tropical forest, but little of beauty or brilliancy of color. The huge buttress trees, the fissured trunks, t extraordinary air-roots, the twisted and wrinkl climbers, and the elegant palms, are what stri the attention and fill the mind with admiratic and surprise, and awe. But all is gloomy a solemn, and one feels relief on again seeing t blue sky, and feeling the scorching rays of t sun.

"It is on the road-side, and on the river's ban that we see all the beauty of the tropical vegetatic There we find a mass of bushes, and shrubs, a trees of every height, rising over one another, exposed to the bright light and the fresh air, a putting forth within reach, their flowers and fr which, in the forest, only grow far up on the t most branches. Bright flowers and green folia combine their charms, and climbers with th flowery festoons cover over the bare and decayi stems. Yet, pick out the loveliest spot, where t most gorgeous flowers of the tropics expand th glowing petals, and for every scene of this kind may find another at home of equal beauty, a with an equal amount of brilliant colors.

"Look at a field of butter-cups and daisies, hill-side covered with gorse and broom, a mounts rich with purple heather, or a forest glade, asu with a carpet of wild hyacinths, and they w bear a comparison with any scene the tropics c produce. I have never seen anything more glo ous than an old crab-tree in full blossom; and t horse-chestnut, lilac, and laburnum, will vie wi the choicest tropical trees and shrubs. In t tropical waters are no more beautiful plants th our white and yellow water-lilies, our irises, a flowering rush; for I cannot consider the flower the Victoria regia more beautiful than that of t Nymphæa alba, though it may be larger; nor it so abundant an ornament of the tropical wate as the latter is of ours.

"But the question is not to be decided by comparison of individual plants, or the effects th may produce in the landscape, but in the freque cy with which they occur, and the proportion t brilliantly colored bear to the inconspicuous plan My friend R. Spruce, now investigating the bota of the Amazon and Rio Negro, assures me that l far the greater proportion of plants gathered l him have inconspicuous green or white flowe and with regard to the frequency of their occu rence, it was not an uncommon thing for me pass days travelling up the rivers without seei any striking flowering tree or shrub. This is part owing to the flowers of most tropical trees bei so deciduous; they no sooner open than they b gin to fall; the Malastomas in particular, general burst into flower in the morning, and the next d are withered, and for twelve months that tree bea no more flowers. This will serve to explain wh the tropical flowering trees and shrubs do not mal so much show as might be expected."

Strange Case of Gluttony.—English pape mention the suicide of an individual named Roy stone, who, ten years ago, possessed a fortune one hundred and fifty thousand pounds sterlin which he has since squandered in the gratificati of his appetite. He had agents in China, Mexic Canada and other places to supply him with t rarest delicacies, and a single dish, sometime cost him fifty pounds. At length, on the 15th last month, nothing was left him but a solita guinea. He bought a woodcock with the guine which he had served up in the highest style of t culinary art. Two hours afterwards, the mea of gratifying his depraved appetite being now exhausted, he ended his wretched and despicab life by jumping into the Thames, from Westmi ster bridge.

For "The Friend."

The editorial of the 26th ult., has so nearly cried out the concern of the individual, who sent a scrap, signed J., that she feels encouraged to complete it by adding the following.

We may not all be granted a sick bed at the close of time, even if our omissions and commissions have not hid the things that "belong to our peace" from us, therefore let us every one take the apostle's advice,—"Brethren, give diligence to make your calling and election sure, for if ye do these things, ye shall never fall." J.

A SUMMER SHOWER.

The rain is o'er.—How dense and bright
Yon pearly clouds reposing lie!
Cloud above cloud, a glorious sight,
Contrasting with the deep-blue sky!

In grateful silence earth receives
The general blessing; fresh and fair,
Each flower expands its little leaves,
As glad the common joy to share.

The softened sunbeams pour around
A fairy light uncertain, pale;
The wind flows cool, the scented ground
Is breathing odours on the gale.

Mid yon rich cloud's voluptuous pile,
Methinks some spirit of the air
Might rest to gaze below a while,
Then turn to bathe and revel there.

The sun breaks forth—from off the scene,
Its floating veil of mist is flung;
And all the wilderness of green
With trembling drops of light is hung.

Now gaze on nature—yet the same—
Glowing with life, by breezes fann'd,
Luxuriant, lovely as she came,
Fresh in her youth, from God's own hand.

Hear the rich music of that voice,
Which sounds from all below, above;
She calls her children to rejoice,
And round them throws her arms of love.

Drink in her influence—low born care,
And all the train of mean desire,
Refuse to breathe this holy air
And mid this living light expire.

Andrews Norton.

LAKE ERIE.

These lovely shores! how lone and still
A hundred years ago,
The unbroken forest stood above,
The waters dash'd below:
The waters of a lonely sea,
Where never sail was furl'd,
Embosom'd in a wilderness,
Which was itself a world.

A hundred years! go back; and lo!
Where, closing in the view,
Juts out the shore, with rapid oar
Darts round a frail canoe.
'Tis a white voyager, and see,
His prow is westward set
O'er the calm wave: hail to thy bold,
World-seeking bark, Marquette!

The lonely bird, that picks his food
Where rise the waves, and sink,
At their strange coming, with shrill scream,
Starts from the sandy brink;
The fish-hawk, hanging in mid sky,
Floats o'er on level wing,
And the savage from his covert looks,
With arrow on the string.

A hundred years are past and gone,
And all the rocky coast
Is turreted with shining towns,
An empire's noble boast.
And the old wilderness is changed
To cultured vale and hill;
And the circuit of its mountains
An empire's numbers fill. *E. Peabody.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

WILLIAM SOUTHEBY.

(Continued from page 302.)

Notwithstanding William Southeby's objections, the Yearly Meeting again laid the subject before Friends at London, in their Epistle of 1714. The valuable Friends of Chester Quarterly Meeting, who saw the full evil of slavery, knew that the only way in which the practice could be removed from the Society of Friends, would be, by every member, in his or her place, waiting for Divine qualification to bear testimony against it. The following minute was made in that "Quarterly Meeting held at Providence Meeting-house, the first day of the Sixth month, 1715." "A weighty concern coming before the meeting concerning some Friends being yet in the practice of importing, buying and selling negroe slaves; after some time spent in a solid and serious consideration thereof, it is the unanimous sense and judgment of this meeting, that Friends be not concerned in the importing, buying or selling of any negro slaves that shall be imported in future; and that the same be laid before the next Yearly Meeting desiring their concurrence therein.

"Signed by order and on behalf of the Meeting,

CALEB PUSEY,
JNO. WRIGHT,
NICHO. FAIRLAMB,
JNO. BLUNSTEN."

This minute bringing the subject before the Yearly Meeting, it was concluded that all who imported slaves, should be dealt with; that Friends should treat their negroes in a christian spirit, and that all should "forbear judging or reflecting on one another, either in public or private, concerning the detaining or keeping their servants."

William Southeby was much concerned that the Yearly Meeting went no further, and he now put his pen to work in the cause, and came forth with a pamphlet, in which it is probable he did not spare those who held slaves, nor those who were not prepared for the church taking active measure in purging her borders of those who held them. This publication being contrary to the practice and discipline of that day brought him under the notice of his Monthly Meeting, which by minute says, "having seen a paper in print, signed by William Southeby, that he has published without the approbation of Friends, which being contrary to our established discipline, this meeting orders that William Southeby stop the publication of his papers, and condemn his disorderly practice therein." Being now brought seriously to consider the condition in which he had involved himself, William Southeby condemned his action, and, we may suppose, tried to fulfil the advice of the Monthly Meeting of the Third month, effectually to stop the spreading of his papers, and "condemn the manner of his printing, and censuring Friends contrary to the minutes of our Yearly Meeting."

After this, William seemed to subside into quietness for a short time, and we find him once more in his appropriate sphere of usefulness in the Monthly Meeting, laying before it the "wants of an aged poor man."

But the case of the poor blacks still pressed upon his mind, and finding that the Yearly Meeting of 1716 did little more than reiterate its advice of 1715, he grew restive and impatient of the control which he was under, being anxious again to wield his pen, and see what he could effect thereby towards changing the views of his brethren.

One natural effect of being almost alone in defending a cause, is, if the advocate is really and heartily convinced of its truth, a tendency to cause him to over-estimate his own clearness of spiritual vision, and to underrate the religious principles, as well as religious judgment of opposers. This tendency may be counteracted by Divine grace to the watchful and humble in spirit. If the advocate meet with rebuffs and caustic rebukes for his zeal, it is very difficult for him to preserve a loving, forgiving, and just temper towards the rebuker, and a fair estimate of his motives and character.

Here William Southeby failed. The meeting could not go as fast as he thought right, and he was disposed to blame its tardiness, and censure its members. He was called on to condemn his printing contrary to discipline, and for publicly censuring his Friends who had not seen so far as he had, and he complied, but the root of bitterness was not eradicated. In the year 1717, he was again at work with his pen, and, in print, was, whilst advocating a sound christian testimony, manifesting a spirit out of unity with the body, and calculated to spread disunity and contention. Friends of his meeting informed him that if he did not condemn his disorderly proceedings in this matter they would be obliged to disown him. Nothing further was then done. In the Tenth mo., 1718, he being again at work with his pen, the meeting directed that "at the next meeting the minute made concerning him in 1717, should be read." He probably about this time ceased his public opposition to the slow movement of the body, and no record of his after course can be found. He had, through allowing this one concern very much to swallow up all other religious concerns, long lost his usefulness in his meeting, and we cannot tell at what time he closed his eyes on the troubles of this world of sorrow and suffering. He must have been far advanced in life, when we catch the last trace of him, and it is most likely his course was soon after ended. I cannot but hope, that through the quickening influence of the Sun of Righteousness, he found, when withdrawn from active opposition to his brethren, the fruits of the Spirit to perfect within him, so that love had a large increase, and long-suffering, gentleness, and meekness sprang up and abounded. But here we must leave it. We know that he once was a faithful, useful servant of the Lord Jesus, living in his love, and sustained and comforted by the unity of the brethren, and we only know, that through his impatient zeal, he gradually lost the fellowship of his former fellow-labourers; let in jealousy respecting them, and awakened jealousy in them towards himself. His case may find a parallel in that of some other advocates of the African race, who have, since his time, failed in patience and long-suffering.

The humble, watchful Christian, moves on in his proper path of duty, under the fresh openings of his divine Master. He scrutinizes his actions lest self should in any degree prompt them; but when duty is clearly made manifest, he performs it, leaving the result. He feels that obedience is his safety; consequences are in the hands of the Great Controller of events. In this he is justified by his God, and moves in the unity of those who have attained to an establishment in the Truth. If, whilst in the meekness of wisdom, and the earnestness of fervent faith, he is endeavouring to perform his duty, his Friends should labour to dissuade him, by pointing out the painful consequences which they think must ensue, he could answer in the spirit of the words of the apostle, in a similar occasion, "What mean ye to weep and to break mine heart? for I am ready not to be bound only, but also to die at Jerusalem for the

name of the Lord Jesus." Had the church in its collective capacity laid a restraining hand on the apostle, he had without doubt, with dutiful cheerfulness, submitted thereto. But the fears, the tears, the entreaties of those whose only opposition to his proposed course was the consequences which would follow, moved him not from the obedience of faith. When they could not turn him from his duty, they exclaimed, "The will of the Lord be done." The conduct of the apostle is a pattern for the true Christian disciple. He should feel the desires, the request of his fellow-believers, as of so much consequence, that to go counter thereto, is even as it were to "break his heart," and yet if the judgment of the church accompany not their entreaties, he should pass on, fulfilling all known duties, though the consequences should be suffering, privation and death.

Where the church is assembled, waiting on its Holy Head, and seeking to know his will, if the concern and exercise of a baptized member, is not at once felt and owned by the body, he is bound to wait in the patience, as well as in the faith of the saints, until the Lord Jesus Christ makes a way for it. This he will undoubtedly do, if the concern is of his own begetting, and his children with meekness and faithfulness, as he qualifies them, continue to bear testimony to the Truth. There is a gradual advance in the spiritual life of faithful, devoted Christians, and there has been an advance witnessed in the church militant relative to some of the testimonies of Truth. Not that the Truth changes, but through the blessing of God on the faithful labour of the more clear-sighted members of the church, there has arisen a general appreciation of the evil of some practices once tolerated, and a more consistent testimony is borne against them. Whilst the church is in the progressive state, it is especially incumbent on those who see the Truth, to conduct themselves with patient meekness, in all their efforts to advocate it. Our impatience will not hurry on the time for the general reception of the Truth; but, if it is allowed to sour our tempers, we may find, whilst we have deemed ourselves contending for the right, we have lost spiritual greenness, and are far from exhibiting, in our own lives and conversation, the beauty and excellency of the gospel of Him, who is not only the Truth, but the Life and the Light also.

[Much inquiry and research has been made to find a copy of any one of the printed papers issued by William Southeby, but without success. They were probably mere pamphlets which no one deemed of sufficient consequence to preserve.]

(To be continued.)

America—Its Age and its Antiquities.

The only knowledge which the present can obtain of the past, anterior to written history, must be gathered from the lessons taught by the monuments that have survived the devastating wars of ignorant and infuriated man, the crash of the elements, and the slow corroding power of untold time. The two continents of this Western hemisphere abound with these mute, enduring records. The labours of the antiquarians in Asia, Africa, and Europe have disclosed monuments of art now in ruins that were reared by a people whose history has passed down to us in written records. With the general history of the Assyrians, the Israelites, the Egyptians, the Carthagenians, the Greeks, and the Romans we are already acquainted, and all the discoveries made by antiquarians in their researches in those countries, among the ruins of ancient palaces, temples, and cities, serve but to illumine some portions of written history that are now dark, or illustrate others that are imperfectly detailed. But such is not the case in America. The antiquities of America extend from the shores of the Atlantic to the Pacific Ocean, and from the great lakes and British Provinces to Peru and Brazil, in South America. These ruins are not illustrated or even alluded to by any written history. Their origin is lost to view behind the impenetrable veil imposed by unnumbered cycles of unchronicled centuries. Immense forests growing over the ruins of large cities, and the gigantic size of trees, with indications that other generations of trees sprung up and grew and decayed before them, prove that these ruins preceded the Christian era. Neither history nor tradition indicates the origin or the rise of those vast mounds that are found scattered over the North American continent. They stand in silent grandeur, monuments of a race of people that have long since passed away, leaving no other trace of their existence. It is fashionable to speak of the eastern continent as the Old World, yet it is not known to be entitled to this appellation. Who can say that the Andes and the Sierra Nevada are not the seigniors of the Alps and the Himalaya? Who is prepared to prove that the ruins of Uxmal and Palenque, and the pyramids of Cholula, in Mexico, do not take precedence in age of the sphinxes and pyramids of Egypt, or the winged lions of Assyria? History traces the rise and fall of Ninevah, of Babylon, and of Thebes, but we have no record of the rise, progress, or fall of those great cities in Central America which the laborious researches of Stevens and Catherwood brought to light. There the human-faced bulls and the winged lions of Nineveh find their equivalents in the grotesque carving in stone of hideous forms of men and animals. Who can say that these rude sepultures of America did not precede those of Asia?

But we will not speculate on a subject that offers no basis on which even a plausible argument can be erected. The existence of numerous and immense ruins in America of what were once large cities is a fixed fact, and we must be content to remain in utter ignorance of the epoch in which they flourished. The most extensive of these ruins are to be found at Uxmal and Pelenque, in the south-eastern part of Mexico. At Uxmal are immense pyramids, coated with stone, and quadrangular stone edifices and terraces. The highest of these pyramids is 130 feet, and on the summit it supports a temple. On one of the facades of the temple are four human figures, cut in stone with great exactness and elegance. The hands are crossed upon the breast, the head is covered with something like a helmet, about the neck is a garment of the skin of an alligator, and over each body is a figure of death's-head and bones.

At Pelenque are immense ruins, a city of great extent, with the remains of a royal palace. One temple, that of Copan, was 520 feet by 650, and is supposed to have been as large as St. Peter's at Rome. Another temple of great dimensions is here, having an entrance by a portico 100 feet long and 10 feet broad; it stands on an elevation of 60 feet. The pillars of the portico are adorned with hieroglyphics and other devices. Different objects of worship have been found, representations of the gods who were worshipped in this country. These temples, with fourteen large buildings and many other objects of curiosity, stand here as monuments of ancient greatness, to remind us of the remote origin of a mighty empire. This city has been described as the Thebes of America, and travellers have supposed that it must have been sixty miles in circumference, and contained a population of 3,000,000 of souls.

It is in Mexico that we must seek the largest pyramid in the world. The tourists, the historians, and the geographers have made us familiar with the pyramids of Egypt, among which, that of Cheops looms up, a wonder among wonders. But Cheops is a pigmy compared with that of Cholula, in Mexico.

The pyramid of Cholula is described as covering forty-four acres of ground. On its summit was a temple, and in the interior has been discovered a vault, roofed with beams of wood, containing skeletons and idols. Several smaller pyramids surround this large one. It appears to have been formed by cutting a hill into an artificial shape. Its dimensions are immense, being nearly three miles in circumference and about four hundred feet high. It is divided into terraces and slopes, covered with platforms, stages, and bastions, elevated one above the other, and all formed with large stones skilfully cut, and joined without any cement. In some respects the style of architecture resembles the Gothic, being massive and durable, in other respects it resembles the Egyptian; yet the general construction, manner, and style of architecture is different from anything hitherto described in the world.

The wave of emigration which has planted the Anglo-Saxon race on the shores of the Pacific ere not fail to be favourable to the advancement of knowledge among men. The well-known activity, enterprise, and inquisitive character of the race will naturally prompt them to explore the ruins which are so profusely scattered over Mexico and South America, and it yet may be the destiny of some restless Yankee to trace in the ruined temples and cities of this strange land a history which has hitherto lain hidden under the rubbish of countless centuries.—*Louisville Journal.*

Extracted for "The Friend.

Stillness and Quietness.

"Stillest streams
Oft water fairest meadows, and the bird
That flutters least, is longest on the wing."

"The benevolence of an humble mind may be compared to a rivulet in a meadow, which, though it glides along unseen and without noise, refreshes and fertilizes the soil, leaving it to display the benefit received, by its increased verdure and fruitfulness."

"The man whose virtues are more felt than seen,
Must drop indeed the hope of *public* praise;
But he may boast what few that win it can,
That, if his country stand not by his skill,
At least his follies have not wrought its fall."

"Let not thy peace depend upon the commendation or censure of ignorant and fallible creatures like thyself, for they can make no alteration in thy real character. Be not impatient when men think evil of thee. Thy own opinion of thyself should be much lower than others *can* form, because thou art conscious of imperfections which they cannot know. If thy attention and care were confined to the life of the internal man, thou wouldst not feel the influence of fleeting words that dissolve in air. In times of ignorance and wickedness, it is most wise to bear reproach in silence, and in full conversion of thy heart to Christ, not to regard the judgment of men.

"If some professing religion have been unquiet in their unquietness hath given the lie to their profession. Quietness is our badge; it will be our strength, our rejoicing in the day of evil: it is pleasing to God, it may work good upon others. A good means of keeping our minds quiet is, to have them filled with the knowledge and belief of these two things: First, that the kingdom of Christ is not of this world, (many have thought otherwise, and it hath made them unquiet.)

ndly, that the wrath of man worketh *not* the ghteousness of God. We must, therefore, mor- y unquietness in the causes of it. We must ware of the company, and converse of those that e unquiet; though deceitful matters be devised, e must be quiet still."

"In true silence, strength is renewed; the mind erein is weaned from all things, but as they may e enjoyed in the Divine will. Where the fruits that spirit which is of the world, are brought rth by many who profess to be led by the Spirit Truth, and cloudiness is felt to be gathering er the visibly gathered church, the sincere in art who abide in true stillness, and are exercised erein, before the Lord for his name's sake, have knowledge of Christ in the fellowship of his suf- rings; and inward thankfulness is felt at times, st through Divine love, our own wisdom is cast t, and that *forward active* part in us subjected, hich would rise and do something in the visible thered church, without the pure leadings of the pirit of Christ.

"Whilst aught remains in us different from a erfect resignation of our wills, it is like a seal to book, wherein is written that good, and accept- ble, and perfect will of God concerning us; but hen our minds entirely yield to Christ, that dence is known, which followeth the opening of he last of the seals. In this silence we learn biding in the Divine will, and there feel that we ve no cause to promote, but *that only* in which e light of life directs us in our proceedings; id that the alone way to be useful in the church Christ, is to abide faithfully under the leadings his holy Spirit, in all cases: and being thereby reserved in purity of heart, and holiness of con- rsation, a testimony to the purity of his govern- ent may be held forth to others.

"This would lead us out of all pride, than hich there is no single obstacle which stands ore in the way of people in the search after uth. They have once declared themselves of a rticular opinion, and they cannot bring them- lves to think they could possibly be in the rong; consequently they cannot persuade them- lves of the necessity of re-examining the foun- tion of their opinions. To acknowledge and ve up their error, would be a still severer trial. ut the truth is, there is more greatness of mind candidly giving up a mistake, than would have ppeared in escaping it at first, if not a very ameful one. The surest way of avoiding error, careful examination. The best way of leaving om for a change of opinion, which should always e provided for, is to be modest in delivering our ntiments. A man may, without confusion, give o an opinion which he has declared without rogance."

"He that hath no rule over his own spirit, is ke a city that is broken down, and without walls; t the humble man who has no points of his own gain, and whose exercises *are in secret* before e Lord, is preserved from the disquietude occa- oned by the contention and strife of party zeal. e will not be found railing against those of an pposite view to himself; but as his trust is in e justice and mercy of God, he will leave them be judged and rewarded by Him, according to eir faith and deeds."

His warfare is *within*. There unfatigu'd
His fervent spirit labours. There he fights,
And there obtains fresh triumphs o'er himself,
And never with'ring wreaths, compared with which
The laurels that a Cæsar reaps, are weeds.
Perhaps the self-approving haughty world,
That deems him a cypher in the works of God,
Receives advantage from his noiseless hours,
Of which she little dreams. Perhaps she owes
Her sunshine and her rain, her blooming spring
And plenteous harvest to the pray'r he makes,
When, Isaac like, the solitary saint
Walks forth to meditate at even tide."

For "The Friend."

Meteorological Notice.

West-town—Third Month.—The average temperature of this month was 36¾°, which is 3½° lower than for the same month last year. The amount of rain was 1.64 inches; no snow excepting a few snow squalls near the close of the month. This month was very dry and high winds prevailed. All the rain which fell during the month was on the 13th, 15th, and 17th; previous to this none had fallen for twenty-five days. At the close of the month, scarcely a sign of vegetation appeared, though the frost was apparently all out, and the earth settled and roads good.

Fourth month.—The average temperature of this month was 50½°, which is 2½° higher than for the same month last year. The amount of rain was 2.28 inches; for the same month last year it was 5.62 inches. It is believed that the temperature of the 19th and 25th of this month was almost without precedent in this latitude, and at this season of the year; on the former of these days the mercury rose to 90° in the shade, and on the latter to 89½°; the average temperature of the 19th was 75°. This would be considered very hot weather in mid-summer. Range of thermometer for this month was from 19° on the 4th to 90° on the 19th, or *seventy-one degrees—a change from mid-winter's cold to mid-summer's heat in fifteen days!* At the close of the month the earth was still very dry and vegetation backward.

Fifth month.—The average temperature of this month was 58½°; for the same month last year it was 61¾°. The amount of rain was 4.03 inches, a little less than the usual average for this month. A good deal of pretty cool weather during the month with frost on the morning of the 11th. Range of the thermometer from 33° on the 10th and 11th, to 88° on the 15th, or 55°. Frequent showers during the month, and a copious rain on the 19th, have had a beneficial effect on vegetation, which, though still backward, is nevertheless progressing finely.

The average temperature of the three spring months was 48½°, which is 1½° lower than last year. The range of the thermometer from 11° on the 21st of Third month, to 90° on 19th of Fourth month, or 79°. The amount of rain for the three spring months was 7.95 inches; last year it was 11.15 inches—a marked difference, the effects of which are very seriously apparent in the scanty supply of water, and lowness of the springs throughout the whole country.

A Noble Deed—During the night of Eleventh mo. 26th last, in a thick snow storm, the wind blowing a heavy gale down the lake, the water chilled and making ice fast, the Canadian schooner Conductor, Captain Hacket, struck on the bar outside of Long Point cut, on the island side, beat over and filled with water immediately, some distance from the shore, the sea making a complete breach over her, driving the crew to the rigging for their lives. In the morning at daylight they were discovered clinging to the wreck, by Margaret Becker, a trapper's wife, the sole inhabitant of that end of the island, her husband being over on the main land. She immediately went down abreast of the vessel on the beach, and built a large fire of logs, made some hot tea, and prepared some food for them in case they reached the shore, and to refresh and encourage their drooping spirits by showing them succour was at hand. All that long day, with the tempest raving around her, did that heroic woman watch the suffering seamen clinging to the rigging of the wreck.

Just at nightfall the captain called to the mate, who was on the other side of the rigging, that they would all perish if they had to remain in the rigging another night, and that he was going to attempt to swim ashore; If he succeeded, the rest could follow him; if he drowned, they could cling to the rigging and run their chance. He leaped overboard and struck out. As he reached the undertow and backwater, his strength failing, and chilled and benumbed with cold, he would certainly have been drowned, had not the woman gone to his rescue. She waded in through the surf up to her neck, grasping him and dragging him out safely. The balance of the crew then followed him one by one, with the same result, this noble woman breasting the sea, and meeting and dragging them out singly as they came ashore; being, in the main, instrumental in saving the whole crew. Such noble conduct deserves more than a passing notice. She is a woman of the most humble position in life, but showed herself on this occasion a true heroine, and possessed of the noblest qualities of heart and soul.—*Buffalo Commercial Advertiser.*

For "The Friend."

Show me thy faith without thy works, and I will show thee my faith by my works, James, ii. 18. It is an easy thing to talk and to write of love, and patience, forbearance, forgiveness and charity; but is it not quite another matter to *bear* this kind of fruit? and by *example* not only defend and commend, but "adorn the doctrine of God our Saviour;" in all ages, those who have borne most of this precious fruit, have been far less careful to set it forth by the lip and pen, than to manifest by the weightiness of their spirits that they have *kept* with Jesus who *changeth* not.

The New Metal.—The Paris Academy of Sciences has been experimenting on the new metal recently announced as being contained in abundance in common potters' clay. A report has just been presented to that body by M. Delville, which says it can be manufactured cheaply from that article, and is appearently destined at no distant day to supplant copper, iron, brass and tin in many if not all manufactures. The qualities of this metal, producible from so cheap and accessible a raw material, are stated to be the lightness of glass, the whiteness and brilliancy of silver, malleability and ductility nearly equal to those of the precious metals, the tenacity of iron, and the fusibility of copper; so that it may be rolled, drawn, hammered, and filed into every variety of form.

An Educator.—A writer in the London Examiner states that he lately saw a man led by a dog as if blind, and looking with much apparent interest at the prints in Colnaghi's window. "Why, my friend," said he, "it seems you are not blind." "Blind! no, thank God, your honour," replied the man, "I have my blessed sight as well as another." "Then why do you go about led by a dog with a string?" asked he. "Why? because I hedicates dogs for blind men."

THE FRIEND.

SIXTH MONTH 9, 1855.

NEW YORK YEARLY MEETING.

By a letter received from a Friend in New York, we have received the following information of the proceedings of New York Yearly Meeting, up to

the close of the session on Seventh-day, the 2d instant:

The Yearly Meeting of New York convened on the 1st of the Sixth month; the number in attendance being about the same as it has been for several years past.

After the opening of the meeting, epistles from London, Dublin and N. England were read; and then the meeting proceeded to dispose of an Appeal from the judgment of Farmington Quarterly Meeting, after which the meeting adjourned to 4 o'clock, P. M. Several members from Ohio, Indiana and New England, were present with minutes.

Afternoon.—Proceeded with reading the epistles: those from Indiana and Baltimore referred to minutes, explanatory of their proceedings in receiving the epistle from one of the meetings in Ohio. The Clerk then informed the meeting that he had on the table two documents purporting to be epistles from Ohio Yearly Meeting, and he proposed that he should now read the minutes referred to in the epistles from Indiana and Baltimore Yearly Meetings, in relation to and explanatory of their proceedings thereon, which was done; when a pretty large expression of sentiment took place, that those meetings had taken the right course,—the only course that this [N. York] meeting could take to be consistent with itself. After considerable expression of dissent, upon the ground that that course would not only connect New York Yearly Meeting with another that had sprung into existence through disorder, but also that it would fasten on it, a connection with the departure from sound doctrine, out of which all these troubles had grown, &c., &c.; the Clerk read the epistle from the Separatists in Ohio, signed by Jonathan Binns.

On Seventh-day morning, a committee was appointed to prepare essays of epistles to all the Yearly Meetings usually corresponded with, except that of Philadelphia; after which the Clerk informed the meeting that he purposely omitted Philadelphia Yearly Meeting in that minute, and he proposed the adoption of a minute which he had formed, appointing a special committee to prepare a communication to Philadelphia, and instructing that committee to remonstrate with that Yearly Meeting, in relation to its decision in the case of Ohio Yearly Meeting, and admonishing it to resume its correspondence with New England, and to conform, in respect to Ohio, with the decision of the other Yearly Meetings, as the only terms upon which New York Yearly Meeting could consent to continue correspondence with it. The last clause it was concluded to erase.

The meeting then proceeded with hearing the Queries and Answers.

Afternoon.—The reading of the Queries and Answers was continued, after which a memorial for Reuben Haines was read.

Then adjourned.

SUMMARY OF EVENTS.

EUROPE.—The steamship Pacific arrived at N. York on the 30th ult., with Liverpool dates to Fifth mo. 19.

The War. — The telegraphic despatches from the Crimea represent the condition of affairs as very little changed. It would seem the allies despaired of taking Sebastopol at present, and were preparing for operations in the field. Fresh troops were arriving daily. There would soon be 200,000 of the allied forces in the Crimea, a force large enough it was thought to pursue the siege, and also operate against the Russians in the field. The Russians were watching their enemies closely, and appeared to be aware of all their designs. The cholera had disappeared. The Russian loss, daily, is stated by Gortschakoff at from 100 to 175 men, killed and wounded. Lord Raglan's despatch of the 5th says, that the Russians have constructed new batteries to the left of the Mamelon tower, and there is every appearance of the establishment of a very large camp on the plateau above the Belbak on the north side. The Russians made a sortie on the night of the 11th, which was repulsed with considerable loss. A short truce was granted to allow the Russians to bury their dead in front of the allies' advances. Canrobert's latest despatch states that the French were throwing *camonflets* or stink-pots into the city as a means of annoyance to its defenders. At General Canrobert's request, the chief command has been given to Gen. Pelissier, and Canrobert has been transferred to the command of Pelissier's division of the army. Canrobert asked to be relieved from the chief command on account of ill health. Fifteen thousand Turks, French, and English had been hastily embarked on board of all the available ships near Sebastopol, and sailed in the direction of the sea of Azoff. The expedition returned in a day or two, and the troops were as hastily disembarked.

The Baltic.—The French fleet had arrived in this sea, and the allied fleets were pushing forward.

FRANCE.—The Universal Exposition at Paris opened on the 15th ult. The Emperor and Empress were present, and the former delivered an appropriate speech. Pianori was decapitated on the 14th. He refused to the last to make any disclosures. The Paris papers have assumed the tone of outspoken hostility to Austria. France and England have presented an ultimatum to Sweden, which the latter seems inclined to reject.

RUSSIA.—The Czar has ordered another levy of twelve men for every thousand in the seventeen western provinces of the Empire, to be completed by the end of Seventh mo. The disturbances in the Ukraine had subsided. They were not of such magnitude as at first reported.

ENGLAND.—In Parliament, Lord Panmure stated the details of certain proposed reforms in the army. There are said to be dissensions in the British Cabinet, and the Times proclaims that there is great danger of peace being made with Russia on dishonorable terms. Lord John Russell is censured on account of his disposition towards peace, and his willingness "to renounce the career in which we have entered, to throw away the task we have undertaken," and to abandon Turkey to the discretion of Russia. The bill to abolish Church Rates was carried on second reading in the House of Commons, against the Government by 28 majority. Roebucks Committee of Inquiry has submitted a report. Layard's motion of a want of confidence in Ministers, would come up in the House of Commons on the 24th, and Milner Gibson's on the 21st. The King of Sardinia is said to be negotiating for the marriage of Queen Victoria's eldest daughter. *London Market.*—The money market was easy. Consols had advanced to 89¾. *Liverpool Market.*—The speculative demand for cotton continued, and prices had further advanced from 1-8 to 3-16*d.* The sales of the week reached 117,000 bales, 4900 of which were on speculation. Breadstuffs were unchanged and dull of sale. The prospects for the coming crops were favourable.

HAVANA, dates to Fifth mo. 25.—There were no apprehensions of further hostile movements from the United States. The state of siege prevailing in Cuba, ceased on the 23d. Yellow fever and small-pox were prevailing to a considerable extent.

MEXICO, dates from the city of Mexico, to Fifth mo. 19th.—The insurgents had concentrated at Zamora, and Santa Anna was on his march thither with a large army. A decisive engagement was expected. A destructive hurricane occurred in Mexico on the 9th.

THE ISTHMUS OF SUEZ.—The State Department at Washington has, it is stated, received information that the Viceroy of Egypt has adopted the project to cut through the Isthmus, and to form a universal company for the performance of the work, in which capitalists of all nations may take part.

UNITED STATES.—*The Gold Coinage.*—The total coinage of gold at the U. S. mint and branches, up to the first of 1855, was $344,338,987, of which $256,208,-971 were from California, received principally within the previous five years. The total production of gold in California since 1849, is doubtless considerably over three hundred millions.

New York.—More Mormon immigrants have arrived from England. The Kinney Nicaragua Expedition, which was ready to sail from this port, has, it is said, been finally abandoned, in consequence of Government interference. The Kane Relief Expedition sailed on the 2d inst. for the Arctic Seas. The steamship Baltic takes out 251 passengers and $1,727,600 in gold. A formidable opposition to the enforcement of the Prohibitory Liquor Law has been organized. About 14,000 individuals are enrolled as members, who are to be legally defended at the expense of the general fund. The ship Living Age, bound to New York with a car of teas valued at $800,000, has been lost in the Chi Seas.

Philadelphia.—The hotel-keepers of this city he held a meeting, and raised their prices of board. T proprietors of the New York hotels had previously a vanced their rates. Mortality last week, 149.

California, dates to Fifth mo. 9, received by the stea ship Star of the West, which brought 300 passeng and $413,791 in gold. The banking house of Pa Bacon & Co. had again suspended. An armed party fifty-six men, under the command of the notori Walker, had sailed for Nicaragua. Indian affairs the Tejon reservation, are said to be in a flourishi condition. The Indians were busily engaged in t various duties assigned them by the Superintende and a favourable influence was exerted over the nativ who as yet refrain from coming into the reserve. The are no further complaints of horse stealing or Indi depredations, and this improvement in the Indian hab was attributed to the exertions of the officers at the r servation. The Legislature adjourned on the 7th, ha ing previously passed laws to incorporate the city San Francisco; to provide for funding its debts, and submit the prohibitory liquor law to the people at t next election. The ruling of the U. S. Supreme Co in the Fremont case, to the effect that a precise defi tion of boundary is not necessary to the validity Mexican and Spanish grants, is likely to create consi erable excitement in California.

Miscellaneous.—Turkey in Europe.—Of the 15,500,0 European subjects of the Sultan of Turkey, 11,370,0 are of the Greek Church, and 260,000 are Catholic while only 3,800,000 are Mohammedans.

Spain and Church Property.—The Queen of Spain h sanctioned the law by the Cortes, confiscating the pr perty of the Church. The property confiscated is est mated as high as $300,000,000, but probably the Tre sury of Spain may not realize an actual benefit of mo than $150,000,000 to $200,000,000. The Queen gave h signature with great reluctance, and only yielded h opposition when assured that revolution would be t consequence of her refusal.

The Norwalk Catastrophe.—By this disaster, the Ne York and New Haven Railroad Company incurr heavy liabilities to parties injured. The cost so far h been $280,000 to the company, and there are still a settled claims against them.

Popery.—The "Golden Rose" which the Pope bless every year, and presents to some female sovereign, this year to be given to the Empress of Austria.

A Benighted Region.—The citizens, in the vicinity Tuscumbia, Alabama, have for some time past resolute persisted in pulling down the telegraph wires, on a count of their supposed effect in preventing the fall rain.

The French Crystal Palaces. — The two buildin erected for the great exhibition in Paris, cover an ar of more than twenty-two acres. The great hall is 39 feet long, and is the largest in the world.

Watchmaking in Texas.—The Houston (Texas) Tel graph says, that twelve hundred Swiss watchmake form a portion of the new colony, about to be estat lished near Dallas.

The Cholera, which has been prevailing on the Mi souri and Upper Mississippi rivers, is said to have e tirely disappeared.

RECEIPTS.

Received from J. P. Smith, Pa., $4, vols. 27 and 2 from A. Rogers, agt., C. W., for John Webb and Jas. Edwards, $2 each, vol. 28; from H. Robinson, agt., Y., for Wm. Wright and A. Boone, C. W., $2.53 eac for vol. 28.

MARRIED, at Friends' Meeting, Salem, Columbiana C Ohio, on Fourth-day, the 2d of the Fifth mo., CHARL J. HAYES, to DEBORAH, daughter of Jehu Fawcett, all that place.

DIED, at his late residence, Leeds Point, N. J., on t 6th of the Fourth month, 1855, JAPHETH LEEDS, in t 71st year of his age; a member of Haddonfield Month Meeting. He bore his sufferings, during his last illne with christian fortitude; expressing his resignation the Divine will, and his belief that his afflictions h been sanctified to him; affording to his family a friends the consoling hope, that his end was peace.

Postage to any part of Pennsylvania, for three months, prepaid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

The Shepherds of Monte Rotondo.

In 1853, a work on Corsica was published at Lyme in the German language. The author accompanies an account of his summer tour in this interesting and peculiar island, with a variety of valuable information respecting its history, natural productions, and the manners, superstitions, and character of the Corsicans. The book, which is considered one of much literary merit, has been translated by E. Joy Morris, and recently published under the title of "Wanderings in Corsica." We extract portions of a chapter presenting a view of life in the mountains.

"I had proposed to ascend Monte Rotondo, the highest mountain of Corsica, which lies a half day's journey to the south-west of Corte, and may be considered the central point of the island. Although it was represented to me as a difficult undertaking, I yet hoped to be indemnified by the wide view afforded in clear weather. At least, I expected to obtain an insight into the primitive shepherd life.

"Having provided myself with a guide and a mule, a little bread and some pumpkin flasks of wine, early on the morning of the 28th of July, I started for the mountain. The way, a shepherd path, passes through the same valley of the wild Restonica, from its junction with the Tavignano near the town, to the summit of Monte Rotondo, from which descended its head waters. The bed of this mountain stream is this deep and gloomy ravine. Near to Corte the valley expands to a tolerable breadth, and there flourish chestnut and walnut trees by the water. Further up it grows narrower and narrower, and it is hemmed in by towering precipices, overshadowed by ancient pine and larch trees.

"The mule clambered with a sure foot along the narrowest ledges on the verge of the precipice; and the view down into the abyss, through which the Restonica roared with its milk white waters, was fearfully beautiful, and often rendered the brain dizzy. As the sun rose higher, I entered a magnificent forest of pines and larches. These gigantic trees,—the pines with their broad green crowns, and the larches, as gnarled and tough as the cedars of Lebanon, are very imposing and picturesque objects. The monstrous trunks were buried in an undergrowth of white blossoming myrth, and of the tall erect boxwood and erika. Refreshing and balmy was the perfume from the medicinal plants, with which the mountains of Corsica are so rich.

"My guide walked on with quick steps. Occasionally I shuddered with secret apprehension in finding myself alone with him in this dark wilderness of rock and forest, and when he cast a glance back at me. He was an ugly fellow, and his eyes did not bode much good. I afterwards learned that his hands were stained with blood, and that he was a murderer; for a year before, he had stabbed a man at the market of Corte.

"In this romantic mountain wilderness, nothing was to be heard, as for hours we rode along, but the monotonous rushing of the water, the screaming of falcons, and sometimes the shrill whistle of a goat-herd calling his goats. The goat-herds lie scattered about in caves or huts, on the sides of Monte Rotondo, up to whose very summit their flocks browse. The pasture ranges and haunts of some of them lie at a height of more than five thousand feet above the level of the sea. Their strange stations have their peculiar names. After three hours' ride, I came to the first shepherd station, the *Rotù del Dragone*. On riding from the edge of the ravine to the stream, I beheld before me a black, smoke-begrimed cavern, buried deep in the mountain, with a ceiling of huge blocks of granite. A few steps before its entrance, the Restonica thundered by; between splintered crags around, rocks lay piled on rocks, and the woods were of an impenetrable density. A fire burned within the depths of the cave, around which cowered the family of the shepherd. A wretched looking woman sat there, mending a garment, and alongside of her was a fever stricken boy, wrapped up in a brown covering of goats' wool, peering inquiringly about with his pale face and flaring eyes. The goatherd came out of the cave, and kindly invited me to dismount, and to partake of some fresh milk and cheese. I accepted his invitation with thanks, and examined the interior of this dismal subterranean habitation. The grotto ran deep into the mountain, affording room for two hundred sheep and goats, which were driven within it every evening to be milked. It was so truly a cave of Polyphemus, that it seemed to be the original of that described by Homer; for I found all literally exact here, even the rows of vessels full of milk, and more than a hundred pieces of smooth round cheese, laid on fresh leaves. Polyphemus himself was wanting; for my host, ruffian-like and wild as he looked in his shaggy attire, was hospitality itself.

"'Do the bandits sometimes come down to you from the mountain?' I asked the Troglodyte.

"'Certainly they do,' he replied, 'when they are in want of food. Look on this stone, on which I am sitting—two years ago two bandit hunters concealed themselves in my cave to lay in wait for Serafino. But he stole in upon them in the night, and with two stabs he struck them dead on this stone, and then went back to the mountain.'

"The guide called me to depart. I returned thanks to the shepherd for his entertainment, and resumed the journey, not without a shudder, however. The path which now led through the Restonica to the other shore, continually grew steeper and more difficult. At length, after two hours' march, and being thoroughly drenched by a storm, I reached the last shepherd station on the lower Rotondo, where I was to pass the night. It is called Co di Mozzo. Some storm beaten larch trees stood on the sharpest edge of a naked ravine, over whose precipitous bed the Restonica leaped from rock to rock. Nothing was to be seen around, but perfectly naked pinnacles of rock, and far below lay the overclouded valley from which I had just ascended. I looked for a long time after the *capanne*, which my guide indicated. At length I saw among the rocks four habitations, of the most original style of architecture in the world, and probably built with less art than the termites or beavers employ on their constructions. Every capanna consists of four walls, the stones of which are simply laid on each other. They are about three feet high, covered with a gable roof of blackened trunks of trees and boards loaded with great stones. An opening in the front wall serves as door, through which the smoke escapes, or by the roof and walls, which are full of rents. There is a small space before the hut surrounded by stones, in which the milk vessels are kept, and here also is the *palo* or pole, with some cross bars, to which are suspended kettles, pieces of clothing and slices of goat meat. A couple of shaggy dogs bounded towards me, as I advanced to the capanna, and the shepherd's family, with the tattered children, crawled out of the hut, and curiously regarded the stranger. They looked picturesque enough among the wild rocks, their brown cloaks, thrown over the shoulder, the red *beretto* on their heads, and with their bronzed, dark-bearded faces."

(To be continued.)

Epistle of George Fox,

WRITTEN IN THE YEAR 1686.

"Dear Friends and Brethren in the Lord Jesus Christ,—In whom ye have all peace and life, and in whom there is no division, schism, rent, strife, nor separation; for Christ is not divided; there can be no separation in the truth, nor in the light, grace, faith, and Holy Ghost, but unity, fellowship, and communion. For the devil was the first that went out of the truth, separated from it, and tempted man and woman to disobey God, and to go from the truth into a false liberty, to do that which God forbade. So it is the serpent now that leads men and women into a false liberty, even the God of the world, from which man and woman must be separated by the truth; that Christ the Truth may make them free, and then they are free, indeed. Then they are to stand fast in that liberty, in which Christ hath made them free, and in Him there is no division, schism, rent or separation; but peace, life, and reconciliation to God, and to one another. So in Christ, male and female are all one; for whether they be male or female, Jew or Gentile, bond or free, they are all one in Christ. And there can be no schism, rent or division in Him; nor in the worship of God in his Holy Spirit and truth, nor in the pure and undefiled religion, that keeps from the spots of the world; nor in the love of God that beareth and endureth all things; nor in the Word of God's grace, for it is pure and endureth forever. Many, you see, have lost the Word of patience, and the Word of wisdom, that is pure, and peaceable, and gentle, and easy to be entreated; they run into the wisdom that is below, that is earthly, sensual,

and devilish, and very uneasy to be entreated. They go from the love of God that beareth all things, endureth all things, thinketh no evil, and doth not behave itself unseemly; then they cannot bear, but grow brittle, and are easily provoked, run into unseemly things, and are in that that vaunteth itself, are puffed up, rash, heady, high-minded, and fierce, and become as sounding brass, or a tinkling cymbal; but this is contrary to the nature of the love of God. Therefore, dear Friends and Brethren, dwell in the love of God; for they who dwell in love, dwell in God, and God in them. Keep in the Word of wisdom, that is gentle, pure, and peaceable, and in the Word of patience, that endureth and beareth all things; which Word of patience the devil, and the world, and all his instruments can never wear out; it will wear them all out; for it was before they were, and will be when they are gone, the pure, holy Word of God, by which all God's children are born again, feed on the milk thereof, and live and grow by it. My desires are, that ye may all be of one heart, mind, soul and spirit in Christ Jesus. Amen. G. F."

From "The Leisure Hour."

A Chapter on Corks and Bungs.

So numerous, diversified, and magnificently gigantic on the one hand, and so wondrously delicate and minute on the other, are the mechanical operations which are effected by means of steam machinery, that we can hardly hope to excite surprise by anything which may now be related of it. We shall attempt, nevertheless, to interest the reader for a few minutes by describing the scenes we saw, and the facts we gathered, during a visit lately paid to a factory where corks and bungs are cut by means of an ingenious and recently-patented steam machine.

We entered the factory at the hour appointed, and, accompanied by the managing director, proceeded through a warehouse stacked with huge piles of cork, tied up in bales as imported into this country, to a little yard in the rear of the building. Here we found one of the workmen busily engaged before a blazing fire of cork shavings, on which was placed a huge gridiron. He was "charring" the cork, as the operation is called; that is to say, he was literally broiling and blackening it on this gridiron. It is this process that gives the bungs that dark exterior which they always possess; it also closes the pores, without at all diminishing the size or lessening the weight of the cork. Many sheets of cork, which, by reason of their porosity, would be almost valueless, are by this means rendered fit for port wine and other fine corks. A number of sooty little urchins, who might easily be mistaken for diminutive specimens of the sons of Ham, were assisting in this department.

Returning to the warehouse, we were enabled to inspect the curious and interesting machinery by which the manufacture is accomplished. There was cork of every kind: the black, coarse, and dirty, from Portugal—the white, fine, and clean, from Spain—cork in large sheets, and cork in small pieces—the size of a finger nail for phials and the smaller vessels. The foreman told at a glance the value of the various sheets, and was sorting them according to their respective qualities.

To those of our readers who may be engaged in manufactures of various kinds, which call in the aid of steam machinery, it may not be uninteresting to present a brief descriptive sketch of the mode in which these slices or sheets of the cork-bark were turned into bottle-corks and bungs. A sheet of cork is placed on an iron table, in which revolves a circular knife, by which all "knobs and excrescences" are pared off. Parallel with the knife, and at a distance from it, regulated by the size of the cork required, is a little gauge, or edge. Pushing the cork against the edge of the knife, and passing it between the knife and the gauge, the sheet is speedily cut up into long strips. One boy can cut up in this way half a ton of cork in a day. By a similar process these slips are cut into little parallelograms, the length of the cork required. A lad, at 1s. per day, turns out 80 gross, or 11,500 per diem, while the most experienced workman, by hand-labour, could hardly do half as much within the same period, although he would charge five or six times the money for his labour.

These parallelograms are then taken to another machine. The boy places one on a lever, holds it there with his hand; the lever, hand, and cork are carried up to an iron table; two "holders" now seize the square piece of cork exactly in its centre, and it begins to revolve; the hand and lever return. Now there comes along, horizontally, a fearfully large knife—a yard in length—which catches the parallelogram of cork on the side as it is turning round to its edge. It will easily be seen that the square is thus cut into an ordinary bottle cork; and we may remark, also, as a curious fact, that out of 10,000 of these parallelograms, a round cork would, in every individual case, be cut of the very largest dimensions mathematically possible; and not only so, but the entire 10,000 would be, in the strictest mathematical sense of the word, of precisely the same size and circumference. Moreover, all are perfectly circular, which cannot possibly be the case with corks cut by hand. As the knife recedes, the holders drop the perfect cork into one basket, and the shavings into another, and the knife, by an ingenious process, is made to sharpen itself. This is a great advantage; for the hand-cutters lose much time in sharpening their knives; it being a fact that hardly any substance so soon takes off the edge as cork. From sixteen to twenty-five corks can be, and are, cut in a minute; and there are children of from 12 to 14 years of age, who make at the rate of seventy gross a-day. By a similar machine, though somewhat more complicated, bungs are cut, both round and tapering, at one operation.

One of the patents held by this company—which, the managing director facetiously remarked, were sufficiently numerous to paper his counting-house—was for the manufacture of ordnance corks; and we were shown some of these "wads" for eighteen-inch howitzers.

Further on, an ingenious piece of mechanism was branding the corks with the names of the large brewing and bottling firms for whose use they were intended. This little machine acted very rapidly, and the process was very simple. We also had an opportunity of witnessing cork-cutting by hand, both by English and by French operatives; but their mode is too well known to need any descriptive details here.

It appears that the superior kinds of cork are not permitted to be exported from Spain in an unmanufactured state, Spaniards on the spot being so far protected in their cutting. The Spaniards, we may observe, who export cork, often place all the best sheets outside, so that those who go down to the docks to purchase are sometimes taken in by this deceptive process, to a very serious extent.

(To be continued.)

Never compare thy condition with those above thee; but to secure thy content, look upon those thousands with whom thou wouldst not, for any interest, change thy fortune and condition.

Trust in the Lord.

BY OLD HUMPHREY.

If you want anything worth having, the wa obtain it is to trust in the Lord. If you can get it in this way, you will not get it in any ot God denies to those who trust in him nothing is for their good. Make yourself easy, then, if you only trust in him all will be well. W he gives you will be in love, and what he holds will be in wisdom.

Do you want health? Trust in the Lord, none but he has it in his power to give it. freshest breeze, the sunniest sky, the mild cline, and the medicine of the most skilful p sician, will all be in vain to bestow or prese health without God's blessing. Trust and "f the Lord, and depart from evil. It shall be hea to thy navel, and marrow to thy bones." Pr iii. 7, 8.

Trust in the Lord; his power alone bestows
On pallid cheeks the colour of the rose.

Do you want riches? You must go where th are to be had. Now "the earth is the Lord and the fulness thereof." The gold and the silv are his, and the cattle on a thousand hills. him, then, you must apply. Trust in the Lo and if riches will add to your happiness on eart without hindering you on your way to heave rich you shall be.

Trust in the Lord, his righteous ways uphold,
And he will give thee better gifts than gold.

Do you want reputation? Trust in the Lo and ask him to enable you to deserve it. Rep tation is very hard to get, and very easy to lo Envy, hatred, malice, and slander's tongue ma in an unlooked-for moment, deprive you of it, u less God be your protector. If he is your frien you are secure.

Trust in the Lord, and he will guard thy fame,
And in the book of life inscribe thy name.

Do you want wisdom? Trust in the Lord, an put up your petition to him. Some travel to g wisdom, some read books to get wisdom, and son listen to the learned to get wisdom; but "t fear of the Lord is the beginning of wisdom. Fear him, then, love him, obey him, trust hi and praise him. "If any of you lack wisdom, l him ask of God, that giveth to all men liberall and upbraideth not; and it shall be given to him. James i. 5.

Trust in the Lord, for he can make us wise
As angels, and prepare us for the skies.

Do you want peace? Trust in the Lord, f unless he bestows it, you will never have it. It not to be had for love nor money, and no one ca beg, borrow, or steal it. "There si no peace t the wicked." God is its only giver, and from hi it must come, if it comes at all. "Let your r quests be made known unto God: and the peac of God, which passeth all understanding, sha keep your hearts and minds through Christ Jesus." Phil. iv. 6, 7.

Trust in the Lord, and care shall ne'er confound thee,
But thou shalt be at peace with trouble all around thee.

Do you want a guide through the world? Trus in the Lord, for none other can you safely trus Others, when you least expect it, will fail or d ceive you. Some are ignorant, some ungodly some unjust, and some false in all things; bu God is wise, and holy, and just, and true; trus then in him, and "the Lord shall guide thee con tinually." Isa. lviii. 11.

Trust in the Lord, and he in truth and love
Shall guide thee to the golden gates above.

Do you want a bright prospect of eternity—a
ance of the mansions of the blest? Trust in
Lord, and he will unfold to you things won-
ous to behold—things hidden from the eyes of
se who fear not God. He can give you a faith
at shall sharpen your eyesight and increase your
e. "Faith is the substance of things hoped
, the evidence of things not seen." Heb. xi. 1.

Trust in the Lord, and thou by faith shalt see
The heaven of glory that's prepared for thee.

Whether you want health, wealth, reputation,
dom, or peace, a guide through this world and
right prospect of a better, trust in the Lord,
d, if for your good, you shall have them all.

For "The Friend."

Submarine Telegraph to Europe.

In the New York Tribune of the 1st instant,
ere is an article on the proposed telegraph line
tween America and England, from which we
ke the following extract:

"We are now, however, about to witness some-
ing which our old-fashioned historians would
spatch in a line or a note, though worth a
lume or library or many libraries. We mean
e telegraphic communication between America
d Europe, precedent to its extension round the
obe. This is too large a theme for any single
ro. It is an idea. And yet the parties engaged
its realization regard it as already certain to be
rried out. The experience of the Black Sea
legraph for instance, is thought to be conclusive,
shorter lines previously established were not.
om Balaklava to Varna the wires stretch under
ater more than 350 miles, and not the slightest
fficulty is experienced in using them. There
u then be no difficulty in sending electricity
ross the Atlantic by the same means. The
gth of the wires from Ireland to Newfoundland
ll be some 1750 miles; they will lie on the
ady plain, which the soundings of our Govern-
ent have shown to stretch from land to land for
e whole distance, with the exception of about
o hundred miles next to the Irish coast, where
e bottom becomes irregular and the water deeper.
he actual distance is some 1600 miles only, but it
ll be necessary to make a detour with the wires in
der to carry them around the Banks where ice-
rgs often ground, and where the cable might be
oken by their weight and friction.

The line from Ireland to Newfoundland is to be
nstructed by a European Company of which
rett, who has laid down most of the submarine
legraphs of Europe, is a prominent member.
he capital of this Company is two millions ster-
g, and the contracts—already perfected—for
e completion of the work require that it shall
ready for operation by First month 22, 1858—
ss than three years hence. The cable of this part
the line is to contain six telegraphic wires—like
e great Mediterranean cable now being laid
wn—and is to weigh eight tons to the mile. In
ying it down of course several steamers will be
quired, as no single vessel could contain the
normous weight of the entire mass; but the in-
nious manufacturers, W. Kaper & Co., of Lon-
on, have contrived means of so splicing it as to
nder the joints quite as strong and quite as ser-
ceable as any other part of the line. Thus,
hen one steamer has paid out her portion of the
able, the end will be spliced upon the coil on
oard of the next steamer, and so on till all is down.
hould a storm arise during the process, the ex-
eding strength of the cable, formed as it is of a
ass of heavy iron wires wound spirally around
he thick tarred envelope and gutta percha cords
hich contain the electric conductors, will be sufficient to hold the steamer as if she were at anchor, until the gale is over. Of course the work will be done in summer months when there is little danger of interruption from tempests. The cable, when once sunk upon the bottom, will remain there forever, below the range of marine animals, and safe from all disturbance. It would be difficult to fix a limit to its duration after it is once successfully bedded.

Of the Company which has undertaken the cis-Atlantic portion of the work we have often had occasion to speak. It is composed of some eight or more wealthy gentlemen, who propose to build the entire line from St. Johns, Newfoundland, to New York with their own resources. Peter Cooper is the President, and Moses Taylor the Treasurer of this Company, and Cyrus Field, one of its members, has just returned from Europe, where he went to consummate the arrangement with the European Company. The American part of the line will be 1200 miles in length, 71 miles of which will be under the Gulf of St. Lawrence, and the cost of the whole is estimated at a million and a half of dollars. The wires across Newfoundland will make 400 miles of the line, running through a country hitherto unoccupied and unknown. In the cutting of the path and other preparatory labours, the Company have had 400 men employed during the past year in that island alone. They have been liberally aided with grants of land from that colony, and have obtained advantageous charters and grants elsewhere. From our last English journals we learn that the cable, to go under the Gulf of St. Lawrence, was about to be shipped, and we may accordingly soon expect to be able to receive despatches from St. Johns as easily and regularly as we now do from New Orleans. This cable contains three electric wires only, it being contemplated to lay down another of the same size when the European wires have been brought across and the business between New York and London requires it.

Meanwhile, as soon as communication is opened with St. Johns, it is expected that the Collins steamers will regularly call there to take in coals and deliver the news. This alone will bring us two days nearer to Europe in point of intelligence, St. Johns being two days's sail beyond Halifax. The advantage of taking a smaller stock of coal, and carrying more freight, will suffice to render this arrangement a most profitable one for the steamers. Finally in three years, the communication from Europe to America will become instantaneous, and then the steamers will no longer be of any value as bearers of news. When we find in The Tribune every morning a column or two of telegraphic despatches, narrating every interesting event of the previous day in Europe and Asia—for the magical wires are being extended thither also—we shall care but little for files of journals and correspondence that reach us ten days old. These can then possess only that curious interest which belongs to old letters and old newspapers; we shall read them with pleasure perhaps, but their freshness will be gone.

The gigantic triumphs of modern science and industry are matters so trite and threadbare that they are now rarely referred to except in some dinner speech or anniversary oration, but still it is impossible to contemplate the probability of such an achievement as we have described without a glow and a thrill at its sublime audacity and its magnificent uses. When events, discoveries, projections, business speculation, love and war, may all be flashed unerringly from hemisphere to hemisphere ten thousand feet beneath the surface of the sea, stolidity itself must expand into wonder and delight. Where then will be time and space, the ancient limitations of humanity? Annihilated by that industrious hand and that scientific genius with which Man was endowed when he was set to subdue and to rule the earth!"

Report of the Book Committee.

The Yearly Meeting of Philadelphia directed an abstract from the report made to the Meeting for Sufferings by its committee having charge of the publication and circulation of the writings approved by the Society, to be published in the extracts, in order to spread it before the members generally. It is as follows:

"The operations of the Book Store have been carefully attended to during the past year, and continue to furnish satisfactory and encouraging evidence of the usefulness of the establishment, in spreading a knowledge of the principles and testimonies of our religious Society.

Twenty-one hundred and fifty-three books and pamphlets have been sold, and 628 bound volumes, and 406 pamphlets gratuitously distributed, considerable part of which has been given to the Preparative meetings of our own Yearly meeting. The following Libraries have been gratuitously supplied with 194 volumes:—West Philadelphia Institute;—Pottstown;—Young Men's Lyceum at Nicetown;—Norristown;—Ephrata, Pennsylvania;—for Coloured people in Indiana;—First-day School at Radnor, Pennsylvania;—Boarding School in Michigan;—Eastern Penitentiary;—Dickenson College, Carlisle, Pennsylvania, on application of one of the Professors;—the Government Libraries at Cape Palmas and Monrovia, Africa;—and to the New York State Library.

Books have also been gratuitously furnished to persons in Nova Scotia; Iowa; Ohio; Clarefield, Penn'a; North Carolina; Baltimore; Muncy, Penn'a; Atlantic City, New Jersey; St. Paul, Minesota; Port au Paix; Haiti, and Alabama.

Through the liberality of individuals interested in the dissemination of the approved writings of Friends, a valuable edition of Sewel's History has been stereotyped during the year, at a cost of upwards of $1,100. The text has been carefully collated with the most perfect editions, and the typographical errors corrected; the matter has been divided into chapters, with copious headings, embracing the principal subjects treated on; and a new and ample Index has been prepared, with much labour and care, and appended to the work; so that it forms the most complete and desirable edition of this interesting history which has ever been published.

The stereotype plates being gratuitously supplied, the work can be sold low; and is now offered at the small price of $1.25 per copy, containing 920 pages; printed on good paper, in a clear type, and well bound in leather.

As the object of the contributors to this undertaking is to promote the reading of the history; and as it is very desirable that our members generally, and especially the youth, should be made acquainted with the rise of the Society, and the sufferings which the primitive Friends patiently endured for a long course of years, in the faithful maintenance of their christian doctrines and testimonies, we hope that parents and others will be careful to supply themselves and families with the book, and encourage the perusal of it.

If the members of our Society were concerned to make themselves more thoroughly acquainted with the pious lives of our honourable predecessors in the Truth; with the principles for which they so nobly and steadfastly contended and suffered; and with their unwearied and disinterested labours to promulgate them, and to spread the

kingdom of the Redeemer of men; we believe it would not only tend to increase their love for the religion of their forefathers, and their conviction of its unspeakable value and importance; but also counteract the influence of the light and superficial reading, ostensibly of a religious character, which so much abounds in our day: the tendency of which is to create a false rest, in an easy outside religion, that soothes self and saves it alive; while the heart-changing work of the Holy Spirit, which crucifies to the world and its attractions, is overlooked or shunned.

The committee wish again to call the attention of Friends, to the importance of endeavouring to promote the circulation of the approved writings of the Society. It is not sufficient to place the Books in the Preparative Meetings' Libraries, and allow them to lie there unused. Means should be taken to give proper notice that they are there, and may be freely obtained; and also to promote the reading of them by our own members and by others.

It is also desirable that Friends should distribute in their neighbourhoods, among those of other religious denominations, suitable treatises calculated to prevent or remove the misconceptions of our Christian principles, which sometimes arise from ignorance or design. Books are silent testimony-bearers to the Truth, often taken up and read when the mind is in a favourable state to receive profitable impressions; and instances are not unfrequent, where, through the Divine blessing, they have been made instrumental in convincing persons of the Truth as it is in Jesus; and of removing those doubts and difficulties, with which they had long been tossed and perplexed."

Philadelphia, Fourth mo. 12th, 1855.

The Speed of Railroad Cars.—Many of the accidents which happen to persons attempting to cross railroads, are the result of ignorance of the velocity of the iron horse when fairly under way. A writer in the Hartford Courant gives some interesting facts, which it may be well to bear in mind:

"It seems almost incredible, that as we glide smoothly along, the elegantly furnished car moves nearly twice its own length in a second of time—about seventy-four feet. At this velocity we find that the locomotive driving-wheels, six feet in diameter, make four revolutions per second. It is no idle piston-rod that traverses the cylinder thus eight times per second.

"If a man with a horse and carriage upon an unimportant public road in a country town, should approach and cross the track at a speed of six miles per hour, which would be crossing rapidly, an express train approaching at the moment, would move towards him two hundred and fifty-seven feet while he was in the act of crossing a distance barely sufficient to clear the horse and vehicle. If the horse was moving at a rate no faster than a walk, as the track is usually crossed, the train would move toward him, while in the act of crossing more than five hundred feet. This fact accounts for many accidents at such points. The person driving thinks he may cross because the train is a few rods distant.

"How compares the highest speed of the train with the velocity of sound? When the whistle is opened at the eighty rod 'whistle post' the train will advance near one hundred feet before the sound of the whistle traverses the distance to and is heard at the crossing. The velocity exceeds the flight of many of our birds."

In keeping faithful to the pure Counsellor, and under trying circumstances suffering adversity for righteousness' sake, there is a reward.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 310.)

JOHN FARMER.

In connection with the account of William Southeby, it may be proper to give a short sketch of the difficulties the Society of Friends in America were involved in, by the indiscreet zeal of John Farmer. His actions might have been suffered to have slept in oblivion, if it were not that Friends of Philadelphia Yearly Meeting have been several times charged in print with silencing him, because of his testimony against slavery. This charge was first published several years ago on the credit of a statement made by an old man, that in his youth a Friend of New Jersey had told him that John Farmer, a minister, from England, had a powerful testimony against slavery; but that being rebuked therefor by Friends of Philadelphia, he was discouraged,—ceased the exercise of his gift, and never returned home. The account also stated that on his death-bed, he was sorry that he had given way to discouragement, and had ceased to bear testimony for the Truth. This statement which was first published many years ago, has since been occasionally quoted in certain papers, to bring odium on Friends here. The truth of the case, as far as we can now unravel it, we purpose to lay before the readers of "The Friend."

John Farmer, whose residence was at Stanstead, in Essex, Great Britain, was in good repute amongst his Friends there, for his labours of love in the ministry of the gospel, and for his orderly and upright walking in his daily intercourse in the world. Having laid before his Friends, in 1711 or 1712, a concern to pay a religious visit to America, he was set at liberty, and had testimonies of unity from a meeting at Colchester, and several other meetings.

He came to Philadelphia, about the close of the Sixth month, 1712, where his gospel service was acceptable. During the next year he appears to have visited the meetings on this continent generally. He was in Philadelphia, in the First month, 1713, and again about the time of the Yearly Meeting, in the Seventh month of that year. At this time he produced certificates from Friends of various parts which he had visited, bearing testimony to their unity with him, and also to the excellent service he had had amongst them.

During the time of the Yearly Meeting, he informed that body that he had drawings towards some labour among the Indians, and also to visit Friends in Barbadoes and other islands. For this latter service, a certificate was granted him. This certificate addressed to Friends in Barbadoes, states "that our well esteemed friend, John Farmer, having been travelling in the service of Truth, in the several provinces of these parts of America, of whose service and labour of love in the gospel we have had divers good accounts which have been read in our meeting to our satisfaction;" "now laying before us a concern that rests upon him to visit Friends in yours and other islands, desired a certificate." "We, therefore, certify you that, after due consideration, we are well satisfied with his undertaking, hoping it may be for the benefit of souls. He hath been a faithful labourer in the work of the ministry amongst us, and we have good unity with his testimony, his conversation being answerable to his doctrine. We desire the Lord may preserve him, and attend him with his power and good presence, that so he may be enabled to perform the service which God hath required of him. To the guidance and protection of the Lord's good Spirit we recommend him, h ing no better thing to recommend unto the churel of Christ, the whole world over, and to such desire the welfare of Zion, and the prosperity Jerusalem."

Of the visit to the Indians we know nothi but it probably was paid before the middle of t Ninth month, when he was again in Philadelph After finishing his religious service in the W Indies, he returned to England. About the l ginning of 1715, with a fresh certificate from Monthly Meeting at Stanstead, and one from t Second-day Morning Meeting at London, he ag sailed for America. He gave account to Frie in Philadelphia towards the close of the Fou month, of his travels in the service of Truth sir he left there, which account was to their "comf and satisfaction." After attending the Yea Meeting in the Seventh month, he proceeded visit the meetings in Maryland, having for a co panion that valuable minister, Richard Townsen The epistle to Maryland of that year, states, "Our dear friends, Gabriel Newby, Matthew Pi chard, and John Farmer, with divers other faithf ministers and brethren, were with us, and we we greatly comforted, strengthened and edified in t Lord, and one in another."

Of John Farmer's labours during the year 17 we have little information, except that he was New England, where he became involved in co troversy with Friends of Rhode Island. It appea that John felt strong sympathy on behalf of t negroes,—that oppressed portion of his fello men, and that he thought himself constrained open his mouth for them, as for the dumb, a those who had none to help them. He, witho doubt, lost his patience, on finding that his tes mony in this respect had not a ready entranc amongst his Friends there. What steps he wish them to take we cannot now tell, but it probab was the same which William Southeby was at th very time urging so vehemently in Philadelphi the absolute and unconditional freedom of the slav held by Friends.

How much might have been effected, even Newport, that stronghold of the African sla trade, by a calm, christian, constant testimony the great truth that liberty is the undoubted rig of all, who have not by some act of their own d prived themselves of it, we cannot tell. Hum nature prompts to strong, sudden exertion on b half of what it deems truth and justice, but it r quires Divine grace to enable any one to bear faithful, consistent testimony in the meekness wisdom against error, when his pleadings and re sonings are addressed to those, who, through th effects of habit, education, or the deadening infl ence of interest, have no ears to hear. Job Farmer may have rightly, as well as forcibly ple the cause of the slave. If, after doing this, h had left the matter to the great Head of th Church, and whilst proclaiming his truth, he endeavoured to cultivate in himself love and goo will to all those who differed from him, he wou not only have promoted his own peace, but wou have done more towards advancing the cause de to his heart, than could have been effected by an amount of denunciation, or irritating languag We know not whether any other matter entere into John Farmer's dispute with his Rhode Islan Friends, but that of slavery, but we know th losing his patience in the controversy, he, in add tion to the biting remarks of his tongue, resorte to his pen to maintain his views, and without th sanction or revision of the Society of Friends, pul lished what his excited zeal prompted. "Muc patient labour," we are assured, was bestowe upon him, not to alter his judgment in the matt

i controversy, but to induce him to recall his pamphlets which tended to division, and to con-n his violation of the directions of the body, at all writings should be submitted to the in-ection and revision of Friends, previous to pub-lation. By this time, John, deeming himself a sferer for the Truth, was so securely covered by e armour self furnished, that the entreaties of Friends found little entrance. For the mem-rs of the committee of the Yearly Meeting of nistering Friends, who endeavoured to induce n to condemn the spirit in which he had acted, l to recall the writings clearly issued without the ersight and care that the discipline required, he obably had individually, respect and esteem. t pride was now in arms to sustain self from miliation, and, it appears, he maintained a spirit subdued by tender appeals—by kind reasonings, by plain statements of what the end must be, if submitted not to his Friends. Satisfied that e view he had taken was right, he would not nd his dignity sufficiently to admit that the irit in which he had maintained it, was wrong. e advocated and urged a right measure before e time had come for the church to take the step unity, and judging and condemning all who w not as clearly as he did, he lost ground in a ligious sense. After a time, the Yearly Meet-g of Ministers at Newport issued a testimony, sowning him, until he should call in his papers, d condemn his printing them contrary to dis-pline, to the satisfaction of that meeting.

In the year 1717, John Farmer came within e limits of Philadelphia Yearly Meeting, bring-g his papers and pamphlets with him. The con-oversy he had been engaged in, seems to have tured his spirit, and wherever he went, disturb-nce and confusion followed. His habit was to ad his pamphlets in meetings, as well as out of eetings, and as Friends generally, even those who ndemned slavery, felt convinced that his conduct d been undoubtedly wrong, he was often interrupt-l in his disorderly actions. To quiet the disturb-nce, if possible, the ministering Friends of Phi-delphia found it absolutely necessary for them to t in the matter. They remembered the services John, when, in the meekness of a spirit depend-g on his Master for daily guidance, he was enabled promote vital Christianity by word and doctrine, conduct and conversation. They had loved m for his work' sake, and now, "having a care r his good, and the peace of the church," they esired Thomas Chalkley and Anthony Morris to t him know that his brethren were dissatisfied ith his proceedings, and wished to have an op-ortunity of personally labouring with him. He eadily complied. Strong in his belief, that in is case the end had justified the means, he was isposed to explain and dispute, and glad of the pportunity thus afforded. Much labour was be-owed upon him, as the account says, "in the ve of God to bring him to a sense of his outgo-g and acting, contrary to the established disci-line." He was firm in defence of his conduct, ndeavouring to shield his actions, by holding up ne greatness of the cause. The meeting, after earing him, and the testimony of Rhode Island riends against him, informed him that they nited with the testimony unanimously. They nen earnestly advised him to "use all justifiable eans," to be reconciled to the Friends, who had isowned him. They desired him to deliver up ne papers he had been reading, to the disturb-nce of Friends, and to cease offering his gift in eetings, until that reconciliation should be ef-ected. The Monthly Meeting of Philadelphia, enth mo. 27, 1717, having come to the same onclusion as the ministering Friends, he appealed to the Quarterly Meeting against its decision. This was a novel proceeding as that Monthly Meeting had not disowned him, yet Friends, anxious to save him, if possible, consented to his prosecuting the appeal.

The Quarterly Meeting, after a patient hearing and bestowing much kind advice, united in the judgment of the Monthly Meeting, and he then appealed to the Yearly Meeting.

When the Yearly Meeting, commencing Seventh mo. 20, 1718, came on, John Farmer addressed to the Friends assembled, this communication.

"Loving Friends of Pennsylvania and Jersey Yearly Meeting held this day for discipline. I desire you to give me the hearing of what I have to say to you upon the following matters. First, a brief relation of a difference between Friends of Rhode Island Yearly Meeting of Ministers, Philadelphia Meeting of Ministers and their Monthly and Quarterly Meeting for discipline on the one part, and I, on the other part. Secondly, my appeal from Philadelphia Quarterly Meeting to you. Thirdly, an offer to you about my papers, and some Friends' printed books. Fourthly, a short account of a war between the Spirit of the Lord and the flesh, and a call to you to come up to the help of the Spirit. Fifthly, if you will not do it, but join with Philadelphia Quarterly Meeting in disowning me, then I declare my appeal from you to our London Yearly Meeting. Sixthly, I have to charge you with a fault. Seventhly, some questions showing what I think, hath been in the minds of some of my antagonists, and after it some of what was in my mind about it is expressed. Eighthly, a question concerning Philadelphia Monthly and Quarterly Meetings, and an answer to their paper disowning me. All which things, of which this being the contents, will, I think, take about half an hour's time to declare to you. But if you will not hear me on the whole of it, then I desire you to hear me declare some part of it; which part you please to hear. But if you will hear none of it, then I desire you to let me know your minds in it, as soon as you conveniently can do it. And let me and London Yearly Meeting have your reasons why you will not hear me, for I intend to complain to them of your doings, if you will not hear me, who am your friend, John Farmer."

On considering this paper, the Yearly Meeting did not see that any good would result from listening to John's complaints and papers, as he had not been disowned by any of its subordinate meetings, but it united in the judgment of the Quarterly Meeting, that he could not be received as in unity, until by condemning his unsanctioned printing, he should be reconciled with the Yearly Meeting of Ministers which had disowned him.

I cannot find that John ever prosecuted his appeal to London. Two years after this, he was still in the neighbourhood of Philadelphia holding meetings, which some few, in membership with Friends, attended. It is a singular fact, that in none of the papers or minutes on this subject, which have been preserved here, is there any allusion whatever to the original cause of the trouble in England. The judgment of the meetings is based on the palpable violation of discipline in printing without the required revision, and they sustain the Meeting of Ministers in Rhode Island in their disownment, solely on that ground. We know, however, from other sources, that one cause, if not the only one of the dissension, was this of slavery. His life furnishes another evidence of the necessity of seeking to the Lord for patience to enable us to wait his time for the fruit of our labours. Yea, to leave all to him, contented with his will, mainly anxious that grace, mercy, and peace may be upon the Israel of God, and that all the members of the church below may come through faith and faithfulness into blessed fellowship and oneness, so that seeing eye to eye, and loving one another with a pure heart fervently, joy and peace in the Holy Ghost, may more and more spread and abound.

(To be continued.)

Burying Bees for the Winter.—Enoch E. Kalb, of Lovettsville, Va., states that, having a swarm of bees, last fall, which had no honey, and not knowing if they would live over the winter, he buried them, air-tight, on the warm side of a hill, in a case sufficient to keep all dampness out, and as soon as he uncovered them, this spring, they were full of life and vigor, and instantly went to work and are still working finely.

"THE SON OF MAN HATH NOT WHERE TO LAY HIS HEAD."

Birds have their quiet nest,
Foxes their holes, and man his peaceful bed;
All creatures have their rest,—
But Jesus had not where to lay His head.

Winds have their hour of calm,
And waves, to slumber on the voiceless deep;
Eve hath its breath of balm,
To hush all senses and all sounds to sleep.

The wild deer hath his lair,
The homeward flocks the shelter of their shed;
All have their rest from care,—
But Jesus had not where to lay His head.

And yet He came to give
The weary and the heavy-laden rest;
To bid the sinner live,
And soothe our griefs to slumber on His breast.

What then am I, my God,
Permitted thus the paths of peace to tread?
Peace, purchased by the blood
Of Him who had not where to lay His head!

I, who once made Him grieve;
I, who once bid His gentle spirit mourn;
Whose hand essayed to weave
For His meek brow the cruel crown of thorn:—

O why should I have peace?
Why? but for that unchanged, undying love,
Which would not, could not cease,
Until it made me heir of joys above.

Yes! but for pardoning grace,
I feel I never should in glory see
The brightness of that face,
That once was pale and agonized for me!

Let the birds seek their nest,
Foxes their holes, and man his peaceful bed;
Come, Saviour, in my breast
Deign to repose Thine oft rejected head!

Come! give me rest, and take
The only rest on earth Thou lovest,—within
A heart, that for thy sake
Lies bleeding, broken, penitent for sin.

THE SEARCH AFTER REST.

When first the Dove, afar and wide,
Skimmed the dark waters o'er,
To seek beyond the heaving tide,
A green and peaceful shore,

No leafy bough, nor life-like thing,
Rose 'mid the swelling main—
The lone bird sought, with faltering wing,
The hallowed Ark again.

And ever thus Man's heart hath traced
A lone and weary round;
But never yet, 'mid Earth's dark waste,
A resting place has found.

The peace for which his spirit yearns
Is ever sought in vain,
'Till like the Dove it HOMEWARD turns,
And finds its God again.

N. Y. Ev. Post.

For "The Friend."

The Indians.

Governor Stevens' Report.

The first Blackfeet they met, were a party of about a hundred. The first intimation of their approach, was the sudden springing forth from the bushes, of the painted warriors, arrayed in their richest war dresses. They accompanied the Governor for three days. The benefit of the presence of their civilized countrywoman was soon apparent. She was in constant intercourse with the Indians, and inspired them with confidence. It is a great mistake, to suppose them the silent, unsociable people they are commonly represented to be. The Governor found them to be, on ordinary occasions, the most talkative, gossiping people he had ever seen. The men and women, together, were fond of gathering around the dusky lady to hear stories of the whites. One evening he heard loud shouts of merry laughter from one of these groups; upon inquiring the source of the merriment, he learned that she was telling stories to her simple Indian friends, of what she saw at St. Louis. As she described a fat woman whom she had seen exhibited, and sketched with great humour the ladies of St. Louis, it was pleasant to see the delight which beamed from the swarthy faces around her.

On reaching Milk River, the party was met by a deputation of Gros Ventres, consisting of seven chiefs, five of them with their wives; among the latter a very pretty woman, called the White Antelope. Their conduct was marked by the strictest propriety. Their manners were dignified, and their tender of hospitalities most cordial. A feud had lately broken out between them and the Blackfeet. A Gros Ventre was married to a Blackfoot woman. While travelling with his wife, he was attacked by a Blackfoot, killed, and a fleet horse of his stolen. The assassin immediately proposed to the wife, that she should marry him, and go northward, and that the Gros Ventres would never hear of them. She seemingly assented, and he gave her the slow animal upon which he had ridden, himself mounting the swift horse. They soon arrived at water; she went off to get some, and coming back, urged the Blackfoot to go to the water,—"it was so good." He did so, leaving his horse. After he had gone a few hundred yards, the woman mounted the swift horse, and fled in a direction opposite to their former course, reached the tribe of her deceased husband, and stirred them up to revenge. They were, accordingly, preparing for war.

Proceeding forward, the Governor came to the camp of the Gros Ventres. There were 300 lodges, some 2,000 people, and about 1,000 horses. The principal men soon appeared, dressed in their finest costume; among them were The Cloudy Robe, The Ball in the Horse, The Man who goes on Horseback, The Wolf Taker, The Bear's Boat, The only Pipe-stem Carrier, The Old Horse, The Sitting Squaw, and The Little White Calf. They received their visitors with the greatest hospitality, in a large lodge prepared for the occasion, some twenty-five feet in diameter, where they smoked, drank, and talked. They appeared to be a simple-minded race, easily influenced, and very kindly disposed towards the whites. In their habits they are filthy, and improvident, like most Indians, it is with them a feast or a famine. They offered their guests a mess of buffalo-manou berries, and the scrapings of buffalo-lodge skins. The Governor felt bound to partake of the proffered repast, though some of the party were more fastidious. Next day he made, in his own camp, a feast, in which hard bread, coffee, sugar, and rice figured conspicuously. Two hundred Indians came, and seated themselves in squads of twenty or thirty. Before the feast they seemed to be in high glee, singing, with an accompaniment of rattles made of the hoofs of antelopes, strung very fancifully upon a piece of wood about a foot long.

The Governor pursuaded them to desist from war; he urged upon them a treaty of peace, and of boundaries, with the Blackfeet, Piegans, and others, and explained the advantages that would accrue to them from such a treaty; and he proposed a plan for the settlement of the difficulty with the Blackfeet. After an hour's consultation together, they assented to his propositions. While around the Governor's camp, they behaved with the utmost propriety, and although they had access to every part, nothing was missed. They expressed the greatest friendship towards the whites, and received with gratitude a present of clothing, ammunition, tobacco, and hard bread.

Stanley, the artist of the expedition, was sent to the Cypress Mountain in search of the Piegans. He found them in a camp of about 100 lodges, 160 miles north 20° west of Fort Benton. In his report he says: "The day was spent in feasting with the several chiefs, all seeming anxious to extend their hospitality; and while feasting with one chief, another had his messenger at the door of the lodge, to conduct me to another. One of the favourite dishes was composed of boiled buffalo blood and dried berries, used as dessert, after the more solid food. I being a guest whom they wished to honour, had this delicacy in profuse quantities.

"At an early hour, a town-crier announced the intention of the chief to move camp. The horses were immediately brought in, and secured around their respective lodges, and in less than one hour, the whole encampment was drawn out in two parallel lines on the plains, forming one of the most picturesque scenes I have ever witnessed.

"Preparation for their transportation is made in the following manner: the poles of the lodge, which are from 20 to 30 feet in length, are divided, the small ends being lashed together, and secured to the shoulders of the horse, allowing the butt ends to drag upon the ground on either side. Just behind the horse are secured two cross pieces, to keep the poles in their respective places, upon which are placed the lodge and domestic furniture. This also serves for the safe transportation of the children and infirm, unable to ride on horseback, the lodge being folded so as to allow two or more to ride securely.

"The horses dragging this burden, often of 300 pounds, are also ridden by the squaws, with a child astride, behind, and one in her arms, embracing sometimes a favourite pup. Their dogs, of which they have a large number, are also used in transporting their effects in the same manner as the horses, making with ease 20 miles a day, dragging 40 pounds.

"In this way this heterogeneous caravan, comprised of 1000 souls, with twice that number of horses, and at least 300 dogs, fell into line, and trotted gaily until night; while the chiefs and braves rode in front, flank, or rear, ever ready for the chase, or defence against the foe."

On the 21st of Ninth mo., Governor Stevens held a council with the Piegans, Bloods, and Blackfeet. On this occasion, the chiefs and warriors were all richly caparisoned. Their dresses, of softly prepared skins of deer, elk, or antelope, were elegantly ornamented with bead-work. These are made by their women; and some must have occupied many months in making. The other articles of their costume were leggins, made of buffalo-skins, and moccasins, also embroidered, and a breech-cloth of blue cloth. "On all solemn occasions," says the Governor, "where I met Indians, they were arrayed with the utmost c My duties in the field did not allow the s attention on my part; and the Indians someti complained of this, saying, 'We dress up to ceive you, and why do you not wear the dres a chief?' When the Indians were assemble addressed the Piegans [in these terms]: I h come a great distance, and have passed thro many tribes on my way to the great ocean of West. I shall pass through many tribes m with whom you have waged war for many ye I wish to carry a message of peace from you them. Your Great Father has sent me to bea message to you and all his other children. It that he wishes you to live at peace with e other and the whites. He desires that you sho be under his protection, and partake equally w the Crows and Assinaboines of his bounty. L in peace with all the neighbouring Indians, p tect all the whites passing through your count and the Great Father will be your fast friend.

"I then said to them: Why is it that you h two or three women to one man? Is it not cause your young men go out on war parties, a thus the flower of your tribe is cut down? A you will go on diminishing every year. Wo your women prefer husbands to scalps and horse The Gros Ventres desire to meet you in counc and have the difficulties between you arrang Will you meet them in council? They answere We will. I continued: What words shall I ta to the Flat Heads, the Nez Perces, and oth tribes, with whom you have difficulties on t buffalo plains? They answered, that they wou meet them in council, and desired to live on ter of peace with them.

"Before the breaking up of the council, I d tributed presents of the value of about $600, wi which they were greatly pleased.

"While in the council, Low Horn, the prin pal chief and speaker, made all his replies witho rising from his seat, and in a quiet, conversation tone. After the council, he assembled his brave and resumed the lofty bearing of a chief. I addressed them with great fervour and eloquenc commanded them to cease sending out war parti henceforth, and threatened them with seve punishment if they disobeyed.

"I have since learned that these chiefs we faithful to their promises. One of the bravest them, who was actually attacked and wounded the Assinaboines, would not retaliate, in cons quence of his promise in council to abstain fro war."

SLANDER.

"Of all characters in society, the slanderer the most odious, and the most likely to produ mischief. 'His tongue,' says the great Massillo 'is a devouring fire, which tarnishes whatever touches; which exercises its fury on the goo grain equally as on the chaff; on the profane on the sacred, which, whenever it passes, leav only desolation and ruin; blackens what it cann consume, and sometimes sparkles and deligh before it destroys. It is a secret pride, which di covers to us the mote in our brother's eye, b hides the beam which is in our own eye; a mea envy, which, hurt at the talents or prosperity others, makes them the subject of its censure and studies to dim the splendour of whatever ou shines itself; a disguised hatred, which sheds its speeches the hidden venom of the heart; a unworthy duplicity, which praises to the face, an tears in pieces behind the back; a shamef levity, which has no command over itself or word

often sacrifices both fortune and comfort to impudence of an amusing conversation; a berate barbarity, which goes to pierce an ab- t brother; an injustice where we ravish from brother what is dearest to him. It is a restless , which disturbs society; spreads dissension ough cities and countries; disunites the strict- friendships; is the source of hatred and re- ge; fills wherever it enters with disturbances l confusion; and everywhere is an enemy to ce, comfort, and christian good breeding. Lastly, an evil, full of deadly poison; even its praises imposioned; its applauses malicious; its ges- es, motions, and looks, have all their venom, spread it each in their way. Still more dread- is this evil when it is found amongst those o are the professed disciples of Jesus Christ. e church formerly held in horror the exhibi- ns of gladiators, and denied that believers, ught up in the tenderness and benignity of us Christ, could innocently feast their eyes h the blood and death of these unfortunate res; but these entertain the spectators with nds which they inflict on persons, who have oted themselves to God; who are their bre- en, and members of Jesus Christ!"

The Eruption of Vesuvius.—The Naples corres- dent of the London Daily News gives an ac- nt of the eruption of Mount Vesuvius, now in operation. The lava, by the latest accounts, advanced ten miles from its source and is do- much damage:

have before me the report of Cozzolino as to latest changes which have taken place about cone. Just at the base of it a lake of fire has n formed which looks like a red sea in an undu- ry state. In the very centre of this has opened ther crater, which is throwing out red hot ses. The whole of the summit of the crater is a sponge, and must inevitably fall in. The n crust trembles under your feet. You may see stones dance with the tremulous movement; part immediately round the crater looks like sides of a heated copper boiler. There are re- ts of an opening towards Pompeii, which is not ikely, and of another towards Resina. Last ht I went to the scene of most stirring interest, r an interval of two days. As we approached menaced neighbourhood, the inhabitants were oving their goods; and on a bridge, in the mid- of the little township of Cercole, were sappers, sing mounds on either side, to divert the ruin m some private grounds, and keep the lava in straight course. Since the morning it had ved a mile. It was like a vast river of glowing e. As it moved on, the tens of thousands of ips rolled and tumbled one over the other, ckling, and grinding, and grating; and when, m the very face of it, a large lump fell off, the earance was that of an iron furnace when the n is being drawn. What struck me at first, and l strikes me as the most majestic feature in the ole scene, is the slow, silent, irresistible motion hat fiery flood. Sweeping everything before it, rcoming every obstacle, growing up against ervening walls or houses, and devouring them lily, and then marching on in the same silent, relenting, irresistible manner as before. There s a spot beneath my feet where a wall of mason rk had been built to break the winter floods; to s spot all eyes were directed. The fiery river uld fall over it in an hour; as yet it was distant m it seventy yards, perhaps. Gradually it rose height, and swelled out its vast proportions, and n vast masses fell off and rolled forward; then swelled again as fresh matter came pressing down hind, and so it broke, and on it rolled, again and again, till it had arrived at the very edge. There was a general buzz and murmur of voices. The royal family stood opposite to me, intermingled with the crowd, looking on with intense anxiety. At last it broke, not hurriedly, still with a certain show of majesty. At first a few small lumps fell down; then poured over a pure liquid of metal like thick treacle, clinging sometimes mass to mass, from its glutinous character, and last of all tumbled over gigantic lumps of scoriæ. The expectation is that the lava, should the eruption continue, will flow down to the Ponte Maddaloni, and into the sea. So grand and so destructive an eruption has not been known for many years.

Misrepresentation.

Misrepresentation is the act of wilfully representing a thing otherwise than it is. It is one of the greatest mishiefs of conversation. Self love is continually at work to give to all we say, a bias in our own favour. How often in society otherwise respectable, are we pained with narrations in which prejudice warps, and self-love blinds? How often do we see that withholding part of a truth, answers the worst ends of falsehood? How often regret the unfair turn given to a cause, by placing a sentiment in one point of view, which the speaker had used in another—the *letter* of truth preserved where its spirit is violated—a superstitious exactness scrupulously maintained in the *under* parts of a detail, in order to impress the idea of integrity as shall gain credit for the *misrepresenter*, while he is designedly mistaking the leading principle. How may we observe a new character given to a fact by a different look, tone, or emphasis, which alters it as much as words could have done—the care to avoid literal untruths, while the mischief is better effected by the unfair quotation of a passage, divested of its context—the false impression of a sermon conveyed, when we do not like the preacher—the bringing together detached portions of a subject, and making those parts ludicrous when connected, which were serious in their distinct position—the insiduous use made of a sentiment, by representing it as the *opinion* of him who had only brought it forward in order to expose it—the relating opinions, which had merely been put hypothetically, as if they were the avowed principles of him we would discredit—that subtle falsehood which is so made to incorporate with a certain quantity of truth, that the most skilful moral chemist cannot analyze or separate them—for a good *misrepresenter* knows that a successful lie must have a certain infusion of truth, or it will not go down. And this amalgamation is the test of his skill; as too *much* truth would defeat the end of his mischief, and too *little* would destroy the belief of his hearer. All that indefinable ambiguity and equivocation; all that prudent deceit which is rather implied than expressed; those more delicate artifices which allow us when we dare not deny a truth, yet so to disguise and discolour it, that the truth we relate shall not resemble the truth we heard; these and *all* the thousand shades of simulation and dissimulation, will be *carefully* guarded against in the conversation of the vigilant christian.

Advice to Christian Ministers.

"Be diligent; never be unemployed; never be triflingly employed; never while away time, nor spend more time at any place than is strictly necessary. Be serious; let your motto be *holiness unto the Lord*; avoid all lightness, jesting, and foolish talking. Converse sparingly and cautiously. Believe evil of no one; unless fully proved, take heed how you credit it; put the best construction you can on everything; you know the judge is always supposed to be on the prisoner's side. Speak evil of no one, else *your* word especially would eat as doth a canker; keep your thoughts within your own breast, till you come to the person concerned. Tell every one what you think wrong in him, lovingly and plainly, and as soon as may be, else it will fester in your own breast; make all haste to cast the fire out of your bosom. Do not affect the gentleman; a preacher of the gospel is the servant of all. Be ashamed of nothing but sin; no, not of cleaning your own shoes when necessary. Be punctual; do everything exactly at the time; and do not *mind* our rules, but *keep* them, and that for conscience' sake. Go always, not only to those who want you, but to those who want or need you most. Act in all things, not according to your own will, but as a son in the gospel, and in union with your brethren."

THE FRIEND.

SIXTH MONTH 16, 1855.

No information of the further proceedings of New York Yearly Meeting has reached us. On the receipt of the printed minutes, we shall make such extracts as are of general interest.

"A manual of Ancient History from the remotest times, to the overthrow of the Western Empire, A. D. 476, by Dr. Leonnard Schmitz, F. R. S. E., with copious Chronological tables. Philadelphia, Blanchard & Lee, 1855."

We have received from the publishers a copy of the above work, and given it a cursory examination. As its title indicates, it gives a concise but clear exposition of the historical facts connected with the great nations of antiquity; exhibiting in striking colours, a picture of the ancient world; and appears to be valuable, not only as a manual for the student, but especially for reviving in the memory of those, who, in former years, have made themselves acquainted with ancient history; the leading circumstances which marked the promotion or retarding of the work of civilization and refinement among different people, and connected the interests of the various nations with each other. It rejects the theory so strenously urged by some modern sceptics, of the different origin of the several races (as they are termed) of mankind, and adheres to the truth, revealed in the Holy Scriptures, that the whole human family is descended from Adam.

The scene described in the following extract from the Marion (Miss.) Republican of Fifth mo. 28th, is so horrible, that we almost shrink from exposing it to our readers; but it is proper that the hardening, depraving effect of the slavery existing in our country, on the moral feelings of the whites, familiar with its every day enormities; as well as the cruel sufferings and necessary degradation of the poor slaves themselves, should be kept before us; in order to stimulate to unrelaxed concern and exertion to have the system overthrown, and our country freed from the awful responsibility and deep disgrace, that it has fastened upon it.

It is not needful to make comments, and we will only add, that the remarks of the writer of the extract, afford strong evidence of the prevalent perversion of correct moral feeling and principle, not to say anything of pure Christianity.

HORRIBLE ATROCITY—BURNING A NEGRO AT THE STAKE IN MISSISSIPPI.

The Scene Witnessed by Three Thousand Citizens, and Two Thousand Slaves.

Some time since we published an account of the murder of —— Thornton, an interesting young girl, residing near Gaston, Alabama. Immediately after the murder and detection of the negro, his immediate punishment was seriously contemplated by the people of Sumpter county, but after mature deliberation, the law-abiding citizens delivered him into the custody of the proper officers, and he was committed to prison.

At the late term of the Circuit Court of Sumpter county, the attorney appointed by the Court, in the discharge of his duty, moved for a change of venue to Green county. The Judge, as the motion was sustained by the proper affidavit, sustained the application.

On Wednesday last, the citizens of South Sumpter assembled *en masse* at William McElroy's, and unanimously passed a series of resolutions, reflecting seriously upon the conduct of the Judge, and after having pledged themselves to sustain each other, a portion of them proceeded to Livingston, and took the miserable criminal by force from the jail where he was confined. On Friday last, after due preparation, they carried him to the spot where he so cruelly murdered his innocent victim, and burnt him alive at the stake.

About three thousand persons were present, who witnessed, with various emotions, the dreadful spectacle. We were present, but hope that we will never again witness a scene like it. The pyre was composed of several cords of light wood, in the centre of which was a green willow stake, selected in consequence of its indestructability by fire. On the top of the pile of light wood the criminal was placed, and securely chained to the stake. While in this situation he confessed his guilt, stating that he had no accomplice.

After this confession was made, the match was applied, and in a few moments the devouring flames were enveloping the doomed negro; his fearful cries resounded through the air, while the surrounding negroes who witnessed his dreadful agony and horrible contortions sent up an involuntary howl of horror. His sufferings, though excruciating, were short; in a few minutes the flames had enveloped him entirely, revealing now and then, as they fitly swayed, hither and thither, his black and burning carcass, like a demon of the fire, grinning as if in hellish triumph at his tormentors. Soon all was over, nothing was left but the burning flesh and charred skeleton of this human devil, who could thus deliberately perpetrate so foul a crime. The horrid outrage was fearfully avenged, and though the heavens were reeking with the stench of burning flesh, yet justice was satisfied; the law of retaliation was inflicted as nearly as it could be, while the example made of this wretch had, no doubt, a salutary effect upon the two thousand slaves who witnessed his execution.

We are far from approving of the infliction of mob law, yet, in aggravated cases like this, popular ebullition will manifest itself, and in view of the enormity of the wretch's offence, we, as a public journalist, cannot approve, yet we have neither time nor inclination to censure the conduct of the people of South Sumpter. Justice was inflicted by them, and a thousand deaths of the kind were too good for the devil like negro Dave.

SUMMARY OF EVENTS.

EUROPE.—News from England to Fifth month 26.—*The Peace Conference.*—Negotiations were about to be reopened at Vienna. The Berlin papers report that the Austrian mediatory proposals are, for Russia and Turkey to settle between themselves the number of ships each shall keep in the Black Sea—that England and France shall each keep two ships therein, and Turkey not to enter into any treaty with Russia, unless first submitted to France and England. *The War.*—General Pelissier's appointment to the chief command of the French army, is said to be highly popular. The recent arrival of three French divisions makes the allied forces about 200,000—say French, 120,000; English, 30,000; Turks, 40,000; Sardinians, 11,000. Some fever and cholera still prevailed; the troops were well supplied with necessaries. On the 19th, and on the 23d ult., severe partial engagements took place before the walls of Sebastopol. In the latter, the French attacked the Russian entrenched camp near the Quarantine Bastion. Pelissier telegraphs on the 24th, that a very lively combat had occurred in front of this important position, which lasted all the previous night. He says, "We obtained complete success. The Russian loss is enormous, and ours has been considerable."

AUSTRIA.—The mortality in the Austrian army in Silesia, continues to be very great; fifteen thousand men had died, and twenty-three thousand were in the hospitals.

RUSSIA.—Russia has just annexed four districts of country belonging to the Mogul tribes on the frontiers of China. An imperial Ukase has authorized the Polish Treasury to effect a loan for the current expenses of the army in Poland. All the Russian ships of war at Cronstadt are to be sunk, except eight ships of the line.

GREAT BRITAIN.—A great debate had occurred in the House of Commons on the motion of D'Israeli, expressing a want of confidence and dissatisfaction with the government. The ministry was sustained by a strong vote. On division, the House stood 219 for D'Israeli's motion, and 305 against. On the 24th, Lord Palmerston had a private meeting with the members of Parliament at his house. There were over 200 present. The Premier asserted the entire unanimity of the government, and declared his intention to prosecute the war. The Bill abolishing newspaper stamps, has been read a second time in the House of Lords. Parliament had adjourned to the 4th inst. It was expected that by the 20th, every available man in Great Britain belonging to the infantry regiments, will have embarked for the war.

Liverpool.—The speculative demand for cotton continued, and prices had further advanced; the sales of the week had reached 153,000 bales, half of which was taken on speculation. The market for breadstuffs was dull, and price without change.

London Money Market.—Consols have advanced to 91¾. United States securities were in good demand. The bullion in the Bank of England has increased £600,000.

The Coming Harvest.—In consequence of the cool weather and the want of timely rains, the wheat in England, Scotland and Ireland it is two or three weeks more forward than in the eastern half of England. The London News notices the shipment of cargoes of wheat and maize from Liverpool to New York, and says, "In all probability the course of trade will be inverted ere the sun has tinged with the golden hue of ripeness our tardy fields."

UNITED STATES.—*The Growing Crops.*—The New York Journal of Commerce publishes statements from all the principal grain growing districts in the United States, from which it may be inferred, that the coming wheat crop is likely to prove an abundant one as regards the whole country, notwithstanding partial exceptions, provided the wheat escapes the injuries, to which it is yet liable before harvesting.

The Cuban Difficulties.—The Spanish Government is reported to have made an entirely satisfactory settlement of the matters in dispute with the United States. Such instructions have been issued as will prevent in future the recurrence of any difficulty from the conduct of the Spanish cruisers.

New Orleans.—Cholera has become epidemic, and the mortality heavy. In the week ending Fifth mo. 28, 385 deaths occurred, of which 204 were from cholera. In that ending 4th inst., the deaths numbered 500, including 275 from cholera; among the victims was Godard, the celebrated æronaut. Owing to the drought, the stock of cotton was very light, consisting of only 54,000 bales, which is less than one-fourth the quantity on hand at the same time last year. During the week ending 26th ult., five men were convicted of murder, three of them to be hanged, and two imprisoned for life. Thirteen others, charged with murder, are still to be tried. At the last dates, copious rains had fallen.

California.—The steamship Northern Light arrived at New York on the 6th, with 415 passengers and $524,000 in gold on freight. The passengers had also a large amount of gold in their possession. On the 8th, the steamship Illinois arrived with 450 passengers and $495,000 in gold. The ship Charmer had sailed from San Francisco for New York, with 704 tons of wheat, 204 tons of barley, and 172 tons of flour. The ship Flying Snow would follow with 1000 tons of wheat and flour. Chili and California flour was selling at $6. The mines were said to be yielding abundantly, and the growing crops looked well. Much satisfaction is felt at the confirmation of Capt. Sutter's claim. It included the city of Sacramento, and a vast number of titles depended upon it. The veteran pioneer will, it is said, not be greatly benefited, having long since disposed of most of the tract.

Small-pox among the Indians.—The South-west Democrat states, that small-pox is making sad ravages among the Osage Indians. During the short space of two weeks, near two hundred died.

Prohibition in Illinois.—The returns from 66 counties give a small majority against the Prohibitory Law. It is believed that the law has been defeated.

Philadelphia.—The mean temperature for the month was 61½°, which is one degree below the aver for the last thirty years. The highest temperature 85° on the 15th and 16th, and the lowest 40° on 10th. The amount of rain, 2.96 inches. At Paoli amount of rain was 4 inches; at Trenton, N. J., inches. Mortality last week, 159.

Arkansas.—This portion of the country which suffered so severely from long protracted drought, been relieved by abundant rains. The rains were most welcome in Louisiana, in the interior of which planters were recently obliged to send their cattle and even twenty miles, to procure water for them drink.

Iowa.—The emigration to Iowa this season is said be without precedent. The settlers were making clai 250 miles west of the Mississippi, and opening ro building mills, fencing farms, &c., throughout the St

New York.—The whole number of foreign im grants arriving at this port in the Fifth month, 22,482; in the same period last year, 54,078. On 4th inst., according to the weekly statement of banks, the specie in their vaults amounted to $15,3 500; their circulation, to $9,605,600; deposits, $1 343,250. Mortality last week, 356.

Minnesota.—A salt lake has been discovered, ab 150 miles west of St. Cloud, in Minnesota. Aroc the edges of the lake, salt of good quality can be gath ed in baskets. It is also stated, that near the l there are large beds of excellent coal.

Boston.—In the public schools of this city, 22, scholars received instruction last year, at a cost $300,500. The system of instruction is a liberal o and some of the schools are of a high order. The ste ship America which sailed on the 6th, took $1,012,500 in specie.

Miscellaneous.—Russia.—A census taken by order the Czar in 1851, gives the population of the Empire 65,213,589, not including the regular army nor Kirgish hordes.

Nunneries in Spain.—The Spanish Government l issued a circular to the ecclesiastical authorities, dire ing them to suspend the admission of novices into co vents, until the number and occupation of all the nu in Spain shall have been ascertained.

Old School Presbyterians.—The General Assembly this body has, under its jurisdiction, 28 Synods and Presbyteries. In its connection are 2976 congregatio 2203 ministers, and 225,000 communing members.

Turkey.—At the urgent request of France and En land, the *harady* or Christian poll tax has been ab lished.

Iron Ships.—Of wooden vessels there are but thi now building on the Clyde, while of iron ships there no fewer than thirty-five.

German Paupers.—The Nuremberg (Germany) Cour states, that the corporation of Baisingen, in the provin of Horb, have sold their poor-house to the Jews, a *sent their poor to America.*

Curious Course of Trade.—A vessel was loaded recent at Sodus Bay, Lake Ontario, with wood at $2.38 p cord, to be sold in Chicago, Ill., where it brings $5 $6.

Idols in England.—At Birmingham, Hindoo idols a made for exportation to India.

Melancholy Shipwreck.—Melbourne dates to Third m 8th, mention the arrival there of the captain and five the crew of the Peruvian ship Grimerva, which h been wrecked on the passage from China to Callao. T ship had 640 Chinese emigrants on board, who near all perished.

The Golden Age.—This steamship has been float off from the beach near Tobaga, and was being repair for an immediate trip to San Francisco.

WANTED.

A middle-aged Friend, as housekeeper in a sma family, in a country village. Apply at this office.

MARRIED, on the 23d of Fifth mo. last, at Friend Meeting-house, on Twelfth street, Philadelphia, CHARL M. ALLEN, of Fairfield, Maine, to ELIZABETH H., daug ter of Dr. William Pettit, late of this city, deceased.

DIED, on the 25th ult., in the sixteenth year of h age, HENRY, son of William A. and Anne Gibbons, Salem, N. J. His last illness was short, but he seem in a patient and affectionate disposition, and nearly l last words were, "*peace*"—"*heaven*," showing what w the best of his mind at that solemn season.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, SIXTH MONTH 23, 1855. NO. 41.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

The Shepherds of Monte Rotondo.

(Continued from page 313.)

"I called to the shepherd, 'Friends, a friend who has crossed the sea to visit the shepherds of Di Mozzo, begs your hospitality.' They friendly responded: '*Evviva!*' and '*Benevenuto!*' 'Come to the capanna,' said one, 'and dry yourself by the fire; it is warm within.' I immediately peezed through the door, eager to see the interior of the habitation. I found a dark space, about fourteen feet in length, and ten feet in width—there was no furniture, seat, or table, nothing but naked black stone walls, and the smoke of the pine wood fire, which seemed intolerable to me. Against the wall, on the earthen floor, burned a great trunk of a tree, with a kettle hanging over it. Angelo, my host, spread the fleece, which I had brought with me, on the ground, and as the post of honour, gave me the nearest place by the fire, round which crouched the wife, who, with three little girls and a boy, the last, I and my guide, filled up the hut. In the meanwhile, Angelo cast some strips of goat's meat into the kettle, and Santa, his wife, brought cheese and milk. The table was a three foot in length board, laid on the earth, upon which the mistress placed a wooden bowl full of milk, a flat cheese, and a loaf of bread. 'Eat,' said she, 'and remember you are among poor shepherds;' 'we will give you some trout for supper, as my son has gone to catch some.'

"Thus, hovering over the fire, in the narrow, smoke-filled, capanna, surrounded by a group of old and strange looking figures, and a wooden bowl in hand, I fell into a good humour, and began to praise the life of the mountain shepherds, so content themselves with what their herds afford them, and are unacquainted with the miseries of 'mine and thine,' and the golden cares of the place. But the honest *pastoro* shook his head, and said: '*Vita povera, vita miserabile!*' And truth, it is, in truth. These people lead a miserable existence. For the four months of May, June, July, and August, they house themselves in these capanna, deprived of everything which makes life to man. In their world, there is no other change than that of the elements; the storm, clouds, rain, hail, and the warm sun; in the evening a sad song, a lamento on the pipe of reed, a bandit story, or a hunting adventure with the moufflon or fox, and by the fire, and high above and around them the giant pyramids of the primitive mountain, and the starry glory of the heavens, bearing in their breasts, perhaps, in spite of the *vita povera*, modestly contented, cheerful, God-fearing and honest human hearts. With the earliest dawn, these poor people rise from the hard earth, on which they have slept in their clothes, without any covering, and drive their herds to the pasture grounds. There they consume their scanty meal of cheese, bread, and milk. The old ones who remain at home, lie in the capanna by the fire, or busy themselves with necessary household labours. In the evening, the herd returns, and is milked, and then the night falls, and it is time to lay down to sleep.

"The snow and rain storms of September drive the shepherds from their mountain huts; then they go down to the country along the coast. There they generally have more comfortable *capanna*, in which the wife often passes the summer with the children. My hostess, Santa, was the only woman in the shepherd colony of Co di Mozzo, which consisted of six families.

"'Why,' said I, 'did you come up here to this gloomy hut?' 'Look you!' interrupted Angelo, 'she came hither to refresh herself.' I almost laughed aloud, as he said this, for the smoke forced tears from my eyes, and the atmosphere was intolerable. I was thus to look upon this heap of stones, as a summer villa, where a family might come for recreation. 'Yes,' said Angelo, as he observed my doubting face, 'below it is warm, but here above blows the mountain breeze, and fresh water comes tumbling down as cold as ice. Thus we live under the favour of God.' I observed alongside of the huts, some smaller covered ones, which served as storehouses. Angelo opened a little door in his own, and beckoned me to follow him, which I did. The flat cheeses lay there on green branches, and balls of whitish goat butter in little baskets.

"I now sat down on a stone, and made a sketch of the capanna. The whole community gathered around me, and expressed the highest pleasure. Every one wished to be drawn, in order to be afterwards printed in Paris, as they said. They persisted in the opinion, that I was from Paris, and I could not make them comprehend there was another country, besides Paris, called Germany. 'So Germany is the name of your country,' said my host, 'and it has kings, and belongs to Paris.' Let it be so then.

"Evening thus came on, in the vast, still wilderness. Tired with the day's fatigue, I sat down before the capanna, and observed the shifting spectacle of the cloud formation. The mist rose out the ravines, and attracted and repelled by the mountains, it massed together in the valleys, or dispersed into the clouds which slowly rolled over the mountain summits from above. The herds came home. I regarded with pleasure the long procession of black, delicate goats, and black sheep, on which the poor shepherds depended for support. Every shepherd drove or allured them by a clear cry into the enclosure, by the capanna, where they were milked. This labour is performed with astonishing quickness. The shepherd sits among the herd, and seizes one goat after the other, by the hind legs. He calls the animals by their names, for he knows them all, and they all bear a mark on the ear, indicating their owner. Forty of my host's goats only gave a moderate pailful of milk. The herds passed the night in the enclosure. The shaggy dogs protected them, not from the wolves, because there are none in Corsica, but from the foxes, which in the mountains are exceedingly strong and courageous, and fall upon the lambs like wolves. My host's were a noble pair of dogs.

"The eldest son soon arrived with his booty of fine trout, and Angelo prepared the supper. I was surprised to see the husband cooking, and not the wife. Was it, probably, in honour of his guest? For the wife, in Corsica, generally performs all the menial duties. This reminded me, that in Homer, also, the men themselves prepared everything, put the meat on the spit, cooked, and served it up. Here had I the men of the epic and early civilized epochs visibly before me. There are in Corsica men of Homer and Plutarch. We had bread, soup, cheese and milk, and in especial honour of the guest, roasted goat's meat. I could see, from the eyes of the children, that this was an uncommon meal, and I should have relished it more, if they had partaken of it with me.

"The night was now to be passed in the hut. I was curious to know how we could all be accommodated in such a limited space. But the arrangements were soon made. The cover was spread for me on the ground, and I stretched myself out at full length on it, against the innermost wall. The others, wife and children, by and by laid down also, with their heads propped up against the wall. Angelo, however, laid himself by the threshold, alongside of his smallest child. Thus lay we all quietly together; our feet turned to the fire. They soon sunk to sleep, and I regarded with pleasure this happy, slumbering Gymnosophist family, and thought of the profound philosophy of Sancho touching sleep. 'A cloak,' says he, 'is sleep, which covers all human cares; the food which appeases hunger, a drink that allays thirst, a fire which expels cold, which mitigates heat, and, in short, the universal coin for which all things could be purchased, the scale and weight which makes the shepherd and king equal.'"

(To be continued.)

The Largest Mill in the World.—The Lowell (Mass.) Journal says:—The largest and most comprehensive mill in the world is the Pacific, at Lawrence. It makes none but the finest kinds of goods, and the success of its operations is looked to with great interest by manufacturers. The floor surface of this immense structure is sixteen acres—the largest mill in England is eleven and a half acres. There is now in operation 40,000 cotton spindles, and 10,000 worsted spindles; and these are to be increased to 80,000 and 20,000 respectively. There are 1200 looms in operation, to be increased to 2400. These, with two thousand hands, produce 300,000 pieces of cloth per annum, one-half de laines. The weekly consumption of cotton is 20,000 pounds, say 1,500,000 per annum, and 500,000 pounds of wool. Once a month the two thousand hands assemble at the cashier's office, where Clapp pays out to them $500,000 for wages, appropriating to each one the exact amount she has earned.

For "The Friend."

In looking lately through an old volume of "Ecclesiastical Literature," I was forcibly struck with the following remarks of Etherius, Bishop of Tyana, A. D. 431.

In speaking against those who judge of Truth from *numbers* alone, he says, "Christ at one time cries, 'I am the Truth;' at another he exhorts, 'Be of good comfort, I have overcome the world:' how, therefore, are they to be pitied who attribute strength to doctrine in proportion to the numbers of its advocates! They do not consider that our Lord Jesus Christ gave to twelve plain, unlearned, poor, unskilful disciples courage to oppose the whole world; instructing them, not for the twelve to follow the multitude, but that the multitude should agree with the twelve; thus Truth is always victorious, sooner or later, though it be found only among few. He, who dares not give a reason for a proposition, nor is well furnished by experience therefor, but has recourse to numbers, owns his cause to be weak, as having no other source of confidence.

"Numbers, arrogating to themselves authority without reason, may inspire fear, but by no means conviction. What *numbers* could persuade me that day was night? or induce me to believe and receive as gold a coin of brass? or evident poison as wholesome food? In earthly things do we not know the multitude to be erroneous? And in heavenly doctrines shall I follow it with an assent unreasoned upon, setting aside what has been transmitted from very ancient times with full consent, and testimony of Scripture? One individual of just judgment is of far more estimation, than a multitude whose claim to regard rests upon bold assertion. *You*, may honour the drowned multitude rather than the preserved Noah; but allow me to take refuge in the ark with the few. You may choose to range yourself with the mob in Sodom, but I will be fellow-traveller with Lot, although for preservation he should depart from the multitude alone. Yet, I also have a reverence for the multitude, *not when it avoids inquiry, but when it affords proof; not when it bitterly contends, but when it paternally corrects; not when it rejoices in innovation, but when it guards its ancient inheritance.* But, from their fruits ye shall know them; and the fruits of these present active labourers are, to scatter, not to assemble and settle; to persecute, not to bring back; to cast down, not to raise up; to wound, not to heal; to hate the poor wanderers, not to seek them. And this tragedy is acted by many professed ministers of the gospel! the commencement of whose public worship and teaching often is, 'Peace be with you all.' (O! impious daring) the lamentations of Jeremiah are too weak for the amount and magnitude of these evils! Those possessing the power imperiously demand; prescribe laws; force opinions; demand obedience; revile some, and banish others; involve one in accusations, and despoil another of his credit; brow-beat this, and by vaunting, persuade that one. (O, intolerable judgment.")

Thus does Etherius describe the methods of christian persuasion in those days. And these will ever be the effects of innovations upon long and well-established doctrines, and principles, and usages.

There is nothing new under the sun.

All the peace and favour of the world cannot quiet a troubled heart; but where the peace is which *Christ* gives, all the trouble and disquiet in the world cannot disturb it. All outward distress to such a mind, is but as the rattling of the hail upon the tiles to him, who sits within the house at a sumptuous banquet.

From "The Leisure Hour."

A Chapter on Corks and Bungs.

(Concluded from page 314.)

To us there appeared considerable beauty in the perfect accuracy and precision with which these corks were turned out by the machines before alluded to; but this satisfactory result has only been attained after the purchase, trial, and rejection of several patents—after expensive experimentation, and the sacrifice of a large quantity of valuable machinery. But patience has had its triumph; and the existing machinery has at length been brought to a point which leaves apparently nothing further to be desired. One of the important results which has thereby been attained, is, that these iron-handed, fire-eating, water-drinking, steam-breathing cork-cutters can neither strike nor starve. They can neither "pocket" the corks, nor delay the execution of orders by "making saint Monday," as the phrase goes, that is, by taking a holiday on the second day of the week.

Cork is the bark of the evergreen oak known as *Quercus Suber*. As it is a species of dead bark, it may be removed without detriment to the health of the tree, at intervals of from eight to ten years after the tree has reached about its fifteenth year. It is curious, also, that the more frequently this bark is stripped off from its parent stem, the finer in quality and the greater in quantity is each succeeding layer. The commoner purposes to which this substance is applied, in every-day life, need not be detailed here. The ancient Egyptians would appear to have been acquainted with its properties and uses; for, amongst other things, we are told that they were accustomed to construct their coffins of it, lining them with a resinous composition, the better to preserve the bodies. Cork parings are made productive, being manufactured into Spanish black. We have cork soles for shoes, cork foundations for hats, and, amongst the wonders of the Exhibition of 1851, we had some beautiful specimens of printing on cork about the thickness of paper. The odds and ends and shavings in this factory are disposed of by contract to a company who grind them to powder, mix them with a solution of India-rubber, and thus construct a "noiseless floor-cloth!" Cork is produced throughout the south of Europe; the best is found, however, in Andalusia, although, for the reason before mentioned, we only get it in limited quantities and in a manufactured state. We receive our best unmanufactured cork from Sines, in Portugal. A very beautiful description of cork, too, is grown at and near Palermo; but little or none of it arrives in this country. The different consignments vary in value remarkably; the ordinary price ranges from 20*l.* to 70*l.* per ton; but as much and more than 100*l.* has at times been given for a very superior article. Some two or three years ago a cargo of 200 tons of cork was imported from Morocco; but we can learn of none coming thence either before or since. There are large forests of cork in the French colony of Algeria, particularly on an estate granted some time back by the Emperor Napoleon III. to M. le duc de Montebello. This immense forest must give rise to a great trade when the old coarse bark at present appearing shall have been stripped off, and replaced by that which is finer and fit for use.

In connection with this coarse cork, we have heard a curious circumstance; there is now, it is said, a very large pile of it in the docks, which is owned by no one, because the charges upon it are really more than it is worth. There are periodically what are known as "clearance sales," but none ever cleared out this doomed cargo; and the longer it rests there, the heavier are the charges, and therefore the more improbable is its remo It is so coarse as barely to be fit for fishing-tacl To meet the protective duties on the very t qualities, as far as possible, a band of Engl cork-cutters has been organized near Barcelo almost under the very trees which produce "raw material." A considerable impetus is j now being given to the cork trade by the v heavy orders which are constantly coming in fr Australia.

The store-room was suggestive of some int esting reflections. There were packages of fi or one hundred gross, or more, labelled and re to depart, some to various quarters of the Uni Kingdom, and others for different parts of world. In fact, you may now find the productio of the machines in the little back street of metropolis in the bottles of your soda-water, win stout, ginger-beer, or lemonade, not only throu out the United Kingdom, but in the interior our Indian possessions; under the canvas tents the Australian gold-digger, or in the comfortal homes of other parts of that country; in t miserable huts of the gold regions of Californ or in the gorgeous *salons* of the New York or B ton hotels. Indeed, the very next "uncorkin you witness, whatever your station in life, w ther it be wine, spirits, malt liquors, or vinegar whether you think of the liberation of a champag cork, or of the simple bung of a beer-barrel blacking-bottle, or a pickle-pot, or even of t disagreeable necessity, the doctor's draught— whatever use your next cork may have been a propriated, and in whatever part of the globe y may chance to be when you read these lines, a use it—the probability is that it was cut into present shape in the quiet little street before ferred to, which thousands of our readers m have passed, and perhaps hundreds of times w pass again, without its ever having for a mome attracted their attention.

From the Journal of George Fox.

"And because most people would confess, th God's people should be thus, but few know h to come to this state; therefore, in the openin of the Spirit of truth, I wrote another short pap directing to 'the right way and means, where people might come unto Christ, and so be ma like unto God.' Thus:—

"Christ saith, 'I am the way, the truth, a the life; no man cometh unto the Father but me.' John xiv. 6. And again, 'No man can co to me, except the Father which hath sent m draw him.' John vi. 44. Now, what is t means by which God doth draw people to his S but by his Holy Spirit, who poureth out of h Spirit upon all flesh! By this Holy Spirit, t holy and righteous God doth draw people fr their unrighteousness and unholiness, to Chri the righteous and holy One, the great Prophet his New Covenant and New Testament, wh Moses in the Old Covenant and Testament sa God would raise up, like unto him, and wh people should hear in all things; and they th would not hear him should be cut off! They th do not hear the Son of God, the great Proph do not mind the drawings of the Father by Holy Spirit to his Son; but to them that mi the drawings of the good Spirit of the Father his Son, the Spirit giveth understanding to kn God and Jesus Christ, which is eternal life. Th they know that Jesus Christ is the way, the tru and the life, and that none can come unto G but by and through his Son, who is their Sh herd, to feed them in his pastures and springs life; and His sheep know His holy voice, in wh there was no sin, and in whose mouth there w

guile; and a hireling they will not hear, he careth not for the sheep; for they are not e hirelings, but Christ's, who hath laid down s life for his sheep. He that robs and steals s neighbour's words, that climbeth up another y, and entereth not by the door, is a thief and robber; but Christ is the door into his sheepld, for his sheep to enter in by. They know at Christ is the Bishop of their souls, to see that ey do not go astray from God, nor out of his stures of life; they know that Christ is their ediator, and makes their peace with God; and ey know that Christ is their High Priest, made gher than the heavens, and hath died for their ns, doth cleanse them with his blood, is risen for eir justification; and is able to the utmost to ve all that come to God by Him. G. F."

Gooses, the Sixth month, 1687.

Colleges in the United States.—Statistics of blic schools are to be had without difficulty. hey are brought forward prominently in the anual messages of Governors, are condensed continlly for newspapers, and are scattered broadcast er the nation in essays on education. But the atistics of American Colleges are less common. 'e shall endeavour, therefore, partially to supply e deficiency.

The number of Colleges in the United States is e hundred and eighteen, an average of nearly ur for every State. Of these, fourteen are in ew England, thirty-eight in the Middle States, irty-six in the South and South-western States, d thirty in the West. The oldest is Harvard, Cambridge, Mass., A. D. 1636; the next, Wilm and Mary, at Williamsburg, Va., which dates om A. D. 1692; and the third, Yale, at New aven, Ct., which was established A. D. 1700. f the principal Colleges in the Middle States, that Princeton, N. J., originated A. D. 1745; the niversity of Pennsylvania, A. D. 1755; Jefferson ollege, at Canonsburg, Pa., A. D. 1802; Mount t. Mary's, at Emmetsburg, Md., A. D. 1830; and he University of Virginia, A. D. 1819. In the 'est, the most flourishing College is the Universi- of St. Louis, founded A. D. 1832.

The number of students in these one hundred nd eighteen Colleges is about twelve thousand. he largest number on the roll of any one College n 1854 was 466, the number attending the Uniersity of Virginia. The number at Yale, however, as nearly as great, being 443. Harvard had 339, rinceton 225, the University of North Carolina 70, and Brown University, at Providence, R. I. 52. The largest library belongs to Harvard, which ollege has 98,000 volumes; Yale has the next rgest, containing 54,000; and Brown University e next, 32,000. Bowdoin, at Brunswick, Me., as 28,000; Dartmouth, at Hanover, N. H. 31,000; eorgetown College, at Georgetown, D. C. 24,000; nd the South Carolina College, at Columbia, S. . 22,000. Several of the Western Colleges, conidering their youth, have splendid libraries. Thus Iarietta College, in Ohio, has 14,000 volumes, nd the University of St. Louis, 15,000, in these stimates, the volumes in the students' libraries, s well as those in the college library proper, are ncluded.

The cost of education varies at different Colleges. At Harvard, the total expenses of room rent and uition are ninety dollars annually; and the cost f board is from seventy to ninety dollars in addiion; making an average, with washing, wood and ights, of two hundred dollars. The expenses at Yale, averaged in a similar manner, may be estinated at about the same sum, as may also those t Princeton. Bowdoin, Dartmouth, Brown Uniersity, Amherst and Williams, are cheaper, ranging from one hundred and twenty-five to one hundred and fifty dollars. The University of Virginia costs each student about one hundred and twenty-five dollars; while that of the western Reserve costs less than half, or only about one hundred. In these estimates, clothing, books and pocket money are not included.

Besides these one huudred and eighteen colleges proper, there are forty-four theological schools in the United States, about seventeen law schools, and about forty medical ones.—*Ledger.*

For "The Friend."

JEALOUSY.

It is much to be regretted in this day of sifting, and separations, in our Society, that some of our members suffer a spirit of jealousy to creep in towards their brethren, to the injury of the growth of the good seed in their own hearts, as well as destroying that peace and harmony in our small meetings, which has formerly and ever will characterize the disciples of Christ. "By this shall all men know that ye are my disciples if ye have love one towards another;" and again, "If ye walk in the light as he is in the light, ye shall have fellowship one with another, and the blood of Jesus Christ his Son cleanseth us from all sin." For want of abiding under the influence of this light, which lighteneth every man that cometh into the world, it is to be feared, some of our members, even of those who see eye to eye in the support of our precious principles and testimonies, are suffering the enemy to enter their habitations, and raise a jealous spirit in their hearts toward some of their friends; it may be from various causes, which, if we are sufficiently on the watch, we may be enabled to check in its infancy. And when we find any matter growing between our brother and ourselves, that will cause unkind feelings if suffered to remain, let us seek for counsel from Him, who is very truly represented as Wonderful Counsellor, so that if we have erred, we may be favoured to see it, and not only see, but also to acknowledge our error though it may be hard to the natural feelings. We may not only injure ourselves if we suffer these things to remain, but in such case our neighbours may be drawn into the difficulty, and these feelings may be carried into our meetings for discipline, thus disturbing that harmony which, it is so desirable, should prevail, in which if one member suffer, all shall suffer therewith, and if one be exalted, all shall rejoice; and we be willing to bear one another's burdens, thus fulfilling the law of Christ.

J.

Ohio, Sixth mo., 1855.

Fruit Trade of Boston.—The amount of the fruit business of Boston probably surpasses that of any other city in the Union, save New York, and the sales of some particular kinds of fruit in Boston even greatly exceeds that city. About seventeen thousand boxes of oranges have arrived at this port since seventh day. Since last ninth month 70,000 boxes Oranges, 30,000 do. Lemons, and nearly 300,000 drums Figs. From this port as the great centre, fruit is distributed not only to every village and town in New England, but to a certain extent all over the country, even to New York and Philadelphia, and is exported in great quantities to foreign countries. The New England consumption of Oranges, Lemons, Figs, Raisins, &c., is immense, probably much more in proportion than in any other district of country. To supply the population of Boston alone we should need quite a fleet annually from the Mediterranean, with large cargoes.—*Traveller.*

For "The Friend."

Remarkable Preservation.

During the storm on the night of the 6th inst., the house on Linden St., Germantown, occupied as a Boarding School, was struck by lightning; the discharge being so great as to rend from the building a well constructed conductor, which was thrown into a tree, where the platina on its summit was seen to melt with coruscations. The house sustained some damage, but no person was injured.

So providential an escape is a striking manifestation of the tender mercy and restraining power of the unslumbering Shepherd who watches over His heritage in darkest storms.

On viewing the injury the premises sustained, and yielding due credit to the lightning conductor as instrumental in warding off the thunderbolt, it is obvious that nothing short of Omnipotence could thus have used the means to prevent entire demolition.

Had the consequence been destruction, the appalling intelligence would have sounded far and wide that "more than twenty human beings were at an unexpected moment launched into eternity;" how worthy then of commemoration is the mercy, that *no one was injured!* The effect produced on the inmates—even some of the younger children —it appears, has been profitable; may it remain deeply impressed; and may it incite others to feel our many obligations to a Father of love, who thus watches over us—rescuing us from danger, seen and unseen; and on whom we are dependent for life moment by moment; also, may it animate us all to consider—seriously consider, on lying down to sleep, whether or not we have experienced that renovation of heart and conformity to the Divine image, which will ensure a glorious reward, a perpetuity of unmixed happiness, should we awake in eternity.

Philad., Sixth mo., 1855.

National Debts of the World.—At a time like the present, when the contracting of national debts is becoming general, the following statement of the debts by the principal States in the world, corrected up to a late period, is of some interest. It is contained in Ayre's edition of "Fenn on the English and Foreign Funds," very recently issued: —Austria, amount of debt, £211,000,000; Baden, £7,000,000; Bavaria, £14,117,000; Belgium, £26,000,000; Bolivia, £521,000; Brazil, £12,392,000; Buenos Ayres, £2,500,000; Chili, £1,784,000; Columbia, £6,625,950; Cuba, £311,230; Denmark, £13,069,000; Ecuador, £3,817,000; England, £773,923,000, France, £233,000,000; Granada, (New,) £7,500,000; Greece, £8,250,000; Guatemala, £594,500; Hamburg, £4,000,000; Hanover, £5,174,000; Holland, £102,451,000; India, (British,) £48,000,000; Mexico, £10,000,000; Peru, £9,953,800; Portugal, £19,122,000; Prussia, £33,500,000; Roman States, £17,152,000; Russia, £68,000,000; Sardinia, £23,000,000; Saxony, £6,223,000; Spain, £70,000,000; Sweden, £450,000; Switzerland, £160,000; Turkey, £5,000,000; United States of America, (Federal,) £10,000,000; Venezuela, £3,789,000; Wurtemberg, £4,850,000. Total, £1,736,229,550.

Avoid the company of drunkards and busybodies, and all such as are apt to talk much to little purpose; for no man can be provident of his time that is not prudent in the choice of his company; and if one of the speakers be vain, tedious, and trifling, he that hears, and he that answers, in the discourse, are equal losers of their time.

For "The Friend."

The Fellowship of Suffering.

The tendency of common calamities, should be to drive the suffering to their heavenly Protector, and to unite them more nearly and firmly in love to one another. Reproach, and the persecution inflicted upon the early Friends, no doubt, had the effect to bind them together in sympathy, and in prayer to Almighty God, that he would arm them on the right hand, and on the left, enabling them to endure, as Christians, the unrighteous oppression and the cruelties they were subjected to, for maintaining the testimony which he gave them to bear, against the errors of that day, and for spreading a knowledge of the spiritual nature of the gospel dispensation. The self-denying disciple of the Lord Jesus has always been lightly esteemed by the men of this world; but he feels bound by principle, to keep to the cause of his divine Master, whatever contempt the world may cast upon him. The more he endures for his name's sake, and for the salvation of his own soul; the more will the pure peaceful streams of that river, which makes glad the city of God, flow into his heart. Eventually there will be an end to the sufferings of the righteous. He who is touched with a feeling of all our infirmities, said to his followers, "Blessed are ye that weep now, for ye shall laugh. Blessed are ye when men shall hate you, and when they shall separate you from their company, and shall reproach you, and cast out your name as evil, for the Son of man's sake. Rejoice ye in that day, and leap for joy; for, behold your reward is great in heaven; for in the like manner did their fathers unto the prophets."

Though these may be subjected to reproach and great trial, man cannot dispossess them of their place in the church of Christ, nor of their character as true Friends, nor of their final reward, the crown of righteousness, which the Lord, the righteous Judge, has in store for all them, who fight a good fight, and keep the faith unto the end. Anything designed to serve party purposes, and to sustain unsound opinions, can never support the cause of Christ, which is for the salvation of souls. Instead of promoting peace and harmony, it must feed and encourage division and animosity, and wound the feelings of innocent sufferers.

But may none of the afflictions of the present time be permitted to discourage Friends from pursuing faithfully the path of religious duty, labouring in the ability which the Lord gives, to comfort and strengthen one another, to walk uprightly by the same rule, and to mind the same things, which their forefathers in the truth followed after, and preferred above their chief earthly joy. It is not affliction, or reproach, or rejection by former Friends merely, that will preserve from temptation, and qualify to do good; watching unto prayer continually for ourselves and for one another, seeking to know the Divine will inwardly revealed, and asking the saving help of the Shepherd of Israel, are essential to our growth and preservation in the blessed Truth. This, we believe, will be granted and renewed from time to time, as we keep the faith, and the patience of the saints.

Though meetings in some places may be small, and the labourers few, yet He who declared that he is in the midst where two or three are met in his name, will graciously regard our low estate, and in due time comfort the sincere travailers with the wine of his kingdom, as they look to Him, and hold fast their confidence firm to the end. It is also said, "Greater is he that is in you than he that is in the world;" and if our trials humble us and turn us to the Lord with fervency of soul, he will bless us, and make way for his Seed to rise into dominion. He can cause the Truth more eminently to prosper through our sufferings, and continue to prepare a people, that shall hold forth, in life and doctrine, the same blessed principles of the gospel, which our fathers lived in. He can give gifts to the children, and raise up as from the stones of the street, living witnesses who shall tell of his wondrous works, and invite their neighbours to come, taste, and see, that the Lord is good, and that his mercy endures forever. David, a servant of God, was a man of signal affliction. On one occasion he said, "Though an host should encamp against me, my heart shall not fear; though war should rise against me, in this will I be confident; one thing have I desired of the Lord, that will I seek after; that I may dwell in the house of the Lord all the days of my life, to behold the beauty of the Lord, and to inquire in his temple. For in the time of trouble he shall hide me in his pavilion: in the secret of his tabernacle will he hide me; he shall set me up upon a rock." "When my father and my mother forsake me, the Lord will take me up. Teach me thy way, O Lord, and lead me *in a plain path*, because of mine enemies. Deliver me not over unto the will of mine enemies; for false witnesses are risen up against me, and such as breathe out cruelty. I had fainted, unless I had *believed to see the goodness of the Lord* in the land of the living. Wait on the Lord; *be of good courage*, and *he shall strengthen thine heart:* wait, I say, on the Lord." Psal. xxvii.

Russian Losses.—Lord Lansdowne stated in the House of Peers last week that the Russian loss since the commencement of the war, including all the battles on the Danube with the Turks, had been 247,000 men. The following are further details. In First month last a report was presented to the Emperor Nicholas, stating the loss of the army at 187,000 men, including those who died under the severity of the long marches and of sickness. A new report was presented to the Emperor Alexander in Fourth month, fixing the total loss of the army to Third mo., 31st, at 250,000. In this report especial stress was laid on the effect of the marches, and some disastrous incidents were particularized. It was stated that an entire company had perished under the snows between Odessa and Perekop, and another between St. Petersburg and the South. An entire battery had been lost in the same manner, with the men and horses. The guns were found after the thaw, and are again used It is calculated that the addition to the Russian army to be made under the last ukase will consist of about 250,000 men. Twelve in a thousand is the ratio, and the area includes the most populous governments of the empire.—*English Paper.*

Singular Enterprise.—A company of Norwegians are engaged at San Francisco in collecting cast-off boots and shoes. The manner of conducting the business is as follows:—Agents are employed to take into custody all discarded subjects of the genus boot. The physical condition of the article is comparatively of little consequence; neither is it considered important to take into account its relations of fellowship, and the sole receives no consideration, whatever may be the state of its hopelessness.

The next operation consists in cutting the thread of the boot's existence, which being accomplished, and a little greasing, the valuable remains are made into packages to be shipped to Europe. It is stated that the value of boot-legs gathered and prepared by this establishment during the period of six months, amounts to upwards of $3,000. In many parts of Europe, old boot-legs may be readily sold at fifty cents per pair.

How true it is that one-half the world does not know how the other half lives.

Selected.

TRANSITORY THINGS.

If ever thou hast felt that all on earth
Is transient and unstable; that the hopes
Which man reposes on his brother man,
Are oft but broken reads; if thou hast seen
That life itself is "but a vapour," springing
From Time's upheaving ocean, decked perhaps
With here and there a rainbow, but full soon
To be dissolved and mingled in the vast
And fathomless expanse, that rolls its waves,
On every side around thee; if thy heart
Has deeply felt all this, and thus has learned
That earth has no security; then go
And place thy trust in God. The bliss of earth
Is transient as the coloured light that beams
In morning dew-drops. Yet a little while
And all that earth can show of majesty,
Of strength or loveliness, shall fade away
Like vernal blossoms. From the conqueror's hand
The sceptre and the sword shall pass away,
The mighty ones of earth shall lay them down
In their low beds, and death shall set his seal
On beauty's marble brow, and cold and pale,
Bloomless and voiceless, shall the lovely ones,
Go to the "congregation of the dead."
Yea, more than this; the mighty rocks that lift
Their solemn forms upon the mountain heights,
Like Time's proud citadels, to bear the storms
And wreck of ages; these too shall decay,
And Desolation's ivy hand shall wave
O'er all that thou canst see,—blot out the suns
That shed their glory o'er uncounted worlds,
And clothe the heavens in darkness. But the power
Of God, his goodness and his grace, shall be
Unchanged, when all the worlds that He has made
Have ceased their revolutions. When the suns
That burn in yonder sky, have poured their last,
Their dying glory o'er the realms of space,
Still God shall be the same,—the same in love,
In majesty, in mercy; then rely
In faith on Him, and thou shalt never find
Hope disappointed, or reliance vain.

Selected.

CITY STREET.

I love the fields, the woods, the streams,
The wild flowers fresh and sweet,
And yet I love no less than these,
The crowded city street;
For haunts of men, where'er they be
Awake my deepest sympathy.

I see within the city street,
Life's most extreme estates,
The gorgeous domes of palaces,
The prison's doleful gates;
The hearths by household virtues blest;
The dens that are the serpents' rest.

I see the rich man proudly fed
And richly clothed, pass by;
I see the shivering, homeless wretch
With hunger in his eye;
For life's severest contrasts meet
Forever, in the city street.

And lofty, princely palaces—
What dreary deeds of woe,
What untold mortal agonies
Their arras chambers know!
Yet is without all smooth and fair
As Heaven's blue dome of summer air.

And even the portliest citizen,
Within his doors doth hide,
Some household grief, some secret care,
From all the world beside;
It ever was, it must be so,
For human heritage is woe!

Hence is it that a city street
Can deepest thoughts impart,
For all its people, high and low,
Are kindred to my heart,
And with a yearning love I share
In all their joys, their pain, their care.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 317.)

WILLIAM AND MARY HAIG.

Of the birth-place or early history of William Haig I had no account. After he had come to man's estate, he became acquainted with Mary Masters, a religiously inclined young woman, and a mutual attachment springing up in them, they were married at Friends' Meeting at Flushing, on the 1st of the seventh month, 1700. Thomas Story says, "We were at the marriage of William Haig and Mary Masters at Flushing; on which occasion we were favoured of the Lord with his good presence, and an open satisfactory meeting."

The young married couple soon went to Antigua, and settle, where they kept open house for such friends as visited that Island, and were diligent attenders of meeting. She soon came forth in the ministry, as he did also after a number of years. They appear to have prospered on the Island, in every sense; but as they began to have a flock of children growing up around them, they felt uneasy to remain where there were no suitable companions for them. This induced them, about 1710, or a year or two later, to sell their property in Antigua, and to remove to Pasquotank county, North Carolina, where at that time there were many friends.

He is described to have been of a "loving and meek spirit." Of his labours or travels in the work of the ministry we have no account. He was often sick in the latter part of 1718, and was remarkably sustained in faith and patience, under his sufferings, being at times even filled as it were with heavenly joy. On one occasion some Friends being by his bedside, he exclaimed with holy admiration, "Friends, I am glad of your company. I feel so much of the blessed Truth, as I hope will carry me into that joy where I shall praise the Lord amongst the redeemed. I hear that Truth prospers mightily in England, Blessed be the Lord for it."

In parting with his children, he exhorted them with many heavenly expressions," taking a solemn leave of them "in a living sense of Truth," and praying that the blessing of the Lord might rest upon them. He charged them, "Love and fear your mother; learn your books, and keep to the Truth." Addressing his faithful helpmeet, he said, "My dear, thou hast been a true wife to me. When my mind was drawn to love thee, I did not inquire what thou hadst, nor thou what I had. We came together in love, and have lived in love." "The Lord bless thee and my children; the Almighty protect you."

To a young woman who came to see him, he said, "Fear God; keep to the Truth. Never turn thy back upon it, lest the days come in which thou shalt say, I have no pleasure in them. As for me, I am going to my place, and I hope it will be in everlasting rest." To another one who had recovered after having had a very severe illness, he said, "It had been better for thee to have died in thy sickness, than to live to forget God."

After praying that God would remember all his people, and make his dwelling with them, he added, "But what shall I say? There are too many that tread the testimony of Truth under foot. Gather them into thy fold of rest; I pray thee, Lord!"

To a friend, he said, "Thou art of the ministry, I have hast been a great while, and I am but young, and I would advise thee to be careful in thy testimony—not to enlarge beyond thy gift or concern. Have a care that thou do not stand in the way of others, or speak anything to hurt them that may be but small and tender. Wait until thou art filled; and then be humble; not puffed up with pride, for pride goeth before a fall."

After praying to the Lord, that he might be settled on the sure foundation and rock which cannot be removed, he quietly departed this life, Eleventh mo. 6, 1718, and, his friends add, "now rests in joy."

His beloved wife, who was a woman of an exemplary life and conversation, tarried not long behind him. Whether sick at the time of his death, doth not appear; but in a day or two afterwards she was looking forward to a speedy termination of her sorrowful widowhood, and gave some direction to a Friend, concerning her outward affairs. Afterwards she said, "According to my small gift [in the ministry], I have discharged myself, so that nothing lieth at my door. O, that the people would remember the words that I have spoken among them, and that this young generation would come up in the Truth. As for me, I had never left the island of Antigua, if it were not that I might have my poor children amongst faithful Friends. I have seen the wonders of the Lord in the deep ocean, and witnessed his delivering arm in many exercises, and he hath kept me sweet and clean since I knew the Truth. Oh! that my children may remember the advice they have received of their father and me. I am clear; having done my duty."

After this, she praised God, and uttered many sweet and comforting expressions. On another occasion she said, "When I was but nine years old, the Lord made himself known to me; but I lived then where there were no Friends. After some time I went to Pennsylvania, and there met with Friends. Some of them were loose and light; others were solid and weighty. With these I joined, and received much benefit from the family of the Lloyds.* After I was married, we went to Antigua, and there in the first meeting, the power of the Lord was greatly with me, insomuch that the people's expectations were on me for words. Soon after it pleased the Lord to send two of his servants, Jonah Langdale and Thomas Thompson, to visit the island, when the power of the Lord did break in upon me like thunder."

She signified that having then been brought into the ministry, she had been faithful ever since in her measure. On the day of her death, she said, "Friends, be loving one to another, that the Lord may bless you. The love I feel in my heart, is inexpressible." After a time she desired that her love might be remembered to Lydia Lancaster and Elizabeth Rawlinson, two English Friends then in America, adding, and Friends generally: "Tell them, I die in unity with all faithful Friends." "My husband is gone, but I shall not be long a sorrowful widow, yet not my will but thine be done! My speech fails apace; sweet Lord Jesus, thou hast loved me from a child, and I have loved thee, ever since I knew thee! My case is no doubtful case! I come, I come; hasten thou my journey." Her death took place, the 13th of Eleventh month, 1718, seven days after her husband had been taken to his reward. She was about thirty-nine years old.

* The daughters of Thomas Lloyd, who were generally valuable Friends.

(To be continued.)

In real silent worship the soul feeds on that which is Divine; but we cannot partake of the table of the Lord, and that table which is prepared by the god of this world.

For "The Friend."

The Indians.

Manners and Customs of the Blackfeet.

The dresses of the Blackfeet on state occasions are a short hunting-shirt made of finely dressed deer, elk, or buffalo skin, richly ornamented with beads of a blue and white colour. A breech-cloth of coarse blue cloth, moccasins and leggins of buffalo skin ornamented with beads, and on grand occasions a head-dress of feathers, complete the costume of the men. The head-dress is a circlet worn around the head, in which are placed feathers taken from birds of the falcon tribe, standing perpendicularly; a band of deer-skin, ornamented with projecting feathers, falls down the back. The feathers most prized are those of an eagle, (*falco cheyscotas*), called by the Indians the war-eagle. The feathers are the wing primaries, and are regarded as of great value; the Indians will often give a horse for a single feather. No warrior is allowed to wear the feathers of the war-eagle unless he has performed some great exploit. This eagle is so wild as to be out of reach of the Indian's arrows. When the Indian discovers that the war-eagle frequents a certain district, he repairs to it with provisions for several days; he digs a hole in the ground large enough to receive himself and provisions for several days. Placing himself in the hole, he covers it and himself with boughs and sticks, the covering having several openings large enough to admit his hand. Upon this covering he places the body of an antelope, and patiently waits. After a time, the eagle, attracted by the game, alights upon the ambush; the Indian seizes the bird by the legs and secures it.

The dress of the women is a buckskin shirt, close fitting around the neck, and falling nearly to the ancles; it fits snugly to the shape, leaving barely room enough for the movement of the lower limbs; a wide sleeve, fringed on the border, falls just below the elbow; a broad belt of beadwork passes from the shoulders to the waist; leggins and moccasins, worked with beads, adorn the legs and feet. No underdress is worn. The Indian women wear no head-dress; their hair is worn flowing, reaching barely to the shoulders; it is parted in the middle, and bears no trace of any curls. When travelling, they place their children in sacks of skin on the tent-poles. They do not appear to use a cradle of any kind.

Their lodges are from 14 to 30 feet in diameter, and will usually accommodate as many as 22 persons. They are often neatly and quite tastefully arranged. The cooking utensils are simply a shallow vessel of tinned iron, purchased from the traders, and a rude tripod for hanging this vessel over the fire.

The food of these Indians consists principally of buffalo meat, varied, or rather relished only by the typsina root and dried berries. When a feast is prepared, the rump, ribs, and marrow bones of the buffalo are reserved for roasting before the fire in the centre of the lodge. Fifteen or twenty pounds of meat, with the tripe, of which they are very fond, with the addition of the typsina root, are boiled in the kettle before mentioned. The liver is eaten raw, and often while still warm. The blood is boiled with berries and eaten as soup. Although salt is found abundantly in their country, they rarely use it. The berries are several species of whortleberry. Any vegetable food is highly esteemed. Hard bread is eaten with avidity, and no more palatable feast can be provided for these Indians of the plains, than a dish of boiled rice, sprinkled with sugar. Most of them only know of whiskey by report.

Their manners towards each other are kindly and cheerful. The men treat their wives with

great kindness and familiarity, and are very fond of their children; a constant laughing and gossiping is going on in their lodges. Their principal amusements are their dances, and games of skill and chance, upon which they bet heavily. Two of these games were characteristic. The first is called the game of the arrow and the ring. Fifteen or twenty persons arrange themselves on a side. Two embankments of earth, about 10 feet long and 6 inches high, are made parallel to each other, about 40 feet apart. Two Indians play at a time, nearly divested of clothing. A man holds in his hand a ring made of willows, about 12 inches in diameter, across which are stretched strings forming four radii of a circle. He starts to run, throwing with his hand, first the ring, towards the opposite embankment, and then the arrow. The object is to make the arrow strike within the ring, and near the centre. If the arrow does not fall within the ring, and if it strikes at a certain distance from it, it counts something. A tally is carefully kept by those looking on, by placing sticks in the ground. When the first man has thrown, the man on the opposite side does the same, and they go round until all have played. Horses, dresses, and arms are staked on the result of this game. Another amusement is the game of the bullet. It is played by men standing up in a circle, with arms extended above their heads. The bullet is passed from hand to hand, and the point is, to guess in whose hand the bullet is. In this game there is much action and gesture. It is always accompanied by a beating of drums. Few scenes in Indian life are more picturesque than a party playing this game at night, and illuminated by firelight, which brings into full relief the excited faces and wild gestures of the players.

Their principal weapons, besides the bow and arrow, are the north-west trading guns, an inferior kind of shot-gun. They commonly file off a piece of the barrel, leaving it but little longer than a horse pistol. The bow and arrow are much more efficient in their hands. The bow is of spruce, about 3 feet long, and strengthened by sinews on the back. The arrows have steel heads, and are feathered. When an Indian attacks a buffalo, if he fails with his gun, he instantly brings his bow and arrows from his back, and discharges his arrows with great rapidity, firing from 12 to 15 in a minute. At 50 yards he is as certain in his aim as with the rifle. But it is remarkable that he never sights the arrow, and never elevates it to the eye, but always shoots from the breast.

Gov. Stevens recommends the Government to take measures for the instruction of these people in agriculture. He says: "I regard the project of establishing a farm for these Indians, as entirely practicable. First, because farms have succeeded among all our Indian tribes where the experiment has been thoroughly tested; Second, because in my recent journey through the Piegan, Blackfoot, and Blood Indians, the establishment of an agency and farm was fully explained to all the principal chiefs; and not only were they unanimously in favour of the project, but promised that in case a farm should be started, they and their people would work upon it and give it a fair trial."

"I think, from the observations I have been able to make, that a treaty with these Indians, and the establishment of an agency and farm in their country, will do much towards changing them from a warlike and nomadic, to a peaceable and agricultural nation."

The *Selish* proper, or Flatheads, inhabit St. Mary's or Flathead valley, and the neighbourhood of the lake of the same name. The origin of their name is not known, but the flattening of the heads of their children does not prevail among them. The tribe was once very powerful, but has been much diminished by the Blackfeet. They are said to number 350. Their country is admirable for grazing, and they possess about 1000 head of cattle. They have many small patches of wheat and vegetables, and though not rich in horses, have many good ones. A Blackfoot brave, significantly called the White man's horse, boasted that he always stole the first Flathead horse he came across, "It was sure to be a good one."

Although so few in number, they are very brave. It is said that five Blackfeet will run from one Flathead. They get no salmon, but live principally by the chase. Their own territory still furnishes elk, moose, black and white tailed deer, the big-horn, and bears. Beaver and otter are abundant. Their custom is to make two hunts annually across the mountains. In these excursions they are accompanied by several other tribes. They have no canoes, but cross streams in their lodge skins, which are drawn up into an oval form by cords, and stretched on a few sticks. These they tow with horses, riding themselves, three abreast.

The men are rather small, but well built, muscular, and good looking. Although professedly Roman Catholics, they still preserve their aboriginal dress, and many of the old customs. They are profuse in the use of paint, and eager for beads and trinkets. Their women are kept in the same state of subjection as among the heathen Indians. They, in fact, do every thing but hunt and fight.

They deserve to be furnished with agricultural implements, and say they are always glad to see the white man, whose blood they rejoice never to have shed. Lieut. Mullan relates the following: "September 20th. We had to night a great luxury in a string of mountain trout, brought by a Flathead. His people were without any thing to eat. We had nothing but a little flour. These being the first fish caught, they insisted on our taking them. This, at first, we refused, but they insisted until we were compelled to accept them." He adds, "I cannot say too much of the three noble men of this tribe who were with us. They were firm, upright, and reliable, and entertained a religious belief which they never violated."

For "The Friend."

The Insurrection in China.

The insurrection, which for several years past has kept in turmoil and confusion, this long tranquil portion of the world, possesses interest, not only on account of the great number of the human family whose civil and political institutions may be affected by it, but also on account of the semi-religious character of the movement; its chiefs and leaders aiming at nothing short of the introduction of a new code in religion and morals. The rebellion has appeared to be making a gradual, but steady progress until a recent period. Whether the reverses which have latterly befallen the insurgents, are to be regarded as merely casual and incidental to a state of revolution, or whether they indicate the approaching triumph of the imperial cause in this long protracted struggle, it is vain to conjecture. The French missionary, Huc, author of the interesting book, entitled "Travels in Thibet," in a recent work containing an account of his journey through the Chinese Empire, has some observations touching the apprehended results of the present condition of things, a portion of which is furnished in the following extract. It should be premised that the Roman Catholic Christians are quite a numerous body in China, amounting in number to some hundreds of thousands; and for a long series of years efforts, not wholly unsuccessful, have been made by Protestant missionaries to introduce a knowledge of christian truth among the people, by circulating the s writings and religious tracts. Huc, observes

"And now, what is to be the result o Chinese insurrection? Are the innovators to their ends, that is to say, found a new dyn and a new faith in accordance with their re creed? Or, has 'the son of heaven' (the tit the Emperor of China) strength sufficient to solidate his tottering power? It is not yet p ble to say what is to be the probable issue of struggle.

"Notwithstanding the impossibility of se clearly into the future, the editors of Europe given publicity to the opinion, that if the T dynasty is overthrown, the Chinese system wi reconstituted, and the nation fall back int traditional ways. This strikes us as erroneo there is no such thing, properly speaking, Chinese system; for this expression, in the s in which we have just used it, can only be un stood as being opposed to the Tartar system. there is not, nor has there ever been a Tartar tem. The Mantchou race has, it is true, bee its yoke all China; but its influence has been on the Chinese mind. The utmost it has able to effect, has been to introduce a few tri modifications in the national costume, and to f the conquered people to shave their heads wear plaited tails. This is the only Tartar sys —since the conquest, as much as before, Chinese nation has been governed by the same stitutions, and has remained invariably faithf the traditions of its ancestors. Moreover it so to speak, absorbed in itself the Tartar race imposing upon it its own civilization and ha and even in great part extinguishing the Tartar guage and substituting its own. Lastly, the tar influence has been annulled throughout empire by their rarely getting possession of offices, which bring about a direct relation betw the rulers and the people. Almost all these, cept military dignities and high state offices, l fallen to the share of the Chinese, who were n generally competent to fill them than the Tar These latter, dispersed and lost in the imm extent of the empire, have retained the privi of watching over the tranquillity of the front manning the forts, and mounting guard before palaces.

"There is nothing surprising in the fact of Chinese system having held good against Mantchou invasion, and remained unchanged the advent of a foreign dynasty. China is different from Europe. The innumerable polit convulsions and revolutions, which have ta place in the country, have destroyed nothing, the reason is simply this. A distinctive trai Chinese idiosyncrasy is a profound veneration religious respect for old things and ancient in tutions. After each revolution, this extraordin people has set itself to bring back the past and establish former traditions, so as in no wise deviate from the rites established by their an tors. Therefore the Chinese system has alw remained what it is; and here also we have on the causes, explaining why a people who ha rapidly reached a remarkable degree of civil tion, should have remained stationary and with progress for centuries. Are we to hope, then, this new insurrection is to modify the Chi system? It is but reasonable to doubt it. I even highly probable that the want of sympa in China towards the nations of the West will main just as striking as heretofore. China is no manner of means thrown open, and notw standing what has been said, we believe there little to be hoped for from missions. We must lose sight of the fact that Christianity is not invo

e present crisis; the Christians, too prudent
n wise to range themselves under a political
ner, and besides, too few in number to exercise
rect influence on the affairs of the country,
s remained neutral. As such, they have be-
ne obnoxious alike to both parties; and we are
to fear that the victor, whichever it be, may
n day take vengeance upon them as a conquered
se. If the Tartar government puts down the
surrection which has so often displayed the
rs on its standard, it will be without mercy for
l Christians, and the length of the struggle will
r redouble its suspicions and its resentment;
on the contrary, Tien-Te is successful and ex-
s the former conquerors of China, as he lays
m to be the founder not only of a new dynasty
of a new creed, he will in the first flush of
ory sweep away all obstacles to his projects.
end of the civil war may perhaps, therefore,
the beginning of great persecution. These
ful trials ought not, however, make us despair
o the future christianizing of China; we know
t God leads all nations according to His own
, and knows how to educe good out of evil, so
ftentimes when men think all is lost, then
s that all is saved."

Apt Comparison.—An English writer has re-
rked that he who teaches what he does not per-
m, may be compared to a sun-dial on the front
a house, which instructs the passenger, but
the tenant.

THE FRIEND.

SIXTH MONTH 23, 1855.

Information has been received in this city, that
ndon Yearly Meeting referred the two epistles
m Ohio, to a large committee, and an invitation
ng extended to all the members who chose to
ue, its sittings were attended by much the
ger part of the men's meeting. After hearing
various documents put forth by the two bodies,
d the minutes on the subject of the three Yearly
etings in this country which have united with
separatists, the committee on their third sit-
g, concluded to recommend to the Yearly Meet-
g to unite with the body of which Jona'n Binns
clerk: a recommendation which there is reason
believe the meeting would adopt.

This result of the controversy that has been
ng on in the Society for many years, is indeed
culated to fill the mind with sadness, and to
use those who feel bound to maintain the testi-
ny of Truth against the innovations on the
ctrines and discipline of Friends, which have been
ught in of late years, to feel more deeply
eir own insufficiency for the work, and the neces-
y of depending solely on their Divine Master
wisdom and strength to perform it aright.

The principles that are at stake are of vital im-
rtance, and if deserted or betrayed, we firmly
lieve, one innovation after another will inevita-
be made on our doctrines and testimonies, un-
Quakerism will have little left to distinguish
from the formal religion of other professors.

The testimony against the unsound sentiments
omulgated by some in membership in England,
s not sprung up in a day, nor has it been con-
ed to those living on this side of the Atlantic.

The Beaconite separation was the product of
ose views, carried to their legitimate sequence;
d the history of the Society for the last twenty
ars will show, that among its members in Great
itain, many of the most experienced and devoted
servants of the Most High, have felt constrained openly to declare their disunity with them, and to warn Friends there and elsewhere, in the most solemn manner, of the disastrous consequences that must continue to result to the Society, unless it testified against those unsound views, and thus cleared itself of all responsibility for them. Among these, we may mention Thomas Shillito, George and Ann Jones, Sarah Lines Grubb, John Barclay, George Withy, Daniel Wheeler, and I. N. Richardson; and there were many others whose names we do not now recall. All these have been gathered to their everlasting rest, but in the discernment and authority of that Divine Anointing which made them what they were, they bore a clear and decided testimony against the unsound views contained in many of the works of J. J. Gurney and of E. Ash; some of them predicting that the Society would in time testify against them; and also, that it never would witness a return to its original brightness and power until that duty was performed. The same testimony was borne by a large number of the worthies in this country, who, within the same period, have been removed from works to rewards, especially among those in Philadelphia and Ohio Yearly Meetings, who were conspicuous for their uprightness and clearness of vision, and who, in view of the conflict which they saw approaching, ceased not to warn and incite their fellow believers, to stand fast in the faith, earnestly contending for it as revealed to primitive Friends, and firmly resisting the innovations attempted to be made upon it.

These all saw that the Spirit of the world had made wide inroads among those professing with Friends, and prepared the way for the adoption of the unsound views contained in the works alluded to, which however sincerely held by their authors would, wherever adopted, lead away from the spirituality of our religion.

So fully and generally did this feeling prevail among the more active and experienced members of those meetings, that both bodies, affectionately, but earnestly invoked the attention of their brethren in England to the subject, besought them to give it that consideration which its importance demanded, warned them of the feelings of disunity which the sanction directly and indirectly given to the unsound views complained of, was produeing, and pointed out the divisions that it was feared would finally result therefrom, unless the cause was removed. To all this, Friends in England gave little heed, satisfying themselves with the plea of the individual responsibility of the authors of the works containing the unsound sentiments, to their respective meetings, which took no notice of them.

Philadelphia Yearly Meeting, feeling religiously bound to do what it could to prevent the inroad of error among its members, and to defend the faith of the Society in its original purity, prepared and issued the "Appeal from the Ancient Doctrines of the Society," in which many of the unsound views contained in the works of J. J. Gurney and E. Ash, are quoted, and shown to be contrary to the faith of the Society. This appeal was adopted by Ohio Yearly Meeting. However some may affect to believe, that the discrepancies between the sentiments of the authors above named, commented on in the "Appeal," and the faith ever professed by the Society, are not of material importance; yet those sentiments have not been and cannot be reconciled with the acknowledged doctrines of Friends; and as we have before said, they have been declared inimical to those doctrines and their practical fruits, and as such, been testified against by many of the most experienced and devoted of the Lord's servants in the Society for the last twenty-five years; and we have no doubt a succeeding generation will rejoice, that amid the declension and general lukewarmness of the present time, there were two Yearly Meetings enabled to hold up a clear testimony to the faith for which our forefathers suffered so deeply, and against the errors, that in specious guise, threatened its purety or overthrow.

The introduction or defence of these unsound views, is now producing the convulsions predicted, and rending the society to pieces; and no misrepresentation or sophistry can disguise the fact. It was this that gave birth to the division in N. England, where the discipline and usages of the society were violated, in order to secure the disownment of an individual for faithfully testifying against those views; and it is this that lies at the bottom of the separation in Ohio. Philadelphia Yearly Meeting has shown the violation of the discipline, and of the fundamental principles of our church government committed in N. England, and given irrefragible reasons why it should not sanction them, by manifesting unity with the body committing them; and it has striven to maintain the rights of members, and the organization of the society, by urging the annulling of the arbitrary acts, that led to the separation in that meeting. Ohio Yearly Meeting has also steadily refused to sanction those acts, because they strike at the right and the duty of all faithful Friends to defend the society from the inroads of error; and the separation from it that took place in the Ninth month last, was of those who do not unite with it, in its testimony against the unsound views alluded to, and against the violation of the discipline in New England, resulting from them.

The setting up of the meeting of which J. Binns is clerk, has been clearly shown to have been in violation of the discipline and usages of the society; several of those composing it, at the time, declared their measures to be a separation and no action of other Yearly Meetings can alter the facts which establish its being so, nor deprive the Yearly Meeting of which B. Hoyle is clerk, of its legitimate standing and authority as a Yearly Meeting of the Society of Friends. Other Yearly Meetings may decide to unite with those who separated, because they agree with them in sentiment and feeling; but that does not change their character as a separating body, nor give them the standing of a rightly constituted meeting of Friends, while it breaks asunder the outward bond that kept the society together as one body.

There is a strong disposition manifested to do away with many of the testimonies given to the Society to uphold, and we believe that where modified Quakerism is not firmly and openly condemned, those testimonies cannot be long supported. We see that in some meetings, the testimony against grave-stones has been discarded, and that against marrying with those not in membership, is reduced to a mere form; while a departure from the plain language and plain garb, which have always characterized the true Friend; the introduction of formal doctrinal teaching into meetings; and the propriety of the members being released from responsibility, "for all that has been said and written by our early predecessors," are openly advocated, as a means for preventing so many from leaving the society. Such remedies will only aggravate the disease. One distinctive characteristic will be swept away after another; the children of those who approve of or connive at these departures, will continue to leave the society, and where the meetings of such may be able to preserve their form, there will be but little else remaining.

The rendings and divisions in the society should humble us into the very dust. They show the emptiness of a mere formal profession, and the insufficiency, by themselves, of that good name, and divinely authorized organization handed down from our forefathers, to keep the society from degeneration and decay. We believe they are permitted to come upon it, in order to bring the members back, through suffering, to a more practical experience of the principles we profess. A mere avowal or advocacy of the doctrines of the society, will do but little to extricate it from its present condition, unless the members come more generally to be that spiritually minded people, wholly dependent on the Lord for wisdom and strength to do his work, which the primitive Friends were, and which He designed their successors to be; and we apprehend that peace and harmony will not be restored, until this is in good measure brought about, and the members far more generally experience that work begun and carried on in themselves.

SUMMARY OF EVENTS.

EUROPE.—News from England to 2d inst.

The Peace Conferences, at Vienna, have not been resumed, England and France declining further negotiations at present. *The War.*—The despatches from the Crimea show increased activity in warlike operations, in which the allies have obtained some important advantages. An expedition of 20,000 men, under the command of Sir George Brown and Admiral Lyon, which was despatched secretly against Kertch, a Russian fortified town, near the entrance of the sea of Azoff, had succeeded in taking the place, without difficulty. The Russians retired on the approach of the allies, having previously blown up the forts, and burned four steamers, thirty transports and immense quantities of wheat and other breadstuffs, which had been collected for the supply of the Russian army. The allies took a large number of transports, five vessels laden with wheat, and more than one hundred guns. It is also stated, that they destroyed about one hundred merchant vessels. The allies will now be enabled to cut off the supplies from the sea of Azoff, on which the Russian forces at Sebastopol chiefly depended. Their forces are now numerically superior to those of the Russians, and the attempt will probably be made to invest Sebastopol on all sides. On the 24th ult., the day that Kertch was taken, a detachment of 35,000 men advanced on the valley of the Tchernaya, the Russians retiring on their approach. The French attack on the Russian entrenchments, on the nights of the 22d and 23d ult., appears to have been a most sanguinary affair. It is said that not fewer than 8000 men were killed or wounded on both sides, mostly by the bayonet. The French obtained possession of the entrenchment, and were thus enabled to complete their fourth parallel. Reinforcements were daily arriving at Constantinople. Cholera had appeared in both the English and French armies, but did not prevail extensively. The weather was very warm.

RUSSIA.—The Russian Minister of Foreign Affairs has issued a circular respecting the blockade of the ports of Finland, which says that England has departed from the principle that the flag covers the cargo, and warns neutral vessels of the circumstance. Menschikoff had arrived at St. Petersburg, and was well received by the Emperor. Advices from St. Petersburg state that there is now a strong party in favour of peace. It is stated that the garrison of Sebastopol numbers about 50,000 men, and that they are provisioned for eight months.

FRANCE.—The Exposition is beginning to attract more attention, but is still far short of the general anticipations. The King of Portugal is in Paris. The dearness of provisions has become a matter of serious import in France. Strikes among the workmen in many parts of the country, were becoming common.

SPAIN.—Letters from Rome say that the news of the Queen having sanctioned the law confiscating the estates of the church, had caused a great sensation. The Pope is said to be profoundly afflicted, and the general opinion was, that diplomatic relations between Spain and Rome would speedily cease. The Cortes have decided that they will hold themselves *en permanence* until they shall have voted the extraordinary powers asked for by the Government.

SWEDEN.—It is stated that great preparations are making for war, and that recruits are being enlisted and exercised as fast as they can be procured.

SARDINIA.—The Convents Suppression Bill with the amendments of the Senate, has been adopted by the Chamber of Deputies, by a vote of 95 to 23.

GREAT BRITAIN.—The shipping returns for the Fourth mo. last, show a considerable decrease in the employment of tonnage. Parliament was not in session.

London Money Market.—Consols have advanced to 92⅞. Money was abundant.

Liverpool.—The cotton market still exhibits an active speculative demand with a considerable advance in price, reaching on some grades ¼d. per lb. Sales of the week, 152,500 bales, 81,500 of which was bought on speculation. Breadstuffs unchanged, and the market dull. The weather for the previous week had been unfavourable for the growing crops. Iron was in active demand, and prices slightly advanced.

INDIA.—Letters from Bombay, dated Fourth mo. 30, state that an expedition, consisting of 15,000 men, and an extensive fleet, was in readiness to proceed to the Persian Gulf, to commence offensive operations against the Shah of Persia.

CHINA.—Dates from Canton to Fourth mo. 13. The city with a circuit of from ten to twelve miles, was in the hands of the Imperialists. Beyond this, the rebels are supposed to be as numerous and powerful as ever. Between Third mo. 18th and Fourth mo. 5th, about 3000 persons had been beheaded in Canton. There was much suffering on account of the dearness of provisions, owing to the unsettled state of affairs; the cultivation of the rice fields had been much interfered with.

MEXICO.—Dates from the city of Mexico to 2d inst. Santa Anna had taken possession of Zamora, which the insurgents left on his approach. The fugitives were pursued and completely routed, not less than two thousand prisoners having been captured. Santa Anna returned to Morelia on the 21st ult., and left again on the 23d for Aris, where another party of insurgents, numbering 2500 men, were posted. Several smaller bands of revolutionists have been routed by the Government troops. In the north, the revolutionists have been more successful. On the 27th ult., the city of Monterey was captured by them, and Gen. Cardova and 67 officers taken prisoners. A large quantity of munitions of war and 26 pieces of cannon were also taken.

LIBERIA.—Advices from Monrovia to Fourth mo. 13th. Considerable progress appears to be making by the people of Liberia in agriculture, trade and the mechanic arts. A new settlement was about to be commenced at Grand Cape Mount. A company of seventy-five men, accompanied by President Roberts, had left Monrovia, to commence the colony.

JAMAICA.—Advices from Kingston to the 28th ult., state that great damage has been done by floods throughout the whole island. A number of persons had been drowned, and the town of Rio Bueno, at the mouth of the river of that name, was very much damaged. It was feared that next year's crop of cane will be seriously affected by the overflow.

UNITED STATES. — *The Mackerel Fisheries* off the coast of New England, are said to be quite successful this season, and that the "catch" will be greater than for many years past.

The Wool Crop of Ohio.—Early in this mouth, the wool growers throughout Richland, Crawford and Marion counties, were engaged in clipping their wool, and taking it to market. It was selling at the following prices:—Common, 20, 22½; blood, 23, 25½; do. 26 a 28½; 30 a 33; full blood, 34 a 35.

New Orleans.—There were 381 deaths in New Orleans, during the week ending 11st inst.; of these, 200 were from cholera. Cholera prevails at Baton Rouge, and other points on the river. Information had been received at N. Orleans, of a rise in the Red river, in consequence of heavy rains in that part of the country.

The South-west.—The Mobile Register reports the rivers as once more in navigable condition, and estimates that with the force of boats now at command, the cotton awaiting shipment can be brought down in three weeks. The rivers in Georgia are navigable. The Savannah Georgian of Sixth mo. 8, says: Corn is backward; it has only just begun to tassel. Wheat harvest is over, and the crop is a good one.

The Cherokee Indians, are said to be in great distress from a scarcity of breadstuffs and other necessaries of life. A recent account mentions the death of three of them by starvation.

The North-west.—The Indianapolis Journal of 11th inst. states, that the wheat crop, in some sections of Indiana and Illinois, has suffered severely from frost. The regions indicated are the valley of the Wabash and the northern portions of Indiana and Illinois. Some fields are said to be almost entirely ruined; others escaped uninjured.

Philadelphia.—Mortality last week, 170. The receipts on the Pennsylvania Railroad for the month e
Fifth mo. 31, were $325,711; for the same mont
year, $297,137. The inmates of the almshouse
week consisted of 1321 persons of foreign birth
white Americans, and 124 coloured; total, 1949.
time last year, 1731. The Reading and Pottsville
road is this year doing a very large and profitable
ness. The receipts of the road for the Fifth month
were $449,694. Charges of all kinds, $184,425
profits for one month, $265,269.

New York.—Mortality last week, 353.

State of the Ohio.—On the 16th, there was six fe
water in the channel at Pittsburg, and falling.

Miscellaneous.—Fugitive Slaves.—A suit to recove
value of fugitive slaves, has been instituted against
Northern Central Railway Company, Pa., by a sl
holder, near Frederick, Md. The slaves applied
passage to York, Pa., which was granted by the
ductor of the train, although it is alleged he knew t
to be fugitives. The case excites much interes
Maryland.

The Catholic Council on Temperance.—The past
letter signed by the Archbishop of Cincinnati, and
eral Catholic bishops, recently issued, contains ad
to the members of the Romish church to discontinen
and discontinue altogether the practice of retailing
toxicating drinks. Intemperance is called a horr
vice, and the traffic in intoxicating liquors is pronoun
dangerous to the morals of those engaged in it, dis
ditable in public estimation, and unnecessary a
means of obtaining a livelihood.

Ballooning.—William D. Bannistle, of Adrian
Mich., recently ascended from that place, in a balle
at 10½ in the morning, and descended in Clarion cou
Pa., at 2½ in the afternoon, making the computed
tance of three hundred and fifty miles in about
hours. The daring adventurer suffered severely f
the cold to which he was exposed at the high elevat
reached.

A Volcano in Nova Scotia.—Granville mountain,
Digby, N. S., is now in an eruptive condition, ejec
smoke and stones, one of which was recently thre
into a house in the vicinity.

Emancipation in Peru.—In the late revolution in Pe
the slaves were all set free. The great complaints in c
sequence are made by the planters, who say they h
now no means of cultivating their estates.

French Losses in the Crimea.—The Paris correspond
of the London Times states from official sources,
the number of the French troops sent out to the Crim
since the commencement of the war, is 182,000, of wh
number 120,000 were recently effective. This show
loss from all causes of 62,000 men.

RECEIPTS.

Received from David Hall, O., $4, vols. 28 and 2
Thos. Hall, O., $2, vol. 29; D. Binns, jr., O., $2, vol.
from Isaac Hoge, O., $1, to 41, vol. 28; from A. Han
ton, Ind., $2, to 32, vol. 29; from Jehu Fawcett, a
O., for H. W. Harris, C. C. More, D. Painter, J. B. Br

A Short Memoir, by William Hodgson, Jr., of *Ly
Ann Barclay*, a minister, late of Aberdeen, Scotlan
who deceased the 31st of First month last, at Cocke
mouth, Eng., a pamphlet of 24 pages, has recently be
published, and is for sale at Friends' Bookstore, 84 Ar
street, and at the office of "The Friend."

WANTED.

A middle-aged Friend, as housekeeper in a sm
family, in a country village. Apply at this office.

DIED, on the 14th inst., at her residence in the city
New York, HANNAH H., widow of the late Robert
Walker. This dear Friend witnessed "patience to ha
her perfect work." Sweetly relying on the mercy a
goodness of her heavenly Father, she was enabled
bear a protracted illness, with remarkable cheerfulne
and submission to His will, leaving to her friends t
consoling assurance, that her emancipated spirit h
been permitted an entrance into one of those bles
mansions, which our Saviour said, "I go to prepare
you, that where I am, there ye may be also."

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, SIXTH MONTH 30, 1855. NO. 42.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From "The Leisure Hour."

A Few Words about the Wind.

The reader need not be told that the earth is completely surrounded by air. Although we cannot see it, we see the things it supports—the straw which dances before our path, or the broad-pinioned bird mounting from his solitary and rocky perch in full gaze of the sun. We neither appreciate it by taste or smell; but it is the carrier of things which affect both these organs. If we are strangers to the odoriferous orange and spice groves of warmer climes, we have strolled through northern gardens when the air has been scented by the briar, the wall-flower, or the gentle mignonette. All the senses give evidence, in some way or other, of the existence of the atmosphere as evidence so indisputable that we never ask the philosopher for a proof of it, though pleased to see his experiments and hear his demonstrations.

It is equally unnecessary to ask the man of science to demonstrate that wind is air in motion. He breathes softly upon the heated brow as we sit under the shelter of the overhanging cliff by the hot-side; and its keen, cutting blasts, when it sweeps along from the cold north, pierce our thick woollen clothing in winter. The motion of air in the production of winds is recognised as the cause of the draughts which annoy us by our fire-sides, as well as of the storms which toss the strong ship, like a very little thing, from the mountainous top of the dark valleys of the black surging waves. Like the great ocean of water which it majestically controls, the atmosphere has its times of calm and tempest, sometimes sleeping so motionless upon the bosom of the earth that it cannot fill the tiny sail of a toy, and sometimes sweeping over it in billows, whose length can only be measured by countries or continents.

Heat is the prime cause of the ceaseless changes in the condition of the atmosphere; and this also, in an isolated fact, is generally known, even if the circumstances under which it acts, and the origin of its direction and velocity, be not understood. Cold air, as everybody knows, always rushes into space filled with an atmosphere warmer than itself.

We may obtain, indeed, a familiar illustration of the origin and direction of the wind, by supposing a fire to be burning in the centre of a large room, and then tracing the effect it would have upon the air. Immediately around the burning body, the air will be heated by contact and so expand, and bulk for bulk become lighter. The colder, denser, and therefore heavier air will press upon this lighter fluid and force it upwards, as a stream of water flowing into a vessel containing oil would displace it and cause it to float on the top.

A balloon rises in the air till it comes into an atmosphere no heavier than itself; the same principle determines the height to which a body of heated air ascends. Having reached this elevation, it receives a progressive motion towards the spaces which the colder air is vacating; but as it is each instant losing a portion of its heat, it must again drop to the surface and pass through a similar series of changes. There are, then, two currents in the atmosphere—one below, from colder regions towards the warmer, which we call winds; and another above, from the hotter towards the colder, of which we are insensible on account of their height above the surface of the earth. The existence of these two currents may be proved in any room where a fire is burning; for if a lighted candle be held before the crevice at the top of the door, the flame will be blown outward, proving that the heated air within the apartment is moving towards the colder atmosphere without; but near the bottom of the door it will be blown inward by the cold wind entering to occupy the space of that which has been displaced.

So frequent are the changes in the direction and intensity of the wind in Great Britain, that it has, in our daily phraseology, become the emblem of uncertainty. "As fickle as the wind" is the description of a man who is unstable in all his ways. But these changes in the state of the atmosphere are not the results of a separation from the influence of physical causes; they are the consequences of an obedience to the law of its constitution. Within a short period of time it shifts from one point of the compass to another, and may often be literally said to have traversed the heavens. These silent and secret changes of the wind our Saviour alludes to when enforcing on Nicodemus the necessity of regeneration by the Holy Spirit: "Marvel not that I say unto thee, Ye must be born again. The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh nor whether it goeth. So is every one that is born of the Spirit." The velocity and force of the wind also increase and diminish, for it travels over the earth at all speeds, from one mile to a hundred miles an hour; having in the former case a motion of which we are hardly conscious, and in the latter a force sufficient to uproot the sturdiest trees of the forest, and to level with the ground the most durable works of man. But with all this irregularity, there is in every country a prevalence of wind in one direction more than others. In western Europe the south-west wind is most frequent, but still not so constant as to give any certainty in predicting either its period or velocity.

But, although winds are so irregular and uncertain in temperate climes, they have in many tropical regions a constancy scarcely less remarkable than the succession of the seasons, or the daily rising and setting of the sun. This is the case over a large area (28 degrees) on each side of the equator. To the north of the equator, that is, in the northern hemisphere, the direction is in some point between the north and the east; and in the southern hemisphere between the south and east. That narrow belt of the earth, about the equator, where the two winds would come in contact, is distinguished by the prevalence of calms. These atmospheric currents are called the trade-winds, because by a knowledge of their precise direction in every part of the ocean, where they are more regular than on the land, the mariner is able to calculate upon a portion of his voyage with certainty, and the transit of merchandise over the ocean is consequently greatly facilitated.

The origin of these winds may be satisfactorily explained. The atmosphere upon the equatorial regions of the east where the sun is directly over head at noon-day, being intensely heated, expands and rises. Streams of cold air from both the north and south rush in to occupy the space it vacates, and the winds would be direct north and south, if the earth had no revolution on its axis. But the earth has a diurnal rotation from east to west, and the velocity must constantly increase from the poles upon which it is supposed to revolve, to that portion of the surface where, if a great circle were drawn round the globe, it would divide it into two equal parts, or, in other words, to the equator. Now, as the atmosphere attends the earth in its daily journey, a current of air in advancing from a region where the velocity is small, towards one where it is greater, must be bent out of its course—turned eastward in fact, in the direction of the earth's rotation. This is the reason why the trade-winds flow from the north and south-east.

But there is another class of winds—those which are periodical. All persons residing near the sea-coast speak of the land and sea-breezes which alternate with day and night During the summer season they are agreeably refreshing on our shores; but in the West India islands and other tropical coasts, where the heat of the day is excessive, and mind and body flag under its exhausting influence, they seem to be almost necessary for healthful, not to say comfortable, existence. During the day, the earth being more heated than the sea, the air is rarefied, and a cool breeze blows on to the land; but after sunset the earth is more rapidly cooled by radiation than the ocean, and a stream of cold air then flows seaward. The same cause acting for a longer time, and over a larger space, produces the monsoons or season winds, which derive their name from a Malay word, signifying a season. In those countries subject to their influence, and situated to the north of the equator, they blow for five months from the north-east, and for another five months from the south-west. In countries situated south of the equator, they blow alternately for the same periods from the north-west and south-east. In India, the north-east monsoon begins about the end of October, making its approach known by heavy squalls, and continues to the close of March. This is the rainy season of the Coromandel coast. The south-west monsoon commences about the middle of April, and continues till September: this is the rainy season of the Malabar coast.

When we inquire for what purpose this incessant commotion of the atmosphere was established by the Creator of all things, many of the beneficial purposes it serves are at once discovered. The

mariner bravely ventures his bark over the turbulent and uncertain seas of the northern and southern oceans, and directs his course into the trade-winds; he has hope, courage, and skill to help him when he is tempest-tossed, but he dreads the place of calm. By the motion of the atmosphere God has not only provided for the free intercommunication of the human race, but also for the purity of the great ærial ocean, which would otherwise be a prolific source of disease, suffering, and death to his creatures. The condition of the most unhealthy part of the earth would be incomparably worse if the deleterious atmosphere were not constantly driven into the great ocean, to be there partly purged of its noxious qualities by dilution, and then gradually withdrawn by chemical unions with other substances—thus converting an apparent evil into a blessing.

Epistle of George Fox.

"Dear Friends,—My love is to you all in the holy Seed, Christ Jesus, that bruises the serpent's head, and destroys the devil and his works; and who hath all power in heaven and in earth given to him. Let every one's faith stand in Him, and in his power, who is the author and finisher of your faith. And now for you, who have been partakers of his power, and are sensible of it in this day of his power, that is over darkness and its power; by whose power the hearts of the king and rulers have been opened, and your outward prison doors set open for your liberty, my desires are that all may be preserved in humility and thankfulness, in the sense of the mercies of the Lord; and live in the peaceable truth, that is over all; that ye may answer God's grace, and his light and Spirit in all, in a righteous, godly life and conversation. Let none be lifted up by their outward liberty, neither let any be cast down by suffering for Christ's sake; but all live in the Seed, (which is as wheat,) which is not shaken, nor blown away by the winds and storms, as the chaff is. Which Seed of life, none below can make higher or lower; for the children of the Seed are the children of the everlasting, unchangeable kingdom of Christ and God. In Christ Jesus, whom God hath given you for a sanctuary, God Almighty keep you; in whom ye have life everlasting, and wisdom from above, which is pure, peaceable, gentle, and easy to be entreated, full of mercy and good fruits; that all now may be exercised in, and may practise this wisdom in holy lives and conversations; so that this wisdom may be justified of all her children, and they exercised and preserved in it in this day of the power of Christ, in which all his people are made a willing people, to serve and worship God in righteousness and holiness, in Spirit and in truth.

"Let none abuse the power of the Lord, nor grieve his Spirit, by which you are sealed, and kept to the day of salvation and redemption; but always exercise yourselves to have a good conscience, void of offence towards God and towards all men, being exercised in holiness, godliness, and righteousness; and in the truth, and in the love of it. All study to be approved unto God in innocency, virtue, simplicity and faithfulness; labouring and studying to be quiet in the will of God. And whatsoever ye do in word or deed, do all in the name of the Lord Jesus; giving thanks to God the Father by him; that he who is over all, may have the praise for all his mercies and blessings; with which he hath refreshed his people, and by his eternal arm and power hath kept and preserved them to this day; glory to his name over all forever. Amen. Christ hath called you by his grace into one body, to him the Holy Head; therefore live in charity, and in the love of God, which is the bond of perfectness in his body. This love edifies the body of Christ; which body and all his members are knit together, and increased with the increase of God, from whom they receive nourishment. For by one Spirit we are all baptized into one body, and have been made all to drink into one Spirit; in which Spirit the body and all its members have fellowship with Christ, the Head, and one with another The unity of this Holy Spirit is the bond of peace of all the living members of Christ Jesus, of which he is the spiritual Head, Rock, and Foundation. In the midst of his church of living members, Christ exercises his spiritual prophetical office, to open to them the mysteries of his kingdom. He is a spiritual Bishop to oversee them, that they do not go astray from the living God that made them; a Shepherd that feeds them with bread and water of life from heaven; and none is able to pluck his sheep out of his hands. He is a Priest that died for them, sanctifies them, and presents them to God; who ruleth in their hearts by the Divine faith, which he is the author and finisher of. His living members praise God through Jesus Christ, in whom they have life and salvation, who reconciles them to God, that they can say they have peace with God through Jesus Christ, and so praise God through him that was dead, and is alive again, who reigns over all; and liveth forevermore, blessed forever; Hallelujah. Amen.

"Greet one another with a holy kiss of charity. Love or charity beareth all things, believeth all things, hopeth all things, endureth all things. It envieth not, vaunteth not itself, is not puffed up, nor doth it behave itself unseemly. It rejoices not in iniquity, but rejoices in the truth. Charity is not easily provoked, and thinks no evil, but suffereth long, and is kind. Charity never faileth. I say, greet one another with this holy kiss of charity, and peace be with you all, that are in Christ Jesus, your life and salvation. G. F."

The 30th of the Third month, 1686.

The Life of the Earth.

A rush of waters take place from the poles toward the equator. The two lobes close, cut off the equatorial flow between them, and crowd the Indian Ocean with polar waters. They press out the overheated waters; hence the great equatorial flow encountered by Captain Grant.

Thus this opening between the cold water lobes appears to hold to the chambers of the Indian Ocean, with their heated waters, the relations which the valves and the ventricles of the human heart hold to the circulation of the blood. The closing of these lobes at certain times prevents regurgitations of the warm waters, and compels them to pass through their appointed channels.

From this point of view, how many new beauties do not now begin to present themselves in the machinery of the ocean! its great heart not only beating time to the seasons, but palpitating also to the winds and the rains, to the clouds and the sunshine, to day and night. Few persons have ever taken the trouble to compute how much the fall of a single inch of rain over an extensive region in the sea, or how much the change even of two or three degrees of temperature over a few thousand square miles of its surface, tends to disturb its equilibrium, and consequently to cause an aqueous palpitation that is felt from the equator to the poles. Let us illustrate by an example: The surface of the Atlantic Ocean covers an area of about twenty-five millions of square miles. Now, let us take one-fifth of this area, and suppose a fall of rain one inch deep to take place over it. This rain would weigh three hundred and sixty thousand millions of tons; and the salt which [illegible] water, it held in solution in the sea, and when that water was taken up as vapour, was [illegible] behind to disturb equilibrium, weighed six [illegible] millions more of tons, or nearly twice as much [illegible] all the ships in the world could carry at a c[illegible] each. It might fall in an hour, or it might [illegible] in a day; but occupy what time it might in [illegible] ing, this rain is calculated to exert so much f[illegible] —which is inconceivably great—in disturbing [illegible] equilibrium of the ocean. If all the water [illegible] charged by the Mississippi river during the [illegible] were taken up in one mighty measure, and [illegible] into the ocean at one effort, it would not mak[illegible] greater disturbance in the equilibrium of the [illegible] than would the fall of rain supposed. Now [illegible] is for but one-fifth of the Atlantic, and the [illegible] of the Atlantic is about one-fifth of the sea-[illegible] of the world; and the estimated fall of rain [illegible] but one inch, whereas the average for the yea[illegible] sixty inches, but we will assume it for the se[illegible] be no more than thirty inches. In the aggreg[illegible] and on an average, then, such a disturbance [illegible] the equilibrium of the whole ocean as is here [illegible] posed occurs seven hundred and fifty times a y[illegible] or at the rate of once in twelve hours. Moreo[illegible] when it is recollected that these rains take pl[illegible] now here, now there; that the vapour of wh[illegible] they were formed was taken up at still ot[illegible] places, we shall be enabled to appreciate the be[illegible] the force and the effect of these pulsations in [illegible] sea.

Between the hottest hour of the day and [illegible] coldest hour of the night there is frequentl[illegible] change of four degrees in the temperature of [illegible] sea. Let us, therefore, to appreciate the thr[illegible] bings of the sea-heart, which take place in con[illegible] quence of the diurnal changes in its temperatu[illegible] call in the sunshine, the cloud without rain, w[illegible] day and night, and their heating and radiati[illegible] processes. And to make the case as strong, as [illegible] be true to Nature we may, let us again sel[illegible] one-fifth of the Atlantic Ocean for the scene [illegible] operation. The day over it is clear, and the s[illegible] pours down his rays with their greatest intensi[illegible] and raises the temperature two degrees. At nig[illegible] the clouds interpose and prevent radiation fr[illegible] this fifth, whereas the remaining four-fifths, wh[illegible] are supposed to have been screened by clouds, [illegible] as to cut off the heat from the sun during the d[illegible] are now looking up to the stars in a cloudless sk[illegible] and serve to lower the temperature of the surfa[illegible] waters, by radiation, two degrees. Here, then, [illegible] a difference of four degrees, which we will su[illegible] pose extends only ten feet below the surface. T[illegible] total and absolute change made in such a mass [illegible] sea water by altering its temperature four degr[illegible] is equivalent to a change in its volumes of thr[illegible] hundred and ninety thousand millions of cub[illegible] feet.

Do not the clouds, night and day, now prese[illegible] themselves to us in a new light? They are cog[illegible] and rachets, and wheels in that grand and exquisi[illegible] machinery which governs the sea, and whic[illegible] amid all the jarrings of the elements, preserves [illegible] harmony the exquisite adaptations of the ocean.

Lieut. Maury.

Of Humility.—He that is proud of his birt[illegible] is proud of the blessings of others, not of himsel[illegible] for if his parents were more eminent in any c[illegible] cumstances than their neighbours, he is to than[illegible] God, and to rejoice in them: but still he may [illegible] a fool, or unfortunate, or deformed; and wh[illegible] himself was born. it was indifferent to him wh[illegible] ther his father were a king or a peasant, for [illegible] knew not anything, nor chose anything; and mo[illegible] commonly it is true, that he who boasts of b[illegible]

ancestors, who were the founders and raisers of a noble family, doth confess that he hath in himself less virtue and a less honour, and therefore that his degenerated.—*Jer. Taylor.*

The Influence of the Parental Character.

By Richard Cecil.

The influence of the paternal character on children is not to be calculated. Every thing around has an influence on us. Indeed, the influence of things is so great, that, by familiarity with them, they insensibly urge on us principles and feelings which we before abhorred. I knew a man who took in a democratical paper, only to laugh at it. At, at length, he had read the same things again and again, so often, that he began to think there must be some truth in them; and that men and measures were really such as they were so often said to be. A drop of water seems to have no influence on the stone; but it will, in the end, wear its way through. If there be, therefore, such almighty influence in everything around us, the parental influence must be great indeed.

Consistency is the great character, in good parents, which impresses children. They may witness much temper: but if they see their father keep the even tenor of his way," his imperfections will be understood and allowed for as reasonable. The child will see and reflect on his parent's intention: and this will have great influence on his mind. This influence may, indeed, be afterwards counteracted: but that only proves that contrary currents may arise, and carry the child another way. Old Adam may be too strong for young Malancthon.

The implantation of principles is of unspeakable importance, especially when culled from time to time out of the Bible. The child feels his parent's authority supported by the Bible, and the authority of the Bible supported by his parent's weight and influence. Here are data—fixed data. A man can very seldom get rid of these principles. They stand in his way. He wishes to forget them, perhaps; but it is impossible.

Where parental influence does not convert, it hampers. It hangs on the wheels of evil. I had a pious mother who dropped things in my way. I could never rid myself of them. I was a professed infidel: but then I liked to be an infidel in company, rather than when alone. I was wretched when by myself.

Those principles, and maxims, and data spoiled my jollity. With my companions I could sometimes affle them: like embers, we kept one another warm. Besides, I was here a sort of hero. I had beguiled several of my associates into my own opinions, and I had to maintain a character before them. But I could not divest myself of my better principles. I went with one of my companions to hear the 'Minor.' He could laugh heartily at Mother Cole—I could not. He saw in her the picture of all who talked about religion—I knew better. The ridicule on regeneration was high sport to him—to me, it was none: it could not move my features. He knew no difference between regeneration and transubstantiation—I did. I knew there was such a thing. I was afraid and ashamed to laugh at it. Parental influence thus cleaves to a man: it harasses him—it throws itself continually in his way.

I find in myself another evidence of the greatness of parental influence. I detect myself to this day in laying down maxims in my family, which I took up at three or four years of age, before I could possibly know the reason of the thing.

It is of incalculable importance to obtain a hold on the conscience. Children have a conscience; and it is not seared, though it is evil. Bringing the eternal world into their view—planning and acting with that world before us—this gains, at length, such a hold on them, that, with all the infidel poison which they may afterwards imbibe, there are few children, who at night—in their chamber—in the dark—in a storm of thunder—will not feel. They cannot cheat like other men. They recollect that ETERNITY which stands in their way. It goads them: it thunders in their ears. After all they are obliged to compound the matter with conscience, if they cannot be prevailed on to return to God without delay:—I MUST be religious one time or other. That is clear, I cannot get rid of this thing. Well! I will begin at such a time. I will finish such a scheme, and then!

The opinions—the spirit—the conversation—the manners of the parent, influence the child. Whatever sort of man he is, such, in a great degree will be the child; unless constitution or accident give him another turn. If the parent is a fantastic man—if he is a genealogist, knows nothing but who married such an one, and who married such an one—if he is a sensualist, a low wretch—his children will usually catch these tastes. If he is a literary man—his very girls will talk learnedly. If he is a griping, hard, miserly man—such will be his children. This I speak of as GENERALLY the case. It may happen, that the parent's disposition may have no ground to work on in that of the child. It may happen that the child may be driven into disgust; the miser, for instance, often implants disgust, and his son becomes a spendthrift.

After all, in some cases, perhaps, every thing seems to have been done and exhibited by the pious parent in vain. Yet he *casts his bread upon the waters.* And, perhaps, after he has been in his grave twenty years, his son remembers what his father told him.

Besides, parental influence must be great, because God has said that it shall be so. The parent is not to stand reasoning and calculating, God has said that his character shall have influence.

And this appointment of Providence becomes often the punishment of a wicked man. Such a man is a complete SELFIST. I am weary of hearing such men talk about their "family,"—and their "family"—they "must provide for their family." Their family has no place in their REAL REGARD. They push for themselves. But God says—"No! You think your children shall be so and so. But they shall be rods for your own backs. They shall be your curse. They shall rise up against you." The most common of all human complaints is—parents groaning under the vices of their children! This is all the effect of parental influence.

In the exercise of this influence there are two leading dangers to be avoided.

Excess of SEVERITY is one danger. My Mother, on the contrary, would talk to me, and weep as she talked. I flung out of the house with an oath—but wept too when I got into the street. Sympathy is the powerful engine of a mother. I was desperate: I would go on board a privateer. But there are soft moments to such desperadoes. God does not, at once, abandon them to themselves. There are times when the man says—"I should be glad to return: but I should not like to meet that face!" if he has been treated with severity.

Yet excess of LAXITY is another danger. The case of Eli affords a serious warning on this subject. Instead of his mild expostulation on the flagrant wickedness of his sons—*nay, my sons, it is no good report that I hear*—he ought to have exercised his authority as a parent and magistrate in punishing and restraining their crimes.

Red Fogs and Sea Dust.—Lieutenant Maury, in his Physical Geography of the Sea, explains an ingenious theory which he has formed respecting the character and origin of the red fogs which seamen sometimes encounter in the Cape Verde Islands, and of the showers of red dust which in the vicinity of Northern Africa, often descend in such quantities as to cover the sails and rigging, though the vessel may be hundreds of miles from the land. In the Mediterranean this dust, which is of a brick red or cinnamon colour, is called Sorocco dust, and in other places African dust, from the belief that the winds bring them from some parched section of the continent of Africa. But this assumption is far from correct, for it has been discovered by the microscope of Professor Ehrenberg, one of the most distinguished scientific men of modern times, that the dust consists of infusoria and organisms which could only have come from the south-east trade wind region of South America.

Lieutenant Maury thinks that this establishes the fact that there is a perpetual upper current of air from South America to North Africa, and he says there can be no doubt that this volume of air is nearly equal to the volume which flows to the southward, with the north-east trade winds. The "rain dust" has been observed to fall most frequently in the spring and autumn seasons of the year, from thirty to sixty days after the equinoxes. The reason for these periodical visitations is supposed to be the fact that these are the dry seasons of certain portions of the South American continent. At the time of the vernal equinox, for example, the valley of the Lower Orinoco is parched with drought, the pools are dry, and marshes and plains are arid wastes; vegetation ceases, and light scorching breezes bear away dense clouds of dust from the dried up lakes. Whirlwinds and tornadoes sweep over the earth with terrific force, so impregnating the air with dust that it assumes a straw-coloured hue. At the period of the autumnal equinox another portion of the Amazonian basin is parched with drought, and affected in a like manner by the winds. Lieut. Maury thinks that these are the countries from which the rain dust comes. He thinks that it is caught up from the valleys of the Amazon, and Orinoco by these whirlwinds, and borne away, far away, by the rapid currents of upper air, to the region of Northern Africa.—*Baltimore American.*

Amount of Gold Consumed for Manufacturing Purposes.—The Banker's Magazine has a valuable article on the "Uses of Gold and Silver in the Arts." It is computed that the amount of the precious metals consumed in various ways is from forty to fifty millions of dollars' value per annum. the quantity used in the manufacture of watch cases, pencil cases, plate, household materials, and in the arts, is enormous. It is stated that for gilding metals by the electrotype and the water-gilding processes, and in the Staffordshire patterns, no less than 18,000 to 20,000 ounces are annually required. In Paris 18,000,000 francs are used for manufacturing purposes yearly; and in the United States, $10,000,000 is the estimated amount converted into ornamental jewelry.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 325.)

JOSEPH GLAISTER.

Joseph Glaister was born in the year 1673, it is believed, in the county of Cumberland, in Great Britain, which was for some time his residence.

Submitting to the visitations of the Holy Spirit in early life, he grew in religious experience, and about the time he reached manhood, came forth in the ministry. In the exercise of his gift, he travelled extensively. In 1695 he visited Ireland in company with another person of the same name, both from Cumberland. In the year 1703, then being thirty years of age, he spread before his Friends a concern to visit the provinces in America, on religious service; and having the unity of the meetings, in the same year he came hither.

He attended the General Meeting of Ministers in Philadelphia, in the First month, 1704, where his company was acceptable, and his certificate read to satisfaction. He was in and about the city, during the second month, and Thomas Chalkley being liberated to visit the meetings of Friends on Long Island, Rhode Island, and New England, they joined company early in the Third month, and went towards New York. They held meetings at Burlington and Crosswicks, and passing to Long Island, attended many there; from thence they proceeded to Rhode Island Yearly Meeting, which was held in the Fourth month. It was a time of great trial to Friends in New England. An Indian war was raging, and many of the settlers, men, women and children, were barbarously murdered, and scalped by the cruel and exasperated children of the forest. Many of the inhabitants were bitter against Friends, because they could not take up arms to slay the Indians.

Thomas Chalkley says, "We travelled the country, and had large meetings, and the good presence of God was with us abundantly, and we had great inward joy in the Holy Ghost in our outward jeopardy and travels. The people generally rode, and went to their meetings armed; but Friends went to their meetings without either sword or gun, having their trust and confidence in God."

Joseph Glaister must have thought of escaping a visit to Friends in the south, for after spending the latter part of the Ninth month, attending meetings round Philadelphia, he, early in the Tenth month, applied for a return certificate, expecting as he said in a few days to sail for Europe. So much for his intention,—but his Master turned him another way. The next place we meet with him is, in Virginia, where, on the 21st of the Fourth month, 1705, he joined company with Thomas Story at a large, good meeting held at Pagan's Creek.

Andrew Monro, a priest, had had a controversy with Joseph Glaister a short time before, and being disposed to have another meeting, Joseph agreed to it, although Monro would not tell him the subject he intended to treat on. Thomas Story, after telling what a great auditory were assembled, says, "My friend, Joseph Glaister, and I, were very low, inward, and humble in our minds, the multitude being generally against us, and the honour of Truth concerned in the management and issue of this engagement on our part; yet the Lord was on our side." Although Joseph Glaister was under some seeming disadvantage in not knowing the points before hand that Monro intended to urge, yet he readily entered into them when stated. The first was on water baptism. The second was on the possibility of being made free from sin in this life. The third was, whether Christ ever gave power to his apostles and ministers to force a maintenance. In treating the first and second questions, Joseph was so enabled to uphold the Truth, that Monro was foiled, and not willing to enter on the third. He said, "Mr. Glaister, you are a much younger man than I am, and stronger, and can hold an argument longer. I confess you have a close way of reasoning, though I think I have the truth on my side, but can hold out no longer." Thomas Story says, "Being hot weather, and he, an elderly man, grew so weary, weak and faint, that he could scarcely be heard; but called for a pipe of tobacco and a tankard of ale, for his refreshment; and so it ended on his part in drink and smoke."

In a dispute which Thomas Story had with another priest a few days after, the priest commenced with asserting, that the Quakers never used the Lord's prayer in their meetings, although Christ had commanded his disciples that they should thus pray; and finished by saying, the Quakers are no Christians. Thomas, in reply, stated that although the words of that prayer were not often repeated entire in our meetings, yet they were frequently referred to, and explained, and that they were sometimes repeated verbatim. The priest said, "I never heard you, and who else here ever did." Several of the audience said, "I have," "I have," and a lawyer said, "I have heard Joseph Glaister now present, in particular, use it, and others also." The priest then dropped the charge.

It appears from hints in Thomas Story's Journal, that Joseph Glaister had had more than one encounter, in Virginia, with contentious priests. For this service he appears to have been admirably fitted, having a clear head, a watchful dependence on his inward guide, an accurate acquaintance with the Holy Scriptures, and a quick memory as to the place where the passages used were to be found. He appears to have returned shortly after this to England. Samuel Jennings, writing in the Sixth month, 1706, to William Ellis, requests him to convey his love to various Friends, who had visited America, ending with the one who had left last, Joseph Glaister. Adding, "They will be all glad to hear of the Truth's prosperity, and Friends' welfare."

I have not been able to ascertain at what time Joseph Glaister returned to America to settle, bringing his family with him. He took up his abode in North Carolina, where he was very serviceable, having a good judgment in discipline, and a deep concern to maintain it.

In the year 1717, he was engaged in extensive religious travels on this continent. In Maryland he attended the Yearly Meeting, held in Fourth month, from the 8th to the 12th, where his gospel labours were serviceable and acceptable. We can find some traces of his visit about Philadelphia, in the Fifth month, and from the General Meeting of Ministers, in the Seventh month, he received a returning certificate of unity, having finished his labours within the limits of this Yearly Meeting.

In the year 1718, he was taken ill, but the threatened approach of death did not terrify him. He had endeavoured to perform his duty, with fervency of spirit, and he felt the approving presence of his Master with him. To some Friends who called to visit him, he said, "I am very ill! but am out of all doubt of my salvation, being well assured of it." Other Friends coming in, he seemed to rejoice, saying, "Now I think I have most of the chief Friends about me that I desired. Dear Friends! give me up freely, that I may not be longer in misery. I can say with one of old, Lord, I have waited for thy salvation! Now I have an assurance of it, and although the pains are great, yet the comfort and pleasure I see before me, do outbalance them all." He said afterwards to this effect, "I hope Friends may keep their places in being faithful. Not shrink from one another, when troubles or differences arise in the church, or amongst neighbours, by any evil spirit that may get into any, for want of a true and faithful watch. If any such thing happen, I hope that such as now are, or then be, will stand firm together, and give judgment in or by a living, fresh and Divine s[pirit]. Keep constant in mind. Thereby the transgr[essor] or transgressors may be judged down and [be] able to resist. But if you see in them anyt[hing] tender, then, dear Friends! turn to them [in] bowels of love. Perhaps in so doing, you [may] gain such as in time past may have gone astr[ay]. He continued speaking of the great love and t[ender] he felt with his Friends there, and the many [ex]times he had had among them, when his s[pirit] was borne up by the arm of Divine power, [and] had been from time to time his great support.

As his close drew nigh, he was much eng[aged] in prayer; but his voice was so feeble, that n[ot a] words were lost. Thus, with a sense of the [great] love of the Lord his God to his soul, and fe[lt] the presence of the blessed Saviour with him [and] in humble confidence trod the valley of the s[hado]dow of death, fearing no evil. His close [took] place on the 31st of the Eleventh month, 1[718]. He was about 45 years old, and had been a m[ini]ster of the gospel twenty-four years.

(To be continued.)

THE FRIEND.

SIXTH MONTH 30, 1855.

We transfer from the "British Friend" the following account of London Yearly Meeting. That the meeting in Ohio, of which J. Binn[s] clerk, was set up contrary to the discipline [and] usages of our religious Society, appears to h[ave] been fully admitted; but the majority of Lon[don] Yearly Meeting united with it on the ground, [that] those composing it, are one with them in se[n]ment. It is evident that the decision was c[on]trary to the judgment of a large portion of [the] meeting. We are glad to find, that the unsou[nd]ness in doctrine, which is the cause of our d[if]sions and difficulties, was opened by some of [the] members.

The decision of Philadelphia Yearly Meeting *continue* its correspondence with the long est[a]blished Yearly Meeting of Ohio, was erroneo[usly] said by some who objected to it, to violate a f[un]damental principle of our religious Society, [be]cause a number of the members, though comp[a]tively few, were opposed to it; but it may be tr[uly] said, that fundamental principles of the soci[ety] have been violated in this case, where the decis[ion] was not only contrary to the judgment of a la[rge] portion of the members, but was to comme[nce] a correspondence with a meeting, set up, confi[rmed] edly, in violation of the discipline.

Time will develope the consequences result[ing] from this course.

LONDON YEARLY MEETING.

Friends assembled as usual at ten on Fourth-[day] morning, the 23d of Fifth Month. The num[ber] present appeared to be smaller at the opening th[an] we have observed on some former occasions.

There was a comfortable feeling of solemn[ity] permitted, and one Friend was engaged in supp[li]cation; three or four others followed in br[ief] ministerial communication, and a second Frie[nd] in prayer. These offerings, particularly that a Friend from Ireland, who made a touching al[lu]sion to the absence of dear brethren who have go[ne] to their everlasting rest, and no longer occupi[ed] seats amongst us, and tenderly encouraged t[he] younger Friends present to be willing to yield their hearts to the Lord's service, tended furth[er]

he solid comfort of the meeting. The clerk, ptty soon afterwards read the opening minute. ls representatives, on being called, mostly answer- sto their names. A few were absent, for whom rsonable excuses were given; some joined the eting before the sitting closed, and most others e expected to be in early attendance.

The meeting being informed that two Friends m the south of France were on the premises, o desired permission to attend the sittings of s meeting, a ready acquiescence with this re- st was given, and the Friends were conducted by ROBERT ALSOP. The meeting was informed t these individuals were members of the body fessing with Friends in France, and with ich this meeting regularly corresponds. Their mes were Jules Paradon and Christophe Majo- r.

The further ordinary routine business being nsacted, the reading of epistles from other arly Meetings was proceeded with, beginning th Ireland, and concluding with that from Indi- a. These documents all contained references causes of mourning and trial on account of re- rted deficiency in various branches of our Chris- n testimony, yet acknowledged they had been toured with the owning of the Great Head of the urch in coming together at their different meet- gs. Pertinent caution, counsel, and exhortation, ld been given in reference to these deficiencies; e remedy for them all—individual faithfulness the Divine will—was clearly and forcibly incul- ed, and a comforting hope was attendant, that re were among the youth (who had been present some of the Yearly Meetings in unusually large mbers) those who, if they abode under the form- g hand of Divine power, would be raised up to the places of fathers and mothers in the church o had been removed.

After the reading of the New England epistle, Friend said—I have a very short testimony to ar on behalf of the smaller body in New England; ree or four verses of Scripture, very little more, has appeared to me, that they might adopt the nguage which the prophet Isaiah addressed to e Almighty on behalf of the church in his day, ying, "Doubtless Thou art our Father, though braham be ignorant of us, and Israel acknowledge not: Thou O Lord, art our Father, our redeem- ; thy name is from everlasting." And that hinent servant, Moses, together with his brother aron, "fell upon their faces, and said, O God, the od of the spirits of all flesh, shall one man sin, nd wilt Thou be wroth with all the congregation?" orah only, and his company, however, were con- med. "But on the morrow all the congregation the children of Israel murmured against Moses nd against Aaron, saying, Ye have killed the eople of the Lord." And again the anger of the ord was kindled against them. "But Aaron ok a censer, and put fire therein from off the ltar, and put incense thereon, and ran into the idst of the congregation, and stood between the ead and the living, and made an atonement for em, and the plague was stayed." So now, let ayer ascend as incense unto Him who sitteth up- n the throne, and unto the Lamb, the Great Head f the church, that He would be pleased to make up is breach, and all other breaches; to stay this lague, and to restore health unto His people, that ey may again dwell together in unity. For this nall body of Friends to whom I have referred, rofess the same principles that we do, and they re as sound in the faith which was once delivered nto the saints, as we are. Let not, therefore, ules of discipline be preferred to Christian charity.

The epistles contained, besides, much excellent ntiment on a variety of topics, and sympathized with Friends in this country on the subject of the war in which our government is at present engaged; several of them denounced slavery in terms of just reprobation, and detailed the steps they had adopted in regard to the extension of the area of slave territory, &c.

Those from Indiana, Baltimore, and North Carolina, adverted to the separation that had taken place in Ohio, and the action they had deemed it right to pursue thereon; for which they directed attention to printed copies of minutes which they had forwarded. The epistles from Ohio were the last which were brought under notice. One had come from each of the two bodies in that state claiming to be Ohio Yearly Meeting, and the meeting, after some deliberation, concluded that the best way of dealing with this matter was to refer both documents to the Committee on Epistles, together with the minutes above alluded to. It was also agreed to refer to the same committee two communications which had been laid on the table, having come to hand otherways than through the ordinary channel of the correspondents. Three Friends were named to take these out of meeting, and report whether they were suitable to be read. On returning, it appeared that one, addressed to the clerk, was a private communication, regarding a member who had belonged to one of our Quarterly Meetings, which was placed in the hands of a Friend of said meeting. The other contained an epistle to the Yearly Meeting of men and women Friends now assembled, from a body purporting to be Baltimore Yearly Meeting. These were also referred to the Committee on Epistles, which, it was thought, as the subject was one likely to occupy some time, should sit down at four in the afternoon, and the Yearly Meeting adjourn till ten to-morrow morning. It was very satisfactory to find how general was the desire manifested to afford Friends the opportunity of obtaining the fullest information regarding this painfully interesting question; and it was agreed that the Committee should be open to *any* Friend who desired to attend, and in order to afford ample convenience, that the committee should sit down in the Yearly meeting-house.

The representatives met as usual immediately on the rising of the meeting, to consider of nominating a clerk and assistants. Joseph Pease acted as clerk to the meeting, when, after some deliberation, it was concluded again to nominate the Friends at present in office, viz., Joseph Thorp for clerk, and Robert Forster and Edward Backhouse, Jun., assistants.

Fourth-day Afternoon. — The Committee on Epistles—or in other words, the large committee —met as appointed, the attendance being about as large as the morning sitting of the Yearly Meeting. John Hodgkin was requested to act as clerk, having for assistants, Joseph Thorp and Joseph Pease.

Some weighty and valuable remarks were made by sundry Friends, on the blessedness of unity, harmony, and love prevailing throughout our borders, and on the desolating effects of separation and division. The business began by the reading of the minute of the Yearly Meeting appointing this committee. The epistle from the smaller body in Ohio, of which Jonathan Binns is clerk, with the minutes of the same body detailing the causes that had led to the separation were first read; the like documents from the larger body followed. This was the order in which the names of the correspondents who had forwarded the two epistles, &c., stood in the correspondent book, Isaac Parker being the Friend on that appointment who had sent the epistle from the body of which Jonathan Binns is clerk, in Ohio, and Benjamin Hoyle that of the meeting for which he acted as clerk. Extracts from the printed minutes of both bodies were also read, with communications from their Meetings for Sufferings, together with a subsequent statement of the case of the larger body, which we gave in our last number, and finishing with a pamphlet of sixteen pages, put forth on behalf of the smaller body. These, with observations, chiefly explanatory, which fell from different Friends, engaged the attention of the meeting nearly four hours. Some were prepared at once to receive the epistle signed by Jonathan Binns; while another proposition was, to receive neither of the epistles, but to send an address to both divisions in Ohio, as comprising *one* Yearly Meeting, exhorting to harmony among themselves, &c. Divers suggestions were offered as to further proceeding with the case, but it was ultimately concluded to adjourn to such time as the Yearly Meeting might name; and Friends having now had all the information on the subject which could be obtained, they were recommended to dwell in deep retirement of mind, that so they might be in a state prepared, through the help of Divine wisdom, to come to a sound and enlightened conclusion, to the honour of the Great Head of the church, and the promotion of His blessed cause. Adjourned after eight o'clock.

Fifth-day Morning, Fifth Month 24th.—Yearly Meeting met at ten. Before the opening minute was read, a Friend expressed a few words in the line of the ministry. Report was made that the Committee on Epistles had, last evening, given its attention to the subject referred to them, but that it would require further time for that object, and the meeting, therefore, came to the conclusion to adjourn to four this afternoon. Whereupon the clerks left the table, and those of the Committee immediately occupied their places.

Expression of sentiment then followed, on the evidence which had been laid before us yesterday afternoon, regarding the two Yearly Meetings in Ohio, and an entire sitting of four and a half hours was occupied with the business. The discussion was conducted with remarkable patience, calmness, condescension, and forbearance. One Friend went at great length into a historical survey of the whole ground of the different separations in America, from the time of Joseph John Gurney's going on a religious visit to that country in 1837. He adverted to his early education not having been among Friends, and that hence his mind had received a bias which, perhaps, was not altogether easily got over; it could not, then, be considered wonderful, though in some respects he made use of terms differing a little from some others who had not been so circumstanced. He alluded to some of his writings as having been objected to by many Friends in this country, on the ground of a want of harmony in them with the doctrine originally promulgated by our early Friends, though, in his own opinion, there was no substantial ground for this objection. He, on the contrary, considered the Society under a debt of gratitude to Joseph John Gurney, for setting forth, in a clearer and more satisfactory light, many subjects relating to the great doctrines of the gospel, than any writer who had gone before him. He believed him to have been a consistent and thoroughly conscientious Friend, exemplifying in his own practice that which he preached to others; faithfully upholding all our testimonies, and in none was he more conspicuous than in relation to plainness of speech, behaviour, and apparel. He acknowledged it to be a fact, that there was not a full unity with him as a minister, nor with his liberation for religious service in America, chiefly on the ground of its being deemed not the right

time. He was, however, as Friends knew, liberated for religious labour in that land. Dissatisfaction with his writings at least, if not also with his ministry, then, and for some time previously, existed in America; and before he departed on his mission, letters, he stated, were written by Friends in this country to correspondents in the United States, calculated to foster the prejudice against our friend, whereby his course was rendered both embarrassing and painful. John Wilbur he described as the most prominent of those who were opposed to Joseph John Gurney, and whom, he alleged, had injured him by a course of detraction, &c. He related next the various disciplinary proceedings exercised towards John Wilbur, and these being ineffectual to restrain him from the course he had pursued, his disownment was the ultimate result. The separation in New England soon after took place, and had been the original source of other divisions that had occurred, to which he briefly adverted; and he wound up his remarks by avowing his belief, that the section of Ohio Yearly Meeting represented by Jonathan Binns as clerk, was that which this Yearly Meeting should acknowledge, by receiving the epistle which had been forwarded. While he said this, he saw no objection to the proposal made last evening, to address an epistle to the other section, represented by Benjamin Hoyle.

Another Friend followed, who also made considerable reference to Joseph John Gurney's visit, and read a returning certificate from Ohio Yearly Meeting, on his behalf, which very fully expressed unity with the said Friend. Both of these individuals, however, seemed to us to diverge considerably from the real question before the meeting; and although there wanted neither ability nor inclination, we believe, to have pointed out this, yet tenderness for occupying the time of the meeting, occasioned its being withheld.

Several Friends, who had been in America, conveyed to the meeting their views in relation to the course which it should adopt, confirming, from their own observation, the statements contained in the epistle and other documents transmitted by the meeting of which Jonathan Binns was clerk; approving of the course proposed in relation to receiving that epistle, &c. On the other hand, there were many who strongly advocated the opposite course. At one time it seemed this would be the prevailing conclusion; at another, the first view was favoured, and when the hour of adjournment came, this was rather the uppermost feeling in the meeting; though, at the same time, there were some admirable illustrations given of the superior advantages likely to accrue from adopting the proposition for delay, &c.

Adjourned at half-past two, to such time as the Yearly Meeting shall direct.

Yearly Meeting, four Afternoon.—The meeting being apprised that the Committee on Epistles yet desired further time for the business committed to them, it was agreed to adjourn to the close of the sitting of the committee.

The business of the Committee on Epistles was therefore immediately resumed. Expression continued for some time to be given in favour of receiving the epistle signed by Jonathan Binns; after which the clerk went into an interesting historical account of the establishment of Ohio Yearly Meeting forty years ago, and intimated that this was the first instance of any cause of interruption to our correspondence with it. It had been instructive to him to look back to that period, even though the days of his boyhood, and to remember the proposition of dear Stephen Grellet, that London Yearly Meeting should greet that new meeting (a branch from the Yearly Meeting of Virginia) with an epistle, from which he read the concluding passage: "Finally, brethren, farewell. Be perfect, be of good comfort, be of one mind; live in peace, and the God of love and peace shall be with you." He further stated, that from the same meeting there had sprung up, a few years thereafter, a healthy offshoot, Indiana Yearly Meeting, the largest by far of any Yearly Meeting of Friends in the world. Looking next at matters in a disciplinary point of view, and regarding our discipline as springing from the same source —in its measure—as that from which the Christian doctrines we held emanated, it might, he thought, be stated as a general rule, that the right order of the discipline had been with those who were sound in doctrine. One exception to this, and only one, he believed had occurred, viz., in 1828, when a small number came out from Baltimore Yearly Meeting, on the ground of unsound doctrine prevailing in that body.

Referring to our correspondence with America, he turned to the epistle with which this Yearly Meeting saluted that small secession from the followers of Elias Hicks, and quoted from it a passage, setting forth in clear and explicit terms the great and blessed doctrine of the propitiatory sacrifice of Christ for the sins of the whole world, as the same had ever been held by Friends. Coming next to the case before the meeting, he showed that the section of Ohio Meeting of which Benjamin Hoyle was clerk, was *constitutionally* the legitimate Yearly Meeting of Ohio; and that the other body, however they might have, as they had asserted, suffered under the condition of things in that meeting, had yet established themselves *out of the regular order of the discipline.* Another point worthy to be noted, and not hitherto alluded to, was the fact, that the Yearly Meeting of women Friends in Ohio had continued, while the men's meeting had declined, to receive the epistle from the larger body in New England; and that *now*, these women Friends, with the same clerk, were associated with the meeting of which Jonathan Binns was the representative: and the women Friends dissenting from said meeting were now connected with the section which was represented by Benjamin Hoyle; and moreover, that the latter amounted to *two-thirds* of the whole Yearly Meeting of Ohio, while if London Yearly Meeting should make its election, to receive the epistle from the body of which Jonathan Binns was clerk, they would cut off from all intercourse with us—in other words, *practically disown*—a body of Friends, one with us in doctrine, numbering *four thousand persons.* This seemed to him a most fearful alternative; and therefore he would feel most comfortable if the meeting could agree, in the meantime, to receive neither epistle, but leave a decision in the case to another year, and send an epistle, as already proposed, to both sections in Ohio, regarding them as still *one* Yearly Meeting, and exhorting them, in the spirit of brotherly love, to endeavour after a reconciliation one with another.

These observations of the clerk made a deep impression on the meeting, and many expressed their cordial approbation of them. Still there was considerable difference of sentiment manifest, and when some individuals insisted pretty strongly that doctrine had much more to do with the Ohio separation than many were aware of, or others were willing to admit; particularly when some Friends insinuated and others broadly expressed, that Wilburism was nothing less than an approach to Hicksism, and that, when in this country, John Wilbur had manifested this tendency, as also in some publications he had lately issued, a sort of panic almost seemed to seize the minds of a number, who saw, as they apprehended, nothing l danger in delaying to recognise the Jonatl Binns section in Ohio, while they could not dou that by so doing, they should at the same ti keep open the door for friendly remonstrance a entreaty with those represented by Benjamin Hoy

Many deprecations of this mode of settling t question, continued to be given by Friends weight and experience; but the clerk at leng expressing it as his opinion that the opposite vie though contrary to his own feeling and judgme was the prevailing sentiment, a minute was the fore made, and directed to be carried forward the Yearly Meeting, to the effect that the epis aforesaid be received, and an answer to the sa prepared, and transmitted to the body from whi it had come; that the epistle from Ohio, signed Jane M. Plumer, as clerk, should be the o received by our women's Yearly Meeting; a also that the two epistles from Baltimore, sign by William Waring and Elizabeth E. Balderst respectively, be returned to the parties from wh they had been received.

The committee then adjourned, and the Year Meeting resumed.

A proposal was made that some part of t regular business should be proceeded with, su as reading the Accounts of Sufferings, but it w deemed best on the whole to adjourn till four t morrow afternoon.

Sixth-day Morning, 5th Month, 25th.—Mee ings for divine worship took place, according usual order, at all the London meeting-house Devonshire House was filled, and we understar the attendance was also large at the other places

Yearly Meeting, four Afternoon.—A few wor from a Friend, to the effect that we should n trust in our own wisdom, but in that which comet from above, in order to be preserved in that sta in which we should be enabled to act according the Divine will, and for the good of His churc preceded the reading of the opening minute.

The report or minute of the Committee o Epistles, regarding the epistles from Ohio, s agreed upon last evening, was then read—upo which it was intimated, that a Friend who h not entirely relieved his mind in the committe was now desirous to do so. A valued Friend, i the station of a minister, then informed the mee ing, that reluctance to occupy the time had induce him to refrain from going at much length into th expression of his views and feelings on this sul ject. But, since last evening, the conclusion the committee in regard to it had been increa ingly burdensome to his mind; and that, havin been given the opportunity, he felt he must, in a honesty, now state, that he would yield to no on in this meeting in sincere regard for the memor of our beloved and honoured friend, Joseph Joh Gurney. He said beloved and honoured, becaus he really did love and honour him. But he mus at the same time, acknowledge his regret that h should have written so much as he had done with which he, as an individual, had not unity On the contrary, so pernicious had been the effec produced on his mind from perusing some of hi works, that he had very narrowly escaped fro being turned out of the right way by it. Lookin at the influence, then, of these writings, in pr ducing (as we understood the Friend to say) th present painful condition of affairs in Americe did it not behove this Yearly Meeting to be ver careful of its action? For himself he could trul say, that from the time—now ten years ago— when this subject had first claimed the attentio of Friends, he felt thankful that he had been pr served from taking any part in it. He had bee then offered a pamphlet to read, which he declined

had ever since refrained from reading such things. He had never heard John Wilbur, nor had ever sent to, or received from America, any letters. At the time he referred to, there was sounded in his inward ear—"Preach the gospel: for this thou art called;" and he felt thankful, as he had already intimated, that to this, his own sense of service, he had been favoured to adhere. Such being the case, he had only further to add, that the conclusion to which the report pointed was very uncomfortable to him; and he earnestly desired that Friends might pause before coming to such a decision, and allow feelings of charity and forbearance to prevail amongst us.

At this stage a Friend expressed how he had been pained with the statements that had been put forth yesterday, regarding John Wilbur's views being the same as those of Elias Hicks. He believed the charge to be without foundation; and that was, in his opinion, very improper to make against any individual declarations of such a character in that meeting. He did not pin his faith to John Wilbur's sleeve, but he had never heard him say anything open to such a charge, nor had he seen anything that he had published that could in all warrant such assertions as had been uttered. These remarks were made in a very calm and decided tone, and no attempt was made to invalidate them in the least.

Then ensued a discussion, which did not terminate till near nine o'clock. Some of those who had advocated the recommendation contained in the report of the committee, seemed prepared to urge that the meeting had no course open but simply to do at once to accept it; on the ground, principally, that that committee having been a large one, and, to a very great extent, substantially the same persons, though now met in a Yearly Meeting capacity, there could be no necessity for further deliberation in the case. Such a conclusion, however, as this, was clearly and ably demonstrated to be altogether out of the question. A committee, however large, or however unanimous the conclusion to which it might arrive, could never by possibility deprive the meeting itself of the right to exercise its deliberative character. Thereupon a number of Friends who had, the evening before, agreed in the conclusion of the committee, and also others opposed to that conclusion, now stated that, after very much of a sleepless night, they did not feel able to acquiesce in a judgment regarding this matter, which, if it accorded with the recommendation of the committee, would cut them off from all further intercourse with us a body of friends in Ohio, numbering 4000 persons.

In reply to this, it was stated that the parties referred to would not be cut off by us, but had cut themselves off; and some even went so far as to declare their conviction, they did not wish to be connected with us. However, so strong did the warning of many valuable Friends towards this section of Ohio Yearly Meeting, for some time manifest itself, that we were ready to conclude the meeting would have decided the matter in opposition to the committee's report.

At this point, a proposition was again made by the Friend who acted as clerk to the committee on this business, by way of amendment, or as a middle course, to receive and record the committee's report, to take no action upon it at this time, to send a friendly and affectionate epistle to the parties, stating the feeling evinced in this meeting towards them, and leave the final decision till another year.

This met with considerable approbation; yet not satisfying those by whose influence the conclusion of the committee was mainly brought about, elicited from the same quarter so much expression against the proposal, that it was not further pressed. The parties alluded to stated, that if adopted, it would render nugatory all the labour that had been spent on the case, and they urged that the wording of the conclusion should be, to receive and adopt the report; and in other respects, to act in accordance with the judgment given by the committee.

Here a number of aged Friends declared, that having attended the Yearly Meeting for upwards of half a century, they did not remember any instance in which the meeting had decided a question in the face of so much evident want of concurrence, but had forborne until greater unanimity of feeling and judgment should be arrived at.

Some of those who advocated the adoption of the course proposed by the committee, adduced in support of their views, the acknowledgment already by three Yearly Meetings of the smaller body in Ohio, viz., Indiana, Baltimore, and North Carolina; and they anticipated, in the case of those meetings yet to be held in the course of the summer—New York and New England—that they also would come to a similar decision; hence, there would thus be five Yearly Meetings on the American continent in unity with the aforesaid section of Ohio Yearly Meeting, leaving only the single exception of Philadelphia supporting the body of Friends represented by Benjamin Hoyle.

The conclusion, however, to which the meeting at length arrived, was to receive the epistle of a body of separatists as that to which we should send a reply; and regard the said body as Ohio Yearly Meeting, with which, we are hereafter to correspond. A venerable Friend near the table, well versed in the state of American affairs, and not long since returned from a mission to that country, stated that in this conclusion he did not feel that he could acquiesce; considering that the body referred to had established themselves as a Yearly Meeting, not in the order of the discipline, as we understood him, and therefore, in his view, not in the wisdom of truth; a conclusion, moreover, which, in the judgment of many, is not calculated to promote unity or harmony, either in this country or among our American brethren, but is likely to involve us in difficulties, the end of which it is impossible to foresee.

This matter now disposed of, the epistle signed by Benjamin Hoyle was then agreed to be referred to a committee, to consider how it should be dealt with, and to have liberty to prepare and submit to a future sitting any communication from this meeting to the body from whence said epistle issued. * * * *

The foregoing committee were appointed to meet at nine to-morrow morning, and the meeting at large adjourned to ten.

Seventh-day morning, Fifth Mo. 26th.—Read the accounts of distraints for ecclesiastical purposes, which did not give rise to much remark. The amount was upwards of £8000, more than £3000 of which sum had been sustained by Friends of the Quarterly Meeting of Essex. It was mentioned as desirable, that in addition to the gross amount being, as usual, stated in the General Epistle, an abstract of the amounts reported from the several Quarterly Meetings should be sent down to said meetings at the time of transmitting the epistle and other papers; and, after some deliberation, this was agreed to.

The report from the Special General Meeting of Ackworth School was then read, some particulars of which are given in another page, and need not be here repeated. It was cause for gratulation, that the institution was now free of debt, and, considering the very much improved education now afforded at this seminary, it was deemed very desirable that Friends who could afford it, should be encouraged to pay a higher amount annually than the present scale admitted (say £25), in order that the institution might rather have a surplus, and not be so liable to be burdened, as of late years it has been, by debt. Much satisfaction was expressed on learning the extent to which the contributions of Friends who had been educated at the school had assisted in the discharge of the debt. It was recommended to have a young Friend in each Monthly, or in each Particular Meeting, who had been a scholar, to collect annually in behalf of the funds of the institution, and in order to give opportunity, as far as possible, to all to contribute, that small subscriptions should not be refused.

The reading of the other school reports did not lead to very much comment, and, being in print, will be circulated among our readers. The point which seemed to us to be pressed with most emphasis, was the great advantage which was found to result from the conjunction of manual labour with education; and one feature in the expenditure at the Brookfield Agricultural School, in Ireland, was, that the labour of the children yielded, we understood, more than one-third of the cost of their maintenance and education.

Reference was made, by a venerable Friend, to a discussion that took place last year, in regard to the importance of the Society continuing its oversight of the youth during the period between their leaving school and acquiring a settled engagement in business, that being the time wherein the character for life was very much formed; and he called attention to the twelfth clause in the "Rules of Discipline," under the head of "Oversight," which having been read, there ensued a lengthy and interesting deliberation, in the course of which many very valuable observations were made on various branches of the subject. * * * *

There was another point adverted to by some—the hours of labour—which seemed to take hold of the sympathies of a number of Friends; and those having apprentices were encouraged closely to look at the matter, and not unduly to work those in their employ. * * * *

There was another branch of the question as to the oversight of our more advanced youth, which also engaged considerable attention—that of religious instruction—to which it was deemed desirable to direct the attention of any committee which might be appointed, with the view to bringing in a minute relating to the matter now before the meeting, viz., to consider what other means, in addition to those at present brought into exercise, it might be proper to adopt; it being the opinion of some, that the Society does not possess adequate "machinery" for this purpose.

Some very excellent remarks followed at this time particularly on the duty of parents; and the whole subject was, thereafter, remitted to the consideration of a few Friends, who were desired to bring into a future sitting, a minute which should go down to the different Quarterly Meetings.*

* *Yearly Meeting*, 1855.—The following minute on this subject was subsequently brought in and adopted:—This meeting has been introduced into a tender feeling of religious solicitude for the Christian interests of the younger members of our Society, as well as of the children of those who, though not in membership, are in religious profession with us.

Under a renewed sense of the importance of the subject, this meeting concludes to invite the attention of Quarterly Meetings to the twelfth paragraph, under the head "Oversight," in our Rules of Discipline, with special reference to the circumstances of such young persons in the period between the time of their leaving school and their settlement in life.

The several Quarterly Meetings are encouraged to report the result to the next Yearly Meeting.

The business next claiming attention was the report from the committee to examine the accounts of the National Stock; from which it appeared, that the revenue for the year, including last year's balance, £100 from Friends of New England towards defraying travelling expenses of ministers in this country, &c., and a legacy of £100 from our late dear friend, Lydia Ann Barclay, amounted to upwards of £3100. The expenditure was over £2200, leaving a balance in hand of something more than £800. This sum, though appearing large, would not, the report stated, render less needful a liberal subscription this year, as the liabilities of the trustees were to a considerable amount. After some consideration, therefore, and explanation regarding sundry items in the report, a collection in each Quarterly Meeting, equal in amount to last year, was ordered to be made, and forwarded to the treasurer in the usual manner. Adjourned about two, till ten on Second-day. The special committee on the epistle from Ohio signed by Benjamin Hoyle, was directed to meet at four this afternoon, and the meeting of the Tract Association at five; there appearing no time so suitable for it.

(To be continued.)

SUMMARY OF EVENTS.

EUROPE.—News from England to 9th inst.

The War.—Just before the sailing of the steamer, a despatch was received from Lord Raglan, dated on the 8th at 6 P. M., announcing that, after a fierce bombardment, the French attacked and carried the Mamelon and White Tower at Sebastopol. The loss of life has been very great, but no figures are given. The squadron, under the command of Admiral Lyons, had bombarded Genitchi, on the sea of Azoff; destroyed a quantity of stores and a large number of transports. The Russians had thus lost in four days an immense quantity of provisions, four war steamers, and 240 vessels employed in provisioning the troops in the Crimea. The French army has been largely reinforced, making its number nearly 200,000 men. The allies propose to fortify Yenikali, and garrison it by the Turks, but they will not hold Kertch. Prince Gortschakoff telegraphs, under date of 3d inst., that the allies have left Genitchi, and that part of the burned stores will be saved. The allied steamers visited Arabat, and burned a number of merchant ships. The allies had made no movement towards the interior of the Peninsula of Kertch.

The Baltic Fleets.—The British and French fleets, on the 4th inst., were in the immediate vicinity of Cronstadt. Admiral Dundas had made a reconnoissance, and found that new fortifications had been erected since last year. Several vessels laden with timber, had been captured by the allies.

RUSSIA.—A supplementary ukase has been published for the purpose of "facilitating the levy" of twelve men in every thousand, which was recently ordered. It directs that, when there is a deficiency of men of the prescribed age, those of more mature years shall be taken to make up the number. Letters from Cracow report that the insurrection in the Ukrain is not yet suppressed.

AUSTRIA.—The Prussian Correspondence says:—Austria considers herself released from all engagements to the Western Powers, the latter having refused to conclude a peace on reasonable terms. Austria, however still, professes herself the ally of France and England, under the treaty of Dec. 2d. The Vienna papers state that, although the conferences have closed, the Russian Plenipotentiaries have the Austrian propositions under consideration, and Austria is still desirous of mediation. The Commissioners of France and England have left Vienna.

FRANCE.—A decree has been issued, extending the free importation of breadstuffs to England, during the present year. The King of Sardinia will probably meet Queen Victoria in Paris, the present summer. The French Exhibition was more flourishing.

SPAIN.—The government represents the recent Carlist insurrection as entirely suppressed, but the province of Catalonia is placed in a state of siege. Troops continue to leave Madrid, leading to the inference that trouble still exists.

ITALY.—Numerous political arrests have been recently made in the Roman States and Piedmont.

GREAT BRITAIN.—Parliament has adjourned. The debate on the war had ended after a protracted discussion, in Sir Francis Baring's motion being permitted to pass *nem. con.*, viz.: That the House having seen with regret that the conferences at Vienna had not led to a termination of hostilities, feels it a duty to declare that it will continue to give every support to her Majesty in the prosecution of the war, until she shall, in conjunction with her allies, obtain for the country a safe and honourable peace.

Commercial.—Liverpool Market.—The sales of cotton for the week amounted to 107,000 bales, of which 63,000 were taken by speculators. In the early part of the week, a small advance in price took place; this was afterwards lost, and the market closed steady at former quotations. The rates were Orleans fair, 7¼*d.*; do. middlings, 6, 11-16*d.* Uplands fair, 7*d.*; middlings, 6⅝*d.* *Breadstuffs*, unchanged except for corn which has advanced 1*s.* Flour is quoted at 40*s.* to 45*s.* per bbl. according to quality. *London.*—The bullion in the Bank of England had increased £700,000. Money was plenty at 3½. Consols, 92. The weather is said to have been favourable for the crops. *State of Trade.*—At Manchester the market was dull, and prices unchanged.

BUENOS AYRES, dates to Fourth mo. 25th, have been received. During the last days of the Third month, a large body of Indians, said to number 2500 warriors, made an incursion into one of the cattle raising districts of the province of Buenos Ayres, and drove off about 80,000 head of cattle and a large number of horses. They also carried away five entire families as captives. The loss of property was estimated as high as a million of dollars.

PARAGUAY.—Recent letters from the U. S. squadron on the coasts of Brazil, mention that Paraguay has yielded to Brazil the right to navigate the Paraguay river. It had not transpired whether the right had been conceded to other nations.

UNITED STATES.—*Texas.*—Many foreign immigrants are arriving in this State. They consist of Prussians, Poles, Bohemians and Swiss. In Galveston, fine brick houses, wharves and other valuable improvements, have been recently constructed. Cattle raising is said to be a large and profitable branch of business in Texas. Large herds are sent to the New Orleans market, and the late high prices have even brought some as far as New York. The people of the Upper Trinity despairing of a rise in the river, were hauling their produce to market. A trader had arrived at Galveston, from Navarro county, who had in wagons on the way a quantity of hides, peltries and cotton; they have to be hauled, 300 miles.

Kansas.—Governor Reeder, the District Attorney, and the Associate Justices of the Territory, having been engaged in certain purchases and speculations in Indian lands of questionable propriety, the President has called upon them for explanations, informing them that they cannot be retained in office, unless his present impressions regarding their conduct, shall be removed by satisfactory explanations.

New Wheat.—On the 20th, South Carolina red wheat was sold in New York, being the first of the season; the price was $2.50 per bushel.

New Orleans.—The cholera in this city has abated; in the week ending 18th inst., there were only 76 deaths from that disease. Sales of flour, on the 21st, at $8.25 per bbl.; Western white corn, 90 cts. per bushel.

Illinois.—Returns from the counties show a majority of 14,066 against a Prohibitory Law. The total vote was 167,336, being the largest ever polled in the State.

Burlington, N. J.—A late census of this city gives it a population of 4974. In 1850 the number was 4536.

Philadelphia.—Since the completion of the northern chain of railroads to Niagara Falls, a large quantity of flour has been sent to Philadelphia, from Western New York. Mortality last week, 182.

New York.—The brig Joseph Howe was last week "caught in the act" of carrying off about fifty German recruits for the English army in the Crimea. A considerable number of men are still clandestinely obtained from New York, for the work of human butchery. Mortality in this city last week, 322.

The Plains.—The conductor of the Salt Lake mail recently arrived at Independence, Missouri, informs that cholera was thinning out the trains belonging to the Mormon emigrants. These trains are composed of families lately arrived from Europe. The Indians had been very troublesome of late, having stolen nearly all the stock belonging to the mail contractors, and have driven away the cattle from the foremost emigrants.

California.—The steamship Star of the West arrived at New York on the 24th, with 500 passengers and $625,000 in gold. She brings San Francisco dates to the 1st. inst. The mining news from all parts of the State was encouraging, and it is thought that a previous time has the yield of gold been greater than at present. The deposits of gold at the Branch Mint in San Francisco, amounted to 40,000 ounces in 6 days. A law had been passed by the Legislature granting a large quantity of tule lands, for the use of the Chinese, in which they may plant their own grain and vegetables. The lands granted are fitted for the cultivation of rice, and the Tung Nagi Sanduc (a Chinese paper) speaks favourably of it.

Miscellaneous.—Useless Expenses.—While in all countries, there are many thousands of people, who can barely obtain the necessaries of life, immense sums are annually wasteless expended for useless, or worse than useless purposes. In England alone, about two hundred and fifty millions of dollars are annually paid for intoxicating drinks. The yearly consumption of tobacco in the world over, is computed at 4,000,000,000 pounds, which at only two cents a pound makes a yearly sum was of four hundred millions of dollars. In the United States, the amount spent every year for tobacco, drugs and other things as useless, is probably not less than two hundred millions of dollars.

Turkish Flint Wheat.—One hundred bushels of this hardy and productive grain have been received at the Patent office, Washington. It was grown at the foot of Mount Olympus, in Thessaly.

Prohibitory Laws.—The framers of these laws, in their anxiety to make them effectual, are in danger of failing in their object entirely, by disregarding constitutional limitations. The Supreme Court of Massachusetts has decided that part of the law of that State is unconstitutional. It is generally believed that the recent liquor law of New York, for a similar reason, will have no practical value.

Immigration from Scotland.—A large emigration is now going on, from the north of Scotland to Canada. In two months, 5000 persons have left Aberdeen for other northern ports.

The Oldest Paper in America.—The Newport (R. I.) Mercury closed its ninety-seventh year of publication on the 12th inst.

Killed by Lightning.—As David Bennett and his nephew, Joseph Bennett, were engaged ploughing (breaking prairie) with three yoke of oxen on the 19th inst., at Quebec, Iowa, the two men and four of the oxen were instantly killed by lightning.

Cotton at Market.—It is computed that the late frosts in the Southern rivers will liberate about 200,000 bales of cotton, which have hitherto been kept back by low water. This quantity will furnish ten millions to foreign exchange, saving the shipment of that amount specie to Europe.

Large Sales of Land.—The land sales of the Illinois Central Railroad last month, amounted to $580,000, and for five days of this month, to $125,000.

Southern Methodists.—From the tenth annual report of the "Methodist Church South," it appears that the organization has, under its care, 128 congregations and 79,050 church members.

Destructive Fire.—On the 16th, the town of Bay Sara, Louisiana, was nearly destroyed by fire. Loss supposed to reach half a million.

A Stated Meeting of the "Philadelphia Association for Friends for the Instruction of Poor Children," will be held at the usual place, on Second-day evening, Seventh month 2d, at 8 o'clock.

EDWARD RICHIE, Clerk

CORRECTION.

A typographical error occurs in the 16th line from the bottom of the second column of the editorial in the last number, where the word "from" should be *for*.

MARRIED, at Friends' Meeting-house, Chesnut street, West Chester, S. TOWNSEND BROWN, of Norristown, to MARY S. PARKER, of West Chester, daughter of the late Wistar Parker, of Pennsbury, Chester Co., Pa.

DIED, in this city, on the 21st of Fifth month, in the 72d year of her age, ANN, wife of George Matlack, a member of the Northern District Monthly Meeting. Her illness was of short duration, which she bore with much patience and resignation; and we doubt not her end was peace.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

The Indians.

"It is difficult," says Gov. Stevens, "to conceive that those noble Indians [The Flat-heads] can belong to the same race as the wretched Root Digger Indians, who are occasionally found in wandering families west of the mountains. Lieut. Mullan says of this degraded race, a party of whom he met with on the Snake River:—"about 12 miles from our camps we espied a smoke on the river bank; when approaching it we found among the Artemisia of the prairies three or four families of the Root Digger Indians. They were astonished to see us, the children running and scampering through the bushes as if their lives were in danger They had with them no lodges and no food, save a large pile of white roots which they had just dug from the side of the river, and which they seemed to feast on with as much contentedness as if they were surrounded by all the luxuries of life. The men were absent fishing. Fish and roots are their only subsitute, and still these people are fat and in good condition. They seemed to be living in small enclosures, formed of the Artemisia, in which they had a few glowing embers. A few horses and a mule stood near by. Apparently the sole pursuit of this people was the keeping of soul and body together. They appeared probably more near to the brute creation than any other portion of the human race; we had visited their abodes with the expectation of procuring meat; but disgust getting the better of us, we put spurs to our horses and soon left the presence of the Digger tribe."

The Upper Pend d'Oreilles have been formed at a comparatively recent period under Ambros, their chief, and are known as the Kalespel or Kalispelines. They consist of a number of wandering families, composed of Spokanes, Kalispelusses proper and Flat-heads, who having intermarried, have formed a habit of sojourning in the vicinity of the Horse and Camash plains, or Clark's Forks, during their annual migrations. They have about 40 lodges, with some 280 inhabtants. A Roman Catholic mission was established among them nine years ago. Their food, at first, consisted mainly of Camash roots and berries, which contain very little nourishment. Afterwards, they slowly improved. They obtained pigs, poultry, cattle, horses, agricultural implements and tools. Many of their supplies came from Europe. There are two lay brethren attached to the mission. One of them, brother Francis, is a perfect jack-of-all-trades—by turns, carpenter, gunsmith, blacksmith, and tinman, and good at all. The other, M'Gean, superintends the farming. They have both worked hard, building a wind-mill, blacksmith, and carpenter shops, barns, cow-sheds, &c., besides a chapel and a large dwelling house of hewn timber. The chapel is highly decorated, and contains a carved and gilded altar, a statue of the Virgin Mary, brazen crosses and richly bronzed fonts; work so well executed, as at first to lead one to suppose it of foreign origin. They have also made a grindstone of native rock, modeled by the hand that formed the chisel which wrought it; tinware, a smith's bellows, plough-shares, besides their chimneys and their own tobacco-pipes of wood lined with tin. In household economy they are not excelled. They make their own soap, candles, vinegar, &c., and it is interesting and amusing to listen to the account of their plans, shifts and turns, in overcoming obstacles; their repeated failures and final triumphs. Besides the buildings already mentioned, they have erected several others for lodging cattle and for keeping roots. The farm contains about 160 acres cleared, producing spring-wheat, barley, onions, cabbages, parsnips, peas, beets, potatoes and carrots. Father Hoeken says the children will eat his carrots, when they see them growing, but he shuts his eyes to the theft, as 'any thing else than carrots the little creatures respect.' The Indians are very fond of peas and cabbages, but beets and onions particularly, they dislike. The other productions of the farm are cattle, hogs, poultry, butter and cheese. The houses of the natives are 16 in number, built of logs and hewn timber. There are also quite a number of mat and skin lodges. Formerly these Indians were a poor, half-starved race, and nearly naked; living upon fish and roots, and in extremity upon the pine-tree moss. They considered themselves to be nearly allied to the beaver, but greater than the beaver, because, they said, "the beaver builds houses like us, and he is very cunning; but we can catch the beaver, and he cannot catch us, therefore we are greater than he." It was not uncommon for them to put the very old and the very young to death, because, they said, "these cannot take care of themselves and we cannot take care of them."

The name they give the Creator in their own language is—"The One who made Himself." They formerly believed that evil and bad luck emanated from a fabulous old woman or sorceress. Every man had his particular medicine or charm. With some, it would be the mouse, with others the deer, buffalo, elk, salmon, bear, &c.; and whichever it was, the savage would carry a portion of it constantly with him. The tail of a mouse or the fur, hoof, claw, feather, fin, or scale, of whatever it might be, became the amulet. When a young man grew up, he was not yet considered a man until he had discovered his medicine. His father would send him to the top of a high mountain, in the neighborhood, where he was obliged to remain without food until he had dreamed of an animal; the first one so dreamed about becoming his medicine for life.

During winter, all large game is distributed among all. One is chosen distributor for the season; to him the animal is brought; he cuts it into a number of pieces corresponding to the various families. He then cries: "Come and fetch." Immediately a delegate from each lodge appears and carries off the piece assigned him. No dissatisfaction is ever manifested at the division. This custom was first established by their late chief Loyola. He appears to have been a remarkable man; although of a very quiet and taciturn disposition, he was a good disciplinarian. He was beloved, and had great influence over his people. Before his death, which occurred two years ago, he named the present chief (Victor) as the best man to be his successor. Victor was accordingly elected by the almost unanimous vote of his people. He is small, young and of a good countenance, but so amiable as scarcely to maintain his authority. One of his punishments is, to whip the offender; but this he never does unless with the consent of the culprit, who, after the infliction, will frequently laugh or run races, or play a game, or do something else in the way of fun, to show how little he cares.

The Indians grind their own wheat by a hand-mill, at the rate of three bushels a day. They are said to be comparatively industrious. Each one, who wishes it, is allowed a certain amount of land for his own use. The soil consists of a rich, but very thin mould, beneath which is a tenacious, bluish clay, very barren. It soon wears out. There is good meadow land, unfit however for agriculture, because annually flooded and untillable before the middle of summer. The missionaries wish the natives to remove to the camash plains, where the land is better, but they say, "This is our country; here are the graves of our forefathers; here we were born; here we wish to die; we do not want to leave our country, poor as it is."

Until farms are properly cultivated by these Indians, their wandering habits must continue. Their migrations now extend over a tract more than 100 miles square. They take fish from Clark's River, by means of a weir, which they annually construct. To Lake Rothman, long celebrated for the quality and number of its beaver, they go to catch the latter animal, and to hunt deer; to others to cut flag and rushes for mats, and still again to others to hunt bear.

The old method of cooking fish in bowls of wicker work, heating the water by hot stoves, is still practised; although it is not very cleanly, it is very rapid, and the fish thus cooked have an excellent flavour. They also collect roots and a berry, called the sugar berry and moss, for winter use. They likewise dry meat and fish. During heavy snows, they kill many deer, notwithstanding their poor condition. Last winter they killed 800, and they were barely sufficient for their wants. In old times, they say, there were very few deer; latterly they became much more plentiful. The camash, forms an important article of food when other supplies fail. "It is," says De Smet, "a small, white, vapid onion when removed from the earth, but becomes black and sweet when prepared for food. The women arm themselves with long crooked sticks to go in search of the camash. After having procured a certain quantity of these roots by dint of long and painful labour, they make an excavation in the earth from

12 to 15 inches deep, and of proportional diameter, to contain the root. They cover the bottom with a closely cemented pavement, which they make red-hot. After having carefully withdrawn all the coals, they cover the stones with grass or wet hay; then place a layer of camash, another of grass, a third of bark overlaid with mould, whereon is kept a glowing fire for 50, 60, and sometimes 70 hours. The camash thus acquires a consistency equal to that of the jujube. It is sometimes made into loaves. It is excellent, especially when boiled with meat. If kept dry, it can be preserved a long time."

The good faith of the Pend d'Oreilles was recently signally exhibited. Two of their young men stole some horses, and took them home, where they were recognised as belonging to white men. A council was held, in which it was determined, that it was wrong to rob a friendly people, and that the property should be restored. That otherwise they would be called liars. They had always borne a good name, and were ashamed to have mean things said of them now. Accordingly their chief and five principal men travelled five days and nights through an enemy's country, came boldly to the fort, and delivered up the horses with many expressions of sorrow and shame. Thus proving themselves both brave and honest.

Every man hath in his own life sins enough, in his own mind trouble enough, in his own fortune evils enough, and in performance of his offices, failings more than enough, to entertain his own inquiry; so that curiosity after the affairs of others cannot be without envy and an evil mind. What is it to me, if my neighbour's wife were a Syrian, or that another is indebted five thousand pounds, or whether his wife be expensive? But commonly curious persons, or (as the apostle's phrase is) "busy bodies," are not solicitous or inquisitive into the beauty and order of a well governed family, or after the virtues of an excellent person; but if there be anything for which men keep locks and bars, and porters, things that blush to see the light, and either are shameful in manners, or private in nature, these things are their care and their business. But if great things will satisfy our inquiry, the course of the sun and moon, the spots in their faces, the firmament of heaven, and the supposed orbs, the ebbing and flowing of the sea, are work enough for us; or if this be not, let him tell me whether the number of the stars be even or odd, and when they began to be so; since some ages have discovered new stars which the former knew not, but might have seen if they had been where now they are fixed. If these be too troublesome, search lower, and tell me why this turf this year brings forth a daisy, and the next year a plantain, why the apple bears his seed in his heart, and wheat bears it in his head; let him tell why a graft, taking nourishment from a crabstock, shall have a fruit more noble than its nurse and parent; let him say why the best of oil is at the top, the best of wine in the middle, and the best of honey at the bottom, otherwise than it is in some liquors that are thinner, and in some that are thicker. But these things are not such as please busy bodies.—*Jer. Taylor.*

Give no alms to vicious persons, if such alms will support their sin; as if they will continue in idleness; "if they will not work neither let them eat;" or if they will spend it in drunkenness, or wantonness: such persons, when they are reduced to very great want, must be relieved in such proportions as may not relieve their dying lust, but may refresh their fainting or dying bodies.—*Jer. Taylor.*

Necessity of a Due Allowance of Sleep.—Habit influences, in some degree, the amount of sleep that is required. It should be said, however, that it is never well to withhold any of the revenue that is justly due to sleep. A man may accustom himself to take so little sleep, as to be greatly the loser thereby in his waking moments. It may be commonly observed, that those persons who spend less time in sleep than is usually found needful by others of the same age, and strength, and occupation, consume a much larger portion of their days than others do, in a kind of dreamy vacancy, a virtual inactivity of mind and body. The hours expended in sleep are not the only hours that might be justifiably deducted from the sum total of life, as having been lost to it; numbers of moments are daily spent in an absolute inaction of mind and body, and sleep cannot be robbed of its dues without adding largely, and in greater proportion than the time habitually stolen from the sleep, to that which is wasted in such waking reveries. In order that the mind may have the power of undergoing trying and exhausting labour, that it may continue in the full possession of its capabilities, that it may continue to be undulled and unblunted by such wear and such use, an amount of sleep must be allowed, which is proportionate to the severity of such work, to the engrossing and expending nature of the mind's employment. The nights may be robbed of the hours of sleep, and the time so stolen may be devoted to toil of mind or of body, but the endurance by the system of undue waste and imperfectly restored balance of the vital force, even if somewhat protracted by the strength of the constitution, or if prolonged somewhat by the energy of a determined will, or by the spur of a great necessity, or by the goal of a great ambition or darling hope, must be short-lived. The system cannot be robbed of its sleep without a corresponding disturbance and derangement of the functions; the power and the equilibrium of the vital forces will become so far affected as to involve disordered action, and thus indirectly, by forming part of the common organism, and directly by the diminished tension of the vital forces which supply the sensorium itself, the mind will become unable to continue its exertions. Many an ardent and hopeful aspirant for collegiate distinctions—many an anxious labourer for professional eminence, has thrown away his hopes in thus vainly struggling to cheat the system of this great requirement.—*Dr. Robertson on Diet and Regimen.*

For "The Friend."

CONSISTENCY.

It will doubtless be conceded, that our worthy predecessors were raised up to bear testimony to the spiritual nature of the Christian religion, in opposition to those outward views, which were, and continue to be, maintained by mere worldly professors. Christ Jesus was the foundation upon which they were concerned to build, believing Him to be the immutable Rock upon which the prophets and apostles were built as a spiritual house, of which he is at once the Head and the great Master-builder. They preached the doctrine of an immediate revelation of the will of God to the soul of man, and can we now forsake this ground, and yet maintain the standing which we, as a people, have taken, even that of its being our privilege to be led and guided by the unerring Spirit of Truth? Can we exalt the letter of Scripture above the Spirit, and yet profess to be the followers of Christ as our early Friends were? Can we depreciate this doctrine of the immediate teachings and leadings of the Spirit, and yet retain the name of Quakers, or be the friend Truth?

It was testified by George Fox, relative to o ings made to his mind in the early part of religious experience, that they were made i pendent of the Scriptures, but that he afterw found them conformable thereto. Now, how this compare with the sentiment that the Sc tures are the only source from which we are derive a knowledge of the truths contained there And how can we reconcile the view that the Sc tures apply to all circumstances, comprehend conditions, regulate all motives, and control direct all overt acts, with an acknowledged ne sity for any superior direction? Or that Scriptures are the appointed source from wh ministers are to derive a knowledge of the tru they are to communicate, with the belief that t ministers must wait upon God to be endued w wisdom to qualify and direct in the work of ministry? Do not views like those alluded open the way for the entertainment of a m literal faith, and for the introduction of a stud and superficial ministry? If so, should not ev *right* means be used, to prevent their currer amongst us, lest we be carried back to that st of apostacy from which our worthy forefath were mercifully delivered?

These considerations are worthy of our seric attention, and the entertaining and recommen tion of such queries, have, it is believed, been some measure a means of arresting the spre and preventing the currency of the innovatio alluded to, for which we have cause of thankf ness to Him, who has opened our eyes to see, a prepared our hearts to feel that the Truth w being made to suffer thereby.

Decimal Measures.—We find the following the foreign news:

Notices have been given in Parliament of a m tion for a decimal coinage, and to unite in a Co gress to establish a uniform decimal system throug out the world.

We suppose the design embraces a uniform sy tem of weights and measures, based upon decim division. If so, the agitation of the question, wit a view to action in our next Congress, becom doubly important. We shall secure, by properl urging the measure, not only the best system f ourselves, but acting in concert with the Europea Congress, we shall help to establish the decima system over the whole civilized and mercantil world, and get rid of the trouble and inconvenienc of systems of weights, and measures of length, ca pacity and value, as various and as different as th customs of the world are one from another. Ther is nothing which would tend more to unit the trading and commercial world in a commo brotherhood of feeling, or which would more ma terially facilitate their operations, than a uniform system of weights, measures and of coinage.—*Ledger.*

Selected.

It has been observed, that in a violent gale, those trees which occupied the centre of the forest, and seemed most secure, have been torn from their roots, while others that stood on the margin, and from their unsheltered position, most exposed, had struck their fibres so deep into the soil, as to defy the power of the whirlwind and the storm; which should teach us, that *no length of standing*, no favourable situation in life, much less any inward strength, can secure us from falling; for it is not only to the young, but to the aged, the warning voice must be directed; "What I say unto you, I say unto all, *watch.*"

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 332.)

WALTER FAWCETT.

Walter Fawcett was one of the early settlers of hester, and was at that time a married man with family, and the Monthly Meeting and the uarterly Meeting of Chester, were both at times ld in his house. We find it recorded that at e "Quarterly Meeting held at Walter Fawcett's, t of Sixth mo., 1687, it was agreed that there a Monthly Meeting kept up in the woods, for e service of Friends and Truth, viz. at Newtown, arple, Springfield, Upper Providence, Middlewn, and Edgmond." Again, at a Quarterly eeting held at the same place, Sixth mo., 1690, It was ordered that there be four General Meetgs of Worship settled in this county for the serce of Truth; that is to say, at Chester, the secd weekly Third-day in the Ninth month; at arby, the second weekly Third-day in the Twelfth onth; at Concord, the second weekly Third-day the Third month; at Chester, the second week- Third-day in the Sixth month."

Walter Fawcett was at this time an approved inister, but of his gospel services we have small ecount. In the Fourth month, 1692, he was at he General Meeting of Ministers in Philadelphia, nd signed their testimony against George Keith, nd also their epistle to Friends in England, in stification of this proceeding. Walter appears have travelled with William Ellis, who, in writg to his wife, under date, Philadelphia, Sixth onth 8th, 1698, says, "Here are many tenderearted Friends, who are preserved lowly in mind nd loving, and who keep much out of superfluity apparel. Walter Fawcett is with me, and is ell."

At the Meeting of Ministers at the time of the early Meeting, in the Seventh month, 1698, he id before his Friends a concern he felt to pay a eligious visit to England. It is probable that he ad not first obtained the concurrence of his Monthly Meeting, for whilst granting permission o go, they directed him to procure a certificate of nity, before he went. At the Meeting of Ministers held in the First month, 1699, he opened his oncern again, and having probably all necessary nity of subordinate meetings, his prospect was gain united with, and a certificate granted. Tovards the close of that month, he sailed for Euope in company with his Friend, William Ellis. Ve find from letters written by Samuel Carpenter, hat he had "very dear love" for William Fawcett, nd we may infer that the feeling was general mongst his Friends in America.

He laboured in England, about two years. In he Seventh month, 1701, we find him in Philaelphia, attending meetings. In the General Meeting of Ministers held that month, he was ne appointed to prepare a returning certificate on ehalf of William Penn, then about leaving his rovince. By the minutes of the Yearly Meeting or business, we are informed that "Joseph Kirkride and William Fawcett having been lately on religious visit in England, subscribed for 100 opies of Barclay's Apology, on behalf of the Yearly Meeting."

In the Seventh month, 1703, we find him dealng with a member of the Meeting of Ministers, who, for want of taking heed to his ways, had erred from the path of true rectitude, and given oncern and exercise to his Friends. Much good dvice was bestowed; some benefit seemed to reult at the time, and although no permanent good was effected for the transgressor, yet we doubt not but those who laboured in this exercising work, were themselves improved thereby.

How long his last illness lasted, we do not know. But, on the 29th day of the First month, 1704, his day's work being ended, he was released from the troubles of time.

HANNAH KINSMAN.

Hannah Kinsman or Kingsman, wife of John Kinsman, of Chichester, was the daughter of those valuable Friends, John and Elizabeth Simcock. She was born in the year 1660, and having given up early in life to serve the Lord, she was prepared for usefulness in his church. She received a gift in the ministry, and was serviceable therein. In a short memorial concerning her, which was presented "to the Meeting of ministering Friends held at Providence," it is said, "she was of a modest, plain, and blameless conversation; exemplary as an elder in the church of Christ, and desiring peace and unity amongst Friends. Her testimony, though short, according to the portion of spirit God had given her, was sound and suitable. She often admonished Friends to diligence and carefulness in waiting upon the Lord." "This our Friend, after some time of weakness of body, departed this life, very quietly and innocently, like a little child, the 25th day of Eighth month, 1718; aged about fifty-eight years."

ESTHER HAINES,

Was the wife of John Haines, of Evesham, West Jersey. She deceased, about 1719. Her friends testify that she "was a zealous woman."

VINCENT CALDWELL.

Vincent Caldwell was born in the year 1673, at Brason in Derbyshire, Great Britain, of parents, not professing with Friends. His amount of school learning was not great, yet sufficient to qualify him for all the common duties of life. In 1691, he was convinced of the Truth, under the ministry of John Gratton. Being faithful to the openings of the Lord's Holy Spirit, he grew in religious experience, and, in 1693, a dispensation in the ministry of the gospel of our Lord Jesus Christ was committed to him. Believing it right to remove to Pennsylvania, he applied to his Monthly Meeting at Monyash, which granted him a certificate on the 24th of First month, 1699, addressed to the Monthly Meeting of Philadelphia. This certificate he presented to that Monthly Meeting, held Sixth mo. 25, 1699; but he appears to have almost immediately removed to Darby, where he resided for a few years.

In the fall of 1701, with the unity of his Friends, he paid a religious visit in Maryland, being accompanied most of the time by his fellow-labourer in the gospel, Abraham Marshall. Of this journey Vincent, with thankfulness, acknowledged that the Lord was with him, helping and encouraging him in the service. He and his companion had many good, quiet and peaceable meetings.

After his return from this southern journey, a concern rested with Vincent Caldwell, to visit Friends in Virginia and Carolina, and some of those he had recently been with. He bore it in silence, until coming to Philadelphia to the Yearly Meeting in the Seventh month, 1702, he found that valuable minister from New England, John Rodman, on his way south, without a companion. It opened on Vincent's mind, that it would be in the ordering of Truth for him to accompany John, but his Monthly Meeting was over, and he could have no opportunity of obtaining the concurrence of the Friends of that body. He brought the subject before the General Meeting of Ministers for their judgment. The meeting, feeling full unity with him and his prospect, gave him a certificate for the journey, making this proviso, "that it shall not be taken for a precedent, except upon the like emergence, and where Friends have the like satisfaction of the conversation and ministry of the person requesting it."

The visit was accomplished, and Vincent was at his home about the close of the year, and the account he was enabled to make, was one "with which Friends were well satisfied." In 1704, soon after his return from this visit, he married Betty Pierce, a daughter of George Pierce, of Thornbury, Chester county. After his marriage he removed to East Marlborough, Chester county, and being one of the first settlers there, he was with his wife "serviceable in divers respects." The Friends who settled at Marlborough, held their meetings in private houses, and were members of Brandywine Monthly Meeting, sometimes called Newark.

(To be continued.)

Omaha City.—Judging by the amount of the present emigration to Nebraska, there will soon spring up within its borders a number of thickly populated towns, which will a few years hence, become commercial marts, wherein all the trade of that fertile territory will concentrate. Omaha city on the Missouri, bids fair at the present time to become the chief of those commercial towns. It is situated on the western bank of the Missouri, directly opposite the town of Council Bluffs, with which place it is connected by a ferry. The town as at present laid out, is about a mile and a half in length and a mile in width, and is divided into some fifteen hundred lots. The streets are laid out one hundred and one hundred and twenty feet wide, and the houses, which are yet to be built, are to be erected in blocks that will be separated by wide alleys. In the highest part of the town a large square is laid out for the erection of the capitol, and a large building is to be immediately built as a temporary State House. A number of clear streams flow through the town site. Immediately below the city there stretches for some distance a heavy body of timber, and behind it extend open prairies, suitable for farms. Few houses have yet been built in Omaha, but it is thought that hundreds will be erected before the coming of cold weather.

Yellow Fever Prevented by Inoculation.—We notice in La Cronica, that W. L. Humboldt has discovered a means to prevent yellow fever by inoculation. The government of Cuba, as La Cronica is informed, has directed the inoculation of the major part, amounting to one thousand, of the newly arrived troops, which has resulted in the greatest success, since none have been attacked by this terrible disease, which generally decimates the foreign population shortly after their arrival. The operation is similar to vaccination, by inserting the virus discovered by Dr. Humboldt, generally in both arms; a few hours after this trifling operation, the symptoms of a minature yellow fever commence, and all the pathological consequences follow rapidly and slightly, rarely exceeding forty-eight hours in duration, and with nothing more than a slight feverish action.

Humility consists not in railing against thyself, or wearing mean clothes, or going softly or submissively; but in hearty and real evil or mean opinion of thyself. Believe thyself an unworthy person heartily, as thou believest thyself to be hungry, or poor, or sick, when thou art so.

THE NIGHT-STORM AT SEA.

'Tis a dreary thing to be
Tossing on the wide, wide sea,
When the sun has set in clouds,
And the wind sighs through the shrouds,
With a voice and with a tone
Like a living creature's moan!

Look! how wildly swells the surge
Round the black horizon's verge!
See the giant billows rise
From the ocean to the skies!
While the sea-bird wheels his flight
O'er their streaming crests of white.

List! the wind is wakening fast!
All the sky is overcast!
Lurid vapours, hurrying, trail
In the pathway of the gale,
As it strikes us with a shock
That might rend the deep-set rock!

Falls the strain'd and shivered mast!
Spars are scattered by the blast!
And the sails are split asunder,
As a cloud is rent by thunder;
And the struggling vessel shakes,
As the wild sea o'er her breaks.

Ah! what sudden light is this,
Blazing o'er the dark abyss?
Lo! the full moon rears her form
Mid the cloud-rifts of the storm,
And, athwart the troubled air,
Shines, like hope upon despair!

Every leaping billow gleams
With the lustre of her beams,
And lifts high its fiery plume
Through the midnight's parting gloom:
While its scatter'd flakes of gold
O'er the sinking deck are rolled.

Father! low on bended knee,
Humbled, weak, we turn to thee!
Spare us, mid the fearful fight
Of the raging winds to night!
Guide us o'er the threatening wave:
Save us! thou alone canst save!

E. Sargent.

A WATER SONG.

Each flower holds up a dainty cup
To catch the rain and dew;
The drink of flowers that comes in showers
Is just the drink for you.

The stars so bright that gem the night
In the round heaven of blue,
Fling down their beams upon the streams
Which flow with drink for you.

That nightingale which charms the vale,
From yonder fountain flew;
The song-bird's drink should be, I think,
The drink for birds like you.

George W. Bungay.

Liability to Collision at Sea.—Lieutenant Maury has published a pamphlet, entitled "Letter Concerning Lanes for the Steamers Crossing the Atlantic," in which he states that the part of the ocean used by the European steamers in their voyages to and fro, between the meridians of 15 deg. and 65 deg. west, is, for the American steamers 300 miles broad, and for the English 150 miles broad. The American roadway overlaps and includes the English. Consequently there is a breadth of ocean 300 miles wide, in any part of which a sailing vessel, by night or in a fog, is liable to be brought into collision with the steamers. Lieut. Maury, therefore, proposes new lanes for steamers across the Atlantic, which will "lessen the *liabilities* by diminishing the *chances* of collision." He gives in his pamphlet full charts of these lanes, which will engage the attention of the nautical world, and answer, no doubt, as valuable suggestions to avoid danger.

From "The Leisure Hour."

Thoughts of an Old Smoker.

A Quarter of a century ago, I began to master two difficult attainments: I learned to shave, and I learned to smoke. Of these two attainments, smoking was incomparable the hardest; but I managed it. What has it cost me? I have smoked almost all sorts of tobacco, and, as I suppose, in almost all forms. I began with cigarettes, advanced onwards to cigars, then to Maryland tobacco, then to returns, thence to birds-eye, and thence to the strongest shag. I have bought and smoked segars at all prices, and of all manufactures, from the suspicious articles, seven of which may be bought for sixpence, and which probably are innocent of any connexion with nicotiana, save a slight tinge with its juice, to the Havana at thirty shillings a pound. I have been fanciful in cigar-tubes, and also in pipes, though to no alarming extent, having never paid more than seven shillings for a tube, and five shillings for a meerschaum; and, after all attempts to be fine, preferring the naked cigar, or the half yard of clay. I have spent money, too, on instantaneous lights of many sorts. When phosphorus-boxes, containing a small bottle of fiery mixture, and about a score of matches, cost three shillings and sixpence each, I gave three and sixpence for one. When lucifer matches were invented, and sold for sixpence a box—less in quantity than may now be bought for a halfpenny—I patronized the manufacture. I have used German tinder, fuzees, and a dozen other kindred inventions; and all these, costing money, have served me only for the lighting of my pipes or cigars.

Looking at it, then, altogether, and taking into account cigars, cigar-cases, cigar-tubes, tobacco, pipes, and matches; considering, too, that I have been a constant and persevering, though not an enormous smoker, I may safely and fairly conclude—and keep within compass too—that, take one time with another, smoking has cost me—a shilling a week, for twenty-five years.

A shilling a week: that is to say, two pounds twelve shillings a year: making for the whole period, and without reckoning interest, either compound or simple, the sum of sixty-five pounds. Now this, I repeat, is keeping within compass; and a friend at my side tells me that two shillings a week would be nearer the mark. I fear it would; but as, during ten years past, I have not exceeded the more moderate computation, I shall let the shilling a week remain.

Sixty-five pounds—setting aside the consideration of interest—is a large sum. If, twenty-five years ago, instead of a tobacco-box I had set up a money-box, and dropped into it a weekly shilling, I cannot avoid the conclusion that I should be now sixty-five pounds richer than I am: and there are many things I could do with sixty-five pounds. It might serve me for half a year's housekeeping, for my establishment is on a humble scale; or it might turn to account as an apprenticeship premium for my eldest boy; or it might re-furnish my house. Or, if the shilling a week had been devoted to a life assurance, and I were to die to-morrow, my family would be the better for my self-denial, by a hundred and fifty pounds. Or if I had spent a shilling a week on literature, my library would now be, and much to my advantage, larger than it is. Or if, laying aside selfish considerations, I had set apart a shilling a week to works of charity and mercy, the world might have been the better for it. Many a heartache might have been relieved by the sixty-five pounds which I have puffed away. I think, then, that if I had to begin life again, I would not learn to smoke.

I know it may be said that the argume could be raised against this, that, and the ot superfluity, which might be done without. B I am not writing about this, that, and the ot superfluity; I am writing about tobacco-smok

To turn to another thought: I am not qu sure that smoking is a healthy practice. I kn it is not necessary to health, for I see my frie who do not smoke are not troubled with disea from which those of us who do are exempt. wife does not smoke, and, so far as I can see, does not suffer from the privation. I might g step further, and say, I have a strong suspic that sometimes smoking disagrees with some us, and is rather detrimental to health th otherwise. Certainly, excessive smoking is in rious; but who shall draw the line of demarcat between moderation and excess? As for mys I do not know that smoking has ever hurt r It is true, when I have a bilious head-ache nauseate the smell of tobacco-smoke, but so d nauseate also the smell of roast-beef. Still, a firmly believe that I am none the better for sm ing, I think, if young again, I would not learn smoke.

Then again, I cannot help the conviction th smoking is rather the reverse of a sweet a cleanly practice. To be sure, my friends pra me for not betraying my habits; neverthele there are times when I am glad to rinse my mout and purify my garments, and fear that, after all carry about with me, unmistakable tokens of wh I have been doing. And I am quite sure th some of my smoking friends, who are less partic lar than I am, and especially those who cultiva dirty German pipes, are never free from the pec liar perfumery of stale tobacco. And as this far from being pleasant to me, who am a smoke I am sure it cannot be pleasant to those who a not smokers. Moreover the expectoration whic smoking provokes, is far from a pleasant or clea ly habit. On these accounts, then, had I to pa through life again, I think I would determine pass through it without learning to smoke.

Again, I think that smoking does not add to man's respectability. I am not sure that it h not, sometimes, a contrary tendency. This ma depend on circumstances. Certainly, some me of the highest respectability do not think it an derogation to be seen at times inhaling the vapou of a cigar or a pipe; but no one will say that the would not be equally respectable were they know to avoid smoking as an evil thing. Whereas, o the other hand, some have notoriously lost cast by being numbered among the smokers: and, i fact, I am reluctantly compelled to admit, if smoker be reckoned a respectable man, it is i spite of his habit, and not because of it.

Once more, it is not to be denied that a goo many people in the world are so fastidious an weak, some smokers say, as to think smoking disagreeable habit. They do not willingly admi a smoker into their houses, because they dislik his accompaniments. Well, say that is fastidi ousness and affectation, and "all nonsense"— though, friend and fellow-smoker, we have n right to say that—but suppose it be, the effect i the same; our practice makes us disagreeable causes us to be shunned, and sometimes, if w don't take care, to be shut out from good society.

True, so far as I am concerned, I avoid thi evil—the chance of being disagreeable, or of being thrust out from good society—by never smoking except where smoke is welcome. But it is not pleasant at times, to be debarred a favourite resource for passing time. There is a little bit of self-denial required, I think, when a man would, but dare not, put a pipe to his mouth. And as,

re or less often, such sacrifices must be made the smoker who has consideration for others as ll as for himself, or who has indeed due consid- tion for himself, I would, I think, if my youth uld be renewed, avoid the need for this self- ouial by not learning to smoke.

I think moreover, that smoking is not one of : things which help to push a man onward in e world; and I am mistaken if, sometimes, the bit is not like a clog to keep him back. I am ry sure that a young man, for instance, is not ore likely to obtain a situation of responsibility d trust, because he knows how to handle a cigar an elegant manner, or is refined in his appre- ation of the best oroonoko: I have a strong pression, on the contrary, that such an one ould prefer keeping this acquirement in the ck-ground. In other words, I cannot but be rsuaded that—all things else being equal—the an who does not smoke has a better chance of ccess in the world than the man who does: and , if I were young again, I should wish to succeed, possible, I think I would not learn to smoke.

And I do not wonder that men of business, and nployers generally, look with suspicion upon bacco-smokers; for though a youth or a man, spite of this practice, may be a valuable servant, is not to be denied that the smoker at times ys himself open to temptations, strongly tugging him, to draw him aside from integrity and onour. It is not every smoker that can puff away a *dry pipe*; and the youth who to be manly, uts himself to the discomfort of learning to uoke, is likely also, with the same object in ew, to learn to tipple. In short, I fear it ould be found if curiously and strictly sought to, that smoking often leads to sottishness. I ar also that, as with every other needless ex- ense, it leads sometimes to dishonesty. It is ot always that a youth or a man can afford to issipate a shilling a week, nor sixpence either, in noke. But five shillings a week would not suf- ce for the vespertine or nocturnal cigar and glass many a "fast" youth of the present day. Where do they get their shillings?

Well, I never spent more than I thought I could onestly afford on smoke (perhaps they do not, ither,) and I never needed to wet my pipe; but ecause of the temptations which beset the smoker, think, could I go back again to the morning of fe, I would not learn to smoke.

Again, I do not think that smoking is gene- ally necessary as an aid to mental exertion, or an ncentive to profound study. I cannot subscribe o the motto, "Ex fumo dare lucem;" that is to ay, so far as tobacco smoke is concerned. There ave been philosophers, poets, statesmen, and ivines, among the smokers; so have there been mong the non-smokers. And I am compelled to onclude that wisdom does not coyly clothe itself n vapour. On the contrary, I am bound to ac- nowledge my reluctant belief that if the tobacco- ipe is sometimes a help-meet to the pen, it quite s often happens that the pen is the bond-servant f the pipe. Therefore, were I to begin the world gain, I think I would not learn to smoke.

I think, lastly, that it is very disgusting to see eardless youths, and boys just entering their ens, puffing and spitting in the public streets. t was but an evening or two ago, that I met a lit- le manikin, about four feet in height, and pro- ably twelve years of age, with a face as smooth as girl's, sucking furiously at a dirty meerschaum early as long as his arm, till the ashes in the owl glowed with a burning heat. And the most haritable wish I could frame for the poor mis- uided lad was, that before he got to the bottom f his pipe, he might be desperately sick.

Seriously, I have observed so many mischiefs connected with smoking—have known so many shipwrecks made by it, ay, even of faith and a good conscience—have seen so much time wasted, so much money too, and so much health—and have witnessed so much deterioration of character in some who have given themselves up to the practice, to be led captive by it at its will—that though I may have escaped, by God's help, its worst evils, yet if I had to begin life again, I would not—I think I would not—learn to smoke.

Selected for "The Friend."

Stephen Crisp on Meetings for Discipline.

"And all you, dear Friends, upon whom the Lord hath laid a care for his honour, and for the prosperity of the Truth, and gathered you into the good order of the gospel, to meet together to manage the affairs thereof, to take heed that ye have a single eye to the Lord, to do the Lord's business in the leadings of his Spirit, which is but one, and brings all that are given up to be governed by it, to be of one mind and heart, at least in the general purpose and service of those meetings.

"Although, through the diversity of exercises and the several degrees of growth among the brethren, every one may not see or understand alike in every matter, at the first propounding of it, yet this makes no breach of the unity, nor hinders brotherly kindness, but puts you often upon an exercise and an inward travailing to feel the pure peaceable wisdom, that is from above, among you; and every one's ear is open to it, in whomsoever it speaks, and thereby a sense of life is given in the meeting, to which all that are of a simple and tender mind join and agree.

"But if any among you should be contrary-minded in the management of some outward affair, relating to the Truth, this doth not break the unity that ye have in Christ, nor should it weaken brotherly love. So long as he keeps waiting for an understanding from God, to be gathered into the same sense with you, and walks with you. According to the law of charity, such an one ought to be borne with and cherished; and the supplications of your souls will go up to God for him, that God may reveal it to him, if it be his will, that so no difference may be in understanding, so far as is necessary for the good of the church, no more than there is in matters of faith and obedience to God.

"For, my friends, it is not of absolute necessity that every member of the church should have the same measure of understanding in all things; for then, where were the duty of the strong bearing with the weak? Where were the brother of low degree? Where would be any submitting to them that are set over others in the Lord? which all tend to preserving unity in the church, notwithstanding the different measure, and different growths of the members thereof.

"For, as the spirits of the prophets are subject to the prophets, so are the spirits of all that are kept in a true subjection to the spirit of life in themselves, kept in the same subjection to the sense of life given by the same spirit in the church. By this means we come to know one Master, even Christ, and have no room for other masters in the matter of our obedience to God.

"While every one keeps in this true subjection, the sweet concord is known, and the oil is not only upon Aaron's head, but it reacheth the skirts of his garment also; and things are kept sweet and savoury, and ye love one another from the greatest to the least in sincerity, and without dissimulation.

"This love excludes all whispering of evil things; all backbiting, talebearing, grudging and murmuring, and keeps Friends' minds clean one toward another, waiting for every opportunity to do each other good, and to preserve each other's reputation, and their hearts are comforted at the sight of one another. In all their affairs, both relating to the church and to the world, they will keep watchful over their own spirits, and keep in the Lord's power over that nature in themselves that would be apt to take offence or construe any word or action to a worse sense than the simplicity thereof, or the intention of the other concerned, will allow of.

"And whereas it may often fall out that among a great many, some may have a different apprehension from the rest of their brethren, especially in outward or temporal things, there ought to be a christian liberty maintained for such to express their sense with a freedom of mind, or else they will go away burdened. If they speak their minds freely, and a friendly and christian conference be admitted thereupon, they may be eased, and oftentimes the different apprehension of such an one comes to be wholly removed, and his understanding opened to see as the rest see.

"For the danger in society doth not lie so much in this, that some few may have a differing apprehension in some things from the general sense; as it doth in this, viz., when such that so differ, suffer themselves to be led out of the bond of charity, and labour to impose their private sense upon the rest of their brethren, and are offended and angry if it be not received; this is the seed of sedition and strife that hath grown up in too many to their own hurt.

"Therefore, my dear friends, beware of it, and seek not to drive a matter on in fierceness, or in anger, nor take offence into your minds at any time, because what seems to be clear to you, is not presently received; but let all things in the church be propounded with an awful reverence of Him, who is the head and life of it; who hath said, 'When two or three are met in my name, I will be in the midst of them.' And so he is, and may be felt by all who keep in his Spirit. But he that followeth his own spirit, sees nothing as he ought to see it." S. CRISP.

Colour of the Eyes.—That the colour of the eyes should affect their strength may seem strange; yet that such is the case needs not at this time of day to be proved; and those whose eyes are brown or dark coloured should be informed that they are weaker and more susceptible of injury, from various causes, than gray or blue eyes. Light blue eyes are *caeteris paribus*, generally the most powerful, and next to those are gray. The lighter the pupil the greater and longer-continued is the degree of tension the eye can sustain.—*Hall's Journal.*

Sincerity is a pure and upright principle, and those who are truly sincere, can bear the test of *light*, and are not afraid of having their principles and practices examined by *it*.

Object of Salt in the Sea.—Professor Chapman, of University College, Toronto, has published an interesting paper on the object of sea water being salt, and after giving his objections to the usually received opinions, he urges the theory that the object is to regulate evaporation. If any temporary cause renders the amount of saline matter in the sea above its numeral value, evaporation goes on more and more slowly. If this value be depreciated by the addition of fresh water in undue excess, the evaporating power is the more and more

increased. He gives the results of various experiments in reference to evaporation on weighed quantities of ordinary rain water, and water holding in solution 2.6 per cent of salt. The excess of loss of the rain water compared with the salt solution was, for the first twenty-four hours, 0.54 per cent; at the close of forty-eight hours, 1.04 per cent; after seventy-two hours, 1.46 per cent, and so on in increasing ratio.

How many hours to work.—The limit of mental work varies not only in various individuals, but according to the nature of the work itself. Johnson assigns eight hours a day as sufficient for study; Sir Walter Scott worked four or five; mathematicians and those who do not tax the imagination much, may and do safely study 10 or 12 hours daily. As a general proposition, it may be stated that those studies which excite the feelings are those which can be least borne. On the other hand the tranquil labours of the mind have a marked tendency to prolong life. "On meurt de Betise" is perfectly true; the unemployed brain, like the unused muscle, decays and perishes quite as soon as the overwrought organ. Bernard in his "Treatise on the Influence of Civilization on Longevity," shows the effect of brain labor of an unexciting kind in those who are protected by an assured income from the inroads of care. He took at random the ages of 152 individuals, one-half of whom were members of the Academy of Sciences the other half of the Academy of Inscriptions and found that the average longevity of these mathematicians and antiquarians was 69 years. Sir Humphrey Davy seems to have had in view those only who have "battled" with life, when he states "that there are few instances in this country of very eminent men reaching to old age. They usually fail, droop, and die before they attain the period naturally marked for the end of human existence; the lives of our Statesmen, warriors, poets, and even philosophers, offer abundant proofs of the truth of this opinion,—whatever burns, consumes —ashes remain!"—Consolations in Travel, p. 171. No one who had the happiness of knowing the extraordinary man will doubt an instant whence these suggestions sprang, and to whom they most eminently applied. Scott always asserted that Davy would have been a great poet had he not chosen to be a great philosopher. The excitement and its consequent effect on the frame must have been excessive in one of such impassioned imagination as Davy, at the moment when the truths which have laid the foundation of modern Chemistry were dawning on him. Even the calm and tranquil intellect of Newton, could not bear the blaze of light of his own approaching discoveries; as, prostrated by its effulgence, he gave over his calculation to a friendly hand to finish.—*London Quarterly Review, Jan.* 1855, *p.* 47.

THE FRIEND.

SEVENTH MONTH 7, 1855.

We continue our account of the proceedings of London Yearly Meeting, abridging from the "British Friend."

LONDON YEARLY MEETING.

(Continued from page 336.)

Second-day Morning, Fifth month 28th.—The attendance this morning was large, and the feeling truly solemn. Several Friends were engaged in brief religious communication, mostly in Scripture language, and one in supplication. The reading of the answers to the queries then proceeded in the order of the Quarterly Meetings, a few slight deviations from ordinary practice being made to economize time. When the meeting adjourned about half past one, up to Kent inclusive was attained. * * * *

A testimony from the Monthly Meeting of Newcastle, in behalf of Rachel Priestman, and a minute from the Monthly Meeting of Shaftesbury and Sherborne, for Hannah Hatcher, widow of Edmund Hatcher, of Marnhull, and formerly of Bristol, were read. * * * *

A minute from Cumberland and Northumberland, relating to the late Lydia Ann Barclay, was produced, but the reading of it was deferred until another document for the same should come on in regular order.

Afternoon.—Met at four, and after going on with the answers as far as Norfolk, Cambridge, and Huntingdon inclusive, adjourned at seven, until ten to-morrow.

At this sitting there was considerably more of explanation and remark made relative to the answers; and the reading of a minute from Kingston Monthly Meeting, respecting Charles Fryer, formerly of Rastrick, in Yorkshire, and late superintendent of Croydon School, with a testimony from Norwich Monthly Meeting, in behalf of our much-loved and honoured friend, William Forster, and also a minute of Newberry Monthly Meeting in America, respecting him, together with the observations which followed, occupied a large portion of the time. * * * *

Adjourned about seven.

Third-day, Fifth month, 29th.—A few words in the line of the ministry were uttered by a Friend before the opening minute was read. Read the answers from Suffolk, and overtook the remainder at this sitting. After the answers from Scotland had been read, a minute from Pardshaw Monthly meeting, and a testimony from Aberdeen Monthly Meeting, respecting Lydia Ann Barclay, were produced. The reading of this testimony excited a feeling of tenderness in many minds, and a number of Friends expressed their concurrence in what was stated respecting the deceased, as well as their own individual estimate of her character, and of her self-denying and consistent example.

The report from the Meeting of Ministers and Elders stated that, with one exception as to love and unity, and another case in which the words "a good degree of unity" were used, this body was "preserved in love and unity one with another, endeavouring in harmony to promote the advancement and spreading of the truth." * * *

Third-day Afternoon.—The state of Society, as represented in the reports from the Quarterly Meetings, occupied the whole of the sitting, which extended ever three hours. * * *

Intimation as to the holding of meetings for Divine worship to-morrow morning was then given; the large committee was instructed to meet on the rising of the meeting, and an adjournment to four to-morrow afternoon agreed to.

Fourth-day Afternoon.—The Yearly Meeting assembled at four, when a Friend uttered some brief and weighty counsel before the commencement of the business.

It being understood that at this sitting further opportunity for remark on the state of the Society would be given, a good many friends relieved themselves of that which had pressed upon their minds. * * * * * * *

A proposition was brough in from Durham Quarterly Meeting, and another from Yorkshire, relative to a change in the mode of presentations for marriage, that the personal appearance of women Friends should be dispensed with, and a duly attested certificate of her consent be held sufficient evidence on the part of a man Frier the regularity of his proceedings; his appears personally, at his own meeting, to be continue heretofore; and where the parties are of diffe Monthly Meetings, a certificate of the man's ing presented his intention, and the ordi course adopted in such cases having been att ed to, was, in like manner, to be held suffic for him; the alterations in the marriage act regards due publicity, being now considere answering every purpose in that respect. parties are still, however, to appear at the cele tion of the marriage, at a meeting for worship at present.

These propositions, it appeared, had origina almost simultaneously; and had Durham Frie known of the intention on the part of Yorksh they would have withheld any proposition fro that Quarterly Meeting. The leading reasons signed for the change were—the unnecessary posure and trial of female modesty consequent the present practice of presenting marriages, well as the inconvenience and expense to n Friends of travelling more than once a great d tance where the parties were of different meetin The propositions were received with great appro tion; and, to save time, it was pretty soon c cluded to refer them to the large committee.

The minute of last year relative to lay imp priate tithe rent-charge having been read, the came from the Meeting for Sufferings a repo detailing the conclusion to which the conferen that had been held on the subject had come, lately given in our columns, that there should b relaxation of the rules on this head in the *Bo of Discipline*, of date 1703, 1706, and 1796, a that where lay impropriate tithe, or impropri tithe rent-charge, was not applicable to ecclesi tical purposes, Friends so paying these deman were not to be held as infringing the disciplin nor liable to dealing in consequence. A consi erable time was spent on this subject, and a goo deal of diversity of sentiment was manifested, b it was ultimately concluded to receive and ado the report, to afford time for the committee the epistle from the larger body in Ohio to mee

Fifth-day Morning, Fifth month, 31st.—Th minute of last year, on the geographical bound ries of the Quarterly Meetings, was that whic first claimed attention. * * *

A minute was brought in from the Meeting f Sufferings, relative to Friends from America tr velling on religious service in this country, pr posing that on their arrival at Liverpool the should, as early as convenient, repair to Londo have their certificates verified by the Meeting f Sufferings, have the opportunity of attending th Morning Meeting, and put themselves under th care of that body for advice and guidance in re ference to their movements in the prosecution their service. Some provision of this kind ha been felt necessary, as, owing to Friends fro America being very much unacquainted wit the geography of the country, and there being a Liverpool no organized body to whom they coul apply for advice as to suitable companions, &c from which cause, it was believed, travellin Friends had not only themselves sufferd, but th cause of truth also.

This subject occupied a large share of the atten tion of the meeting, and at first there seeme rather a repugnance to entertain the proposition There was a feeling of jealousy in many minds lest this placing of American ministers under th care of the Morning Meeting, was like setting up an ecclesiastical body, whose rule might lead to very undesirable state of things in the Society, and was taking the business hitherto managed by

on Meeting for Sufferings, out of their hands
without good and sufficient reasons. By explana-
tions, however, which were given, it appeared that
the proposal had rather been prompted by Friends
in the country, than introduced by the Meeting
for Sufferings. The proposition was therefore at
length agreed to.

The adjourned at one to five. * * *

At Five o'clock.—Selected minutes of the
Meeting for Sufferings were read. First that re-
lating to church-rates, on which it did not appear
that the meeting, in its representative capacity,
could do more at present. * * * *

The attention of the meeting was next turned
to the subject of burial-grounds; and a consider-
able expression of opinion was given upon it.
There was rather, at first, a disposition apparent
to call in question the wisdom of the Meeting
for Sufferings, in sending down to the country the
late cautionary minute on this matter. It was
held to be illiberal in spirit, inasmuch as there were
many public cemeteries, in which Friends might
be interred along with others, without any viola-
tion of our testimony regarding the burial of the
dead; It was even more calculated to promote an
improved practice in the public herein, than was
shall likely to be the case where Friends buried
in separate places by themselves; it savoured of
sectarian narrowness, &c., and instances were ad-
duced, where Friends having had interments in
public cemeteries, our simple mode of burial had
been much commended, and a salutary impression
been made on the minds of spectators.

On the other hand, there were instances advert-
ed to of deviation from the simple practice of
Friends, which had been very painful to many.
There was, besides, the danger of temptation to
imitate the modes commonly in use, by resorting
to such places for burial where monuments, &c.,
were so common, so that, on the whole, it was
deemed the best, and safest, and most consistent
course, for Friends to keep to their own burial-
grounds. The subject was interesting, and it was
thus solidly disposed of.

The minute of the Meeting for Sufferings, de-
tailing its proceedings in the preparation of the
"Appeal" to our fellow-countrymen on the war,
engaged considerable attention. * * * *

Sixth-day Morning, Sixth Month 1st.—The
Clerk, having read the opening minute, offered a
few weighty observations on the sense he had
of the value of our privileges as a religious
body. * * * *

Then came the report from the committee on
the subject of the divisions in Ohio, with a state-
ment which they submitted for the consideration
and adoption of the meeting. This document was
of considerable length, narrating the manner in
which the meeting had dealt with the various com-
munications which had been received from Ohio,
already related in previous columns, adverting
to the course formerly adopted by this Yearly
Meeting in regard to previous separations among
Friends on the American continent, particularly
with respect to that of New England; and allud-
ing to the recent visit of an individual from that
place to this country, (John Wilbur,) though not
naming him, which had been reported to the meet-
ing last year; expressed the deep sorrow which
Friends here had been affected with on hearing of
the troubled state of Friends in Ohio in former
years, but particularly since the recent separation
there; declared our anxious solicitude that they
might be led to a harmonious union; asserted our
appreciation of, and our adherence to, the doc-
trines of Christianity in all their fulness, as un-
folded in Holy Scripture, and also as the same
were held by Friends from the rise of the Society,
and by the faithful among us, unto our own time;
concluding in terms of deep fervour and so-
lemnity.

The reading and consideration of the above statement occupied upwards of four hours. There was manifested the most anxious care on all hands to have the wording of it such as, while it should convey the exercise of the meeting, should yet avoid the possibility of giving offence to our American Friends.† Great condescension marked the discussion throughout; and while there were a number who were still unchanged in sentiment, that the safer course for the meeting to have adopted would have been to stand still, and receive neither epistle from Ohio at present, there were others who, after having heard the document, testified their unity with it, though formerly opposed to the conclusion of the meeting. It is to be accompanied by the declaration of Christian doctrine, put forth by this Yearly Meeting in the General Epistles of 1829 and 1830; to be sent down to the Quarterly and Monthly Meetings in Great Britain; to Friends in Ireland; to Benjamin Hoyle, clerk to the larger body of Friends in Ohio; and to all the Yearly Meetings on the American continent with which we are in correspondence. * * * *

Afternoon.—A proposal being made to continue the committee of twenty-five or more Friends, who prepared the document relating to the troubles in Ohio, the subject occupied some attention. There were a number of Friends in favour of it, but some others spoke against it, and some of them somewhat severely, as an unnecessary multiplying of committees, and because it would be like taking the business of the Society out of the hands of the Meeting for Sufferings. Disapprobation, however, was expressed of the use of everything like hard language in the matter, the proposal being quite a reasonable one. It was ultimately concluded best to discontinue the committee.

Read minute from the large committee, on the marriage propositions from Durham and Yorkshire. Notwithstanding that this subject had obtained pretty close attention on the part of the committee, a large amount of expression followed the bringing in of the minute. It recommended the adoption of the alteration in regard to presentations, viz., that an attested certificate of the woman's consent should be accepted in all cases, &c. The meeting agreed to receive the minute, thereby admitting the principle; but as it will require some alteration in the existing regulations on marriages, it was concluded to remit the subject to the Meeting for Sufferings, to prepare the necessary changes in the rules, and submit them to next Yearly Meeting; in the meantime, it being clearly understood that the existing rules are to be followed in every case. * * *

Read selected minutes of the Meetings for Sufferings. First came the report of the Continental Committee, which, while it contained but little evidence of any change in the circumstances of Friends in those parts, yet related some interesting particulars. Property to some amount had been distrained for refusing to comply with military demands; and a young man in Prussia, who had originally been brought up a Roman Catholic, had been removed from his home, and consigned to a prison at some distance, where he was exposed to exceedingly harsh treatment, for refusing to bear arms. Friends of Minden, &c., had memorialized the government on his behalf, but without success. In France, five persons had been received into membership, by the Two Months' Meeting of Congenies. Their school was still kept up, but they had sustained a severe loss in the removal of Christine Paradon, who had so satisfactorily been engaged in promoting its success.

Respecting Friends in Norway, there appeared to be some increase of their number, nine persons having been received into membership with them. It was also stated, that at their Two Months' Meeting, held since the foregoing account had been received, eight individuals had applied for admission. The epistle from the Meeting for Sufferings, with the reply from Friends in Norway, were also read. * * * *

In reply to a question, it was stated that there were Meetings for Discipline established at Hobart Town, Sydney, Adelaide, and Melbourne; the number [of members] amounted in all to about 420, mostly from this country, one-third of the whole being from Ireland. * * * *

Read letter from the Meeting for Sufferings to that of Philadelphia, with their reply; also a subsequent epistle, received within a few days, all of which were interesting.

The proceedings of the Meeting for Sufferings relative to lay impropriate tithe rent charge, occupied a large portion of the sitting. It was agreed, in terms of the conclusion of the Conference, to relax the regulations of 1703, 1706, and 1796, in the Rules of Discipline, on this subject; and a minute therein is to go down to our Quarterly and Monthly Meetings. * * * *

Yearly Meeting, at twelve.—Reference was made by a Friend, in a few words, to a statement that had gone forth, that there was no sympathy felt for the smaller body of Friends in New England, and the document on the Ohio troubles contained something of the same kind; now he could not doubt there were many in that assembly who *did* sympathize with those Friends, and he trusted they would continue to do so; and he would remind us all that we had sympathized with some who had gone much farther wrong, than could be said of those in New England. Read and passed the Epistles to Ireland, Philadelphia, New York, New England, North Carolina, and Indiana. A brief but weighty communication from a minister-ing Friend, "What I say unto you, I say unto all, watch," &c., closed the sitting. Adjourned after two.

Yearly Meeting had been adjourned to six, but so long were the Committee on Epistles over their business, that nearly half an hour elapsed before the meeting gathered. Heard first the minute prepared by the clerks to accompany the statement respecting Ohio, &c., to go down to the Quarterly and Monthly Meetings, and approved the same. * * * *

Next came the Epistles for Baltimore and Ohio, also a postscript to that for New York regarding the late Mahlon Day. * * * *

The reading of the General Epistle, as usual, closed the business of the meeting. It is a remarkably able embodiment of the exercise of the meeting for the welfare of the church. * * *

† This document will be given in our next number.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 16th ult.

The War.—Since the capture of some of the Russian outworks on the 7th, as stated in last week's arrival, no further operations of moment are mentioned in the despatches from Sebastopol. In the sanguinary conflict of that day, about 5000 men were killed and wounded on both sides. In Prince Gortschakoff's despatch to St. Petersburg, dated on the 8th, he acknowledges the loss of the redoubts alluded to, after a desperate resistance. He says, "Our soldiers fought admirably, in proof of which I may state that the enemy's loss exceeds ours, and we have taken 275 men and seven officers prisoners, as well as two French cannon." On the 9th, the Russian General writes, "The cannon-

ade continues against the bastions, Kornilloff and No. 3. The enemy has asked for an armistice, in order that he may bury his dead. His loss on the 7th exceeded 4000 men." Pelissier's latest despatches state that "the combat of the 7th was more advantageous to us than I at first announced. It placed in our hands 502 prisoners, of whom 20 are officers, and 73 pieces of cannon." On the 11th he says, "We are consolidating ourselves in the new works. We have been able to fire with the Russian mortars on their ships, which have gone still further up. We are preparing new batteries." Simultaneously, with the French attack on the Mamelon, the English stormed and took the Russian rifle works in the quarries. In getting possession of them, the English suffered a loss of 161 men, including 11 officers, killed; 510, wounded, and 15, missing—total, 686. The English accounts state that a great number of interments are daily made in the burial fields, north of Sebastopol, whence it is inferred, that there must be much sickness among the garrison. The London Times thinks that this obstinately defended place cannot possibly hold out much longer. A land expedition was fitting out against Perekop. The allied fleet in the sea of Azoff continued to inflict serious injury on the Russians. On the 3d, 5th, and 6th ult., it effected the destruction of the public buildings, and magazines of provisions at Taganrok, Marioupol and Gheisk.

RUSSIA.—An Imperial manifesto issued on the 2d ult., ordains that in case of the decease of the present Emperor, the Grand Duke Constantine shall be regent during the minority of the Crown Prince. An ukase of the Emperor annuls all exceptions, which have been made in the recruiting in towns and villages. Persons, up to the age of 37, are liable to serve, and even the only son of a family. A Russian Envoy with a numerous suite, had arrived at Tabriz, to notify to the Shah of Persia the accession of Alexander II., and to persuade the Shah to keep steady to his neutral policy. On the 8th, the allied fleet consisting of sixteen line of battle ships, was anchored close to Cronstadt, and formed a line across the bay, from shore to shore. Twelve merchant vessels have been taken by the squadron, and sent to England.

GREAT BRITAIN.—In Parliament, on the 15th, the House adopted a resolution to the effect, that a Congress of Nations be invited to settle a universal currency. The decimal system is proposed. The question of administrative reform was under discussion. The weather for ten days had been very fine, and the reports of the growing crops were favourable.

Liverpool Market.—White Wheat, 12*s.* per 70 lb.; flour, from 40*s.* to 45*s.* a bbl. The cotton market had been quiet during the week, at former quotations.

London Money Market.—The Bank had reduced its rate of discount from 4 to 3½ per cent., and discount houses have reduced their rates on call from 3 to 2¾. The bullion in the Bank shows a small decrease. Consols, 91¾.

SOUTH AMERICA.—*The Chilian Republic*, continues prosperous and advancing in the arts of peace and material civilization. Wood is very scarce in the northern parts of Chili, but there are mines of excellent coal, which of late have been worked profitably. During the Second month last, 15,000 tons of coal were exported from the Bay of Aranco; it cost $5.50 per ton. The British mail steamers now obtain their supply there.

Argentine Confederation.—Dates from Rosario are to Fourth mo. 3. Perfect tranquillity prevailed through out the country. General Caceres and his party, who invaded the State of Corientes, had surrendered and been sent to Parana.

BOLIVIA.—Two important decrees have been issued by the Government. The first ordering the purchase of Cinchona bark, by the bank established for that purpose, at the rate of 500 quintals per month. Eighteen thousand quintals are said to exist in deposit. Some of the holders will, therefore, have to wait three years before their bark can be purchased. The other decree orders the confiscation of the property of all political offenders.

PERU.—The Minister from Ecuador has taken his passports, in consequence of the Peruvian Government refusing to deny General Flores an asylum in that country, so that the friendly relations between the two countries are at present interrupted.

NEW GRANADA.—The law on religious liberty received the executive sanction on the 14th of Fifth mo. It decrees that there is no state religion, and that all public authority shall refrain from interfering in things concerning the faith and worship of the people, provided the public peace or morals be not disregarded. Churches and communions of any denomination may be incorporated by law, and cemeteries other than Catholics may be instituted.

MEXICO.—Mexican dates to Sixth mo. 19th, have been received. The city of Mexico papers announce that the government troops had defeated several small bands of the Revolutionists, and also that Santa Anna had returned to the capital. Alvarez had defeated the government troops near the Mescalto, with a loss of 500 in killed and wounded. He had also taken Sonora, and was investing Morelia. All communication between San Luis Potosi and Monterey had been prohibited, and all the troops that could be spared, had been ordered into Neuva Leon for the recapture of Monterey from the insurgents. The Mexican Boundary Commission, on the 25th of Fourth mo., was in camp, twenty miles below Fort Yuma, and on that day the initial point, on the Colorado, of the boundary line between the United States and Mexico as agreed upon by the two Commissioners, was marked. Its position is 32 deg., 29 min., 44 sec., north latitude, and long. 114 deg., 48 min., 44 sec., west from Greenwich.

UNITED STATES. — *Immigration.* — During eleven years ending Twelfth mo. 31, 1854, there arrived in the United States by sea, from foreign countries, 3,174,395 persons, of whom about 60 per cent. were males. In the year 1854, the immigration consisted of 284,887 males and 175,587 females; total, 460,474.

California.—On the 25th ult., the steamship George Law arrived at New York, with California dates to the 2d inst. and $1,052,287 in gold. On the 17th of Fifth month, the "Gambling Law" went into operation. It is very stringent in its provisions, and is expected to break up completely those iniquitous establishments, which have hitherto thriven on the vices of the community. In San Francisco, 2075 children were attending the public schools. The markets were filled with delicious fruit the product of the gardens around the city. The great nugget of gold which has been on exhibition at the bank of James King, has been melted down, and nets the owner $8829. At Sacramento, on the 1st ult., the thermometer stood at 96° at noon.

New Orleans.—The Board of Health reports only 48 deaths from Cholera, during the week ending Sixth mo. 25th. Many negroes have died with cholera at some of the plantations in Louisiana.

Texas.—Galveston dates to the 19th, report a general rise in the rivers of Texas. Cotton was coming forward rapidly.

An Earthquake.—In the city of Baltimore and vicinity, much alarm was occasioned by a tremulous motion of the earth, early in the morning of the 28th ult. At York, Pa., it is said, the shock was truly startling, rousing the whole population, and creating such an excitement that few were willing to retire again for the night. It occurred about eighteen minutes after 12 o'clock.

Philadelphia.—Mortality last week, 187. The average temperature of the Sixth month, at 12 o'clock, noon, from 1824 to 1855, inclusive, was as follows, all the calculations being registered from the same thermometer by McAllister & Brother.

1824	84.3	1832	80.3	1840	80.9	1848	83.4
1825	84.6	1833	77.0	1841	83.8	1849	84.4
1826	82.5	1834	81.4	1842	80.5	1850	83.9
1827	80.2	1835	82.5	1843	82.9	1851	81.7
1828	87.0	1836	73.5	1844	82.2	1852	80.4
1829	80.1	1837	81.2	1845	83.6	1853	83.9
1830	80.3	1838	84.7	1846	80.7	1854	81.3
1831	85.6	1839	79.3	1847	80.6	1855	78.9

Average for the whole period, 81.8.

Miscellaneous.—Protection to the Slave.—In New Orleans, La., lately, a man named Hunter was sentenced to pay a fine of $1000, undergo an imprisonment of six months, and forfeit certain slaves, whom he illegally sold in such a manner as to separate the mother from her children, contrary to the laws of Louisiana.

Niagara Falls.—A man went over the American Falls on the morning of the 23d. He was in the act of landing a skiff just above the rapids, when he was carried away by the current. As he neared the fatal precipice, he appeared to be paralyzed with terror, and unable to make even an effort for his escape.

Comparative Mortality in Europe.—The mortality in the different countries of Europe, is as follows:—In England, 23 in 1000; in Denmark, the same; in Holland, 24 in 1000; in France 23.5 in 1000; in Sweden, 24 in 1000; in Prussia, 28 in 1000; in Sardinia, 30 in 1000; in Austria, 31 in 1000, and in Russia, 36 in 1000.

Watch Manufactory.—Watches equal to the best imported, are made in the town of Waltham, Mass. The company is doing a large business, and it is supposed that Waltham watches will soon be as famous as the best from London or Paris.

Intemperance in the Crimea.—Letters from the seat of war give frightful accounts of the prevailing drunkenness, which co-operates with the Russian arms in mowing the ranks of the British army.

Gold.—The production of California gold the present year is likely to reach $70,000,000. That of Australia the same period is estimated at $20,000,000. The product of California yields about $400,000 of silver per annum in assay.

A New Comet.—Le Verrier, the French astronomer, has announced the discovery, at Paris on the 4th inst., of a new comet.

DIED, at the residence of her son-in-law Jesse Baker, near Barnesville, Ohio, on the 15th of Fifth month, RACHEL PATTON, wife of John Patton, of Pennsville, in the 57th year of her age.

——, at her residence, in Milton, Wayne Co., Indiana, on the 9th of Sixth month, 1855, after a protracted illness, MARY ROBERTS, formerly of Philadelphia, in the 70th year of her age. Her sufferings were great, but they were borne with exemplary patience and resignation.

——, at her residence, in Solebury, Bucks Co., on the 16th of Sixth month, 1855, REBECCA MAGILL, in the 83rd year of her age; a member of Buckingham Monthly Meeting.

——, at Greenwich, N. J., on the 1st ult., JOSEPH SHEPPARD, a member and elder of Greenwich Monthly Meeting, in the eighty-ninth year of his age.

——, on the 2d ult., at his residence, in Middletown, Bucks Co., Pa., JAMES MOON, in the 74th year of his age; a valuable elder and overseer of Falls Monthly Meeting of Friends. For a number of years he had been constrained to live under the crucifying power of the cross of Christ, and a living concern, to know his day's work keeping pace with the day. Though not given much expression of his religious feelings, it was nevertheless evident to those around him, that for a length of time he was mostly occupied in deep introversion of spirit, and with the contemplation of heaven and heavenly things. At times during his long and painful illness, he expressed a desire to bear in patience the portion of suffering allotted him. A short time before his close, he remarked, "I have spent my time so comfortably through life; I have often thought I should have suffering, so that it is not unlooked for;" while under close proving and poverty of spirit, he said, "The company John saw clothed in white, came out of great tribulation. I have need to keep upon the watch." He felt a lively interest in the welfare of our religious Society, believing that a closer seeking after, and walking agreeably to the manifestations of Truth, were the main things needed in the present day; at one time saying, "I believe the society is not all lost, but the fruits remain in time gathered together, however widely separated. Those who should come together, will be brought together; and it would be well for each one of us to settle down and find out our individual duties. It grieved him much to hear the faults of other persons brought into view and dwelt upon; and he expressed his belief, that "if we would individually become acquainted with our own failings, we should have but little time to find fault with others." As his close drew near, his articulation became difficult; but that which was gathered gave a comfortable assurance, that praise was the theme of his departing spirit. At times saying, "O Lord, I love thee." "Praise the Lord," &c. He closed the useful life of this dear Friend, who, it is believed, had been made a pillar in the house of the Lord, to go no more out.

——, suddenly, the 16th ult., JACOB ROBERTS, an esteemed member and overseer of Evesham Monthly Meeting of Friends, New Jersey, in the 57th year of his age. This dear Friend was of circumspect life and conversation, and of later days seemed increasingly devoted to the blessed cause of Truth; while he felt unable *do* or *say* much for it, his being a very humble opinion of his own abilities, he was willing, according to his measure, to suffer for it. Though he was called away as a moment, there is reason to believe that, through the mercy of God in Christ Jesus, his end was peace. In scrutable, indeed, are the ways of Omnipotence, many this solemn event incite us to attend to the exhortation which it holds forth. "Be ye, therefore, ready also, for in such an hour as ye think not the Son of man cometh."

——, on the 29th ult., at the residence of her father in New Baltimore, Green Co., N. York, LYDIA, daughter of Lewis and Berzina Bedell, aged 14 years; a member of Coeymans Monthly Meeting.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, SEVENTH MONTH 14, 1855. NO. 44.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any rt of the United States, for three months, if paid in vance, six and a-half cents.

For "The Friend."

The Indians.

Cœur D'Alenes.

These Indians are about 500 in number. They e on the Cœur d'Alene river, near 30 miles from ie mountains and some 10 miles above the lake. hey have a fine building for public worship, iilt, in part, by their own labour, a large barn, a)rse-mill for flour, &c., and good arrangements r live stock. They have made considerable pro- ess in agriculture, have learned the rudiments f christian doctrine, have abandoned polygamy, id, in general, are greatly improved in morals.

One of these buildings is supported by timber it from larch trees 5 feet in diameter. They ive under tillage 200 acres, and 2000 to 3000 res of prairie. They own 100 pigs, 8 yokes of xen, 20 cows, and a fair proportion of horses and ules. They do the work of the farm, are expert ood cutters, and it is mentioned as something nusual for Indians, that they milk their cows ith both hands. They have a beautiful rolling ountry, interspersed with small prairies. They re in a region of 3000 to 4000 square miles, all f which is believed to be adapted to grazing and ulture. When the Governor visited them, they ere busy harvesting. On their return from the eld, he said to them: "I am glad to see you, nd to find that you are under such good direction. have come four times as far as you go to hunt uffalo, and have come with directions from the reat Father to see you, to talk with you, and to o all I can for your welfare. I see cultivated elds, a church, horses, cattle, and the fruits of he soil—the works of your own hands. The reat Father will be delighted to hear this, and ill certainly assist you; go on, and every family ill have a house and a patch of ground, and every ne will be well clothed. I have had talks with he Blackfeet, who promise to make peace with ll the Indian tribes. Listen to the good Father nd to the good brothers who labour for your good." his is a Roman Catholic station.

The Nez Perces, Cayuse, and Pelouse.

The Nez Perces or La-ap-tine, are on both sides f the Kooskooskie and north fork of Snake river, n Oregon and Washington territories. There are 880 of them. Some of them were seen on the 3d of 12th mo., by Lieut. Mullan, in the valley f the Bitter Root river. They had many beasts, nostly laden with meat and furs. The Lieut. says f this company: "I must say, that I have never een a more miserable looking set of creatures. ome were blind, some decrepit, some had seen four score and some five score years. Dried up and withered creatures formed the top pack of animals already loaded with two bales of dried meat. The exultations of meeting with the white man were loud and frequent. From every small band we met, would be heard 'tinctons,' 'tinctons,' 'friends,' friends.'

On the same day he met another company. He says "they were anxious and curious to know our business. During the night we were visited by numbers, who sat up talking till near midnight." They were returning from the buffalo hunt, and had with them several hundred horses.

The Cayuse are south of, and between the Nez Perces and Wallah-wallahs, almost entirely in Oregon. Though dreaded for their warlike spirit, they are only 126 in number. Of this people and the Pelouse, the Gov. speaks by report. He says: "Lieut. Saxton, who proceeded with a party from the Pacific coast to Fort Owen, gives me some interesting notices of the Nez Perces, Cayuse, and Pelouse Indians. He says: 'We were met by a delegation of Cayuse braves, sent by the chief of the Nez Perces to ascertain our object.' They had been told it was warlike. We answered, 'that we had been sent on a mission of peace to all the Indian tribes on both sides of the mountains, and asked them to invite their chief to come to our camp, and smoke the pipe of peace with us.' In the evening the old chief came, smoked the pipe, promised perpetual friendship, and said he was glad our hearts were good. Afterwards, we were visited by a delegation of 50 Pelouse and Nez Perces warriors, who came in full costume, to hold a grand *war talk*. They seated themselves in a circle, the head chief in the centre, and the braves and warriors, according to rank, on either side. A few paces in the rear of the circle stood 6 Indians, dressed in very fantastic style, supposed to be medicine men.

After completing their arrangements, they sent me word that they wished to talk. I answered that we were all then too much tired, but that after we had eaten and slept, we should be in a better condition to hold a council. They waited patiently until we were ready; then, after shaking hands all round, the chief lighted his medicine pipe, and, smoking a few whiffs himself, passed it to each member of the council, in the direction of the sun. The medicine pipe is a sacred pledge of friendship among all the north-western tribes. The chief then enquired what the whites wanted, and where they were going. The usual reply was made, and they were requested to be ready with men and canoes, to help in crossing the river, to bring in the stray horses, and to be ready to give Gov. Stevens aid should he require any. A fine young Indian made an eloquent speech, in which he told that long ago, his father was chief, and owned all this country. This tribe were then far more rich, numerous, and powerful than now. His father extended the hand of friendship to the first white man who was seen in that country, and they must follow his example.

A consultation was then held by them; and when it was over, the old chief informed me that my talk was good. I gave them a few presents of tobacco, beads, &c. A specimen of our skill in rapid firing, created additional *respect* for us. Lieut. Saxton did not take the good Onas for his model. The respect and love with which *he* inspired the Indians, are things with which these fair-spoken gentlemen of the sword and revolver, have no experience. He proceeds: 'As our guide, Antoine, gave the war-whoop at day light, 14 canoes, manned by as many stout Indians, left the opposite shore, and came across for our baggage. By 10 o'clock they had transported men and *material* over the swift and rocky stream.'

The Spokanes.

The Spo-kih-nish, or Spokanes, are upon the river of that name, and are estimated to be 600 in number. "The men," it is said, "are generally spare, and soon become withered. Their principal chief is Spokane Garry, about 42 years old, very intelligent, and speaks English fluently. He bears an excellent character. His lodge was neat and comfortable, and his family were dressed in the costume of the whites, which in fact now prevails. He offered us the hospitality of his house with much cordiality, a cup of tea or coffee and bread. There was formerly at his village a Hudson's Bay Fort. The Spokanes being Protestants, and the Cœur d'Alenes, Catholics, the latter taunt them as heretics, whose faith is worthless. Garry narrated the evils arising from this state of feeling, with a forbearance and christian spirit of toleration, which would have honoured any one. The high plain which extends from the Spokane river to Lewis's fork of the Columbia, and which belongs chiefly to them and the Nez Perces, though bleak and exposed to violent winds, affords grazing and an abundance of the roots used by them for food, while the river supplies salmon.

"Of large game there is but little. The buffalo, it would seem, in former times penetrated, at least occasionally, thus far to the westward, though now they never come through the northern passes. The last bull they say, was killed some 25 years ago in the Grand Cordee.

"Spokane Garry mentioned a singular superstition of these Indians respecting lake Chesh-chesh-she-lux-um, between Snake and Spokane rivers. It never freezes, and is surrounded by high precipitous rocks, so that it is impossible to descend to the water. They believe that it is inhabited by all sorts of game—elk, deer, and particularly the buffalo. They pretend to have distinctly seen them beneath the waters. The origin of this superstition may be accounted for:—There is a certain spot on the lake which the Indians never pass, fearing that the Great Spirit would raise a commotion in the waters, and cause them to be swallowed up. Two Indian hunters had killed a deer near this spot, and in dragging it home, were compelled to pass this dreaded point, or make a long circuit. One Indian, in spite of the entreaties of the other, declared his intention of passing it. Approaching it, he found a precipitous cliff, and beneath it, he thought he beheld in the open water, figures of men and animals. Looking up, he saw similar figures on the face of the rocks. These were reflected from below. These figures were in bright colours, and had been painted by an unknown people." The Pelouse are about 500 in number.

For "The Friend."

The following epistle placed as a preface to the collection of George Fox's doctrinal essays, contains a strong testimony to his extraordinary character as a sound Christian, a father and pillar in the church of Christ, given by his intimate friends and co-labourers in the gospel. It says, "The books and treatises in the following collection being perused, we find the doctrine of our blessed Lord and Saviour Jesus Christ, and those matters essential to salvation, and true Christianity, so plainly asserted, and fully demonstrated, according to Holy Scripture testimony, as may sufficiently obviate our former and present adversaries' objections, and refute their calumnies and aspersions to the contrary. And though the most eminent reformers and martyrs have been most envied and misrepresented by their adversaries in all ages, as this true servant and minister of Christ was in his day; and since renewed, his name and memory most unjustly defamed by envious spirits; yet the good report and fame, which he, through faith, and blessed effects of his faithful labours, great travels and sufferings, obtained, will outlive the great envy of his and Truth's adversaries. And as he was a true minister and witness for Christ and his kingdom, both in life and doctrine, so he was a plain and true witness against antichrist and his kingdom; and although he gave preference to the Holy Spirit, as *all true spiritual Christians do*, yet his true love to, and sincere esteem of the Holy Scriptures, being given by Divine inspiration, was clearly manifest.

"1st. In his frequent advice to Friends to keep to Scripture language, terms, words, and doctrines, as taught by the Holy Ghost, in matters of faith, religion, controversy and conversation, and not to be imposed upon, and drawn into unscriptural terms, invented by men in their human wisdom.

"2dly. In his great industry in searching the Holy Scriptures, and frequently quoting, reciting, aptly applying and opening the same in his writings. He truly testified, both in his ministry and writings, for Christ Jesus, his power and coming in the flesh and in the Spirit. He was both for the sacred history and mystery of Christ, revealed according to the Holy Scripture testimonies of him, respecting his sufferings without, the work of his power within, and his kingdom and glory, under whose conduct this his minister faithfully warred against the spirit of antichrist, and persecution, and against the mystery of iniquity, mystery Babylon, the false church, the power of darkness, the corruptions of the world, and its deceit and hypocrisy under all professions; and in the Lord's hand and power, was instrumental in turning many to righteousness, and from darkness to light, and from the power of Satan unto God, that they might receive remission of sin, through faith in his dear Son Christ Jesus.

"He gave a thorough stroke in his ministry and writings against the son of perdition, antichrist Babylon, the beast and false prophet, and therefore was the more hated by those, in whom the spirit of enmity and persecution ruled. And we question not but he has his lot and portion with the holy prophets and apostles in heaven; and a share in their rejoicing at the downfall of mystery Babylon, the mother of harlots, and the kingdom of antichrist and Satan. Therefore, rejoice ye heavens, and ye that dwell in them; rejoice over her, thou heaven, and ye holy apostles and prophets, for God hath avenged you upon her; which certainly will be fulfilled at her final downfall. Rev. xii. and xviii.

And this faithful minister and witness of Christ was a man, fearing God, hating covetousness, and eschewing evil, and was a deep sufferer for his testimony to the Truth, when on earth. He died in the favour of God, and rests with him in heaven, with his church triumphant over his persecutors, and the persecuting spirit, which blasphemes against God and his tabernacle, and them that dwell in heaven. Glory to our God, and to the Lamb on the throne forever. Hallelujah. Signed by George Whitehead, and thirteen other Friends, at the Second-day Morning Meeting, 24th of Tenth month, 1705."

An Elephant's Fraternal Feeling and Affection.

While a wagon drawn by several elephants was passing our office recently, the following story was told, which we vouch for as true:

Last season, a menagerie visited the village of Johnstown, Herkimer county. When the cavalcade left town, it passed over a bridge which the road crossed, leaving two elephants to bring up the rear. These were driven to the bridge, but, with the known sagacity of the race, they refused to cross. The water of the creek, which flows through a gorge in the slate formation, presenting at that point banks of precipitous character, and thirty feet in height, was low, and by taking a course across a corn-field a ford could be reached. But the proprietor of the corn-field refused to allow his property to be so used, except on the payment of an exorbitant sum, and this the agent of the menagerie refused to submit to. Accordingly the elephants were again driven to the bridge, and again they refused to attempt the crossing. They would try the structure with their great feet, feel cautiously along the plank with their proboscal fingers, but each time would recoil from making the dangerous experiment.

At last, however, goaded by the sharp iron instrument of the keeper, and accustomed to obedience, they rushed on with a scream half of agony, half of anger. The result showed the prudent prescience of the poor animals to have been correct; the bridge broke and went crashing to the bottom of the gorge, carrying with it both the monstrous beasts. One of them struck upon its tusk and shoulder, breaking the former, and very badly injuring the latter; the other was, strangely enough, unhurt. Now was shown the most singular and remarkable conduct on the part of the brute which had escaped. Its comrade lay there, an extempore bed being provided for its comfort, while no temptation, no stratagem, was sufficient to induce the other to leave, and proceed with the main portion of the caravan, which finally went on, leaving the wounded beast and its companion under the charge of their keeper.

Day after day the suffering creature lay there, rapidly failing, and unable to move. At the end of three weeks, the water in the creek commenced rising, and there was danger it would overflow and drown the disabled elephant. The keeper desired, therefore, to get it up and make it walk as far as a barn near by, where it would be out of danger, and could be better cared for. But it would not stir. He coaxed, wheedled, and scolded, but all to no purpose. At last, enraged, he seized a pitchfork, and was about plunging it into the poor thing's flesh, when the companion wrenched the fork from his hand, broke it in fragments, and flung the pieces from it; then, with eyes glaring, and every evidence of rage in its manner, it stood over its defenceless and wounded friend, as if daring the keeper to approach, which the man was not so green as to do again with cruel purpose.

Thus the injured animal lay there until it died. When satisfied that it could no longer be of service, the other quietly followed the keeper away from the spot, and showed no desire to turn. If this was not reasoning, mingled with affection some men might pattern after, we sho like to know what to call it.—*Buffalo Dem.*

The Lord's Supper.

"And Christ said to the church of Laodic 'Behold, I stand at the door and knock; if man hear my voice, and open the door, I v come in to him, and will sup with him, and with me.' This was the supper that Ch preached to John, and to the church, after he ascended. John had taken the supper of elements of bread and wine in the same night t Christ was betrayed, before Christ was crucifi but now John writes to his church, and tells th of another supper, the marriage supper of Lamb, which is a nearer and more inward supp than taking the elements of bread and wine, remembrance of Christ's death, which Christ g to his disciples before he was crucified; and sa As often as ye eat this bread, and drink this cu do it in remembrance of me, and to show fo his death till he come. But after Christ was ri and ascended, he saith, 'Behold, I stand at door and knock; if any man hear my voice, a open the door,' to wit, of his heart, mind and so by joining to the light, grace and truth of Jes 'I will come in to him and sup with him, and with me.' Is not this the marriage supper of the Lamb? Is not this supper beyond, and a f ther supper, than taking the elements of bre and wine in remembrance of his death, to wit, sup with Christ in his resurrection and ascensio He with them, in their hearts, and they w him? They hear his voice, and so Christ is them; then they are no reprobates. He that ha the Son of God, hath life; for may not reprobat take bread and wine in remembrance of Chris death, and not hear his voice, after his resurre tion and ascension? And can any that do n hear the voice of Christ, nor open the door their hearts to let Christ in, sup with him, a he with them, at the heavenly marriage supper the Lamb, which is the last supper that Chr calls people to, after his resurrection and asce sion? Blessed are they that come to the m riage supper of the Lamb, and sup with him, a he with them."—*Fox's Doctrines.*

For "The Friend.

Benevolence and Courage.

A few days since, as a freight train on t Reading Railroad was passing the Darkwood pon near Fairmount, the conductor, Harrison Pete observed a party of boys in great tribulation, account of one of their number having got beyo his depth, and was in the act of drowning. Wit out stopping an instant to consider the risk inc red, the conductor leaped into the pond from t train, which was going at the rate of twenty mil an hour, and effected the rescue of the drowni boy.

Let us look more at our Saviour, and less at t instruments: Elijah was as well nourished, wh the bread from heaven was brought by a rave as Ishmael, when the spring of water was reveal to him by an angel. Whether, then, we are fed i mediately from God as the Israelites with mann in the wilderness—or by the glorious instrume tality of those who may seem to us as angels— by the base one of those who may seem to us co temptible, let us be content and thankful, if th are but appointed of God, and if it be the bre and water of life they bring.

For "The Friend."

Braving Dangers for the Sake of Freedom.

Our readers will remember the case of Davis, e coloured man, who attempted to escape slavery Savannah, by concealing himself beneath the ards of the steamer Keystone State, but who is detected while the vessel was in the Delaware, d returned to his master. The sufferings endured, d perils braved by the poor fellow on that occa- on, should have excited the sympathy and com- iseration of every generous heart. A late paper ates he recently made another attempt to escape om bondage, by fastening himself under one of e railroad cars at Macon, Geo., where he was scovered by the man who examines the machi- ry of the cars previous to starting. Davis was cured and sent to the individual who claims him his property.

Archæological Discoveries in the Sidon.

A correspondent of the New York Journal of mmerce writes an interesting letter from Beirut, Syria, descriptive of some important archæolo- cal discoveries which have recently been made the ancient city of Sidon; and it is believed at further investigations will reveal to the eyes the searchers monuments and other relics of the st, which, although perhaps not equal in magni- ence to those of Nineveh, will possess greater lue in the history of letters and the disposal of rtain questions of archæology. Sidon is thirty iles south from Beirut, and contains a popula- on of about ten thousand persons. In the win- r of 1853–4, some Mussulmen who were digging r treasures in the old grave-yards of the city, scovered three copper pots, each containing eight ndred pieces of gold. The whole value of the easure was about $12,000. After this discovery, cavations were commenced upon a larger scale, d as it has turned out, with more important re- lts. The correspondent of the Journal of Com- erce says:

"On the 19th of January last, some were dig- ng for more hid treasure in an ancient cemetery the plain of Sidon, called *Mughorat Tubloon*, hen at the depth of about twelve feet below the rface, and near the walls of an ancient edifice, ey uncovered a *sarcophagus*, upon the lid of hich there is a long Phœnician inscription. The l is of a blue black marble, intensely hard, and king a very fine polish. The lid is about eight et long, by four feet wide. The upper end is rought into the figure of a female head and oulders, of almost a giant size. The features e Egyptian, with large, full, almond shaped es, the nose flattened, and lips remarkably thick, d somewhat after the negro mould. The whole untenance is smiling, agreeable, and expressive, yond anything I have ever seen in the disinter- d monuments of Egypt or Nineveh. The head ess resembles that which appears in Egyptian gures, while on each shoulder there is the head some bird—a dove or pigeon—and the bosom covered by what appears to be a sort of cape, ith a deep fringe, as of lace.

"On the lid below the figure head, is the in- ription, consisting of twenty-two long lines, osely written. The letters are in perfect pre- rvation, and can be read with the utmost ease d accuracy, and the whole forms by far the ngest and most perfect inscription yet discovered this most ancient language and character. It ppears to be mainly a genealogical history of the rson buried in the sarcophagus, who, it appears, as a king of Sidon. The names of Baal and shtoreth, the well-known gods of the Sidonians, cur repeatedly in these inscriptions. Some of the words are Hebrew, as *Melek*, king; while the forms of some letters are so much like those of the ancient Greek as at once to indicate the relationship. Letters were *invented* by the Phœnicians. Here we seem to see them dropping from their hands in the first casting. I have a copy of the inscription before me, with the figure head taken with great accuracy by the pen of the young Arab, which could hardly be exceeded by photography or lithography. I wish I could forward it to you to be used in your paper. It was sent to me by a friend in Sidon, and is the more valuable from the fact that, at present, additional copies cannot be taken."

The inscription was not perfectly deciphered at last accounts. Thompson, an American missionary at Sidon, and Dr. Smith, of Beirut, had, however, translated a large part of it with little difficulty, and expected soon to complete their work. In the meantime a controversy had arisen between the English and French Consuls at Beirut respecting the ownership of the sarcophagus. One had made a contract with the owner of the land, by which he was entitled to whatever he should discover in it; and the workmen of the other had discovered the relic within the claim of the first Both were extremely anxious to obtain it at any cost, with the intention of sending it to London or Paris; and for the purpose of preventing any serious trouble, the Turkish Governor of Sidon had closed up the ground, and surrounded it by a guard of soldiers, while the question of ownership was being decided by the Courts.

Thompson informs me that in the process of the diggings, the men opened large and elegant rooms cut out of solid rock, one of which he had entered and examined, and which could be hardly less than thirty feet square by fifteen in height, the ornamental work of which was of the highest finish. As soon as the lawsuit is ended, and the ground opened again, I intend at once to go to Sidon, and obtain by personal examination all the particulars relating to this and other recent discoveries in the place. When a perfect translation of the inscription is made, you may expect to receive it.

From the Journal of George Fox.

"I had not been long in London, before a great weight came upon me, and a sight the Lord gave me of the great bustles and troubles, revolution and change, which soon after came to pass. In the sense whereof, and in the movings of the Spirit of the Lord, I wrote 'A general epistle to Friends, to forewarn them of the approaching storm, that they might all retire to the Lord, in whom safety is;' as follows:

"My dear Friends and Brethren everywhere, who have received the Lord Jesus Christ, and to whom he has given power to become his sons and daughters; in Him ye have life and peace, and in his everlasting kingdom, that is established and cannot be shaken, but is over all the world, and stands in his power, and in righteousness, and joy in the Holy Ghost, into which no unrighteousness, nor the foul, unclean spirit of the devil in his instruments can enter. Therefore, dear Friends and Brethren, every one in the faith of Jesus, stand in His power, who has all power in heaven and in earth, given to him, and will rule the nations with his rod of iron, and dash them to pieces like a potter's vessel, that are not subject and obedient to his power; whose voice will shake the heavens and the earth, that that which may be shaken, may be removed, and that which cannot be shaken, may appear. Stand in Him; and all things shall work together for good to them that love him.

"And now, dear Friends and Brethren, though these waves, and storms and tempests be in the world, yet you may all appear the harmless and innocent lamb of Christ, walking in his peaceable truth, keeping in the Word of power, wisdom and patience; and this Word will keep you in the day of trials and temptations, that will come upon the whole world, to try them that dwell upon the earth. For the Word of God was before the world, and all things were made by it; it is a tried Word, which gave all God's people in all ages, wisdom, power and patience. Therefore, let your dwelling and walking be in Christ Jesus, who is called the Word of God; and in his power, which is over all. Set your affections on things that are above, where Christ sits at the right hand of God, (mark,) on these things which are above, where Christ sits; not on these things that are below, which will change and pass away. Blessed be the Lord God, who, by his eternal arm and power, hath gathered a people to himself; and hath preserved faithful to himself through many troubles, trials, and temptations; his power and Seed, Christ, is over all, and in Him ye have life and peace with God. Therefore, in Him all stand, and see your salvation, who is the First and Last, the Amen. God Almighty preserve and keep you, all in Him, your ark and sanctuary; in Him you are safe over all floods, storms, and tempests; for He was before they were, and will be when they are all gone. G. F."

London, the 17th of the Eighth mo., 1688.

Let the time of temptation be the time of silence. Words react upon feelings; and if Satan, in the time of our trials, can induce us to utter a hasty or unadvised word, he will add, by so doing, to the power of his previous assaults, and increase the probability of his getting the victory.—*Upham.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

VINCENT CALDWELL.

(Continued from page 339.)

In the year 1707, Vincent paid a religious visit to Friends and others in Maryland and Virginia. In 1709 to Friends in the three lower counties, and in 1711 to Maryland, Virginia and Carolina. In all these visits having certificates of Brandywine Monthly Meeting, as well as of the General Meeting of Ministers.

In 1715, with the unity of his Friends, he visited Barbadoes, Antigua and Nevis, in all which places he "was well received," and his labours in the gospel were "serviceable." After his return in 1716, the meeting at Barbadoes sent to his Friends at home a minute testifying their cordial appreciation of his service for Truth in that island, and of his exemplary conversation whilst amongst them. He was instrumental to the convincement of many whilst in the West Indies.

This visit seemed to open the way for more, and in 1718 he obtained the unity of his Friends for a visit to the Caribbean Islands. Of the performance of this religious visit I have found no account.

His Friends testify concerning him, "that his ministry was sound and edifying, being attended with the power of Truth, and adorned with an exemplary conversation." "His service was acceptable, even to the convincement of many, for though he had but little school learning, yet being as the good scribe, well instructed to the kingdom, he did at times bring forth out of the treasury, things new and old."

He was taken sick about the 4th of the First month, 1720, and was preserved during the few days of sickness allotted him, "in a sweet, sensible, and tender frame of spirit." His intimate friend, Doctor Swayne, calling to see him, he spoke cheerfully to him, although suffering much bodily affliction,—saying, "I would have thee speak thy mind freely concerning me, for I am not afraid to die." The doctor, after a pause, signified that he felt doubts of his recovery. An awful silence seemed then to cover the mind of the suffering invalid, and he soon broke forth in an earnest supplication to the Lord for the welfare of Zion. He then exhorted Friends to love and unity, and to beware of that spirit which would lead into a separation. He spoke very clearly and pertinently to the states of some present, exhorting them in gospel love to fear the Lord, and walk humbly before him. Then he assured them, "they would be made partakers of his Divine and heavenly blessing." Again, his heart rose in supplication to the Lord, that he would "prosper his work." After which he added, "the Lord will cause his glorious Truth, to break forth in the north country, and among the Ethiopians." He rejoiced in the sight and sense given him of this.

On one occasion, looking earnestly at his wife who was sitting by his bedside, he said, "My dear, Don't be surprised; in time thou wilt come into that rest I am going into." His wife said, "Dost thou think so?" He replied, "I have no doubt of it." He then took leave of her, saying, "Thou hast been a loving wife, a tender mother, a good neighbour." He took leave of his children separately, charging them to be loving and obedient to their mother, and not to go out in their marriages.

He prayed to the Lord that he would make his passage easy, and receive him graciously into his arms of rest and peace forever. After this he desired his love to be remembered to Friends in general, at their Monthly, Quarterly, and Yearly Meetings, and at the Meeting of Ministers. Being then sensible that his end drew near, he said, "Give me a little water, and I think I shall not want any more, until I drink at that fountain, which springs up into eternal life." His friends add, "Thus, in a resigned frame of mind, he finished his course here, the 10th day of the First month, 1720, in the 46th year of his age, and, we believe, is entered into the mansions of glory, where the wicked cease from troubling, and the weary are at rest."

HENRY WOOD.

Of this Friend but little is recorded. He can be found occasionally noted as attending meetings in Philadelphia, and as representative to the Yearly Meeting. He resided near Woodbury Creek, West Jersey. A short memorial of him says, he "had a public testimony to bear amongst Friends," and that he "was concerned therein for the good of the church in general." He "departed this life in the year 1720."

WILLIAM BALDWIN.

William Baldwin was born at Gisbourn in Yorkshire, England, of parents professing the truth, and was early in life, through submission to the Holy Spirit, led to receive it in love, and to give up his heart to serve the Lord. Having received a gift in the ministry of the gospel, in the twentieth year of his age, he was faithful thereto, and growing in grace, his gift was deepened until he became an able instrument in the Lord's hand. In the exercise of his gift, he visited, as his Master led him, the churches throughout England, Scotland and Ireland.

At what time he married and settled in Lancashire we know not; but in the year 1708, when he was liberated to pay a religious visit to America, we find him a member of the Monthly Meeting at Marsden in that county.

Sailing for Virginia, he landed there in the Third month, 1709, and proceeding directly to Philadelphia, he attended the General Meeting of Ministers, held there the 4th of the Fourth month. Hugh Durborough, a Friend in the ministry, of Philadelphia Monthly Meeting, had laid before that meeting in the Twelfth month, 1708, a concern which pressed upon his mind of paying a religious visit to "Long Island, Rhode Island and New England," "if a suitable companion presents." A certificate was prepared for him, and he was quietly waiting for his companion when William Baldwin came, whose prospect was to proceed at once to the places he felt drawn to. The way opening in both their minds to travel together, the Meeting of Ministers encouraged them in it. William's gospel labours in Philadelphia, were much to the satisfaction of Friends there. In respect to the opening of the Meeting of Ministers above referred to, we have an account preserved, of which the substance is this, "Friends being met together, the power of the Lord was felt among them in an eminent manner, and several living testimonies were delivered in the ancient divine spring of life, tending much to the edification and comfort of those concerned in the work of the ministry. Solemn prayer, thanksgiving, and supplication were put up to God for his mercies received, and for the continuation thereof."

The visit to New England was performed in three months to the relief of the visitors, and to the satisfaction of the visited. William Baldwin gave an account of the service to the comfort [illegible] the Meeting of Ministers at the time of the Ye[illegible] Meeting, in the Seventh month, which was co[illegible] borated by certificates from the Friends, wh[illegible] they had travelled. William Baldwin after t[illegible] had for companion William Wilkinson, and, in [illegible] First month, 1710, he gave satisfactory informat[illegible] to the Meeting of Ministers in Philadelphia [illegible] their visit in Maryland, Virginia and Caroli[illegible] He said, they had had large and peaceable m[illegible] ings, but there was great need of faithful labou[illegible] among Friends in the south. He then reques[illegible] a returning certificate, having been but little o[illegible] nine months in the country. Friends of Amer[illegible] testified some years after, that his visit am[illegible] them was "performed with great diligence, to [illegible] glory of God, and the sweet satisfaction [illegible] Friends."

He did not reach home in time for the Ye[illegible] Meeting at London in 1710; but at that in 17[illegible] he gave an account of his labours in Ameri[illegible] He appears to have been as favourably impres[illegible] by his fellow-professors on the western contine[illegible] as they had been with him, reporting, "he fou[illegible] Friends a people of a generous spirit, and an op[illegible] ness in their hearts and houses."

He soon felt a drawing in his mind, to rem[illegible] with his family to Pennsylvania to settle, and [illegible] due time laid the subject before the members [illegible] his own Monthly Meeting for their unity and [illegible] probation. In the meantime he did not negl[illegible] to attend to the openings of duty at home, and [illegible] 1713 travelled again to Ireland. Some time bef[illegible] the close of the last mentioned year, the Frie[illegible] of his Monthly Meeting being brought to belie[illegible] that William's prospect of removal was rig[illegible] granted him and family a certificate of unity, [illegible] well as of membership.

He settled in Bucks county, but soon fou[illegible] drawings to leave his home comforts and hou[illegible] duties, to travel in his Master's service. He p[illegible] bably arrived there in the spring of 1714, and [illegible] the Seventh month of that year, he had been lib[illegible] rated to attend the Yearly Meeting on the Easte[illegible] Shore of Maryland, which visit he performed [illegible] company with Thomas Chalkley. In the beg[illegible] ning of 1715, he visited Long Island, and was [illegible] the Yearly Meeting there in the Third mont[illegible] which certified in its epistle to Philadelphia [illegible] that year, that he "had been of good servic[illegible] among them.

In the beginning of 1716, he left home [illegible] a general visit to the Eastward, and attended t[illegible] Yearly Meeting of Rhode Island in the Four[illegible] month, which in its epistle acknowledges his cor[illegible] pany among that of other Friends from Penns[illegible] vania. They state the meeting to have be[illegible] favoured with "the joyful power of God, in whi[illegible] several testimonies were borne, to the honour [illegible] the same, and the comfort of his church a[illegible] people."

William Baldwin had evidently grown to th[illegible] stature of a father in the Truth, and the increasi[illegible] estimation of his brethren may be traced in vario[illegible] ways. But although he seemed becoming mo[illegible] and more qualified for usefulness in the churc[illegible] through his discernment, his dedication, his di[illegible] gence, yet his Master seeing that his day's wo[illegible] was accomplished, removed him after an illness [illegible] two weeks' duration, from his field of labour, [illegible] his eternal rest. He was taken sick on the 15[illegible] day of Sixth month, 1720, and died on the 29[illegible] of the same month.

Samuel Smith says of him, "He had an eminen[illegible] deep and reaching ministry. He was in gre[illegible] esteem in the Society of Friends, and well belove[illegible] by his neighbours."

(To be continued.)

4 *Roman's Epitaph.*—Some workmen, in mak- an excavation at Constantia, in Algeria, a rt time back, came to an ancient tomb, which gined out to be that of a Roman citizen. It ered no peculiarity in construction, but the in- ription, which is in well written hexameters and ntameters, appears so curious, that a translation it appears worth giving. It runs thus:—"I, ocilius, whose remains repose here, state the ct truth in these verses. I have spent a life, thout annoyance, exercising the calling of a versmith in my house at Cirte. I have always en of the strictest probity, and of the most mplete frankness towards every man. I have thing to complain of, for I was always gay and ays happy, until the death of my chaste leria. I have celebrated with honour and in sperity one hundred anniversaries of my birth- y; and, at last, my final day arrived when my feebled frame rendered it welcome. The lines hich you are now reading I composed myself ring my lifetime, being permitted so to do by e kind goddess Fortune, who never forsook me. llow the path which I have taken! I await you re below! Come!"

Statement of the proceedings of the Yearly Meeting, held in London, 1855, in reference to the division in Ohio Yearly Meeting.

STATEMENT.

In the course of the usual business of this meet- g, at its first sitting [on Fourth-day, morning, e 23rd of Fifth month] two Epistles were pre- nted to it, each purporting to come from Ohio early Meeting of Friends, one of them signed y Jonathan Binns, as clerk, and authenticated y Isaac Parker, one of our correspondents in hio; and the other signed by Benjamin Hoyle, clerk, and authenticated by him, he being our ly other correspondent in Ohio; and both pistles being regularly transmitted to our corre- pondents in London for Ohio Yearly Meeting.

Two Epistles addressed to our Women's Yearly eeting, each purporting to come from Ohio early Meeting of Women Friends, one signed y Jane M. Plummer, as clerk, and the other by achel E. Patterson, as clerk, and similarly trans- itted, were also presented to us.

The four Epistles were, without being read, re- rred to the Committee on Epistles for investiga- on. This committee, when appointed to answer e Foreign Epistles, usually consists of the re- resentatives and other members of the Yearly eeting, agreeably to the limited definition of that rm, contained in our Rules of Discipline, [name- , acknowledged ministers, appointed elders and rrespondents:] but from the interest which the reumstances of the case have awakened amongst riends, it was concluded that the committee ould be open to the attendance of all Friends ho inclined to be present.

The committee met in the afternoon of the me day, and read the two Epistles addressed to is meeting by the two bodies purporting to be hio Yearly Meeting, and the printed minutes of ose bodies, so far as they referred to the separa- on which has taken place in Ohio, together with e documents in relation thereto, issued by their spective Meetings for Sufferings. They also ad the printed minutes of Indiana, Baltimore, d North Carolina Yearly Meetings, describing eir deliberations and conclusions thereon. At at sitting of the committee, and at two long sit- gs thereof, held on the following day, [Fifth- y, the 24th,] the subject was very deliberately d patiently considered: and the result was, the conclusion to recommend to the Yearly Meeting that it should accept the Epistle signed by Jonathan Binns, as clerk, and transmit to our Women's Yearly Meeting the Epistle signed by Jane M. Plummer, as clerk.

This meeting again assembled on the following afternoon, [Sixth-day, the 25th—the morning occupied with the Meetings for Worship:] and notwithstanding so much time had been devoted to the subject in the committee, it was deliberated upon in the meeting at large, not without a serious sense of the very painful duty thus imposed upon it. After a sitting of about four hours, the recommendation of the committee was adopted as the judgment of the Yearly Meeting, and the Epistle signed by Jonathan Binns was read and referred to the Committee on Epistles to prepare an answer to it; and the Epistle signed by Jane M. Plummer was directed to be sent to our Women's Yearly Meeting.

On a question of such importance to our Society at large, it is proper to record that much brotherly confidence and condescension have marked the deliberations both in the committee and in this meeting; and whilst, amongst the very large number of Friends who took part therein, considerable difference of view existed, mainly as to the course of procedure, it may be stated (without assuming therefrom that no such opinion was entertained), that no proposal was made for accepting as the Epistle of Ohio Yearly Meeting, the Epistle signed by Benjamin Hoyle.

We, moreover, think it right that our proceedings in the present case, should be accompanied by a statement of our past conduct and present views, in reference to the afflictive divisions amongst our dear Friends in America, as well as of our concern for the restoration of harmony and true unity in that land; believing that such a statement may be of importance as a record for time to come, and may be not without its use for our own members, as well as for our friends in America, including those with whom we have at present no epistolary intercourse.

It is a principle with this Yearly Meeting, that the several American Yearly Meetings with which it is in correspondence are independent bodies, whose deliberations and decisions in the exercise of the discipline towards their own members and subordinate meetings are to be regarded as final, and not to be interfered with. In 1846, this meeting accordingly decided that it could not hold any correspondence with those individuals who, in 1845, had separated themselves from New England Yearly Meeting, and who, together with several of the disowned members of that Yearly Meeting, had attempted to form themselves into a Yearly Meeting. The course of action of this meeting, of our Meeting for Sufferings, and of our subordinate Quarterly and Monthly Meetings, has ever since been uniform and consistent with that decision. Our epistolary correspondence with the Yearly Meeting of New England has continued unbroken; the certificates of ministers from that meeting travelling in this land have been uniformly authenticated by our Meeting for Sufferings, and recorded by this meeting and its subordinate meetings, and these gospel messengers have been received with brotherly openness, and sped on their way. Proper guards have at the same time been placed on the intrusion of any who were connected with the body that had separated from that Yearly Meeting, as appears by the correspondence between our Meeting for Sufferings and that of New England, and by the minutes of our Meeting for Sufferings, read at our last Yearly Meeting, in reference to the visit of an individual so circumstanced, to this land.

Our Friends of Ohio Yearly Meeting, under the influence, we cannot but fear, of views and feelings which have now resulted in the division which has taken place within their limits, pursued a very different course. They declined to correspond with New England Yearly Meeting, and in various ways manifested that their sympathies were in a greater or less degree with the body who have separated from it. In 1851, we not only addressed a General Epistle to all our brethren on the American continent, sympathizing with them in their difficulties, and counselling them to avoid all that could tend to separate one Yearly Meeting from another; but in our Epistle of that year to Ohio, we commended to our dear friends there, the maintenance of a correspondence with all the other Yearly Meetings on their side of the water, and expressed our sense of the value of guarding against a spirit of jealousy and distrust. And our beloved Friends of other Yearly Meetings have laboured earnestly in the same cause.

Painful are the proofs which have now been brought before us of the countenance given, year after year, in the Yearly Meeting of Ohio, to the attendance of persons disowned by Friends of New England Yearly Meeting, or connected with the body who have separated therefrom, and whom, upon the principles above referred to, we cannot consider as any longer forming part of our religious Society. Such proceedings are, in our view, a serious infraction of our wholesome Christian order, and a breach of the bond by which one Yearly Meeting is connected with another. The sad effects of this state of things, in the conducting of the affairs of Ohio Yearly Meeting, is but too manifest from the printed minutes of that meeting in 1853, and the concurrent testimony of the printed minutes of both bodies in 1854. And in the Epistle signed by Jonathan Binns, there is equally sorrowful evidence, that the like, and even greater evils, had ensued in many of the subordinate meetings.

The desire consistently to carry out the principles of Christian order which have regulated our own course of action, and to counteract, as far as our example and influence may extend, the disorganizing tendencies that have so painfully manifested themselves, not only in Ohio, but also in several other of the American Yearly Meetings, has led us to accept the Epistle signed by Jonathan Binns, under the conviction that the Friends whom he represents have been, and are, acting most in accordance with the course which this meeting adopted in 1846, and which it has ever since pursued. Yet, in so doing, we would not be understood as implying that the proceedings of that body (though we speak it with tenderness, and with sympathy for the peculiar difficulties of their position) have been, in all respects, such as we could approve, were it our place to pronounce an opinion thereon. The grounds on which our conclusion to accept the Epistle signed by Johathan Binns is based, are at least as fully applicable in favour of accepting the Epistle of the Yearly Meeting of Women Friends, signed by Jane M. Plummer.

In a question of so much delicacy and difficulty as the decision which of two bodies to recognize, (where the separation does not profess to rest on a difference on fundamental doctrines,) it is a satisfaction to us to know that the step which we have taken is in harmony with the judgment of a very large proportion of our dear Friends on the American continent, comprising three out of the four other Yearly Meetings who have already had the subject brought before them.

Though we have thus felt ourselves called upon to act with decision and without delay in determining the course which we ourselves should take,

by at once corresponding with Friends of the Yearly Meeting of which Jonathan Binns acted as Clerk, and endeavouring to uphold their hands in the trying and arduous circumstances in which they are placed, it would indeed be to our comfort and joy to see a re-union effected between the two portions of that body in Ohio with whom we have corresponded ever since its establishment as as a Yearly Meeting in 1813, and to be able once more to salute them as a whole in the language of the apostle, with which we closed our first address to them, to which we have at this time recurred, not without feelings of tender interest and emotion:—"Be perfect, be of good comfort, be of one mind, live in peace, and the God of love and peace shall be with you."

Our hope that such a consummation may yet be effected is not entirely extinguished. Oh that we could so effectually plead with those of our Friends in Ohio, with whom we do not now correspond, as to induce them in love for the truth; and for the unity of the brethren, to lay aside all that may have tended to separate them from full Christian intercourse with the body of Friends in New England and in this country. Then, we believe, they would be brought to feel that there is no substantial obstruction to their being again associated with those Friends within the limits of Ohio Yearly Meeting, from whom they are now separated.

Nor do we deem it inconsistent with the principle which we have so fully recognised, of the mutual independence of one Yearly Meeting upon another in all matters connected with its internal discipline to express, in the liberty which there is in the Truth, yet with brotherly deference, the trust which we entertain, that our dear Friends of Ohio, whom we have recognised in a Yearly Meeting capacity, will be enabled to exercise much forbearance towards those who are at present separated from them, and especially that in their Monthly Meetings they will not be hasty to put in force the discipline towards those who, with a little patience and love, might be induced to re-unite with them in their meetings for worship, and to return to full Christian fellowship and unity in all respects.

As motives for re-union, and as a watchword both to ourselves and to our dear American Friends, we deem it not unsuitable at this time to give expression to some of our views in reference to Christian unity in the church, and to the evils of separation and division.

"One is your Master, even Christ, and all ye are brethren." How comprehensive is this blessed truth in its application to all of every name, who, loving the Lord Jesus Christ in sincerity, are living members of his church upon earth. Whilst not presuming authoritatively to determine who are truly the living members of this church, it is obvious that those who are bound together by one common faith, and by one system of Christian discipline not of mere human arrangement, and who emphatically recognize the supreme authority of Christ as the only Head of his Church, should be earnest in spirit that they may be really brethren in Him, subject one to another in love, honouring Christ with a single heart as their only rightful Lord, and ready to honour one in another that which is of Him.

When we turn, on the other hand, to the present division in Ohio, and to some of those which have taken place in America of later years, sorrow fills our hearts at the severance one from another of brethren and sisters, who in years that are long since past have faithfully and unitedly laboured in the service of the Gospel, and the maintenance of our various religious testimonies. We afresh feel that such divisions are desolating and withering in their effects. They tend to obstruct the right exercise of the different gifts, natural and spiritual, bestowed on the several members for the good of the whole; to divert the mind from that individual exercise, both for its own welfare and that of the brethren, which ought to be maintained in humility and the fear of the Lord; and to occupy it with matters of controversy, and even with questions of a merely personal or party character, evils against which the Apostle Paul so emphatically warned his Corinthian converts.

What difficulties, too, have already been produced by these mutual jealousies and divisions, in the transfer of membership, and in reference to proceedings in marriage; difficulties which will probably be greatly increased, especially in districts where migration is so frequent as it is in some of the Western States.

How does this contrast with that harmonious and brotherly interchange of membership, and of every privilege incident to it, which was so beautifully established amongst us as one great family in the Truth, under the harmonizing influence of the love of Christ, and which was for so many generations maintained without interruption!

Nor can we be unmindful of the injurious effect of these things upon the young and inexperienced; of the awful danger lest divisions among those who should be shepherds of the flock may cause some of the precious lambs for whom Christ died to be scattered, and not only their attachment to our own religious Society impaired, but their trust in the guidance of the blessed Spirit of Truth shaken, and their faith in the Gospel of Christ endangered.

Never before, if we except the great doctrinal secession of 1827 and 1828, have we had presented to us, as a Yearly Meeting, such distressing evidence of the want of harmony and mutual confidence, and of the wide-spread tendency to separation and disorganization, on a smaller or larger scale, in different parts of the Society of Friends in America.

We desire not to shrink from bearing our part, as Christian brethren, both in the sorrow and in the humiliation of the day. We are ready to say, Let us "come with weeping and with supplication" before the Lord: "the family of the house of David apart, and their wives apart; the family of the house of Levi apart, and their wives apart;" "all the families that remain, every family apart, and their wives apart;" to the "fountain opened to the house of David and to the inhabitants of Jerusalem," let us all come with abasedness of heart, yet in faith and hope. If these feelings of tenderness and prostration of spirit had their proper place, we have faith to believe, that a way would be opened, not only for those in Ohio, but for all elsewhere within the limits of the several American Yearly Meetings who are now separated one from another in worship and discipline, though professing the same Christian principles, to be re-united in outward fellowship and brought harmoniously to labour together for the advancement and spreading of the Truth.

Thus might the whole body of Friends in North America yet take a place in the western world, which their present circumstances prevent their occupying, but which, in the condescending goodness of the Lord Almighty, we believe He would both prepare for them and abundantly qualify them to fill, to his glory and to the promotion of the temporal and spiritual welfare of their fellow-countrymen at large.

Before we conclude we think it right to observe that, in adverting to the separation in Ohio and the other divisions which have taken place am Friends in America subsequently to the secess of 1828, we have not spoken of them as connec with any differences in matters of faith, and desire not in anywise to be found judging brethren herein; yet we deem it not unsuitabl on such an occasion as the present, to declare ourselves our own unshaken attachment to all great and glorious truths of the Gospel of Lord and Saviour Jesus Christ as set forth Holy Scripture.

In the year 1829, in sympathy with faith brethren in the United States and with the vi of strengthening their hands, when our Society that land was exposed to grievous inroads from unbelieving spirit, we thought it right to put fo a Declaration of our Christian doctrines: and our printed General Epistle of the following y a further testimony was inserted to the same bles truths.

Those great and immutable truths were precio to our faithful predecessors from the rise of Society down to our own time; and to their Chr tian faith, doctrines, and testimonies we adher We honour their memory and we desire to imita their faithfulness.

After having thus stood by our brethren America in the breach when they were assailed, has grieved us that imputations of holding unsou doctrines, and of departing from the faith of o forefathers, should have been so often made again Friends in this country by some under our nam in that land. For the sake of our own Society i England, for the sake of all under the name Friends throughout the United States of Americ for the sake of those blessed doctrines and pri ciples which under the power of the Lord's Spir we were raised up to support, but, above all, f the love of Christ our Saviour—we entreat th henceforward all may desist from these insinu tions, which tend to weaken, to divide, and t scatter.

We, moreover, think it right in this place, t express our conviction, that under present circum stances few things are more likely to interfer with the restoration of unity and with the righ exercise of a calm and sound judgment in the af fairs of the Church under the guidance of it Holy Head, than the circulation of pamphlets an writings advocating in a party spirit the view taken on the one side or the other, of the question now agitating the body.

On the other hand, in the conviction that th dissensions which are at present so widely spread in some of the American Yearly Meetings, have been greatly promoted by the painful suspension for several years past, on the part of some of them of that epistolary intercourse which formerly sub sisted between them, we are persuaded that the renewal and maintenance of this correspondence in brotherly confidence, would be one of the surest evidences of a return to a sounder condition in the body at large, and would be a powerful means, under the Divine blessing, of assisting to remedy the existing divisions and guarding against the recurrence of these evils.

In conclusion, may we ever bear in mind, that "except the Lord, build the House, they labour in vain that build it; except the Lord keep the city the watchman waketh but in vain." May He who hath loved the Church and given himself for it, condescend to own the travail of our spirits for the prosperity of our beloved Religious Society as a part of this his heritage, and grant that we may, as a united body, though outwardly far separated one from another on his earth, be found walking together in the fear of the Lord and in the comfort of the Holy Ghost, maintain-

through his gracious assistance the unity of Spirit in the bond of peace.

Extracted from the Minutes of the Yearly ing.

JAMES BOWDEN,
Recording Clerk.

THE FRIEND.

SEVENTH MONTH 14, 1855.

n the present number will be found "A state- t of the proceedings of the Yearly Meeting, in London, 1855, in reference to the division ie Ohio Yearly Meeting." As the subject is of general interest, and deeply affecting the are and integrity of our Religious Society, readers will not, we trust, complain of the e devoted to it.

Ve think that the perusal of it, will impress y unprejudiced mind with the conviction, that document is singularly inconsistent in its ral parts, and makes a sad exhibit of the rea- ng by which that Yearly Meeting was led into ing with a body of separatists, who, as men- ed in the "British Friend" "a venerable nd, well versed in the state of American irs, and not long since returned from a mission hat country," stated in the Meeting, had, in opinion, "established themselves as a Yearly eting, not in the order of the discipline," and refore, "not in the wisdom of Truth," and t the course pursued by the Meeting was kely to involve [it, and *we* may add the whole iety] in difficulties, the end of which it is im- sible to foresee.

As will have been observed by the extracts we e heretofore given from the "British Friend," vas admitted that the body of which J. Binns lerk, according to the discipline of the Society, seceders. The London "Friend" which ours that party, when reciting the ground on ich those opposed to the acknowledgment of rested their opposition, states as their fourth ection "that the question as regards Ohio arly Meeting, was, principally, if not entirely, e of discipline, *in which it was clear** that the y represented by J. Binns *were in fact the se- ers.*" This appears to have been at no time ied in question; but, (the same journal says) o these views it was replied, that the question ler consideration could not be narrowed down a mere question of discipline, that something re than mere discipline was involved; that nciples were involved, in which that section of io Yearly Meeting which was represented by J. ins, were in unity with Friends in this country; t in fact the question of *principle* was settled ne years ago, in the case of the New England ision, *the present being a similar case*, and as to ncipie, bearing close analogy with that division." This violation of discipline, and secession from ir long established Yearly Meeting, by those re- sented by J. Binns, is spoken of in the "State- nt" itself, "with tenderness and sympathy *the peculiar difficulties of their situation,*" not having been "in all respects such as we ondon Yearly Meeting] could approve, *were it r place to pronounce an opinion thereon :*" but hen speaking in the same document, of "those dividuals, who, in 1845 had separated them- ves from N. England Yearly Meeting" there no hesitation in pronouncing an opinion, that ; that act, viz., "separating" and "attempting form themselves into a Yearly Meeting," the ne London Yearly Meeting cannot consider them "as *any "longer forming a part of our reli- gious Society."*

The object proposed to be obtained by uniting with and "endeavouring to uphold the hands" of those who thus confessedly separated from Ohio Yearly Meeting, refusing to remain subordinate to it, and spreading disorganization, wherever throughout its limits, they had the power, is declared to be "the desire consistently to carry out the principles of christian order," and "to counteract as far as our example and influence may extend, the disorganizing tendencies that have so painfully manifested themselves, not only in Ohio, but also in several other of the American Yearly Meetings." To us, this seems a most extraordinary way of aiming at producing such effects.

The charge brought against Ohio Yearly Meeting, and for which London Yearly Meeting ceases to hold correspondence with it, is; that "they declined to correspond with N. England Yearly Meeting, and, in various ways, manifested that their sympathies were in a greater or less degree with the body who have separated from it;" and yet, London Yearly Meeting at the same time, states that it is "led to accept the epistle signed by J. Binns [coming from a body acknowledged by it to be seceders] under the conviction that the Friends whom he represents have been, and are, acting most in accordance with the course which this meeting adopted in 1846, and which it has ever since pursued." This is not merely manifesting "that their sympathies are in a greater or less degree with the body who have separated," a course exhibited as a grave charge against Ohio Yearly Meeting, in a case where it believed the faith of the Society was involved; but it is going a great step further; disowning the legitimate Yearly Meeting, and disregarding the discipline and order of the Society for the purpose of giving countenance to, and "to uphold the hands," of those composing a spurious meeting, in a case where London Yearly Meeting declares doctrines are not involved, but the "principle" that every Yearly Meeting is an independent body, whose decisions are * final, and not to be interfered with."

This "principle" is thus laid down. "It is a principle with this Yearly Meeting, that the several American Yearly Meetings with which it is in correspondence, are independent bodies, whose deliberations and decisions in the exercise of the discipline towards their own members and subordinate meetings, are to be regarded as final, and not to be interfered with." Acting on this principle they say, London Yearly Meeting, "decided that it could not hold any correspondence with those individuals, who, in 1845, had separated themselves from N. England Yearly Meeting, and who together with several of the disowned members of that Yearly Meeting, had attempted to form themselves into a Yearly Meeting."

Why was not this "principle" which led to such prompt action in 1846, carried out in 1855 in the case of Ohio Yearly Meeting and "those individuals who had separated" from it? Ohio Yearly Meeting is equally an "independent body" as any other Yearly Meeting; having the same right to legislate for the government of its own members; and the body of which J. Binns is clerk had confessedly separated from it. There is a mistake in the "Statement," that those who withdrew from the "larger body" in N. England, were associated with "several of the disowned members" of N. England Yearly Meeting in "attempting to form themselves into a Yearly Meeting." There was, we believe but one Friend present with them, against whom disciplinary proceedings had been instituted, and he, by general consent, was present at the Yearly Meeting, before the division took place. The only reasons then why London Yearly Meeting refused to take notice of the "smaller body" in N. England, when it and the "larger body" presented their statements to it, were this "independence" of Yearly Meetings, and that [the smaller body] "had separated themselves from N. England Yearly Meeting" and "attempted to form themselves into a Yearly Meeting." It did not in 1846, feel itself required to inquire into the causes that led to the separation, or give heed to the antecedent facts throwing light on the case; but, simply on the "principle" announced, acknowledged what it considered the long established Yearly Meeting, and refused to receive any exposition of the case, put forth by the Friends who thought themselves aggrieved, summarily dismissing them as "no longer forming part of our religious Society."

How completely is the course reversed when the Yearly Meeting comes to decide in the case of the separation in Ohio! The "principle" that Yearly Meetings are independent bodies, and their "deliberations and decisions in the exercise of the discipline towards their members and subordinate meetings," "final and not to be interfered with," is abandoned; the act of separating and attempting to form a Yearly Meeting, so far from being considered as so affecting those engaged in it, that they "no longer form part of our religious Society," is spoken of "with tenderness and sympathy for the peculiar difficulties of their position," as not such as they could approve; statements and claims put forth by those engaged in it, are placed before those of the regular Yearly Meeting, whose authority they are disregarding; the difficulties created by their own insubordination, are received as charges against the regular Yearly Meeting; and finally, those separating are united with, because they are one in sentiment with the majority of the London Yearly Meeting.

We cannot but believe that had the true cause for the opposite courses pursued by London Yearly Meeting in 1846 and 1855, been frankly avowed, all this inconsistency might have been spared. The truth is, those Friends, who in 1845 left the "larger body" in N. England, were known to be opposed to the unsound sentiments contained in the writings of J. J. Gurney, who, contrary to the solid judgment of many of the most experienced ministers and elders of London Yearly Meeting, had been liberated, to visit this country; hence it was that no notice was taken of their statements, and though not disowned, they were pronounced to be no part of our religious Society. Ohio Yearly Meeting had also borne its testimony against these same unsound sentiments, while those who separated from it, do not unite with that testimony; and therefore the latter were received as a body with which London Yearly Meeting could correspond. Here is the cause producing the difference of action in the two cases; and thus we are brought to the origin of the difficulties rending the society to pieces, and which sprung up within the Yearly Meeting, that has thus confirmed the separation in Ohio.

We have not republished the appendix to the "Statement," because we believe there has been no "insinuation" of a departure "from the faith of our forefathers," in relation to the divinity and offices of our blessed Redeemer, as set forth in it. The unsound sentiments against which so many thousands of Friends have felt bound to bear testimony, are not vaguely spoken of, but have been clearly set forth and condemned by two Yearly Meetings of equal standing with that of London.

The exposition of this unsoundness cannot be refuted, and while the sentiments, incompatible with those inculcated by Fox, Penn and Barclay,

* The *italicizing* is our own.—*Ed. Friend.*

and held by the society, from the beginning, are palliated or defended, and a large portion of the society misrepresented as disorderly, and condemned, for bearing testimony against them, it cannot be otherwise, but that divisions, and the "severance one from another of brethren and sisters," mentioned in the "Statement," will continue to be the result.

There is one other part of this document to which we would refer the attention of our readers before concluding. After the great disunity manifested in their own meeting, with the acknowledgment of the small body in Ohio; its admitted secession; and the professed recognition of the independence of one Yearly Meeting on another, how strikingly inconsistent is it to proffer instruction to the seceders, as though they could disown from the Society of Friends the members of a Yearly Meeting that has maintained its doctrines and discipline. What charge could be justly brought against them? or under what pretence could the party represented by J. Binns undertake to treat with Friends from whom they voluntarily separated, in violation of the discipline, and whose character and standing as consistent members, remain unimpaired, notwithstanding that the seceders and their supporters have used great efforts to lay them waste. Must not London Yearly Meeting have lost sight of its own advice to its members against fostering "a party spirit," and "to cherish that candour and charity, which so highly become the Christian," when speaking in a manner so offensive, and so calculated to wound the feelings of upright brethren and sisters in the Truth; as though they had forfeited their claims as members of the church of Christ, and could be regarded as outcasts from our religious Society. But it will be vain to attempt to reconcile the minds of Friends to the idea, that such a course could be pursued by seceders towards upright, consistent members of our religious Society, and while we deeply regret the course pursued by London Yearly Meeting, it is a satisfaction to know, that in it, as in all the others, there is a large number who unite with the true Ohio Yearly Meeting, and tenderly sympathize with them in the suffering unjustly inflicted upon them. This, we believe, will in time be made more manifest.

SUMMARY OF EVENTS.

EUROPE.—The steamer America brings one week later news from Liverpool.

The War.—At day-break on the morning of the 18th ult., the English troops attacked the Redan, and the French, the Malakoff Tower. The attack failed signally, and was attended with terrible slaughter of the assailants. No details of the event had been received in England, nor any official statement of the losses of the allies. Private accounts published in the London papers state the loss of the British alone in the attack on the Redan, to be very little short of 4000, in killed and wounded. General Campbell was killed, and about seventy British officers were killed or wounded. The greatest portion of the loss was experienced in a ravine, where a powerful and unexpected battery was opened on the troops. This result of the first attempt to storm the regular defences of Sebastopol, does not augur favourably for a speedy capture of the place. According to the Russian accounts, horrible atrocities were perpetrated by the French and Turks at the capture of Kertch. Gortschakoff confirms the successes of the allies in the sea of Azoff; he states that the grain stores burned by them, were mostly private property, and do not materially affect the supply of the army, which is mostly obtained by land. All the camps in the Crimea are said to be healthy, except that at Balaklava where cholera prevails. The Sardinians are suffering from it, and General Marmora, the younger, has died.

AUSTRIA.—The Austrian army is being disbanded. The reduction is great and rapid. The Austrian commander in Moldavia has declared martial law, but the Moldavian authorities refuse to promulgate the order, unless authorized by the Sultan. Considerable sensation had been caused in the Principalities, in consequence of the son of the reigning Prince of Moldavia having been killed in a duel by an Austrian officer.

FRANCE.—The Senate and Legislature had been convoked for the 2nd inst., to authorize a new loan for one hundred and fifty millions of francs. Louis Napoleon had been ill for two days, but had recovered. The French funds fell two per cent. on the announcement of his illness.

SPAIN.—The disturbances at Santiago have been suppressed. There was no reliable statement respecting the Carlist insurrection. Russia is suspected as the instigator.

The Baltic.—The allied fleet still lay near Cronstadt, and continued their reconnoissance of the coast and defences. The fortifications are found to have been greatly extended and strengthened since last year. At Hango, the cutter of the English ship Cossack was fired upon, when approaching the shore under a flag of truce, for the purpose of landing a few prisoners, and most of the persons in it killed. It is probable the Russians considered that the boat was taking soundings, as was recently done at Kertch.

GREAT BRITAIN.—The House of Commons had ended the debate on administrative reform, by passing unanimously a resolution, recommending to the earliest attention of Ministers the necessity of a careful revision of the various official establishments, with a view to simplify and facilitate the transaction of public business, and by instituting judicious tests of merit, as well as by removing obstructions to its fair promotion, and by legitimate rewards, to secure to the service of the State, the largest available proportion of the energy and intelligence of the nation. Sir John Paul, William Strachan and Robert M. Bates, partners of the banking house of Strachan, Paul & Co., London, had been arrested on the charge of disposing of the securities entrusted to their care. The bullion in the Bank of England had increased £295,000. Consols had fallen to 90¾. *Liverpool Market.*—Cotton dull, and prices lower. The sales of the week were only 24,400 bales. The decline is equal to ¼ and 3-16*d.* for middling and lower qualities. Flour, Western Canal, 40*s.* to 41*s.* 6*d.* Ohio, 44*s.* The weather was favourable for the crops.

MEXICO.—Rio Grande dates to the 23d ult., confirm the previously reported successes of the Revolutionists, and the whole of the Mexican frontier, with the exception of two or three towns, was said to be in their possession. Many Americans were in the ranks of the Revolutionists.

UNITED STATES.—The U. S. Treasury statement for the Sixth month, shows the amount remaining at the close of the month, subject to draft, to be $18,438,712.

The Coinage, at the Philadelphia Mint last month, consisted of gold, $792,650; silver, $268,170; copper, $5,134—total, $1,065,954. At the Assay Office in New York, in the same period, gold bars were stamped to the value of $1,992,933.

The Far West.—Leavenworth City, Kansas, has become the starting point of the Salt Lake traders. At the last dates, a train of six hundred wagons, laden with government stores, was about to start for the Salt Lake, the draught cattle of which train would number four thousand oxen, beside several hundred horses and mules. Several of the Salt Lake trading firms have sent off twelve hundred wagons, a like number of teamsters, and over ten thousand draught cattle.

Fires of half a Year.—The N. York Journal of Commerce publishes a statement of the fires occurring in that city during the first six months of the present year, where the loss by each was equal to $10,000 or more. The aggregate of losses sums up $7,639,000.

Free of Debt.—Five States of the Union are now free of debt, viz., Connecticut, New Hampshire, Vermont, Delaware and Florida.

Steamboat Disaster.—The steamer Lexington, on her passage from St. Louis to Louisville, burst her boilers, about three o'clock in the morning of the 30th ult., when in the Ohio river, near the town of Rome. There were about eighty persons on board, about one half of whom escaped injury. Four men were killed; eight are missing, and twenty-five were wounded; many very seriously. The boat took fire, and was destroyed.

California.—The steamship Northern Light, at New York, brings dates to the 16th ult. She had 457 passengers and $829,000 in gold on freight. Affairs in Gentral America were more disturbed, owing to the landing and successes of Walker's expedition. Walker received reinforcements at Realejo, and landed at Prieto on the 27th ult., with 375 men. He is reported to have taken the town of Rivas, and then entering San Juan del Sud, he carried off the arms and ammunition collected there, without opposition. The Golden left San Francisco on the 16th ult., with $1,063,0 gold. The U. S. Land Commissioners have conf the claim of Bolton & Barrow, for 13,500 acres of mostly within the corporate limits of San Franc and of the estimated value of forty millions of doll

Indian Hostilities. — Advices from Santa Fe, Mexico, to Fifth mo. 30th, state that on the 29th o previous month, Col. Fauntleroy attacked a camp Utahs, north of Brencha Pass; killed forty of th took six prisoners, together with their horses, sheep provisions. A few days after they attacked a can 35 Indians, two of whom they killed; wounded t took their provisions, horses, &c., and made their prisoner.

Boston.—The revenue collected at this port fo fiscal year ending Sixth month 30th, amounte $7,616,568, being $725,720 less than in the pre year. The mortality of Boston this year, up to S month 30th, has been 1859, or 356 less than the six months of last year. The brig Porpoise, rec seized as a slaver, was, on the 2nd inst., declared fo in the U. S. Circuit Court. Although not actually trying slaves, she was found guilty of aiding within statute.

New York.—The imports of foreign merchandis the year ending Sixth month 30th, amount to $154,5 526. The exports in the same period have consiste specie, $38,008,503; foreign merchandise, $9,721, domestic produce, $52,602,406—total, $100,332, There has been a great falling off in the receipts tolls on the New York canals this year. Mortality week, 547, being an increase of 206 over the prev week. The prohibitory liquor law which should l gone into effect on the 4th, is generally disregarde evaded.

Philadelphia.—An unusual quantity of rain fe this vicinity, during the Sixth month. According record kept at Germantown, there was 8.07 inche rain. The mean temperature for the month was 6 which is below the average. Mortality last week, of which 122 were children under one year of age.

Miscellaneous.—Olive Cuttings for the South.—A co derable quantity of choice olive cuttings have la been distributed by the Patent Office, among the so ern States bordering on the Atlantic and the Gul Mexico. They were selected in France some mo ago, by the agent of the office, from the best and h iest varieties in that country.

Church Building in England.—According to a re lately returned by Sir Wm. Clay, more places of wor have been erected in England during the last fifty ye than had previously been built for five centuries.

The Site of a City.—In the year 1788, eight hund acres of land, the present site of Cincinnati, were p chased for five hundred dollars.

Return of the Jews.—Sir Moses Montefiore, of Lon has gone to Palestine, to purchase a large distric that country, and settle upon it the poor Jews of J salem. Eventually his purpose is to settle there all those Jews, who feel inclined to return to the co try of their ancestors.

Destructive Storm.—On the 1st of Sixth month, a g storm visited the harbour of Mazatlan, on the Mexi Pacific coast, causing the destruction of six vessels cargoes, valued at $1,000,000. Twenty-three per belonging to the vessels, were drowned.

RECEIPTS.

Received from Thos. M. Harvey, per N. K., $2, 28; from Jas. T. Frame, agt., Io., for E. A. Steph $14.36, to No. 9, vol. 25; from Sl. M. Briggs, O., vol. 28; from Jesse Hall, agt., O., for Joshua Ellis, vol. 28, J. C. Hill, $2, vol. 28, Peter Thomas Sen'r, to 44, vol. 29; from Reb. Conard, Pa., $2, to 33, vol.

For "The Friend."

The Indians.

Walla-Wallas, Klik-a-tats and Ya-ka-mas.

These nations adjoin the Territory of Oregon. head chief of the first is Pussumuxmux or Yellow Serpent, an old man. His tribe have been considered by the whites as thieves. eir wealth is in horses, of which they own ge herds. They have no timber, and burn ft wood. Their fisheries are the finest on the umbia river. The head chief owns it is said 00 horses and cattle, and several thousand dol- in gold.

The mission of Dr. Whitman was on the Walla- la river. The Cayuse were suffering from small- . The Indians, regarding the Dr. as the cause, troyed him. They urged Pussumuxmux to them, but he indignantly refused. The yuse reproached him, and said he was afraid of whites. No! says Pussumuxmux, I am not aid of the whites, nor am I afraid of the Cay- s. Determined to make good his assertion, chief went with three lodges only, to the rge of his domain near the Cayuse, pitched his ap and remained for one month. The Cayuse not venture to attack him.

In 1841, his eldest son quarrelled with and s struck by one of the clerks of the Hudson's y Company. The chief's dignity was insulted, l the son's honor lost, unless Commander Kinley should have the clerk punished. The man at the head of one hundred warriors de- nded this. The officer declined, and some of warriors proceeded to seize the clerk. He sted—the war-cry was sounded, and the In- ns had raised their weapons to spill the white n's blood. McKinley seized a keg of powder, l placing it in the centre of the room, stood r it with a flint and steel, and exclaimed, that y were all brave men and would die together. e result was the immediate flight of all the In- ns save the old chief and his son. As soon as warriors had gained the outer walls of the t, the gates were closed against them; while y, halting at a respectful distance, were in mentary expectation of seeing the fort blown . McKinley then quietly seated himself with old chief and his son, and amicably arranged difficulty.

The Wallawallas are estimated by Gov. Stevens 300; in 1807, they were estimated at 2,600 Lewis and Clarke.

The nomadic habits of the Klik-a-tats and Ya- mas, render a census difficult. They are rapidly minishing however, and do not much exceed 300 in number. They manifest a peculiar aptitude for trading, purchasing from the whites feathers, beads, cloth, &c., and exchanging them for horses, which in turn they sell in the settlements. Their country supplies abundant food—the prairies, camash; and the mountains, berries, in great variety. Part they store, and part they exchange for fish, smoked clams, and the roots which their own territory does not furnish. Deer and elk are almost exterminated. The mountain goat, big-horn, or sheep, are both said to have formerly existed here; but fire-arms have driven them into the recesses of the cascades. The black bear alone is still found, though but rarely. The salmon furnishes to these, as to most other tribes of the Pacific, their greatest staple of food. Their neighborhood to the fisheries of the cascades and the Dalles, provides them for the summer, while, after the subsidence of the Columbia, the small rivers contain fish, and in autumn, even the brooks and shallow pools of the prairies.

Very few of these people attempt agriculture; it is said some intend to plant potatoes.

Gov. Stevens found them at the beginning of the eighth month, at Chequoss. They were feasting on strawberries and the mountain whortleberry, which covered the hills around, though, during the night, ice formed on the ponds to the thickness of half an inch. Towards the end of the month, they desend to the Yakotl, Chalacha and Tahk prairies, for the purpose of gathering later berries, and of racing horses. The racing season is their grand annual occasion. A horse of proved reputation is a source of wealth or of ruin to his owner. On his speed, he stakes his whole stud, his household goods, clothes, and finally his wives; and a single heat doubles his fortunes, or sends him forth an improvident adventurer. The interest, however, is not confined to the individual directly concerned; the tribes share it with him, and a common pile of goods, of motley description, apportioned according to their ideas of value, is put up by either party, to be divided among the backers of the winner. The Klik-a-tats themselves are not as rich in horses as those living on the plains, their country generally affording but little pasturage, and the snows compelling them to winter their stock at a distance from their usual abodes. The horse is to them, what the canoe is to the Indians of the river and coast. They ride with skill, reckless of all obstacles, and with little mercy to their beasts, the right hand swinging the whip at every bound. Some of the horses are of fine form and action, but they are generally injured by too early use, and sore backs are universal. In their capacity for endurance they are overrated. A good American horse is as much superior to them in this as in speed, but they are hardy, and capable of shifting with but little food. Their price varies from $40 to $100, but they have some which they will not dispose of at much higher rates. The Indians ride with a hair rope knotted round the under jaw for a bridle. The men use a stuffed pad, with wooden stirrups. The women sit astride in a saddle made with a very high pommel and cantle, and in travelling, carry their infants either dangling by the cradle-strap to the former, or slung in a blanket over their shoulders, while children of a little larger growth, sit perched upon the pack-animals, and hold on as best they may. The horses are trained to stand for hours, with merely a lariat thrown loosely around their necks, the end trailing upon the ground. With the whites they are at first as shy, as are American horses or mules with Indians, but they suffer handling from the squaws and children with perfect contentment, and hang around the huts like dogs. In breaking horses the Indians usually blind them before mounting, often tying down their ears in addition; a strap or cord is then passed around the body of the animal, loose enough to admit the knees of the rider. Much time is spent in soothing and quieting the beast, as the Indian has plenty of it upon his hands. When everything is ready he vaults to his back, always from the off-side, slips his knees under the girth and tightens it, and withdraws the muffle. If the horse throws himself—for throw his rider, he cannot—the quick straightening of the leg releases the knee, and he is prepared for the emergency.

But the dogs of the Indian must not be forgotten. They vary considerably in form with the different tribes, but always preserve the same general character. Quarrelsome and cowardly, inveterate thieves, suspicious and inquisitive, they are constantly engaged in fights among themselves, or in prowling around the lodge for food. The approach of a stranger is heralded by short, sharp yelps, succeeded by a general scamper. They all bear the same mysterious resemblance to the cayote—the sharp muzzle, the erect ears, and stiffly circling tail. Notwithstanding their worthlessness, they seem to have a strong attachment to their owners, and an Indian camp would be a novelty without its pack of curs. Very few characteristic features remain among these people. Their long intercourse with the Hudson's Bay Company, and of late years, with the Americans, has obliterated what peculiarities they may have had; nor is there any essential difference in their habits or manners, from those of the Indians adjoining them. They use for the most part, the arms and utensils of the whites, and the gun has superseded the bow. The pails and baskets constructed from the bark of the cedar; saddles, and fishing apparatus, are the principal articles of domestic manufacture; and even of such things, it is almost as common to find the imported substitutes.

In regard to morality, they are much superior to the river Indians. Their mode of disposing of their dead, like that of their kindred tribes, is in the ground, but without any attempt at coffins, the body merely wrapped in its clothing. Just before Captain M'Clellan's arrival, a man had died of the small pox, and those who had buried him were purifying themselves. During the three days occupied in this, they absented themselves from camp, alternately using the sweat-house and plunging into cold water. The house, which was a small oven-shaped affair, was heated with stones. The mourning is performed by the women, who live apart for a few days, and afterwards bathe and purify themselves. They have a common objection to mentioning the names of the dead, as well as their own. The practice of medicine, as

elsewhere, consists in incantations, and is attended with the usual hazards—the life of the practitioner answering for want of success, or a refusal to attend, where properly fed. Besides these mummeries, however, they use certain plants as medicines, among which are both emetics and cathartics.

Slavery and polygamy are yet retained among them; the number of wives being limited only by the wealth of the husband. A curious custom exists, exhibiting their savage ideas of equity. If a wife dies within a short period after marriage, the bereaved husband may reclaim the consideration from the father; so, also with slaves and horses.

"While I was at Mansfield Woodhouse, I was moved to go to the steeple house and declare the truth to the priest and people. But the people fell upon me in great rage, struck me down, and almost stifled me. I was cruelly beaten and bruised by them, with their hands, *bibles* and sticks. Then they haled me out, though I was hardly able to stand, and put me into the stocks where I sat some hours; and they brought dog-whips and horse-whips, threatening to whip me. After some time, they had me before the magistrate at a knight's house, where were many great persons; who seeing how evilly I had been used, after much threatening, set me at liberty; but the rude people stoned me out of the town, for preaching the word of life to them. I was scarce able to go, or well to stand, by reason of the ill usage I had received; yet, with much ado, I got a mile from the town, and then I met with some people that gave me something to comfort me, because I was inwardly bruised; but the Lord's power soon healed me again. That day some people were convinced of the Lord's truth, and turned to his teaching, at which I rejoiced."—*G. Fox.*

A singular religion, to beat a righteous man out of their meeting houses with their bibles, especially for declaring the doctrines of the bible unto them! We never read of George Fox and his brethren driving or beating with their bibles, which they often carried with them, any people out of their meeting places. But it was through suffering they most effectually spread their doctrines, and in submitting to which, many were convinced of the reality of their religion and joined in the same faith.

"Then," he says, "I went out of Nottinghamshire into Leicestershire, several Friends accompanying me. There were some Baptists in the country, whom I desired to speak with, because they were separated from the public worship. Some of their teachers, and others of the heads of them, with several of their company, came to meet us at Barrow, where we discoursed with them. One of them said, what was not of faith was sin. I asked him what faith was, and how it was wrought in man. But they turned off from that, and spake of their baptism in water. Then I asked them whether their mountain of sin was brought down, and laid low in them, and their rough and crooked ways made smooth and straight in them? They looked upon the Scriptures as meaning outward mountains and ways; but I told them, they must find them in their own hearts; which they seemed to wonder at. We asked them who baptized John the Baptist, Peter and John, and the rest of the apostles? and put them to prove by Scripture, that these were baptized in water; but they were silent. Then I asked them, seeing Judas who betrayed Christ, and was called the son of perdition, had hanged himself, what son of perdition was that which Paul spake of, that sat in the temple of God exalted above all that is called God? and what temple of God was that in which this son of perdition sat? and whether he that betrays Christ within himself, be not one in nature with that Judas that betrayed Christ without? But they could not tell what to make of this, nor what to say to it. So after some discourse we parted; and some of them were loving to us."

Their water baptism had produced little effect to clear their vision or to enlighten their understanding in relation to spiritual things. He only who baptizeth with the Holy Ghost and fire, who gathereth the wheat into his garner and burus the chaff with unquenchable fire, can open the mysteries of salvation and give faith to believe, and divine light to understand and to profit by them. John said, "He must increase and I must decrease." That which is constantly decreasing will come to an end; and the baptism and ministration of the Spirit of Christ which increases, must finally overspread all. The apostle Paul thanked God that he had baptized none of the Corinthians, that is, with the element of water, except two or three whom he mentions. For Christ sent him not to baptize but to preach the gospel, not with wisdom of words, lest the cross of Christ should be made of none effect. And he told the Corinthians, "By one Spirit are we all baptized into one body, whether we be Jews or Gentiles, bond or free, and have been all made to drink into one Spirit." It was by the Holy Spirit they were baptized, and made to drink into one Spirit, not by the application of water upon the surface of the body. Peter wrote to the believers that the baptism which now saves is not the putting away of the filth of the flesh, but the answer of a good conscience towards God, by the resurrection of Jesus Christ; who is gone into heaven and is on the right hand of God, angels and authorities and powers being made subject unto Him. This does not prevent him from appearing in men as a refiner's fire, and as fuller's soap to purge their conscience of dead works and purify them as gold and silver, that they may offer offerings in righteousness. It is out of hearts sanctified by the washing of regeneration and the renewing of the Holy Ghost, which God hath shed on us abundantly through Jesus Christ, the Mediator of the new covenant, that offerings acceptable as in days of old, are offered unto the Lord.

From Rural Hours.

The Forests.

What a noble gift to man are the forests! What a debt of gratitude and admiration we owe for their utility and their beauty! How pleasantly the shadows of the wood fall upon our heads, when we turn from the glitter and turmoil of the world of man! The winds of heaven seem to linger amid these balmy branches, and the sunshine falls like a blessing upon the green leaves; the wild breath of the forest, fragrant with bark and berry, fans the brow with grateful freshness; and the beautiful wood-light, neither garish nor gloomy, full of calm and peaceful influences, sheds repose over the spirit. The view is limited, and the objects about us are uniform in character; yet within the bosom of the woods the mind readily lays aside its daily littleness, and opens to higher thoughts, in silent consciousness that it stands alone with the works of God. The humble moss beneath our feet, the sweet flowers, the varied shrubs, the great trees, and the sky gleaming above in sacred blue, are each the handiwork of God. They were all called into being by the will of the Creator, as we now behold them, full of wisdom and goodness. Every object here has a deeper merit than our wonder can fathom; each has a beauty beyond our full perception; the dullest insect crawling about these roots lives by the power of the Almighty; and the discolored shreds of last year's leaves wither aw upon the lowly herbs in a blessing of fertilit But it is the great trees, stretching their ar above us in a thousand forms of grace a strength, it is more especially the trees which the mind with wonder and praise.

Of the infinite variety of fruits which spri from the bosom of the earth, the trees of the wo are the greatest in dignity. Of all the works the Creator which know the changes of life a death, the trees of the forest have the longe existence. Of all the objects which crown the gr earth, the woods preserve unchanged, throughc the greatest reach of time, their native characte the works of man are ever varying their aspec his towns and his fields alike reflect the unstat opinions, the fickle wills and fancies of each p sing generation; but the forests on his borde remain to-day the same they were ages of yea since. Old as the everlasting hills, during tho sands of seasons they have put forth, and la down their verdure in calm obedience to the d erce which first bade them cover the ruins of t Deluge.

But, although the forests are great and old, y the ancient trees within their bounds must ea bend individually beneath the doom of eve earthly existence; they have their allotted peri when the mosses of Time gather upon the branches; when touched by decay, they bre and crumble to dust. Like man, they are decke in living beauty, like man they fall a prey to death and while we admire their duration, so far beyor our own brief years, we also acknowledge th especial interest which can only belong to t graces of life and to the desolation of death. W raise our eyes, and we see collected in one compar vigorous trunks; the oak, the ash, the pine, fir in the strength of maturity; by their side star a young group, elm, and birch, and maple, the supple branches play in the breezes, gay and fres as youth itself; and yonder, rising in unheede gloom, we behold a skeleton trunk, an old spruc every branch broken, every leaf fallen, fallen,- dull, still, sad, like the finger of Death.

It is the peculiar nature of the forest, that li and death may ever be found within its bound in immediate presence of each other; both wit ceaseless, noiseless, advances, aiming at the ma tery; and if the influences of the first be the mo general, those of the last are the most striking Spring, with all her wealth of life and joy, finc within the forest many a tree unconscious of he approach; a thousand young plants springing u about the fallen trunk, the shaggy roots, seek t soften the gloomy wreck with a semblance of th verdure it bore of old: but ere they have throw their fresh and graceful wreaths over the moulde ing wood, half their own tribe wither and die wit the year. We owe to this perpetual presence death an impression calm, solemn, almost religiou in character, a chastening influence, beyond wha we find in the open fields. But this subdue spirit is far from gloomy or oppressive, since never fails to be relieved by the cheerful animatio of living beauty. Sweet flowers grow beside th fallen trees, among the shattered branches, th season through; and the freedom of the wood the unchecked growth, the careless position o every tree, are favourable to a thousand wild beau ties, and fantastic forms, opening to the mind play of fancy which is in itself cheering and en livening, like the bright sunbeams which cheque with golden light the shadowy groves. Tha character of rich *variety* also, stamped on all th works of the creation, is developed in the fores in clear and noble forms.—We are told that in th field we shall not find two blades of grass exacti

ke; that in the garden we shall not gather two wers precisely similar; but in those cases the es are minute, and we do not seize the truth at ce; in the woods, however, the same fact stands orded in bolder lines: we cannot fail to mark is great variety of detail among the trees; we it in their trunks, their branches, their foliage; the rude knots, the gnarled roots; in the mosses d lichens which feed upon their bark, in their rms, their colouring, their shadows. And within this luxuriance of varied beauty, there dwells sweet quiet, a noble harmony, a calm repose, hich we seek in vain elsewhere, in so full a easure.

Those hills, and the valleys at their feet, lay r untold centuries one vast forest—unnumbered asons, ages of unrecorded time passed away while ey made part of the boundless wilderness of oods. The trees waved over the valleys, they se upon the swelling knolls, they filled the hol-ws, they crowded the narrow glens, they shaded e brooks and springs, they washed their roots in e lakes and rivers, they stood upon the islands, ey swept over the broad hills, they crowned the ads of all the mountains. The whole land lay umbering in the twilight of the forest. Wild reams made up its half-conscious existence. The ngry cry of the beast of prey, or the fiercer deed savage man, whoop and dance, triumph and rture, broke in fitful bursts upon the deep silence, d then died away, leaving the breath of life to se and fall with the passing wind. * *

Sixty years have worked a wonderful change—e forest has fallen upon the low-lands, and there not a valley about us which has not been opened. nother half century may find the country bleak d bare; but as yet the woods have not all been lled. He who takes pleasure in the forest, by cking his way, and following a winding, may et travel many a long mile over a shady path, ich as the red man loved.

Our forest lands of America preserve to the esent hour something that is characteristic of eir wild condition, undisturbed for ages. They ound in ruins of their own.

For "The Friend."

Nothing is of so much moment as the salvation the soul. Anything that absorbs the attention, as to interfere with the constant progress of this reat work, must be in opposition to the divine ill, and our true happiness. We may mistake her matters for religious duty and service, by hich a wrong spirit may take possession of the eart, and deceive us. The longer a false guide followed, the more the mind becomes clouded, nd the greater is the danger of losing a good ondition.

Good gifts, designed to qualify men and women or usefulness in the church, may be misapplied nd finally lost. Those who had possessed them aving come under a cloud, will be among the ast to discover the incalculable loss that has been stained, and the extent to which others may be njured by an improper example. "Watch and ray, lest ye enter into temptation." "The pirit may be ready" and active, "but the flesh weak."

Lines of Railroad connecting the East with the West.—Commencing at Boston, and following the ne of the Western Railroad of Massachusetts to lbany, thence by the New York Central Road o Buffalo, thence by the Lake Shore Railroad to leveland, thence by the lines of railway passing y Bellefontaine to Indianapolis, and thence to erre Haute, we shall have an aggregate of one housand and thirty-four miles of railroad in actual operation, crowded with business through the entire distance.

If we begin at New York, and pass over the Hudson River Railroad to Albany, and thence follow the line above described, we shall find a distance of nine hundred and seventy-eight miles of complete railroads; or if from New York, we follow the New York and Erie Railroad to Dunkirk, and there intercept the above described line, we shall find a distance of nine hundred and fifty-five miles of railroads in daily operation.

If we start from Philadelphia, and pass by the Pennsylvania Central Railroad to Pittsburg, and thence by the Ohio and Pennsylania Railroad to its intersection at Crestline with the line from Cleveland to Indianapolis, we shall find a line of railroad eight hundred and eighteen miles in length to Terre Haute, in actual operation.

If we start from Baltimore, and go by the Baltimore and Ohio Railroad to Wheeling, and thence by the Central Ohio Railroad to Columbus, thence by the line to Xenia and the Indiana Central Railroad to Indianapolis, and thence to Terre Haute, we have a line of seven hundred and seventy miles now in actual operation.

If we start from Cincinnati, and proceed by the railroad via Lawrenceburg to Indianapolis, and thence to Terre Haute, we have a line of one hundred and eighty-two miles of railroad in operation.

Combining these different lines, and omitting such portions of them as are common to two or more of the lines above named, we shall find an aggregate of *two thousand nine hundred and ninety-one miles* of railroad now completed, and in daily and constant operation between Terre Haute and the cities of the East.

Of the lines not completed, but now under construction, the Wabash Valley Railroad will unite with our line at Paris, in Edgar County, one hundred and fifty miles from Alton, and passing to the valley of the Wabash, will proceed by Lafayette, Logansport, and Fort Wayne, to Toledo, where it will unite with the navigation of Lake Erie, and form the shortest connection between St. Louis and the lake that is practicable. It will be about two hundred and seventy miles in length, from Paris to Toledo, and will pass through the most important section of the State of Indiana.

At Toledo, it will unite with the Cleveland and Toledo Railroad, and secure, in the direction of Cleveland and thence to the East, the connections that will entitle it to be considered one of the great thoroughfares of the business between the East and West. Nearly five millions of dollars have already been expended upon this line, and nearly one-half of the whole will be in operation by July of the present year.

It will be remembered that the junction of the Missouri and Mississippi Rivers takes place opposite the city of Alton, and, consequently, the navigation of the Missouri is favorably carried on from this point.

Extracts for "The Friend."

To the Churches of Jesus throughout the World.

"Friends, let it never pass out of our remembrance what our God hath done for us since He hath made us a people. Hath any weapon formed against us prospered? Hath he called us and not protected us? Hath he not sheltered us in many a storm? Did he ever leave us under the reproaches and contradictions of men? Nay, hath he not spoken peace to us? Were we ever cast out by men and he forsook us? No, the Lord hath taken us up. Were we ever in prison and he visited us not; hungry and he fed us not; naked and he clothed us not; or have we been sick, and he came not to see us? When were the jails so close, that he could not come in; and the dungeons so dark, that he caused not his light to shine upon us. O nay; he hath never left us, nor forsaken us; yea, he hath provided richly for us. He hath brought us into the wilderness, not to starve us, but to try us, yet not above our measure. He fed us with manna from on high, with pure honey and water out of the rock, and gave his good Spirit to sustain us. By night he was a pillar of fire to us, to comfort us, and by day a pillar of cloud to hide and shelter us. He was a shadow of a mighty rock that followed us; and we never wanted a brook by the way to refresh us. Was God good to Israel outward? Much more hath he abounded to his spiritual Israel, the proper seed and offspring of himself. O, the noble deeds and valiant acts, that he hath wrought in our day for our deliverance! He hath caused one to chase ten, and ten an hundred, and an hundred a thousand, many a time. None have been able to snatch us out of his hands, who abode in his Truth. For though the winds have blown, and the sea hath raged, yet hath he rebuked the winds and the sea for his seed's sake. He hath said to the winds, be still, and to the sea, thus far shalt thou come and no further. He hath cast up an highway for his ransomed to walk in, so plain, that though a fool, he shall not err therein. This is the light in which the nations of them that are saved must walk forever."

"O my dear friends and brethren, in the sense of that life and power, that God from heaven hath so gloriously dispensed amongst us, and by which he hath given us multiplied assurances of his loving kindness unto us, and crowned us together with heavenly dominion, and in which my spirit is at this time broken before the Lord, do I most earnestly entreat you to watch continually, lest any of you that have tasted of the good Word of God, and the powers of the world to come, fall by temptation; and by carelessess and neglect, tempt the living God to withdraw his fatherly visitation from you, and finally to desert such; for the Lord our God is a jealous God, and he will not give his glory unto another. He hath given to man all but man himself; and him he hath reserved for his own peculiar service, to build him up a glorious temple to himself; so that we are bought with a price and we are not our own.

"Therefore let us continually watch, and stand in awe, that we grieve not his Holy Spirit, nor turn his grace into wantonness. But all of us, let us wait, and that in a holy travail of spirit, to prove ourselves sealed by the spirit of adoption, unto the day of our complete redemption; when not only all our sins, but all our sorrows, sighings and tears shall be wiped away from our eyes; and everlasting songs of joy and thanksgiving, shall melodiously fill our hearts to God, that sits upon the throne, and to his blessed immaculate Lamb, who by his most precious blood, shall have completely redeemed us from the earth, and written our names in the book of life."—*W. Penn.*

Let all the sincere followers of the Lamb, keep close to their heavenly guide, denying themselves and bearing the cross constantly, and he will not permit the powers of darkness, let them operate through whom they may, to overcome and deprive them of his peace and loving kindness. Men may vaunt over them and think to trample them under foot, but strong is the Lord God, their Redeemer, who will keep them as the apple of his eye, if they are faithful to Him, and disappoint the designs of misguided men respecting them.

The just man will flourish in spite of envy.

The Adulteration of Food.

An article recently published in the *London Quarterly Review* on "Food and its Adulterations," has justly excited unusual notice among the newspaper press of this country. No question can be of more importance to the journalist than the preservation of public health, and the astounding facts there set forth, are well calculated to attract the serious consideration of the community. While we legislate with zealous care against the introduction and spread of infectious sickness, there has been hitherto too little thought and care given to the origin and causes of our domestic diseases. It is palpable to the observation of every one, that of late years there has been great increase among our people, of diseases of the stomach and alimentary canal. Dyspepsia and its kindred diseases exist among us to an incredible degree, and while they are partially due to our peculiar habits as a people, the result of recent scientific inquiry would go to show that many of them are attributable to the constant and fraudulent adulteration of the common articles of our food.

The origin of the article in question is curious. The London *Lancet*, the leading medical journal of England, confided, a few years since to several physicians, an investigation by chemical tests, and the microscope into the ordinary articles of food used in the Metropolis. This examination extended from the year 1851 to 1854, and its results have now been given to the world by Dr. Hassel, Chief of the Commission.

For the purpose of this investigation, numerous specimens of each article were purchased in all parts of London, from the West End to St. Giles. Each one of which was carefully labelled with the name and address of the vender. With an honest boldness, which puts to shame our law of libel, the results of each examination, with the name of the seller, have been unhesitatingly published in the results of the Commission.

The revelations of this inquiry have indeed been most startling, and go to show that in London it is almost impossible to procure in a pure form the common articles of food; and that the manner in which they are adulterated is not only one of degree, but of a kind ranging from the mixture of inferior qualities of the same substance, down to the introduction of materials prejudicial to health, and, even to the admixture of the most deadly poisons. From the table castor to the bread, all were found in a very large percentage of cases to be fraudulently altered. Out of forty-two samples of mustard, all were more or less adulterated with flour and turmeric—the basis of the vinegar was sulphuric acid—the black pepper was admixed with linseed, meal and the sweepings of the spice warehouse—while the cayenne, in 24 out of 28 cases was found to be mixed with brick dust, saw dust and red lead. Of fifty-two samples of green tea analysed by Dr. Hassel, *all* were adulterated, and one particular kind—gunpowder, both black and green—was found to be almost entirely a manufactured article. Both had a large admixture of a compound of sand, dirt, tea dust and broken down portions of other leaves, worked together with gum. The colouring matter was given with black lead, Prussian blue, turmeric or French chalk, according to its kind. But worse than this, it was found that much of the tea sold, was made in London, under the most disgusting circumstances. For this purpose, the spent or used up leaves were purchased from the hotels and coffee houses and after being admixed with leaves from the thorn bushes and sloe trees around the Metropolis, and dried, roasted with a solution of gum and copperas, and put up in fancy packages, and thus extensively sold.

The Coffee was worse than the Tea. Analyses of upwards of one hundred different samples proved, that in a great number of cases, articles sold as the "Finest Mocha, &c.," contained, in some cases, very little coffee at all; in others, only a third or a fifth, the rest being made up of Chicory, roasted carrots, red earth, or baked horses' and bullock's livers. The milk was admixed with water, annetto, treacle or flour, and the bread was adulterated with potatoes, or a mixture called by the trade, "hards," or "stuff," consisting of alum and salt, prepared and sold in large quantities by the Druggists, for that purpose. To destroy the sour taste which belongs to flour made from inferior or damaged wheat, and to bring it up to the required colour, this mixture is found to be most applicable, while the alum absorbs a large quantity of water, and thus adds much to the weight; of twenty-eight loaves of bread purchased in every quarter of the city, not one was found to be free from this adulteration.

In all the various preparations of pickles and sweet-meats, poisons were found in perceptible, and in some instances dangerous quantities, and the bonbons and confectionery were discovered to be universally coloured by the chromates of lead, arsenite of copper or other similar deadly poisons.

No improvement was found when the commission passed from the solid to the liquid articles of food. From the water filled with organic matter, vegetable and animal, to the beer and porter of the pothouse, or the vile compounds vended in the gin palace, all alike contained substances injurious to health or prolonged life. The very drugs administered to the sick were vilely altered, and shorn at least, of their virtues, if not made positively worse in their results than the diseases they were designed to cure. Snuff was found to be largely adulterated, and some kinds poisonously so. Many persons have been deprived of the use of their limbs through a persistence in using this article, in which had been introduced preparations of lead, or bichromate of potash, a still more deadly poison.

In a word, fraud by deception was found to exist in all the departments of business connected with the support of life. The baker takes in the grocer, the grocer defrauds the publican, the publican "does" the pickle manufacturer, and the pickle maker fleeces and poisons all the rest.

The article in the review is fraught with a solemn lesson to the people of our large cities, where, it is to be feared, the same sort of rascality is largely practised. It remains to be seen whether, when their attention is called to it, any steps will be taken to relieve us from what has already grown to be a monstrous evil, and prevent the unlawful practices which demoralize a large portion of the community, and defraud, deceive, and vitally injure the remainder.—*D. News.*

Paving Streets with Iron.—Some time ago the experiment of paving the streets with iron blocks was tried on a limited scale in New York, and the experiment has succeeded so well, that a Committee of the Board of Councilmen of that city have reported in favour of paving Maiden lane and Cortland street with the iron pavement, and there is a prospect of their recommendation being adopted. The iron pavement, it is said, gives the street the finish of an elegantly tiled floor, and there is no mud or dust from it. In Boston, the experiment of iron pavements was tried two years ago, and it is said to have been successful, though we have never heard of its having been adopted very extensively in that city. Any kind of pavement is preferable to the cobble stone pavement, which is always rough and uncomfortable to man and horse

THE WORSHIP OF NATURE.

The ocean looketh up to heaven,
As 'twere a living thing;
The homage of its waves is given
In ceaseless worshipping.

They kneel upon the sloping sand,
As bends the human knee,
A beautiful and tireless band,
The priesthood of the sea!

They pour the glittering treasures out,
Which in the deep have birth,
And chant their awful hymns about
The watching hills of earth.

The green earth sends its incense up
From every mountain-shrine,
From every flower and dewy cup
That greeteth the sunshine.

The mists are lifted from the rills,
Like the white wing of prayer;
They lean upon the ancient hills,
As doing homage there.

The forest-tops are lowly cast
O'er breezy hill and glen,
As if a prayerful spirit pass'd
On nature as on men.

The clouds weep o'er the fallen world,
E'en as repentant love;
Ere, to the blessed breeze unfurled,
They fade in light above.

The sky is as a temple's arch,
The blue and wavy air
Is glorious with the spirit-march
Of messengers at prayer.

The gentle moon, the kindling sun,
The many stars are given,
As shrines to burn earth's incense on
The altar-fires of heaven!

Whittier.

Selected.

"COULD YE NOT WATCH WITH ME ONE HOUR"

We gird us bravely to rebuke
Our erring brother in the wrong;
And in the ear of pride and power,
Our warning voice is strong.

Easier to smite with Peter's sword,
Than "watch one hour" in humbling prayer,
Life's "great things," like the Syrian lord,
Our souls can do and dare.

But, O, we shrink from Jordan's side,
From waters which alone can save,
And murmur for Abana's banks,
And Pharpar's brighter wave.

O! Thou who in the garden's shade
Didst wake thy weary ones again,
Who slumber'd in that fearful hour,
Forgetful of thy pain;

Bend o'er us now, as over them,
And set our sleep-bound spirits free,
Nor leave us slumbering in the watch
Our souls should keep with thee!

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned membe
of the Yearly Meeting of Philadelphia.

(Continued from page 339.)

ANTHONY MORRIS.

Of the birth place of this Friend we find n
trace. He was born in 1654, and came to Americ
in 1680, probably about its close, and took up hi
abode in Burlington, where he resided for severa
years. He was either a married man when h
came to America, or married very shortly after
wards, his son Anthony being born in the yea
1682. About the commencement of the yea
1686, he removed to Philadelphia, where h
entered into some kind of business which entitle
him to be called a merchant.

In the 7th month, 1686, he was appointed

ness in the Monthly Meeting of Philadelphia, n was before long its clerk, which office he filled o some time. Anthony was one of the willing harers for the good of his fellow men, and a large amount of service of this kind devolved n him. Being left a widower, he in the year 3 married Agnes Boom, a widow of Cornelius om, a German friend, who a few years before d a bakehouse located in the wilderness, South t from Third and Chestnut streets, and not far h the Creek.

We can trace Anthony Morris almost month by nth by his various appointments in religious iety, and perhaps may see something of his igious growth. At first his services for the rch lay principally in collections for the poor, for schools, in inquiring into clearness as re- cts marriage, in settling differences, and in cing after the interests of fatherless children, se mothers were about marrying again. Soon, vever, appointments of greater weight were put n him, and for the last twenty-five years of his , few subjects of deep importance to the welfare he Religious Society of Friends in Philadelphia nthly, Quarterly and Yearly Meetings, were mitted to the care and judgment of a com- tee, of which he was not a member.

About the middle of the year 1693, having iness to transact in New England, he went ther. From the certificates asked for, it is dent that he was again a widower, and it would m he must have married in his absence. He s not appear to have returned until the begin- g of 1694. From this time to 1700, his ap- ntments are multifarious, embracing almost all services which Monthly Meetings require of ir members. He had much unity with the igious labours of William Ellis, and had pur- ed when the time drew near for that worthy iend to leave this country, to have joined him her at Chester or at New Castle to have taken last solemn parting. But William left a little fore the time expected, in the First month, 1699, d Anthony missed seeing him. On the 12th of e following Fourth month he addressed a letter him.

"Dear William Ellis :—I have often been ubled in my mind when the thoughts of thy ing from us have come into my remembrance, cause that I had not the opportunity of taking r leave of thee in a solemn manner, considering w nearly my spirit was united to thee, so that can truly say, I loved and do love thee in the rd; and through the operation of his Spirit, u wert made serviceable to me. So, dear Wil- m, excuse my neglect, for I came but a few nutes after thou wast gone. Now, I desire thee pray for me, that I may be kept and preserved thful to the Lord; for, according to my weak ilities, I have often done the same for thee ce thy departure from us. I send this by my y good friend Joseph Kirkbride, whom I hope e Lord will attend with his presence, and keep n near to himself, and within his own protec- n; and, if it be his good pleasure, return him e to his family, as I hope thee hast gotten to ne. With the salutation of mine and my wife's r love to thee and thy dear wife, I rest, and bscribe myself, in the Truth that changes not,

Thy real friend,

ANTHONY MORRIS."

Soon after writing this, he was once more left widower, but was married again before the close the next year, to Elizabeth Watson. She was e only one of his wives much used in religious iety, and we may believe that he derived no all benefit from her sympathy and fellow feeling in the various exercises and deep baptism that were now meted out to him, as a preparation for the ministry of the Gospel, to which service his Master had called him. In the year 1701 he first opened his mouth in this way, and his growth appears to have been solid rather than rapid. Without doubt he felt often cast down under the sense of the important work assigned him in the Church Militant, but being humble and watchful he at last attained to the stature of a father in the Truth.

In the year 1701 a young fashionable Friend applied for a certificate to London, and Anthony Morris and George Gray were appointed to enquire into his orderly behaviour, and his clearness in respect to marriage. They found the young man dressed in the height of the then fashion, with a huge periwig, "extraordinarily powdered." They reported with honest, straight-forward simplicity characteristic of the time, "we cannot find but that he is clear in relation to marriage, and debts, but as to his orderly walking amongst Friends we cannot say much." The young man being present and being spoken to on the subject, made some acknowledgment relative to his extravagant appearance, and expressing a hope that he would be more careful for the future, the meeting gave him a certificate. It is probable this plain dealing had its use. The young Friend returned from London, married in the order of Society, and appears to have been an orderly respectable Friend to his death.

Evening Meetings on the First day of the week had been established in Philadelphia, in order to prevent the young members of the Society of Friends from rambling about the streets on that evening. They were held at the houses of several valuable Friends, and, among others, at that of Anthony Morris. There appears to have been fears relative to them in the minds of some, and they were at last discontinued. Previously to this we find this minute of Third mo. 29, 1702. "Several of the evening meetings having been let fall through the late visitation of the small pox, it is the sense of this meeting that Friends may be left to their liberty. Such as are so minded may keep them, provided they be ended in due season. Friends to beware of thinking or speaking hard one of another, either for staying from, or going to said meetings."

In regard to his labour in the ministry for a number of years, it does not appear that Anthony Morris travelled abroad, yet he was a very frequent attender of the meetings in the neighborhood of Philadelphia, as well as some of the Yearly Meetings for worship. The traces of his service of this kind are so abundant as to show the truth of the testimony of his friends. They say, "he was advanced to his forty-seventh year when he engaged in this service, and having a prospect of a great work before him, requiring close application, he drew his worldly business into narrow compass and devoted his time principally to the service of Truth."

On the 5th day of the First month, 1706, he addressed the following letter to his friend Wm. Ellis.

"Dear Friend:—In that love which abides and is unchangeable do I salute thee, not forgetting thy labour of love, and thy care over me, for the Truth's sake and my soul's welfare. I must confess now, as I have often done to that which I received through thee as an instrument, although the work was the Lord's, and he it is who gives the increase. Notwithstanding I knew the Lord in some degree, and loved the Truth and the prosperity thereof, for many years before thy coming amongst us, yet many things stood in my way that wanted to be removed; and thou wast made serviceable to me therein; and now, that thou mayst reap something of thy labours, which may add a little to thy satisfaction, I may inform thee that the bread thou cast upon the waters many days since, is, in part, found again. The Lord, if it be his will, continue to bless thy labour, and keep thee faithful in his service to the end of thy days; the same I earnestly desire for myself, with all the Lord's servants and labourers that he hath employed to run to and fro on his errands, to call others and invite them to come to the marriage of our Heavenly King's Son, who tells us, that in his Father's house are many mansions, and we faithfully believe the report. I shall not need to enlarge much on this subject, to thee especially, because thou knowest more than I can tell thee; but I know by experience that fathers love to hear their children talk a little in their minority and innocency, and if the children do not speak together as they should, the fathers will delight to teach them. Since I have remembered thee, and given thee an opportunity for some fatherly instructions, I hope thou wilt not forget me, for I am in want. Now I think it is time to break off from this subject, and acquaint thee, that these come by our friend Samuel Bownas, who is a brave fellow, a good workman, and hath done great and good service here, and we are loth to part with him; but if you have any more such, let thy prayers with mine be put up to our Master, that he may send them forth amongst us; for here is abundance of work to be done, and a great want of workmen. Now for a conclusion: in the sense of that Ancient Power, which uniting in love makes us one, all the world over, when truly gathered into it, do I again with sincere affection salute thee, and subscribe myself thy friend and younger brother, in the fellowship of the Gospel of Peace, according to my measure.

ANTHONY MORRIS."

The first time he obtained a minute to travel, was in 1708, when his concern was only to attend the Yearly Meeting at Chester, Maryland, and some service on the Eastern Shore. In 1710 he visited the same places, and towards the close of that year, he informed his Friends of a concern to visit New England. He was diligently engaged for about three months, early in 1711, in this service.

In the year 1715 he received the unity and certificates of his Monthly Meeting and the General Meetings of Ministers, for a visit in gospel love to some parts of Great Britain. This visit was principally confined to London, and the south part of England, and was prosecuted diligently. He was again labouring amongst his Friends in Philadelphia, in eleven months, from the time of his leaving them. He brought with him returning certificates of the unity of those he had visited abroad. After this, he continued much about Philadelphia and its neighbourhood, yet he visited Maryland once more.

His Friends testify of his ministry, that it was "edifying" and "sound in word and doctrine." He was "zealous and serviceable in the discipline; a diligent attender of all our religious meetings; careful in observing the time appointed, and often concerned to exhort such to amendment, as were remiss herein."

He was favoured with general good health, until after the Yearly Meeting in the Seventh month, 1721, when he was seized with apoplexy. He recovered from its effects, but had slight returns, until in the Eighth month, when he was visited by a second severe attack. From the effect of this, his understanding seemed entirely to recover,

although his power of speech continued much impaired. He at times, under the sensible influence of Divine love, spoke to those who came to see him, very suitably to their conditions, and which, being well understood by his constant attendants, were repeated by them. He said, that if, consistent with the Divine will, the time of his dissolution was at hand, it would be more joyous for him to depart now than to continue longer in the body. Yet he expressed his free resignation to the will of God in the matter. In a humble tender frame of spirit, he mentioned the testimony our Saviour gave concerning the woman, who poured on his head the precious ointment,—"She hath done what she could." He added, he was favoured with the evidence in himself; that he had done what he could, and felt peace. But he added, "My hope for eternal salvation is alone in the mercy of God, through his Son Jesus Christ; the only Saviour and Mediator."

Some Friends about going to an adjacent Yearly Meeting called to see him, he took leave of them with affection, and said, "Remember my dear love to Friends in general; tell them I am going, and all is well."

He departed this life on the twenty-third day of the Eighth month, 1721, aged 67 years. On the 25th after a meeting held in the Great Meeting house, attended by many Friends from the city and country, his body was taken to the grave-yard and interred.

Egypt.—The railway between Alexandria and Cairo, a distance of 130 miles, is now complete, with the exception of the three bridges on the two branches of the Nile and the Delta Canal. The communication between the two towns may be kept up by the line of railroad by crossing the river in boats, but it will not be available for traffic and passengers until after the bridges are completed—five or six months hence. The most important bridge is the tubular one which crosses the Damietta branch of the Nile at Benha, and which is well advanced toward completion.

The native workmen, on the Egyptian Railway, are very grossly ill-treated and neglected. They are taken away by force from their villages, conveyed to a distance to work, and not only are they not paid, but it happens often that not even bread is provided for them, so that they are frequently seen eating the thistles by the roadside, or clover from the fields to appease their hunger. To be prevented from running away, they are kept under the strictest vigilance, their chiefs are responsible for their number, and at night they are closely penned together, or huddled into barges moored in the middle of the river.

At Benha, in Lower Egypt, is to be seen the large new palace, the favourite residence of the late Abbas Pasha, where he breathed his last. The day after the death of Abbas, a general pilfering of the furniture took place, and this went on until not a single article was left in the whole building; tapestry was torn out of the walls, chandeliers and candelabra wrenched from their fixings, and not one fixture has been left; so that, although the palace is new, it presents an air of striking desolation. The gardens, laid out at an immense cost, are quite neglected, and the large collections of birds and dogs, of every imaginable species, collected from all parts of the world at immense prices, were allowed to die from neglect and starvation; and now there is but one doorkeeper to be seen where formerly thousands kept the place in great animation.

In the pure gospel spirit we walk by faith and not by sight.

For "The Friend."

"That which has let, will let, until it be taken out of the way." My mind has been frequently drawn of late, to warn my beloved fellow-travellers in the cause of Truth, to beware of the letting things that are thrown in the way of our looking to the only sure fountain of light and life, Jesus Christ the righteous, in his spiritual appearing in the heart. I was comforted to see in "The Friend," (p. 306,) some tender breathings, calculated to warn us of the danger of one of the hindering things, that has often arrested my attention, with desires that there might be faithful watchmen on the walls of Sion, to sound the alarm when danger appears. Some, at first sight, may think it small, but it may, perhaps, in some sort be comparable to the mole in the earth, which, though apparently a harmless little thing, may yet do great injury if let alone, to the tender plants, by its secret work, undermining and depriving them of the nourishment which the great Author of all good designed for them. It has seemed to me that the many anonymous publications (on the subject of our difficulties,) that are afloat among us at the present time, are more or less calculated to produce injurious effects, though these may not be immediately apparent; and thus much harm may be done to many choice plants to whom we are looking for good fruits, by these secret invasions of the enemy. There may be many good sentiments in the publications alluded to, but from what source did they come? If I am not mistaken, our Great Master does not require any of us to bear a testimony in this way.

It is not the intention of the writer to bear hard on any, but in tender love to call our attention to this danger, which seems to me to await us if these things are encouraged. For "that which letteth, will let, until it be taken out of the way." Unsound views and sentiments may, (anonymously) be scattered amongst us, dressed in a specious garb, and calculated to spread discord and disunity, and yet we cannot or could not make such secret offenders accountable to the body; and thus gospel order is set at nought.

A remark made by a Friend, I think worth repeating: "That he had made up his mind to read no more anonymous letters," for "if any one has not enough of religious concern to venture his name, he may as well withhold his writings."

With feelings of love, I have endeavoured to bring these things to view, in the hope that it may have been through a want of proper consideration, that any have indulged in such a course, and that more serious reflections may induce them to abandon it. Oh, that we might in this day of conflict and trial, remember the advice or command of Moses to Israel of old, "Stand still and see the salvation of the Lord," and again, "The Lord shall fight for you and ye shall hold your peace." May we not give way to mourning, and distrust his power, and go to work in our own wills to fight the Lord's battles, or enter into improper discussions, and may it be our individual experience that "the preparation of the heart in man, and the answer of the tongue, is from the Lord." J. W.

Morgan Co., Ohio.

The Battle of the Ants.

I was a witness of events of a less peaceful character. One day when I went out to my wood-pile, or rather to my pile of stumps, I observed two large ants, the one red, the other much larger, nearly half an inch long, and black, fiercely contending with one another. Having once got hold they never let go, but struggled and wrestled and rolled on the chips incessantly. Looking further, I was surprised to find that the chips were covered with such combatants, that it was not a *duel*, but a *bellum*—a war between two races of s the red always pitted against the black, and quently two red ones to one black. The leg of these Myrmidons covered all the hills and v in my wood-yard, and the ground was alre strewn with the dead and dying, both red black. It was the only battle-field which I h ever witnessed, the only battle-field I ever while the battle was raging; internecine war; red republicans on the one hand, and the bl imperialists on the other. On every side t were engaged in deadly combat, yet without noise that I could hear, and human soldiers n fought so resolutely. I watched a couple that w fast locked in each other's embraces, in a li sunny valley amid the chips, now at noon day pared to fight till the sun went down, or life w out. The smaller red champion had fastened h self like a vice to his adversary's front, and throu all the tumblings on that field never for an inst ceased to gnaw at one of his feelers near the r having already caused the other to go by the boa while the stronger black one dashed him from s to side, and, as I saw on looking nearer, had alre divested him of several of his members. Th fought with more pertinacity than bull-do Neither manifested the least disposition to retre It was evident that their battle-cry was conqu or die. In the meanwhile there came along single red ant on the hill side of this valley, e dently full of excitement, who either had dispat ed his foe, or had not yet taken part in the batt probably the latter, for he had lost none of limbs. He saw this unequal combat from afar—the blacks were nearly twice the size of the red he drew near with rapid pace till he stood on guard within half an inch of the combatants; the watching his opportunity, he sprang upon the bla warrior, and commenced his operations near t root of his right fore leg, leaving the foe to sele among his own members; and so there were thr united for life, as if a new kind of attraction h been invented which put all other locks and ments to shame.

I should not have wondered by this time to fi that they had their respective musical bands st tioned on some eminent chip, and playing their n tional airs the while, to excite the slow and che the dying combatants. I was myself excited som what, even as if they had been men. I have doubt that it was a principle they fought for, much as our ancestors, and not to avoid a thre penny tax on their tea; and the results of th battle will be as important and memorable to tho whom it concerns as those of the battle of Bunk Hill, at least.

I took up the chip on which the three I ha particularly described were struggling, carried into my house, and placed it under a tumbler my window-sill, in order to see the issue. Holdi a microscope to the first mentioned red ant, I sa that, though he was assiduously gnawing at th near fore-leg of his enemy, having severed his r maining feeler, his own breast was all torn awa exposing what vitals he had there to the jaws the black warrior, whose breastplate was apparentl too thick for him to pierce; and the dark ca buncles of the sufferer's eyes shone with ferocit such as war only could excite. They struggle half an hour longer under the tumbler, and whe I looked again the black soldier had severed th heads of his foes from their bodies, and their sti living heads were hanging on either side of his like ghastly trophies at his saddle bow, still appa rently as firmly fastened as ever, and he was e deavouring with feeble struggles, being witho feelers and with only the remnant of a leg, and

not how many other wounds, to divest him- f them; which at length, after half an hour , he accomplished. I raised the glass, and nt off over the window-sill in that crippled

Whether he finally survived that combat, pent the remainder of his days in some Hotel nvalides, I do not know; but I thought that ndustry would not be worth much thereafter. ver learned which party was victorious, nor ause of the war; but I felt for the rest of day as if I had my feelings excited and har- d by witnessing the struggle, the ferocity and age, of a human battle before my door.—*Tho- 's Life in the Woods.*

ome Words spring up in a very curious way. ich says that the word "to chouse," is a kish one, signifying "interpreter." Such an rpreter or "chiaous"—(written "chaus" in klnyt, "chius" in Massenger)—being attach- o the Turkish Embassy in England, committed he year 1609, an enormous fraud on the Turk- and Persian merchants resident in London succeeded in cheating them of a sum amount- to four thousand pounds sterling—a sum very h greater at that day than at the present. m the vast dimensions of the fraud, and the priety which attended it, any one who cheated efrauded was said to "chiaouse," "chause" chouse,"—to do, that is, as this "chiaouse" done.

For "The Friend."

Human Prudence.

t has ever been the view of consistent profes- of the Truth, that mere human prudence and cy should not govern in the transactions of affairs of the church, as the opposite course liable to lead to discord and confusion, and n effect, a denial of the faith. The following timents of one not in profession with Friends hich are quoted in substance) as they seem to our of justice and truth, will, it is hoped, be nd instructive, as in measure confirming the w above alluded to. "When the end is most questionably good, we should ever *then* take t heed that the means *are* suitable and justifi- e, because the better the end the more easily we cozened into the use of ill means to effect we are apt, while with great earnestness of nd we gaze upon the end, to be careless what rse we take, so as we attain it; and to think t God will overlook the miscarriage in our at- pts, if the end be good. Many times, if not st times, his name and honour do more suffer attempting a good end, by bad means, than by mpting both a bad end, and also by bad means; the blemish that is cast upon that which is d, is in measure cast upon God, the author of and the evil and scandal that is in the means, ast upon the end and doth disparage and blemish " I have, says he "known some men (and if an well observes his own heart, he will find it re also, unless it be strictly denied) that will e God the glory of good enterprizes, but yet h a kind of secret invitation of somewhat of ise for themselves, their prudence, conduct, and dom; and will be glad to hear of it, and se- tly offended and discontented if they miss it; l many times give God the glory, with a kind ostentation and vain glory in doing so." But, s he, "I do know that it is his providential dering of occurrences, that makes providential liberations successful, and more is due unto his dering, disposing, fitting, timing, directing of all seeming casualties, than there is to that human unsel by which it seems to be acted: the least hereof, if not marshalled by his hand would have shattered and broken the counsel to a thousand pieces."

This same wise and good man testified, that "he that sincerely desires and seeks the direction of best wisdom, even in things temporal, does as evidently receive it, as we do the outward direction of our earthly parents. And if, according to our belief, this is so, we are left without excuse if we depart therefrom, by leaning to our own understanding, whereby we shall be led into a wilderness of confusion and sorrow, and become as sheep without a shepherd, exposed to the greatest danger; for the enemy of the precious life in our souls is never more sure of his prize, than when he can exalt the wisdom of the flesh to the producing of a spirit of insubordination and rebellion, by which he has ever wrought to overthrow and destroy the kingdom of righteousness. It was no doubt from a sense of this that the apostle was led to exhort his brethren to be strong in the Lord and in the power of his might; to put on the whole armour of God that they might be able to stand against the wiles of the devil; for, said he, 'we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this in Prussia. Dr. Ritter took with him to Berlin a slave world, against spiritual wickedness in high places.'"

How many and painful were the sufferings of this faithful apostle and minister of Christ, among which, were perils among false brethren, of whom he testified, that it was no marvel that they were false apostles, "transforming themselves into the apostles of Christ;" for, said he "Satan himself is transformed into an angel of light; therefore it is no great thing if his ministers also be transformed, as the ministers of righteousness; whose end shall be according to their works." Now, that this same unwearied enemy, and subtle transformer, is still seeking to exalt us in the spirit of our minds, and to alienate us from our God, and one from another, let us be aroused to a sense of our danger of becoming apostates not having the Spirit of Christ, by which cometh charity, patience, long suffering, humility, meekness and forbearance, against all of which, and the exercises thereof, the wisdom and spirit of this world stand opposed, however much they may seek to shelter themselves from exposure, under the covering of professed friendship.

Oh, the deceitfulness of the enemy of our souls, and the deceivableness of our hearts cannot in language be described, and nothing short of wisdom from above can enable us to distinguish between the Truth and the semblances of it—between the genuine coin and its counterfeit, which so nearly resemble each other to the inexperienced observer, as often to turn the scale of judgment in favour of the latter. Ah, how liable are we to mistake the false birth for the true—fleshly wisdom for Divine inspiration, enthusiasm for zeal, false doctrine for true, literal belief for living faith, retaliation, scandal and revenge for a love of Truth, pride and presumption for meekness and humility, and finally the voice of the stranger for that of the true Shepherd, which is the sum of all deception. Therefore do we find this language of our blessed Saviour, "What I say unto one I say unto *all. Watch*, watch and pray that ye enter not into temptation."

The Tamarind.—The Tamarind has grown in Virginia from seeds, and is highly spoken of as promising to be a valuable acquisition to our fruit trees, especially on the prairie lands of the West. Its growth is rapid, its appearance very ornamental, and it is perfectly free from blight and from the depredations of insects. Last season the trees in Virginia produced fruit as good as the imported.

Stamped Envelopes—Mode of Manufacture.—An account is given in the *Times*, at considerable length, of the various stages of the manufacture of this article. We have condensed portions of it below, as a subject of great general interest:

The paper from which the envelopes are manufactured is made expressly for this purpose, and bears the water mark, "P. O. D.: U. S." These initials of the Post-Office Department, United States, are so arranged that they appear on each envelope after the paper is cut. The paper is brought in large sheets from the mills, packed in cases, and carefully counted and marked in divisions of fifty sheets each. This is the first counting. When it arrives at the factory, it is examined and reckoned again to ascertain that the number of sheets agrees with the invoice. This is the second counting. It is then taken to the cutting-room in the basement of No. 167 Pearl street. In this room is situated the ingenious cutting-machine, driven by steam power. The knife, which is made of the exact size and shape of the envelope before it is folded, is placed upon a pile of four hundred sheets, and being set under the lever of the press, is made to pass easily through the whole thickness of paper, producing, in about three seconds of time, four hundred envelopes, cleanly and perfectly cut, ready to receive the stamp preparatory to being folded. The sheets thus cut are counted a third time, and conveyed to the stamping or embossing room on the first floor. Here are ten or twelve ingeniously constructed embossing presses, superintended by as many intelligent and expert young women. Each press stamps with a perfect and beautiful impression, as near as we could judge, about sixty envelopes per minute, after which, having been counted a fourth time, and the imperfect impressions, if any, removed, they are handed to another class of young women, whose business it is to place the adhesive self-sealing preparation on the outer flap of the envelopes So skilful are the hands in this department, that one person is able to prepare and dry about six thousand self-sealing envelopes per hour! After this, they are counted the fifth time, and passed to the folding department. The machines employed for this purpose are among the most ingenious and perfect that we have ever witnessed. Ten or twelve of these are employed, and, like the stamping presses, each is managed by a young woman. The press moves with the most perfect regularity. The sheets, now cut into proper shape, stamped, and made self-sealing, are brought to this instrument, which completes the process, and, in an instant of time, prepares each envelope for use. A feeding-band is employed, on which the flat envelope is laid; it is thus carried forward to an apparatus which places the adhesive gum on the side flaps, folds the envelope, fastens it, and drops it into a tin box which quickly counts off its contents into layers of twenty-five each, and hands them over to be counted again, bandaged and packed, subject to the order of the Postmaster General. About fifty hands are constantly employed in this department alone; and we understand it is Nesbitt's intention to manufacture, in addition to those made for Government, a supply of his beautiful article, unstamped, for the trade.

The Use of Coal in England in the thirteenth century, met with great opposition. A lecturer upon the subject, in Boston, says its use was prohibited by parliamentary law, under the impression that it produced disease. All milder punishments failing to stop its use, a law was passed making it a capital offence to burn coal. In the reign of Edward the First, a man was actually put to death for using it.

Application of Essence of Coal as a substitute for oil of Turpentine.—M. Pelouze, the son of the distinguished chemist of that name, proposes to use an oily fluid consisting of a mixture of carbohydrogens, especially of benzoine, &c., as a substitute for oil of turpentine in painting. He obtains this fluid, which boils from 100 to 168 deg., Centigrade, by the distillation of cannel coal, by means of sur-heated steam. This liquid is colourless, very fluid, and completely volatile, leaving no stain upon paper, and is not altered by exposure to the light. It has a penetrating smell, which reminds one of common coal gas; but this entirely disappears when it has evaporated. A number of comparative experiments have been made with the object of comparing it with oil of turpentine, by a committee of the Societe d'Encouragement of Paris, all of which have resulted in showing that walls, wood-work, &c., painted with the essence of coal, dried far more rapidly, and the smell disappeared sooner, than where essence of turpentine was employed. For example, in one case where the coal essence and oil of turpentine were respectively mixed with three times their volume of oil, and employed under exactly similar circumstances, the smell of the essence of coal was completely dissipated at the end of three days, while that part painted with the turpentine mixture had still a strong smell, and was not completely dry. The introduction of such an oil would be of great importance, not only in a commercial point of view, but in a hygienic one also.—*Bulletin de la Societe d'Encouragement.*

Wrecks at Key West, Florida.—The whole number of vessels that have been upon the Florida Reef during 1854, and also those that have come into Key West, in distress, amount to 59, of which 10 have been totally lost, 15 have been got off and proceeded on their voyages, without discharging, and 3 have been so much injured that they have been discharged. Value of vessels and cargoes, $2,469,600; value of vessels, $897,500; amount of salvage and expenses, $211,808; amount of salvage, $82,402; court expenses, $13,352.

SUMMARY OF EVENTS.

EUROPE.—Liverpool dates to 6th mo. 30th, have been received by the steamship Pacific.

The War.—The total loss of the allied army, in the attack of the 18th, was probably over five thousand men, killed, wounded, and missing. The Russians took 600 prisoners. The English and French reciprocally blame each other for the disastrous result of the assault. The French troops suffered most; their chief loss was sustained not in the storming of the Malakoff batteries, but in the attempt to stay there under a storm of grape and canister from the contiguous defences. On the 21st, Pelissier telegraphs, "We are actively making approaches towards the Malakoff Tower. The enemy appears to be exclusively occupied in repairing and strengthening his works. A little cholera still prevails, but it does not spread. The general health is good." The Russian government publishes a dispatch from Gortschakoff, dated the evening of the 19th, praising his troops, and announcing that the fire of the allies had nearly ceased. A small Russian reinforcement of infantry was moving down to Sebastopol. The difficulty of keeping large bodies of men supplied with provisions, since the operations of the allies in the Black Sea, prevents the Russians from more largely augmenting their forces in the Crimea. The French commander in chief calls for further reinforcements, and complains of the want of combination or of energetic support on the part of his English colleague. Lord Raglan had been sick, but was recovering. A despatch from the Baltic, states that Sweaborg had been bombarded by the allied fleet, and all the stores there destroyed. Hango has also been bombarded. All the ports in the White Sea are under blockade. The Russian Emperor Alexander is said to be seriously ill. The King of Prussia has also for some time been ill; it is supposed his reign is drawing towards a close.

GREAT BRITAIN.—The Reform agitation continues. Layard, the Nineveh explorer, is regarded as the leader of the movement. A great social revolution is gradually progressing in England, which alarms the privileged classes, since it threatens to break down the barriers of rank, and destroy the controlling influence of the aristocracy.

Commercial.—The week's sales of cotton at Liverpool, amounted to 43,000 bales. Towards the close the market was more active. New Orleans fair, 7¼; middling, 6 9-16ths; Upland fair, 6⅞; middling, 6⅜. Breadstuffs were slightly down, and dull of sale. Iron was in demand. Welsh bars on shipboard, £7 15*s.* Rails, £7 10*s.* Scotch pig iron, 73*s.* The bullion in the Bank of England continued to increase. The money market was easy. Consols, 91¾.

AUSTRIA.—The reduction of the army lately resolved upon, appears to be a consequence of deficiency in the finances of the empire. The expenditures of the year 1854 amounted to 386,046,646 florins. The revenue, notwithstanding "extraordinary contributions" to the amount of 197,487,348 florins, were received, still falls short about 140 millions of florins.

NORWAY.—The city of Bergen suffered from a terrible conflagration, on the 1st ult. Upwards of 350 houses were destroyed, including some of the finest portions of the town.

AUSTRALIA.—Dates to 4th mo. 28th, have been received. Trade at Melbourne was active, and prices of many articles rising. In the mining districts improved machinery had been introduced, and old claims were being worked over again with profit. The increasing Chinese immigration was becoming a cause of uneasiness. The feeling was general, that some means should be adopted to check and control it. The culture of the grape promises to be successful. Belperrond's vineyard had this season produced twelve tons of grapes, and 5,000 gallons of wine.

NOVA SCOTIA.—Halifax papers state that immense quantities of mackerel have been caught, and the prospects of the fishing business were never better. The foreign legion on Melville Island had revolted. They complain strongly of the deception practised, both by the parties who enlisted them, and also by the government. A strong force had been sent to quell the mutiny, and bring the ringleaders to the citadel.

CHILI.—Dates to 5th mo. 31st have been received. A long continued drought was prevailing, and cattle were dying for want of pasturage.

UNITED STATES.—*The Joint Fishing Commission*, appointed under the Reciprocity Treaty with Great Britain, are now in Washington, adjusting their course of proceeding for the present season.

The Reciprocity Treaty. The President has issued his proclamation, prescribing a number of frontier ports, through which bonded merchandize may be exported to Canada, in addition to those now designated by law.

Foreign Ministers.—Wm. L. Lee, minister from the Sandwich Islands, and Baron Winspear, the new Neapolitan Charge d'Affaires, presented their credentials on the 10th inst. The former is clothed with power to negotiate a commercial treaty with the United States.

The Crops.—The wheat crop in Kentucky is said to be the best raised for ten years past. The crop of Ohio is also said, in the aggregate, to be a good one, and the grain mostly of superior quality. The accounts of the harvest in Maryland are also favourable. It is supposed the Wheat crop of Illinois will this year amount to at least 25,000,000 bushels, by far the largest product ever reached in that State. The crop of Pennsylvania will, it is believed, be at least a fair, if not large one.

The Fisheries.—The fisheries this season on the coast of Newfoundland have been very successful. More fish have been taken than in any season for thirty years past.

Utah.—At the latest dates, the grasshoppers were doing great injury to the crops of the Mormons in Salt Lake valley. The country was suffering severely from drought, and many of the Mormons were fearful of a famine. Three thousand emigrants from Liverpool were expected during the present year. The *Deseret News* speaks in glowing language of the prospects and purity of manners and morals of the Mormons. Several parties of missionaries had been sent out to various parts of the world.

New Orleans.—On the 8th, the steamer Magnolia, with a cargo of 1000 bales of cotton, was burned below Baton Rouge, and eight lives lost. The deaths in the city for the previous week, were 160, including 32 from yellow fever, and 19 from cholera.

State of the Ohio.—On the 12th inst., there was 18 feet of water in the channel at Wheeling, and the river still rising.

Boston.—An effort has been commenced at Boston to organize a steamship company, to run four steamers between that port and Liverpool.

New York.—The execution of the Prohibitory Liq Law in the State is very unequal. In New York c there has been scarcely a show of enforcement. Brooklyn, it is rigorously carried out, the taverns closed, liquors seized, &c. This irregularity will c tinue until the Courts pronounce definitely upon constitutionality.

Philadelphia.—The immense coal trade of the Schu kill gives a large business to the transporters. In t Sixth month, the receipts on the Philadelphia a Reading railroad amounted to $382,339; expenses a charges of all kinds, to $170,133, leaving a net pr for the month, of $212,206. Mortality last week, 22

Miscellaneous.—*Church Reforms in South America* The Archbishop of Valparaiso has received author from the Pope to reform the cloister system in his d cese, and bring it back to more rigid austerity and d cipline. The ecclesiastical powers have given assent what the press has so long and so much laboured for the substitution of a direct tax on property, in place tithes.

Scarcity of Cattle in Canada.—The Canadian pape say that there is a great want of cattle in Canada; th farmers are beginning to find out that wheat growin to the neglect of stock, is not profitable, and that it h become necessary to import bullocks from the States.

The Law of Libel, in Connecticut, was materially m dified by an act of the recent Legislature, by which t defendant may show the intention with which he ma the publication, and the plaintiff must prove malice b fore he can recover damages.

Marine Losses.—The New York Insurance Monitor h complete tables, which show that the enormous sum $18,972,092 72 was absorbed in the marine losses su tained by insurance offices in New York and Massach setts during the year 1854.

Virginia Gold.—A lump of pure gold, of great fin ness, was recently taken from the State Hill mine, Louisa county, Va., and forwarded to the U. S. Mint Philadelphia. It is said to be worth $1000.

Large Cargo of Sugar.—The ship J. H. Gliddo which arrived at Boston, Mass., a few days ago, fro Havana, Cuba, brought with her five thousand one hu dred boxes of sugar, the aggregate weight of which wa over two and a quarter millions of pounds.

Low Stage of Water in Lake Ontario.—The water Lake Ontario has risen eight inches during the Sixt month, but the lake is still five feet lower than it wa on the Seventh month last, 1854.

Large Strawberry Patch.—Hammond, of Anne Arunde county, Md., has a field of strawberries, comprisin one hundred acres, from which he has gathered in on day over four hundred bushels of berries. The sea son's crop is estimated at 5000 bushels.

Monkish Orders Suppressed.—The Ministry of Sardini have suppressed 63 of the 70 Monkish orders in th kingdom, under the law recently enacted by the Parlia ment, and their revenues are appropriated to the suppor of their infirm members, and the poor benefices an schools of the country.

Bank Failure.—The oldest bank in the city of London known originally under the name of Snow, and recently as Paul, Bates & Co., has failed. Their liabilities ar nearly $3,000,000. From what has transpired it appear the bankers lived and traded on the deposits of thei customers, all of which is lost.

Slavery in Prussia.—A slave case was recently decide in Prussia. Dr. Ritter took with him to Berlin a slav whom he had purchased in Brazil. The slave was a first declared free, but after full investigation it wa decided that the case had to be adjudged according to *the lex loci*, and the application of the slave was refused and he remanded to his owner.

Area of Canada.—Canada extends in length abou 1000 miles, it has an average breadth of 230 miles, an contains an area of about 324,000,000 acres.

Embezzlement. — Tuckerman, late Treasurer of th Eastern Railroad Company, Boston, has confessed t the embezzlement of the Company's funds to th amount of $287,000. The defalcations have been going on for several years. He is not amenable to the criminal laws of the State, his offence being simply a breach of trust for which he is responsible only to his immediate employers.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

Origin and History of the Catacombs of Rome.

Extracted from Kip's Catacombs of Rome.

It has been conjectured by some writers, that these excavations were commenced long before the founding of the Eternal city by that race, who made it famous, under the name of Rome.

There are traces everywhere of a former mighty people inhabiting these sites, long anterior to the city assigned to Romulus and Remus, when the massive Etruscan tombs were reared, and those temples built in Poestum, which, two thousand years ago, the Romans were accustomed to visit as antiquities. But they were a people, all knowledge of whose language and records has perished. The Rosetta stone* has yet been found to furnish the key to the literature of this mysterious race, and their existence is only known by the inscriptions, sculptures, and vases, dug out of the earth, filling the museums of Italy, or by their rifled tombs presenting objects of curious study to the antiquarian. We speak of them as the Etruscans, and beyond this, everything with regard to them is blank.

It is supposed that by them these quarries may have been first opened, for there is a massiveness in the character of their architecture, which enables us at once to distinguish it, even from the nearer Roman. These ancient quarries abound, not only at Rome, but at Naples, and through the south of Italy. They are traced, too, in Italy, in Greece, in nearly all the Greek isles, and in Asia Minor. But they are never found, except in the vicinity of some considerable and ancient city, or near the spot where some such once stood.

* Brande, in his Dictionary of Science and Art, gives the following account of this celebrated stone, which has played so distinguished a part in modern hieroglyphical researches. It was brought from Rosetta, a village of Egypt, where it was discovered by the French, and is now in the British Museum.

"It is a piece of black basalt, three feet in length, and about two feet and a half in breadth, and contains parts of three different sculptured inscriptions; one in sacred characters, or as they are termed hieroglyphics; the second in enchorial characters, (i. e. in those of the country, or in modified conventional hieroglyphics;) and the third in Greek. As the discovery of this stone presented to the learned the first opportunity of viewing the Greek in juxtaposition to the Egyptian language, the most hopes were entertained that a key would thereby be obtained to the decyphering of the numerous monuments of ancient Egypt. These hopes, however, have not been realized, as further investigations show that the Greek does not faithfully represent the enchorial text, but gives merely its substance.

The Romans inherited the domains of this mysterious race, and we find allusions to the Catacombs in their writers long before the Christian era. The great increase of the city in the latter days of the republic, led again to the working of quarries in the immediate neighbourhood, to procure the materials necessary for building. The soil of the Campagna rests on a volcanic, sandy rock, easily quarried, and from its texture well adapted to the excavation of long galleries, while the Esquiline hill was undermined to obtain sand for making cement. In this way it was, that these crypts or galleries were first formed, until the whole subsoil on one side of Rome, was, in the course of time, perforated by a network of excavations, which ultimately extended to a distance of fifteen, or, as some say, twenty miles. But when these quarries were exhausted of their original stores, they stood vacant, ready to be appropriated to any other use. And none, of course, would know their intricate windings, but those whose hands had formed them, and by whose labour these excavations had been made.

Then came the advent of the Christian faith. The arenarii, or sand diggers, and the workmen in the quarries, were persons of the lowest grade, and, cut off by their occupation from the crowds in the busy city, probably formed a separate and distinct community. There is reason to believe, that Christianity found among them its earliest proselytes; these "hereditary bondsmen," indeed, scarcely calling their lives their own in this world, would most naturally gladly welcome the hopes which dawned upon them from the world to come. One of the most common figures found portrayed in nearly all these quarries, and which can easily be distinguished from the Christian order of the fossors, is that of a man carrying some implement of labour, often for the purpose of excavation, and wearing the short tunic and scanty dress of the slave. In times of persecution, therefore, the converts employed in the subterranean passages had already provided for them a secure retreat, which also they opened to their brethren in the faith, until it became the place of refuge of the Roman church. In addition to this, we learn from a number of testimonies, that the early Christians themselves, as a punishment for abandoning the ancient faith, were often sentenced to labour in these sand-pits. In the "Acts of the Martyrs," we are told that the Emperor Maximian condemned all the Roman soldiers, who were Christians, to hard labour; and in various places set them to work, some to dig stones, others sand. He also ordered Ciriacus and Sisinnus to be strictly guarded, condemning them to dig sand, and to carry it on their shoulders." Thus it was, that the members of the early church became familiar with these winding recesses. We can easily imagine how concealment in these gloomy labyrinths become practicable. The earliest victims selected in a persecution would, of course, be those most prominent in the church—its bishop, or ministers, or officers. These, therefore, would at once take refuge in the Catacombs, where the humbler members of the church, whose obscurity for a time gave them safety, could easily supply them with all the necessaries of life. Springs, too, which still exist in various corridors, and wells—some of which are supposed to have been dug for the purpose of draining parts of the Catacombs—show some of the means by which life was preserved.

That the Catacombs were throughout, well known to the early Christians, is evident; for all parts bear trace of their occupancy. We meet on every side with tombs and chapels, paintings and inscriptions, and for three hundred years the entire Christian population of Rome found sepulture in these recesses.

The "Acts of the Martyrs" relate many attempts made by the persecutors of the early Christians, to trace them in these retreats. But the entrances were so numerous, scattered for miles over the Campagna, and the labyrinths below so complicated, and blocked up in various places, that pursuit was generally useless. Occasionally, however, these efforts were successful, and the Catacombs became not only the burial-place of the martyrs, but also the scene of their last sufferings. In the time of Cyprian, Xystus, bishop of Rome, together with Quartus, one of his clergy, poured out their blood on this spot; and Stephen, another bishop of Rome, was traced by the heathen soldiers to his subterranean chapel. They allowed him to conclude the service in which he was engaged, when he was thrust back into his episcopal chair, and thus beheaded.

The edicts of the Roman emperors, indeed, often referred to the cemeteries as places of worship. Such was the case when Æmilianus, præfect of Egypt, during the persecution under Valerian, issued an edict, one sentence of which was—"Moreover, it shall no longer be lawful for you or for others to hold assemblies, nor to enter the cemeteries as they are called." Orders to the same import were sent forth by Maximian, on the renewal of the Diocletian persecution, forbidding the Christians to meet in the Catacombs. The attempt, however, proved futile, and the followers of Christ still found a refuge in their accustomed places of meeting, until the adherents of the old religion, under the government of Hilario, were so exasperated that they demanded the destruction of the Catacombs. No effort was made, however, to carry this into effect; peace came once more at the close of the Valerian persecution, and when the Emperor Gallienus sent forth an edict, declaring that the ministers of the faith might perform the customary duties of their office with freedom, particular reference is made to the Catacombs, which had been seized by his officers. He grants permission to the bishops "to recover what are called the cemeteries." So well known at this time had become these caves as places of Christian worship. Even after the general establishment of Christianity, as late as the year 352, during a temporary persecution by the Arians, Liberius, bishop of Rome, took up his abode in the cemetery of St. Agnes.

(To be concluded.)

If Christ is our shepherd and feedeth us, and we are faithful in following him, our lives will have an inviting language, and the table of the Lord will not be polluted.

For "The Friend."

A Friend in Need.

The benefit of having a true friend with whom we can take counsel in affliction, and enjoy the strength there is in the unity of the Spirit, is beyond price. Margaret Lucas found such a one in John Toft. She says, "The Beloved of my soul, who, in my tender state, had so graciously replenished my heart, now hid his face from me; and I was not indulged in those times of solace, which I before had so plenteously enjoyed. I waited and waited the return of the dearest object of my soul, often querying, Why stayeth my Beloved so long? or what have I done since his last visitations, to occasion his thus hiding himself from me? Impatient, I sought him in my chamber, in meetings, and in the fields—places where I had used to receive his favour; but these seemed now to have lost their lustre, as well as, my Beloved, his benevolence towards me. I sought him, but I found him not. Like the spouse in the Canticles, I was ready to ask, Have you seen my Beloved? I was disconsolate days and nights, and I may say, I mourned as one wanting his mate. Still, I thought my tears moved not his pity, and his ear seemed deaf to all my cries; whilst the imperious watchmen wounded me, and the cruel enemy upbraided me with all I had gone through for my Beloved's sake, telling me I had better have staid in Egypt, than thus to languish in the wilderness. Great were the conflicts I have met with, not knowing why it should be thus; and fearing I was dying to all that was spiritual, I at length resolved to make application to my friend.

"I went to his house; and while I waited a suitable opportunity to speak to him, the tears trickled down my cheeks; yet when I had unbosomed my complaint, I received great satisfaction; for, from his kind inquiry of my past conduct, I found my opinion of his friendship confirmed. From his tender advice, my soul was encouraged to hope a little longer; and to my inexpressible joy, in some days after, I felt the influence of Divine love suggesting to my mind, Follow on to know the Lord; Joseph, the spiritual Joseph, is yet alive. Oh! surely here I found again that inestimable jewel, the pearl of my best affection, and the life of my hope, with such revivings as Jacob experienced, when he saw the assurance of the welfare of his son; and my soul bowed under a humble sense of gratitude, saying, it is enough, I will go down, and see him ere I die."

Notwithstanding the peculiar trials of the present day, there are preserved those who feel deeply with one another, and are enabled at times to commend the tribulated children of our heavenly Father to him, and not to man, and to the ingathering voice of his Holy Spirit, which will draw from the strife of tongues, to seek after communion with God, and to do the work he would have them to be engaged in.

M. Lucas then gives an account of visiting her uncle and aunt, who had persecuted her for uniting with Friends; and who, on being restored to feelings of respect, showed a very different regard for her. It is a proof of what faithfulness to the intimations of the Spirit of Christ will do, in softening the hard heart, opening the blind eye, and removing the partition wall that had kept individuals asunder. Alluding to the change in her condition, she says, "It was a time of true humility, tenderness and love. My covenant was renewed; and it remained for some time as a summer season, or as the time when the voice of the turtle is heard. Yet at intervals I could not but reflect on former days, and conclude, that the smallest degree of my uncle's and aunt's reconciliation, would add to my happiness. As these thoughts increased, so did my desire of making a trial; and one evening I went to their house, and knocked at the door stranger-like, as indeed I was, not having been there for above two years. Their maid let me in; and I suppose I much surprised them. They were sitting alone by the fire. I just said, 'How do you do?' and stood within the house, a little distant from the door. My uncle looked very sorrowful, and if he spoke at that time, he only said, 'I have no pleasure in seeing thee.' My aunt said enough, and called me many impudencies for coming. I stood about half an hour, and then bidding them farewell, my aunt came with me a part of the way back, scolding me as we went. I thought this was but poor encouragement, yet I was truly glad I had seen them.

"In about six weeks I had a desire to go again. I went in the former manner, knocked and stood as before, and after a little while my uncle said, 'Thou mayst sit down.' My aunt then fetched some books, and read several absurd passages; to which I only said, 'I hope you do not think that any sect can be so ridiculous as to believe and practise those things.' During this interval my uncle sat at a distance; I stood a little longer than before, and my aunt let me come home quietly. Thus I went several times to see them, watching for permission; believing that to go without it, might expose me to danger. But in my fourth or fifth visit, my uncle said to the maid, 'Set her something to eat.' I could truly have said that his love was sufficient; for I was so satisfied with this little return of it, and with my aunt's *increased quietness*, that my heart was ready to overflow. I went to the table, and before I ate, a contrite thanksgiving arose in my soul to God." "They continued toreturn my visits, and behaved kindly to me ever after."

It is pleasant to contemplate the powerful influences of Divine love, both on the heart in which it is shed abroad by the Holy Spirit, and also in reclaiming those in whom a bitter, vindictive spirit, has had sway. This Friend had suffered deeply in being turned out into the world for the sake of her Lord and Master; and no doubt her afflictions had a humbling effect, and prepared her to give up all her heart, to the sanctifying power of the Spirit of Christ. As she sought forgiveness for her past deviations, it taught her to cherish the spirit of forgiveness towards her persecutors, and finally to seek their restoration to a christian disposition towards her. Divine love, that is stronger than all, gave her the victory, and the reward of heavenly peace, as well as the great satisfaction of having her bitter opponents changed into kind and affectionate friends.

Were all the professors of the gospel to yield to the pure government of his Spirit, who came to save that which was lost, there would be a harmonious walking together in the Truth. Division, and contention, and enmity would cease. Every one would strive to promote his brother's good, and to shut out all evil designs. In sincerity all could then say, Come, brother; come, sister, "Let us go up to the mountain of the Lord, to the house of the God of Jacob; and he will teach us of his ways, and we will walk in his paths." "Oh, house of Jacob, come ye, and let us walk in the light of the Lord." A blessed condition, in lieu of the spirit of alienation.

Population, Wealth, Industry.—These, the three sources of national power, and the rules which govern their increase, are what the census were instituted to ascertain. It is a little singular that in the comprehensive and compendious volu issued by the United States Government last ye there is no statement showing the comparative pidity with which each is advancing, in each the several States.

From the figures therein contained, however, is not difficult to frame such a statement. V observe a correspondent of the National Intel gencer has undertaken the task. In a long tal of figures taken from the census report, he arriv at the following results, which, although they s as precise and certain as any other sum in arit metic, a large part of the people of the Uni steadfastly deny, or purposely ignore.

A traveller who should set out at the Tex frontier, or anywhere else on the south-western si of the national domain, and journeying toward t North and East, would meet on his road the fo lowing facts, one after another, in as regular su cession as the steps of a ladder:

1. Farms regularly diminish in size, and increa in number, as we proceeed from South to Nor and East.

2. The proportion of improved land steadily i creases, and that of unimproved land steadily minishes, irrespective of the density of the pop lation, as we proceed from South to North and Ea

3. The cash value in farms, both in the aggr gate, and in the price per acre, regularly increa es, as we proceed from South to North and Eas

4. The production of corn and wheat regular and steadily increases, without an exception, as w proceed from South to North and East.

5. The productive industry of the people, bot in the aggregate and as individuals, regularly in creases as we proceed from South to North an East.

6. The density of population regularly increas as we proceed from South to North and East.

7. The rate of increase of population regularl increases as we proceed from South to North an East.

8. The number of manufactories regularly in creases as we proceed from South to North an East.

9. The amount of shipping regularly increas as we proceed from South to North and East.

10. The amount of capital regularly increases we proceed from South to North and East.

11. The number of railroads regularly increas as we proceed from South to North and East.

12. The number of canals and post roads reg larly increases as we proceed from South to Nort and East.

13. The number of telegraphs and telegraph st tions regularly increases as we proceed from Sout to North and East.

14. The number of persons who cannot read an write, steadily diminishes, and that of schools an scholars regularly increases as we proceed fro South to North and East.

15. The number of churches and of those wh worship therein, steadily increases as we proceed from South to North and East.

These are facts shown by the unerring figure of the census. They do not depend upon the com parative age, nor upon the fertility of the States for whether we proceed from the older to th newer, or from the newer to the older—from th fertile to the sterile, or the sterile to the fertile the result is just the same. This constant orde of succession would seem to indicate some fixe law, or constantly operating cause. But what tha law or cause may be, the census does not state Neither does the Intelligencer. Neither do we But we think it is written plainly enough, an that "in black and white" all over the face of thi broad continent.—*Albany Journal.*

New Hotel Annunciator.—Annunciators, for ells, are now very generally used instead of the t of bells which formerly nearly filled the barms of most of our large public-houses. Aside m the improvement in appearance, they answer uch better purpose than the bells. After a ll-wire has been pulled by the occupant of the om, the bell will ring for a moment, when it will ase to sound, and will itself become still, so at it cannot be answered unless an attendant is esent at the time to witness it.

Not so with an annunciator. The wire being lled by the crank or bell-pull in the room, the nunciator records the number, or brings it to ew in such a manner, that it may remain perinent till it is observed, and replaced by the endant at the bar. A bell is, of course, rung enever a number is operated. One bell, hower, in the annunciator, serves for all the rooms. Those annunciators heretofore used, have the mbers painted or printed upon small numberites or drops, which are arranged on a face-plate, d concealed by a screen until operated.

A new annunciator has been invented by genmen in Buffalo, New York, which indicates the mber of the room to be answered, by printg it on telegraph paper, and handing it out to e attendant, so that it may be taken by the rvant to remind him, in case he should forget, have several rooms to answer at once. This nunciator is only wound up daily, like a clock, d requires little or no other attention. The res which indicate the position of the type are lected by machinery; and yet it is quite simple its construction, and very easily operated. J. ale, of the above named place, is the manufacrer. Measures have been taken to secure a tent for these improvements.—*Life Illustrated.*

The Country of the Navajoes—Ruins of Towns.—The Deseret News contains an account of an pedition by the Mormons, to the Southern part the Territory, among the Navajoes. They deribe the ruins of the towns and villages discored on the St. John, about five hundred miles outheast of Salt Lake City:

The walls of many buildings are still standing ntire, some of them three or four stories high, ith the ends of the red cedar joists yet in the all, some projecting eight or ten inches, but worn a point at their extremities. Every building as a fortification built in the strongest manner naginable, and in a style that the present age now nothing of; many of them still plainly how the whole manner of structure, and even the arks of the workmen's tools.

From here we travelled ten miles, with occaonal ruins by the way, and entered a deep canon ith projecting shelves of rock, and under these elves were numerous houses or fortifications. he one we examined was divided into twentyur rooms, each nearly square and enclosing an rea of about one hundred and forty-four square et. The front wall was built up to the overanging cliff, which formed the roof, and was rved and full of port-holes. The stones were l squared and faced, were of an equal thickness, nd laid up with joints broken in a workmanlike anner. The only entrance we could find was a ole about two feet square and eighteen inches om the ground, which is the usual size of all he doors.

From here to St. John's river, a distance of ten iles, there were scattering ruins; and from there, n twelve miles north-east, we came to the head of canon.

All around the head of this canon, and down on either side, as far as we could see, were houses of every conceivable form and size; and in places where the soil was sufficient, they were overgrown with sage and cedars, in every respect like that on the mountains around. In the centre of this canon, and near the head, was a building sixteen or twenty feet square, four stories high, and built upon a flat rock about four feet higher than the level of the bed of the canon, and but little broader than the building; to this we could not find an entrance, and, unlike all the rest, it had no portholes. One large building, which we entered, stood on the edge of the precipice, with its front wall circular and flush with the bank, which formed the back part, making the ground plan of the building like a half-moon. There were no windows in the lower story of any building, and every entrance was made as difficult and hidden as possible. The door, or hole, into the one last mentioned was guarded by two or three walls of different angles; thus making a crooked, narrow passage to the door, and every part of this passage was in full view from the port-holes of the building, the front wall being full of them, like pigeon-holes, pointing in every possible direction; they were not more than two inches in diameter on the outside, and were plastered smooth on the inside with a kind of cement, with which the stones are laid, and the rooms plastered, and is as hard as stone.

The inside arrangement of all the houses was much alike, all having port-holes in the partition walls, and very small and obscure passage-ways from one room to another, and from one or two houses, into the mountain. Some on the cliffs above were connected with those below.

We noticed there was no water about there, and inquired of the Indians how the former inhabitants could have managed? They told us that they had heard that a long time ago there was water running there. We asked them who built those houses? They smilingly shook their heads and said that they had never heard, but that surely somebody must have built them a very long time back.

For "The Friend."

War.

We find in a late number of the Philadelphia Ledger, the subjoined just and forcible observations on the effects of war. While its horrors and brutalizing tendencies are so well depicted, it is however intimated that wars in self-defence may sometimes be necessary and even justifiable. Can the beneficent and all-wise Parent of the human family, hold his rational creatures justified under any possible circumstances of provocation or danger, in thus giving the reins to their evil passions and rushing into a course of unbridled wickedness, indulging all that is vile and hateful in their fallen natures? Surely, when the nations of the world become christians in reality, as well as in name, views of this matter will prevail very different from those now current in what are called enlightened lands, and this scourge of mankind, with all its unutterable abominations, will be no more.

"The Russian War.—Previous to the last reverses there was a certain confident tone assumed by the Times, and other leading English journals, showing that they fully believed it "impossible that Sebastopol could hold out much longer." How far these reverses may modify this hope, we shall probably soon learn. The successes thus far recorded would not seem to us to warrant any such conclusion, because it is impossible to tell what stores and resources Sebastopol may have within itself. All the hopes of England seem grounded on the destruction of the enemy's rations, the cutting off their supplies, and the supposed prevalence of disease in the city.

It is not the bloody battle—not the cool and deadly aim at the life of his fellow, that is taken by the rifleman—not the shot and shell hurled recklessly to produce indiscriminate destruction, which shows fully the horrors of war, but it is the demoralizing tone in which a whole nation is brought to exult in the disasters and miseries of others, even those not caused by their valour directly, if at all.

We had been taught to believe that Christianity, if it had not put an end to war, had rendered it much more humane, and instances were held up after naval engagements, of the whole force of the conqueror being turned to rescuing the drowning enemy, and binding up their wounds. But now that the light of the press is let in upon the details of its scenes, the gilding of these glowing and generous pictures is sadly rubbed off by the touches of truth.

We are all rejoicing at this moment, because of a plentiful harvest, and the increasing demands for our ships. But what was recently the joy and glory of England? In what was the whole nation exulting as one of the most effective exploits of the war, so far? In the destruction of two hundred and forty-one ships, four steamers, and immense stores of the finest wheat, six millions of rations! That which gives happiness and life to every man, woman and child, not even carried away, but coolly *burnt*, without even the excitement of a man killed in its defence, or of a blow struck on either side, beyond "shelling the towns at long range." And a whole nation is crammed for a fortnight with all the details of this, as a most glorious achievement and source of joy. If it were a stern necessity of war, it might have been silently done, in anger or in sorrow, but why with gloating exultation? Because such is the nature of war. England and France are not worse in this than we should be.

Three *grave-fields*, for the term grave-yards, is hardly appropriate, with seven cart loads of dead at one time, and the whole process of sepulture may be observed with a good glass; and these are not soldiers who have fallen in battle. It is noticed with satisfaction that they are the victims of disease, and perhaps of famine. These things are not only watched eagerly by the besiegers, but carefully and exultingly recorded in the Times, and spread all over England as the hope and the joy of this glorious thing the Allies call their war.

The Emperor of Russia takes cold and dies. It is telegraphed to London in four hours. Stage managers come before the curtain and announce it to the audience in all the theatres, as if it were a second battle of Waterloo won. And yet, he is not slain in war, he bears no wound, but the hand of God in death is upon him in his own bed, as it must be soon in turn on each one of those to whom all this is announced, and, without a thought, the heart leaps to the mouth, and the multitudes clap their hands and shout and hurrah. And even the papers and reviews revile the dead lion, and actually exult. A more brutal or humiliating thing has seldom been witnessed. It is all the effect of war.

Let us not deceive ourselves. These men who exult in misery are decorous men, educated and refined, many of them, but they are under the spell of the demon of war. The newspaper press lays it all bare, and we can see the system as it is, and all its tendencies; see its great heart throb and beat through skeleton ribs. Thus far its savage feelings are not half aroused in England; its exasperations have not begun to be awakened. What are the full horrors which it can produce God only knows. But this is clear that all which gives joy

and gladness to the heart in peace, awakens antipathy and hatred in war; while all that produces commiseration, such as destruction of food, pestilence, famine, death, in all their most horrid forms, these are the sources of its exultation and glory.

A great war always must and does tend to brutalize the spirit of a people immeasurably, inconceivably. Both Napoleon and Wellington left the most explicit testimony on this subject. It may be necessary and justifiable in self-defence. But may a kind Providence long avert from us the stern necessities and lessons of this great scourge. It is not that we need fear the final results as to an honourable peace. The cost of treasure, though immense, would be nothing to us; the blood, though more dear, would be cheerfully spilled in defence of our country, and the green grass would cover the field of battle. But the demoralization of the survivors, the effect on the moral character of all, on the civilization of all, both friends and foes, the loss of industrious habits among the masses, and of social, generous Christian virtues among the whole people—these, despite all Allison may say to the contrary, are more and worse than all; these are the great horrors and curses of war."

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 358.)

NICHOLAS WALLN.

This Friend, previously to his removal to Pennsylvania, resided within the limits of Settle Monthly Meeting, in Yorkshire, England. He was probably a son of Richard Wallin, of the same county, who being early convinced of the truth as preached by George Fox, sufferced in the support of his Christian testimony.

When information of William Penn's intended colony in the Western world reached the Friends of Settle Monthly Meeting, divers of them came under exercise, in the belief, that it would be right for them to remove with their families to this distant wilderness. The matter was laid before the Monthly Meeting for its consideration, and in due time, as the meeting believed the step was right, it issued the following joint certificate.

"From Settle Monthly Meeting,
the 7th of the Fourth month, 1682.

"These are to certify all whom it may concern, that it is manifested to us that a necessity is laid upon several Friends belonging to this Monthly Meeting, to remove into Pennsylvania, and particularly our dear Friend, Cuthbert Hayhurst, (his wife and family,) who has been, and is a labourer in the Truth, for whose welfare and prosperity we are unanimously concerned; and also for our Friends, Thomas Wrightsworth and also his wife; Thomas Walmesly, Elizabeth his wife and six children; Thomas Croasdale, Agnes his wife and six children; Thomas Stackhouse, and Mary his wife; Nicholas Wallin, his wife, and three children; Ellen Cowgill and her family; who, we believe, are faithful Friends in their measures, and single in their intentions to remove into the aforesaid Pennsylvania in America, there to inhabit if the Lord permit. We do certify unity with their said intentions, and desire their prosperity in the Lord, and hope what is done by them will lead to the advancement of the Truth, in which we are unanimously concerned with them."

Some time in the year 1682, Nicholas Wallin, Jane his wife and their children, reached Pennsylvania, and settled in Bucks county, near the Neshamony. They probably were located by midsummer, for before the end of that year, he was elected one of the members of Assembly, which met in the First month, 1683. At this time, although noted among the "faithful Friends," it does not appear that he had received a gift in the ministry. It was not long, however, before he was called to labour by word and doctrine for the everlasting good of his fellow men. In this service he was much employed by his divine Master at home and abroad, and be endeavoured to acquit himself of the duties that devolved upon him, as respected his own self, the claims of his family, and of the public. This last was no light task, being fourteen times elected as a legislator of the New Colony. The first Monthly Meeting of Middletown, was held at his house, First mo. 1st, 1683, and it was held there, and at the house of Robert Hall, alternately, for nearly five years, at which time a meeting-house was built. The Quarterly Meeting for Bucks, Ninth mo. 4, 1684, met at his house, and afterwards alternated between his residence and that of William Biles for a time. It continued to be held with him, at least once a year, until the year 1695, after which it convened at the Falls, and Middletown meeting-houses.

Early in the year 1689, with the approbation and unity of his Friends, Nicholas Wallin paid a religious visit in Maryland. He was accompanied by James Ratcliff. On returning from this visit, he could gratefully acknowledge the comforting presence of their divine Master in the journey, and that they had had "many good meetings."

Nicholas Wallin had a share of the labour with George Keith, being one of the committee of the Meeting of Ministers to advise with and admonish him. He bore his testimony against the spirit under which George was acting, and signed various of the documents issued by the Yearly Meeting of Ministers and the Yearly Meeting of business, relative to that opposing and contentious one. About 1696, he removed to the neighbourhood of Philadelphia, and became a member of that Monthly Meeting. He was soon much employed by the meeting in transacting its business, and, like his Friend, Griffith Owen, was a member of almost all committees on important subjects.

In the Eighth month, 1698, William Ellis writes, "Nicholas Wallin is well, and hath many fine children." His labour of love for their everlasting good had been blessed, and some of them were valuable soldiers in the church militant, before their father was called home to his everlasting rest.

In the First month, 1699, he informed his Friends of the Select Meeting, that he had a concern to visit "New England and thereaway," on religious service. This visit appears to have occupied him several months. Soon after his return, the yellow fever broke out in Philadelphia, and occasioned a great mortality among the inhabitants of that city. Of this pestilence some account is given in the following letter of Nicholas Wallin to William Ellis:—

"Philadelphia, the 22d of the Seventh mo., 1699.

"Dear Friend, Wm. Ellis,—My dear love in the unchangeable Truth is unto thee, and thy dear wife: for in that doth my soul salute you, hoping you are in good health, as, blessed be the Lord! I, my wife and family are at this present time. This is a great mercy from the hand of the Lord; for since thou left these parts, we have met with great exercises, and a great mortality hath happened in the town of Philadelphia, and some in the country. We may truly say it is an exercising time,—a time to drive many home to consider their standing, and upon what foundation they are building, and what they are build upon the foundation; whether it be that wh will abide the fire, yea or nay; for of a truth, Lord is trying his people, and it is a day of bu bling. But may we not honestly say as Job sa 'Shall we receive good at the hand of God, a shall we not receive evil?' for as it is writte 'When the judgments of the Lord are in the ear the inhabitants of the world will learn righteo ness.' So, my dear Friend, I am willing to give th a short hint of things, and who they are that ha laid down their bodies. Of those persons we h great love for, our dear Friends, Esther Hoskin Thomas Duckett, James Fox, Margaret Beardsl her daughter Mary Gray, George Fox, Thom Smyth and his wife, and son, and son-in-law, W liam Harwood, William Alaway, and several othe that I name not. My dear brother-in-law, Jam Dilworth, is dead, and was buried the first d before our Yearly Meeting; Charles Sanders a Stephen Coleman, and a great number of t world's people also.

"Now, my Friend, as touching our Year Meeting, it was but small, by reason of the sic ness; but we may truly say, the Lord our G made up our want; for his living power and swe refreshing presence was with us, to the comfo of his,—whose hearts are true to him. He is t same that ever he was, and as he was good to h Israel in days past, so we may say, he is good t his Israel in this very day; blessed be his hol name forever and forevermore. Our dear Friend Aaron Atkinson, Thomas Story and Roger Gi were with us, who were of good service ther Our dear Friend, Aaron, being very weak by rea son of his sickness, was but little with us. H was with us the Fifth-day following our Yearl Meeting, and I do believe he cleared himself ver well, to the satisfaction of several, if not all, tha were then present. Now, dear William, I, seein a letter that came from thee from London, ca truly say I was right glad when I heard it read in which thou remeberest thy love to me, whicl I kindly accept. My dear love is unto thee an thy wife once more. I desire thee to remembe my love to all Friends that may inquire of me, o to whom thou thinkest fit. My dear wife desire to have her love remembered to thy wife; an we were right glad when we heard thy wife was well. My dear love to my sister Ann Dilworth,* if thou seest her, and let her know that her dea children are well. My son Richard desires to have his kind love to thee and to thy wife, though un known, and to his aunt Ann Dilworth; and I desire thee to remember my love to all our rela tions and friends in Bolland. Sixty persons died out of that ship which came from Liverpool. Some of them were Thomas Musgrave, Thomas Wilson, Henry Michel, Robert Driver, and Grace Driver, but Grace died after she came here.

This, from thy Friend and Brother,
NICHOLAS WALLN."

* In England, on a religious visit.

(To be continued.)

The Power of an Elephant's Trunk.—One has been apt to consider Nasmyth's steam hammer, which can with one blow exert a force of two tons, and with another break a nut without injuring the kernel, as a triumph of human ingenuity, and so it is; but how insignificant when placed in comparison with the trunk of an elephant; for not only can the latter strike a blow of a ton or so, and break an egg or a nut, but it can pick a pin from the floor, or pull down a tree; project water with the force of a twenty-man power forcing pump, or uncork and drink a bottle of soda-water without spilling a drop!

GOD IS LOVE.

When spring with lavish bounty
Clothes earth with living green,
O'ermantling with beauty
Each quiet homestead scene;
When birds awake, and busy bees
Make music all day long;
When purple violets ope their eyes
And cowslips join the throng;
Then, children, sing with gratitude
To Him who reigns above,
Who gives the circling seasons—
The God whose name is Love.

When summer suns are shining
And gentle zephyrs blow;
When flowers in beauty beaming
Around sweet fragrance throw;
When rivulets are singing
Adown the mountain's side;
When the blithe lark upspringing
Hails morn and eventide;
Shall children then be silent,
Nor lift their hearts above,
To Him who made this earth so fair—
The God whose name is Love!

When autumn, in her russet gown,
Sweeps o'er the bending grain;
When hill and valley echo back
The shout of the harvest strain;
When earth is yielding golden store
And plenty crowns the board;
Think of the toiling poor, and spare
A little from your hoard;
That they, with us, in gratitude
May lift their songs above;
And praise the God of harvest,
The God whose name is Love.

When wintry storms are raging,
And bitter tempests blow,
When, bound in icy fetters,
The streams forget to flow;
When desolation spreads her pall
O'er nature, late so smiling;
When gathered round the cheerful hearth
With tales the time beguiling;
Then, children, look with joyousness
And gratitude above,
To Him who rules the raging storm—
The God whose name is Love.

THE HEART'S SONG.

In the silent midnight watches,
List—thy bosom-door!
How it knocketh, knocketh, knocketh,
Knocketh evermore!
Say not 'tis thy pulse's beating;
'Tis thy heart of sin:
'Tis thy Saviour knocks, and crieth,
Rise, and let me in!

Death comes down with reckless footstep
To the hall and hut:
Think you Death will stand a-knocking
Where the door is shut?
Jesus waiteth—waiteth—waiteth;
But thy door is fast!
Grieved, away thy Saviour goeth:
Death breaks in at last.

Then 'tis thine to stand—entreating
Christ to let thee in:
At the gate of heaven beating,
Wailing for thy sin.
Nay, alas! thou foolish virgin,
Hast thou then forgot,
Jesus waited long to know thee,
But he knows thee not!

From Rural Hours.

THE FORESTS.

(Continued from page 355.)

Old trees, dead and dying, are left standing for ars, until at length they are shivered and broken the winds, or they crumble slowly away to a apeless stump. There was no forester at hand cut them down when the first signs of decay appeared; they had no uses then, now they have no value. Broken limbs and dead bodies of great trees lie scattered through the forests; there are spots where the winds seem to have battled with the woods; at every step one treads on fallen trunks, stretched in giant length upon the earth; this still clad in its armor of bark, that bare and mouldering, stained by green mildew, one a crumbling mass of fragments, while others, again, lie shrouded in beautiful mosses, long green hillocks, marking the grave of trees slowly turning to dust. Young trees are frequently found growing upon these forest ruins; if a giant pine or oak has been levelled by some storm, the mass of matted roots and earth will stand upright for years in the same position into which it was raised by the falling trunk; and occasionally a good sized hemlock, or pine, or beech, is seen growing from the summit of the mass, which in itself, is perhaps ten or twelve feet high. We have found a stout tree, of perhaps twenty years' growth, which has sprung from a chance seed, sown by the winds on the prostrate trunk of a fallen pine or chestnut, growing until its roots have stretched down the side of the mouldering log, and reached the earth on both sides, thus holding the crumbling skeleton firmly in its young embrace. The decay of these dead trees is strangely slow; prostrate pines have been known to last fifty years, undecayed, still preserving their sap; and upright gray shafts often remain standing for years, until one comes to know them as familiarly as the living trees. Instances are on record where they have remained erect in death for a space of forty years. The trees destroyed on the Mississippi by the earthquake of 1811, are standing to day, when nearly forty years have elapsed, (Dec. 1849.) * * The finest trees about the banks of our lake are remarkable rather for their height than their girth. Belonging to the old forest race, they have been closely pressed on all sides by their fellows, and the trunks rise in a branchless shaft to a commanding height; their foliage crowns the summit in full masses, and if not devoid of the native graces of each species, still it has not all the beauty developed by the free growth of the open fields. * * It is to be feared that few among the younger generation, now springing up, will even attain to the dignity of old forest trees. Large portions of these woods are already of a second growth, and trees of the greatest size are becoming every year more rare.

As regards the ages of the larger trees, one frequently finds stumps about two hundred years old; those of three hundred are not rare, and occasionally we have seen one which we believed to claim upwards of four hundred rings. But as a rule, the largest are singled out very early in the history of a settlement, and many of these olden stumps of the largest size have now become so worn and ragged, that it is seldom one can count the circles accurately.

The first colonists looked upon a tree as an enemy, and to judge from appearances, one would think that something of the same spirit prevails among their descendants at the present hour. It is not surprising, perhaps, that a man whose chief object in life is to make money, should turn his timber into bank notes with all possible speed; but it is remarkable that any one at all aware of the value of wood, should act so wastefully as most men do in this part of the world. * * But independently of the market price in dollars and cents, trees have other values; they are connected in many ways with the civilization of a country; they have their importance in an intellectual and in a moral sense. After the first rude stages of progress is past in a new country—when shelter and food have been provided—people begin to collect the conveniences and pleasures of a permanent home about their dwellings, and then the farmer sets out a few trees before his door. But it frequently happens that the same man who yesterday planted some half dozen branchless saplings before his door, will to-day cut down a noble elm, or oak, only a few rods from his house; an object which was in itself a hundred-fold more beautiful than any other in his possession. In very truth, a fine tree near a house is a much greater embellishment than the thickest coat of paint that could be put on its walls, or a whole row of wooden columns to adorn its front: nay, a large shady tree in a door-yard is much more desirable than the most expensive mahogany and velvet sofa in the parlour. Unhappily, our people generally, do not see things in this light. But time is a very essential element, absolutely indispensable, in true civilization; and in the course of years we shall, it is to be hoped, learn further lessons of this kind. Close observation will reveal to us the beauty and excellence of simplicity, a quality as yet too little valued or understood in this country. And when we have made this farther progress, then we shall take better care of our trees. We shall not be satisfied with setting out a dozen naked saplings before our door, because our neighbour on the left did so last year, nor cut down a whole wood, within a stone's throw of our dwelling, to pay for a Brussels carpet from the same place as our neighbour's on the right: no, we shall not care a stiver for mere show and parade, in any shape whatever, but we shall look to the general proprieties and fitness of things, whether our neighbours to the right or the left do so or not. *

There is also another view of the subject. A careless indifference to any good gift of our gracious Maker, shows a want of thankfulness, as any abuse or waste, betrays a reckless spirit of evil. It is strange, that one claiming to be a rational creature, should not be thoroughly ashamed of the spirit of destructiveness, since the principle itself is clearly an evil one. Let us remember, that it is the Supreme Being who is the Creator, and in how many ways do we see his gracious providence, his Almighty economy, desiring to work progressive renovation in the humblest objects, when their old forms have become exhausted by Time! There is also something in the *care* of trees which rises above the common labours of husbandry, and speaks of a generous mind. We expect to wear the fleece from our flocks, to drink the milk of our herds, to feed upon the fruits of our fields; but in planting a young wood, in preserving a fine grove, a noble tree, we look beyond ourselves to the band of household friends, to our neighbours—ay, to the passing way-farer and stranger who will share with us the pleasures they give, and it becomes a grateful reflection that long after we are gone, those trees will continue a good to our fellow-creatures for more years, perhaps, than we can tell.

Use Copperas.—The papers are everywhere urging the free use of copperas as a disinfecting agent. It is a cheap article, costing only three cents per pound, and can be found at the druggists' and many of the larger grocery stores. A couple of pounds may be dissolved in ten quarts of water, and the solution poured into sinks, gutters, cesspools, and all other filthy places, with good effect. We advise all housekeepers to purchase five, ten, or fifteen pounds, and make a free use of it as above recommended. Cholera or no cholera, their dwellings and out buildings will contain a purer atmosphere after the use of copperas.—*Exchange.*

From the Journal of George Fox.

"The beginning of the Third month, [1687,] I returned to London, and continued there till after the Yearly Meeting, which began on the 16th of the same, and was very large, Friends having more freedom to come up out of the counties to it, by reason of the general toleration and liberty now granted. The meeting lasted several days; and at the close thereof it was upon me to write the following lines, to be dispensed amongst Friends everywhere as—' A word of counsel and caution to them to walk circumspectly in this time of liberty :'—

"Dear Friends and Brethren in the Lord Jesus Christ,—The Lord by his eternal arm and power, having supported you in all your sufferings, and great spoiling of goods, and tedious imprisonment, only for serving and worshiping the living God that made you; who gave up wife and children, and goods, and suffered the spoil of them, and imprisonment for his truth and name's sake;—the Lord by his infinite power and mercy, having been pleased to open the king's heart towards you, by which you are set at liberty from jails, and the spoilers of your goods are stopped, whereby ye may follow your callings, confess Christ Jesus, and call him Lord by the Holy Ghost, in your assemblies and meetings, without being cast into jails, or having your goods spoiled; a great concern lies upon me from the Lord, to write unto you, dear Brethren, that none may abuse this liberty, nor the mercies of the Lord, but prize them; for there is great danger, in time of liberty, of getting up into ease, looseness and false liberty. And now, seeing that ye have not the outward persecutions to war with in sufferings, with the spiritual weapons, keep down that which would not be subject to Christ; that He, the Holy One, may reign in your hearts; that your lives, conversations, and words, may preach righteousness and truth; that ye may all show forth good ensamples of true believers in Christ, in virtue and holiness, answering that which may be known of God in all people, that ye are the sons and daughters of God; standing fast in that righteous, holy liberty in Christ, the just and Holy One, that has made you free over the loose or false; shunning vain disputes, and foolish questions of men of corrupt minds; for the serpent was the first questioner of Eve, who drew her and Adam out of the truth. Therefore, as ye have received Christ, live and walk in Him, who bruises the serpent's head, who is your safe sanctuary, in whom ye have election, reconciliation and peace with God. Therefore, live in the peace which ye have from Christ, which is not of this world; be at peace one with another, and seek the peace of all men in Christ Jesus; for blessed are the peace-makers. Labour to exercise a good conscience towards God, in obedience to him, in what he requires; and in doing to all men the thing that is just and honest; in your conversations and words giving no offence to Jew or Gentile, nor to the church of God. So ye may be as a city set on God's Sion, a hill, which cannot be hid; and may be lights to the dark world, that they may see your good fruits, and glorify your Father, which is in heaven; for he is glorified in your bringing forth good fruits, as ye abide in Christ the vine, in this his day of life, power and light, that shines over all. Therefore, all you that believe in the light, walk in the light, as children of the light, and of Christ's everlasting day; that in the light ye may have fellowship with the Father and the Son, and one with another; keeping in the unity of his Holy Spirit, in the bond of his holy peace, in his church that he is head of. My desire is, that God's wisdom everywhere may be justified of her children, and that it may be shown forth in meekness, and in the fear of the Lord in this his day. Amen.

G. F."

Perilous Adventure with a Tiger.

J. S. Buckingham, in his "Autobiography," relates an extraordinary adventure he once had with a tiger in India. He had gone to dine some seven or eight miles from Bombay; and having an appointment at home in the morning, and the night being remarkably fine, and with a brilliant moonlight, he declined the invitation of his host and hostess to remain with them over night, but set out at ten o'clock, in his palanquin, on his return to Bombay.

"A great portion of the way," he says, "lay over a level plain of some extent; and while we were in the midst of this, the bearers, of whom there were eight; four to carry, and four for a relay, with two *mussauljees*, or lantern-bearers, who carry their lights in the moonlight as well as in the dark, as a matter of etiquette, which it is thought disrespectful to omit; in short, the whole party of ten in an instant disappeared, scattering in all directions, and each running at his utmost speed. I was perfectly astonished at this sudden halt, and wholly unable to conjecture its cause, and all my calling and remonstrance was in vain. In casting my eyes behind the palanquin, however, I saw, to my horror and dismay, a huge tiger in full career toward me, with his tail almost perpendicular, and with a growl that indicated too distinctly the intense satisfaction with which he anticipated a savoury morsel for his hunger. There was not a moment to loose, or to deliberate. To get out of the palanquin and try to escape, would be running into the jaws of certain death. To remain within was the only alternative.

"The palanquin is an oblong box or chest, about six feet long, two feet broad, and two feet high. It has four short legs for resting it on the ground, three or four inches above the soil. Its bottom and sides are flat, and its top is gently convex to carry off the rain. By a pole projectiug from the centre of each end the bearers carry it on their shoulders, and the occupant lies stretched on a thin mattrass on an open cane bottom, like a couch or bed, with a pillow beneath his head. The mode of entering and leaving the palanquin is through a square opening on each side, which, when the sun or rain requires it, may be closed by a sliding door. This is usually composed of Venetian blinds, to allow light and air, in a wooden frame, and may be fastened if needed, by a small brass hook and eye. Every thing about the palanquin, however, is made as light as possible to lessen the labour of the bearers; and there is no part of the panuelling or sides more than half an inch thick, if so much. All I could do, therefore, was in the shortest possible space of time to close the two sliding doors, and lie along on my back. I had often heard that if you suspend your breath, and put on the semblance of being dead, the most ferocious of wild beasts will leave you. I attempted this, by holding my breath as long as possible, and remaining as still as a recumbent statue. But I found it of no avail.

"The doors were hardly closed before the tiger was alongside, and his smelling and snorting were horrible. He first butted one of the sides with his head, and, as there was no resistance on the other, the palanquin went over on its beam ends, and lay perfectly flat, with the cane bottom presented to the tiger's view. Through this and the mattress, heated, no doubt, by my lying on it, the odour of the living flesh came out stronger than through the wood, and the snuffing and smelling were repeated with increased strength. I certainly expected every moment that, with a powerful blow of his paws, he would break in some part of the palanquin, and drag me out for his devouring. But another butting of his head against the palanquin rolled it over on its convex top, and then rocked to and fro like a cradle. All this while I was obliged, of course, to turn my body with the evolutions of the palanquin itself; and every time I moved I dreaded lest it should provoke some fresh aggression. The beast, however, wanting sagacity, did not use his powerful paw as I expected, and, giving it up in despair, set up a hideous howl of disappointment, and slinked off in the direction from whence he came.

"I rejoiced, as may be well imagined, at the cessation of all sound and smell to indicate his presence; but it was a full quarter of an hour before I had courage to open a side door, and put my head out to see whether he was gone or not. Happily, he had entirely disappeared, and I was instantly relieved. The next course to be considered was whether I was to get out and walk to Bombay, a distance of four miles, now near midnight, or whether I should again close my door and remain where I was. I deemed this the safer plan, and remained accordingly; when, about half an hour after midnight, all my bearers returned with several peons, or foot soldiers, and muskets, pistols, lances, and sabres enough to kill a dozen tigers; but these were too late to be of any use."

Selected.

Little Troubles.

"Many sensitive and fastidious natures are worn away by the constant friction of what are called little troubles without any great affliction, they feel that all the flower and sweetness of their life is faded, their eye grows dim, their cheek care-worn, and their spirit loses hope and elasticity, and becomes bowed with premature age, and in the midst of tangible and physical comfort, they are restless and unhappy. The constant undercurrent of little cares and vexations, which is slowly wearing out the finer springs of life is seen by no one scarcely ever do they speak of these things to their nearest friends. Yet were there a friend, of spirit so discerning as to feel and sympathise in all these things, how much repressed electric restlessness would pass off through such a sympathising mind.

Yet among human friends this is rarely met with, for minds are so diverse that what is a trial and a care to one, is a matter of sport and amusement to another, and all the inner world breathed into a human ear, only excites a surprised or contemptuous pity. To whom then shall the sad turn—who will *feel* that to be affliction, which each spirit knows to be so? If the soul shut itself within itself, it becomes morbid; the fine chords of the mind and nerves, by constant wear, become jarring and discordant; hence fretfulness, discontent, and habitual irritability, steal over the sincere Christian.

But to the Christian who really believes in the agency of God in the smallest events of life, and confides in his love and makes his sympathy his refuge, the thousand minute cares and perplexities of life become each one a fine affiliating bond between the soul and its God. Christ is known not by abstract definition, and by high-raised conceptions of the soul's aspiring hours, but known as a man knoweth his friend; he is known by the hourly wants he supplies—known by every care with which he momentarily sympathises, every apprehension which he relieves, every temptation which he enables us to surmount. We learn to know Christ our Saviour, as the infant child learns to know its mother and father, by all the helpless

ne and all the dependence which are incident to
hi ife; and as we go on thus year by year, and
fin in every changing situation, in every reverse,
in very trouble, from the lightest sorrow to those
wh wring our soul from its depths, that He is
eq ally present, and that his gracious aid is equally
ad uate, our faith seems gradually almost to
ch ge to sight, and His sympathy, love, and care,
see to us more real than any other source of re-
lie e; and thus multiplied cares and trials be-
ce e new avenues of acquaintance between us and
Hi ven."

The Practical Science of Candle-making.

The Belmont candle factory—in that curious
Lo don district, Vauxhall—presents a famous
ex ple of applied chemical science. Rather
mo e than forty years ago, Chevreul, the French
ch mist, announced to the Academy of Sciences
th important fact, that fatty bodies are of a com-
po nd kind. He it was who first pointed out that
fa is not a simple organic substance, but a salt
fo ed of animal acid (margaric acid), combined
wi an animal base, in such a state as to be se-
pa able, the acid then being obtained separately.
Th discovery—the essential base of the modern
ar of candle-making, the fatty acid set free from
th less inflammable base, being wonderfully im-
pr ved as regards its burning properties—led to
th vast extension, in this country, of the stearic
ca dle manufacture, so ably represented by what
is so well known as "Price's Patent Candle Com-
pa y;" and it is to the obtainment of this acid in
a pure hard state, and at the cheapest possible
ma ufacturing cost, that the candlemaker's chemist
h since given his almost undivided attention.

This point gained, Chevreul, still pursuing his
su ject, came upon another fatty acid—oleic acid
or iginally developed in lard. Putting these
tw lely scientific researches into the workman's
ha ds, as in all such transitions, was a task of
gr at difficulty, and it was not until a very few
ye rs ago that these discoveries, in fact, assumed
a really practical and commercially valuable
sh e.

Acting upon Chevreul's suggestion, M. de
Fl y, a Parisian candle-maker, set to work to
en age the acids from their base, "glycerine,"
by boiling the raw material, tallow, with thin
mi k of lime, on the principle of what is now
kn wn as "lime saponification." The glycerine
dis olved in the water, the fatty acids combining
wi h the lime. Sulphuric acid is then used for
de troying this combination; the acid seizing on
the lime, and setting free the fatty acids, pressure
be ng finally employed to obtain the solid mass.
Th s far the French led the way in this curious
ma ufacture; but, in 1829, our countrymen
st pped in. At that date, Mr. James Soames
ob ained a plan for separating the solid and liquid
fa ts of cocoa-nut oil, and this process subse-
qu ntly became the property of Messrs. Price,
wh were induced to establish large cocoa-nut
ke nel crushing mills in Ceylon, to keep up their
su ply of the now necessary cocoa-nut oil. Large
pl ntations of cocoa-nut trees were made in Ceylon;
al of these, now coming into bearing, Messrs.
Pr ce possess above 1,000 acres. The oil is ob-
ta ned from the fruit by drying the kernel, and
th n crushing it under edge-stones—the reduced
ma s being subjected to cold pressure, for obtain-
in the best portion of the valuable oil, and after-
wa ds to hot pressure for getting out the whole
re ainable oleaginous matter.

The solid matter resulting from this pressure,
the cocoa-nut stearine, was, in itself, a step in
ad vance of the tallow product; but the candles
no w known as "composite," so independent of
snuffers, were yet undiscovered. In 1840, Mr. J. P. Wilson, anxious to produce economical self-snuffing candles, for the particular purpose of the illuminations on her majesty's marriage, found that cocoa-nut stearine, mixed with the newly-discovered stearic acid, produced candles burning with a good light, with the great advantage of requiring no snuffing attendance. They are the candles made on this general principle that we now find in every grocer's shop, and in every dwelling-house, whose darkness is as yet undispelled by the brilliancy of gas.

Later chemical discovery—for it must be remembered that the whole routine has been the result of a continued chain of the elegancies of chemical research—led to the distillation of fats, previously acted upon by sulphuric acid, or by nitrous gases. The raw material now used is palm oil, and in the existing refinement of the process, six tons of palm oil are subjected to the action of 6½ cwts. of concentrated sulphuric acid, at a temperature of 350° Fahr. Under this treatment the glycerine is decomposed, sulphurous acid gas is evolved to a considerable extent, and the fat is changed into a mixture of fat acids, dark in colour, and possessing an elevated melting point. The product is washed, and it is then deposited in a still, from which the air is excluded by the agency of stearine.

In its original condition, palm oil is of a bright orange red tint, as thick as butter. After the acidulous treatment and the washing, it is changed to a hard black mass. The distillation separates this into the pure acids, brought over in the form of vapour, and the charred refuse matter left behind in the still. The distilled mass may be used for making cheaper classes of candles; or by being subjected to severe pressure, cold and then hot, it is brought into the condition necessary for making the Belmont sperm candles.

The cotton used as the wick is plaited, and then dipped in a solution of borax. It is this plaiting which gives the wick the slight curvature at the flame, and the preparation with borax renders the cotton somewhat less combu-tible, except at the point which we find is always bent over to the edge of the flame, where it is in contact with the air, and is consumed. The moulding of the fatty matter, or the disposition of the combustible mass round the wick, is effected in a frame, which has attached to it a box, with a wick bobbin for each mould, the movement being so contrived, that the action which expels one set of moulded candles, draws off enough wick for the succeeding operation. Of course, each candle is moulded upon the free end of the wick length, and the severance is effected by the agency of a traversing knife. Forceps are employed to hold each wick over the centre of its mould, the axis of the two being made to coincide with accuracy. In this condition, the mould is run through a steam-heated chamber to warm it, the required temperature being reached by the time the mould arrives at the filler. The filled mould then passes onwards, and, when cool enough to admit of the withdrawal of the forceps without injury to the moulded mass, the superfluous fat is removed, prior to the mould being emptied. All these motions are performed by means of guide railways—a clockwork precision being observed throughout the operation. Each apparatus contains 200 moulds, each mould having 18 inch bobbins, which, when full, hold 60 yards of wick.

Chemistry has done more for the candle manufacture than mechanics. Much yet remains to be done in the manipulatory processes, for at present, some wicks will get out of the candle's centre, whilst the bottoms occasionally turn out to be hollow. Hence, the very best candles are yet made by the old hand system.

During the early part of the present year, Mr. G. F. Wilson, the managing director of the works, introduced castor oil as a new and economical material for this manufacture. Castor oil, when treated with hypo-nitric, nitrous, or sulphurous acid, solidifies, and furnishes what is called "palmine." This palmine, when used after being pressed, is well suited for hardening tallow, as well as for mixing with wax. In making composite candles with it, it is mixed with an equal amount of hard fat acid.

In 1852, the Belmont works employed somewhere about 1,000 hands, turning out upwards of 100 tons of candles a week, of a value of £7,000 or £8,000. Since that time, the works have been surprisingly increased, the number of the employed being 2,000, working upon a capital of £700,000. They cover two acres of ground, besides further space at the Battersea offshoots.

But this extension was not equal to the necessities of demand, and an enormous branch from the parent undertaking has been just now got to work near Liverpool. The new works are named from Bromborough Pool, at which point on the Mersey they are placed. Here the vast area of 3¾ acres is actually roofed in with corrugated iron; fourteen steam boilers being fitted up to supply the great steam-heating power required in works of this kind.

These works, like their progenitors in London, are perfect models of good arrangement and management, and they approach about as near to the perfection of combined industrial operation as any existing example of the great factory system of modern times.—*Pract. Mech. Journal, Glasgow.*

South American Indian Dogs.—A recent traveller in South America, who accompanied a number of Jumna Indians on a tapir hunt, says that besides the hunters, their party was composed of most of the women and boys of the village, together with a score or two of dogs. Of the latter, he adds:—"These dogs were curious creatures to look at. A stranger, ignorant of the customs of the Jumnas, would have been at some loss to account for the peculiarity of their colour. Such dogs I have never seen before. Some were of a bright scarlet, others were yellow, others blue, and some mottled with a variety of tints. What could it mean? But I knew well enough. The dogs were dyed. Yes, it is the custom among many tribes of South American Indians to dye not only their own bodies, but the hairy coat of their dogs, with brilliant colours obtained from vegetable juices, such as the red huitoc, the yellow rocoa, and the blue of the white indigo. The light gray, often white, hair of these animals favours the staining process; and the effect produced pleases the eye of their savage masters. On my eye the effect was strange and fantastical. I could not restrain my laughter when I first scanned these curs in their fanciful coats. Picture to yourself a pack of scarlet, and orange, and purple dogs!"

Gumming Saws.—A. G. Drake, of Sturgis, Mich., informs us that a piece of sheet iron, No. 16 in size, and made into a circular plate 16 inches in diameter, and placed in a wooden collar, which comes within 2½ inches of its edge, to support it, and then made to receive a high velocity, will cut the teeth of a buzz saw in a superior manner and in one-half the time required by common gummers. The edge of the sheet-iron disk must be smooth, and the saw must be moved cautiously and steadily towards it.—*Scientific American.*

A Magnetic Telegraph Without Wires.—An Italian gentleman at Turin has just discovered and shown, by numerous successful experiments, as is reported, that the railway track makes an excellent substitute for the telegraph wires, and that any train carrying along with it a small battery and apparatus, can communicate to and fro with the stations before and behind while going at full speed. This application of the telegraph will probably be immediate, universal and of immense value. One train meeting another can communicate directly with it, and though both approaching each other at the rate of sixty to a hundred miles an hour, they can herald their coming to each other at an infinitely greater speed, converse backward and forward, and make arrangements for passing or stopping as they draw near. If anything detains a train, it can telegraph its whereabouts, if an accident or obstruction occurs, it can send for assistance, and warn trains approaching or overtaking.

Properly managed, this would make collisions almost impossible, and the probabilities of accident infinitely less; since the moving train could then be communicated with at any moment, and from any part of the track. There would then only require the discovery of some combination of substances sufficiently simple and universal by which a magnetic current can at any moment be communicated along the railroad track from any point, so as to excite the attention of the operator in the cars. A premium offered would without doubt soon secure the best method of effecting this.

Since writing the above, we learn that the method in which the Italian gentleman transmits his messages is not yet made public. This, however, is of small matter, if the above facts are true. If the magnetic fluid can be transmitted along an ordinary railroad, instead of passing down into the earth, our operators will find no difficulty in making it talk. The rails being laid on wooden sleepers, so long as they and the surrounding earth are dry, we have little doubt that communication may be effected. Where, however, the iron touches ground naturally damp, or wet by a shower of rain, we doubt the success of the experiment. When the lines are out of order on the arrival of a steamer, it may prove possible sometimes to transmit the news along the railroad tracks past the break.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 7th inst. There is nothing of importance from the seat of war in the Crimea. No new movements had taken place on the part of the allies. The details of the recent repulse show that the English and French were greatly deceived as to the state of the defences which they attempted to carry. It is stated as a singular incident, that during the contest, Gen. Eyre, with 2000 British troops, penetrated into the suburbs of Sebastopol itself, and held possession of the houses in one street for seventeen hours; but being unsupported, he retired at nightfall. Lord Raglan, who was believed to be recovering from his indisposition, sunk finally under his disease, and expired on the 28th ult. He was 67 years of age, and in early life had seen much active service, and been a prominent actor in many scenes of deadly strife. Sir George Simpson has succeeded to the chief command of the British forces. Russian prisoners state that there were 15,000 wounded men in Sebastopol, who cannot be sent away at present, on account of the investment of the place. Cholera was also making sad ravages among the garrison. Careful estimates show that the war has already caused the sacrifice of about half a million of men, and yet no general or decisive engagements have taken place.

FRANCE.—An extraordinary session of the French Legislature convened on the 2d inst. The Emperor demanded a new loan of 750 million francs to carry on the war, which was voted by the Legislature. No extraordinary levy for the army was required, but 140,000 men of the class 1855 were called under arms. Increased taxation on spirits, railway passengers and goods, &c., is proposed so as to produce about seventy million francs more revenue per annum.

SPAIN.—Disturbances continue. A rising had taken place in Catalonia. The insurgents still held Barcelona. The outbreak at present seems more like a riot than an insurrection. The French Emperor is stated to have expressed a determination to prevent any attempt to depose Queen Isabella.

ITALY.—In Sardinia, much depression of feeling exists on account of the mortality that has befallen the Sardinian troops in the Crimea.

PRUSSIA.—The King was reported to be recovering.

TURKEY.—A most disastrous conflagration had occurred at Constantinople. Some hundreds of houses were burned.

GREAT BRITAIN.—The introduction of a bill into Parliament by Lord Grosvenor, which proposed to restrict the working people in some of their usual pursuits and enjoyments on the first day of the week, had produced very formidable manifestations of popular indignation in London. The bill had to be withdrawn by its author, in order to appease the popular tumult created by it. *Commercial.—Cotton.*—Sales of the week amount to 45,000 bales at a slight decline in price. *Breadstuffs.*—Generally dull of sale. Corn had declined 2s. per quarter. Wheat and flour but little changed in price. The accounts of the growing crops were still favourable. The iron market was active, and prices unchanged.

London Money Market.—Consols, 91¼. Considerable gold was going to France. The bullion in the Bank was not, however, sensibly diminished.

CHINA.—Political affairs at Canton were but little changed; but at Cowkong, where the rebels had assembled in large numbers, the Imperialists have obtained some advantages, and have retaken the town of Shantuck. Piracy prevails to a great extent, and prevents native vessels trading to Canton from other points on the coast. The poorer classes are suffering great privations, and many have perished from want in and about Canton.

SIERRA LEONE.—An arrival at New York brings dates to the 3d ult. The British expedition against the native chief on the Bullaghera river, had met with a disastrous defeat, many of the troops having been killed or captured. A number of British subjects had also been seized by the natives on the Rio Nunez. The sloop of war Ferret had been despatched after them.

UNITED STATES.—*Treaty with the Sandwich Islands.*—The Washington Union says, "We understand that the Secretary of State and the Hon. W. L. Lee, his Hawaiian Majesty's minister to this government, yesterday signed a treaty of commercial reciprocity between the United States and the Sandwich Islands."

The Wheat Crop.—The Times is a general concurrence in the opinion, that the crop of the present year is a good one, but when figures are resorted to in order to represent the quantity raised, the vague character of these estimates is soon apparent. Some estimate the total crop of the United States as high as 155 millions of bushels; others as low as 115 millions.

State of the Ohio.—On the 20th, there was four feet two inches water in the channel at Pittsburg, and falling.

Manchester, N. H.—On the 15th, the Manchester Corporation Mill, No. 1, was nearly destroyed by fire, together with its contents. The loss is estimated at $250,000. Five hundred persons are thrown out of employment. The same day twenty-two stores and dwellings were also destroyed by fire, including Tatney's block. Loss, $100,000.

Slavery in the Indian Territory.—During the recent session of the U. S. District Court for the Western District of Arkansas, it was decided, that slaves were not known and considered by the United States laws as property. Two negroes had been convicted of larceny in forcibly rescuing and taking away a slave woman from persons, in the Creek nation. It being the judgment of the Court, that slaves are not known to the U. S. laws as property, the accused were set at liberty.

Railroads.—On the 18th, the Illinois Central Railroad was opened to Dubuque. The western division of the Ohio and Mississippi Railroad has been completed, making a connected line from Philadelphia to St. Louis, the aggregate length of which is 1029 miles. The time between these two cities has been reduced to forty-five hours, and the fare through is but twenty-six dollars.

New Orleans.—The deaths for the week ending 16th inst., numbered 187, including 44 by yellow fever. The Verandah Hotel has been burnt. Loss, $100,000.

Philadelphia.—Mortality last week, 294, of which 137 were children under one year, and only 92 adults. The temperature, from the 16th to the 20th, was unusually high, ranging during the middle of the day, from 90 to 96 degrees. On the latter day there was a violent thunder storm accompanied with a deluge of rain. In those portions of the city where the ground is low, cellars were filled with water, and much property of various kinds was destroyed. The storm was heav in the northern wards, and in that section some of culverts gave way under the severe trial they were s jected to.

New Hampshire.—The New Hampshire Legislat adjourned *sine die* on the 14th inst. The prominent s of the session are the remodeling of the Judiciary, a consequent change of all the Judges; the re-distri ing of the State for the election of State Senators; passage of the Prohibitory Liquor Law, and the gene removal by address of the democratic incumbents all offices filled by Executive appointment. The stro anti-slavery resolutions offered last week, were pas by the House previous to the adjournment, after an citing debate.

Miscellaneous.—Revolution in the Whaling Business.—There are indications that the seat of the whaling terest is about to be transferred from the Atlantic the Pacific coast. Arrangements are already in pr gress with several houses to transfer their busin from New Bedford and other places to some point on t Pacific coast. San Francisco, Benicia, Oakland a Monterey are spoken of. Orders have been given captains of vessels now employed in the whale fisheri in the North Pacific to recruit at the ports of Californ

Kertch.—The details of the expedition to the sea Azoff show that frightful excesses and outrages we committed by the captors at the town of Kertch. valuable museum containing many curious remai taken from tumuli in the neighbourhood, was wanton destroyed, and private buildings were sacked and burn The remaining portion of the ill-fated town was destro ed by fire on the 14th ult.

A Family destroyed by Fire.—On the night of the 14t the dwelling of James Thompson, in the village of Bran near Buffalo, N. Y., was fired by incendiaries, an Thompson, his three daughters and two grand-daugh ters all perished in the flames.

A Bloody Record.—By a summary in a Californi paper, the following is exhibited as the result: Kille from the First month to the Fifth month, inclusive, i street fights and others, 199; hung by the sheriff, 2 hung by the mob, 24; convicted of murder, 9.

New Seed-Sowing Machine.—Brown, of Lawnridg Illinois, has invented a machine for sowing seed broad cast. A series of oblique cups are placed upon a rotat ing cylinder underneath the hopper, in combinatio with distributing plates, which convey the seed from th hopper in such a manner that it is sprinkled with per fect regularity and evenness over the whole ground tra versed by the machine.

An Old Vessel.—The oldest merchant vessel known i France, the Samaritane, which was built in 1716, an launched in 1718, has just been purchased by a time merchant at Nantes, who is about to break her up. He having lasted so long is attributed to her having bee built of teak.

Burning of the John Stevens.—This fine steamboat which for a number of years past has plied between Philadelphia and Bordentown, was destroyed by fire about 1 o'clock, on the morning of the 17th inst., while moored at the wharf, near the latter place. Three coloured women employed as cooks, &c., lost their lives.

Trees on the Illinois Railroad.—Dr. Egan, of Chicago, has made a contract with the Illinois Central Railroad, to plant three rows of locust trees on each side of the road for the distance of 120 miles south of Chicago. The rows are to be set five feet apart, and the trees about three feet from each other.

RECEIPTS.

Received from Dr. P. Griffith, agt., Pa., for Jer. Rogers, $2, to 44, vol. 29; from Levi Chase, R. I., $2, vol. 28; from B. Hoyle, O., per C. E., $2.75, to 20, vol. 29; from H. G. Cooper, Pa., per N. K., $2, vol. 27.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher in the Classical Department in this Institution.

Application may be made to either of the undersigned, members of the Committee.

SAMUEL EYLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, JR. }

DIED, on the 11th inst., at Rahway, N. J., ELIZA P. MARSH, at the residence of her father, Joel Wilson, in the 22d year of her age, after a long and painful illness, borne with much patience and resignation, leaving the consoling evidence, that through redeeming love she has entered into the joy of her Lord.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, EIGHTH MONTH 4, 1855. NO. 47.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

Origin and History of the Catacombs of Rome.

Extracted from Kip's Catacombs of Rome.

(Concluded from page 361.)
